The population of the Pentapolis was estimated in 1896 at 18,892 inhabitants; in 1954, the number had risen to 25,541; and in 1966, to 46,630, to which should be added the 40,975 inhabitants of the other towns of the Mzab. In the census of 1987, the *wilāya* of Ghardaia comprised 216,140 residents, including 35,351 for Guerrara and 21,361 for Berriane. To the 111,350 of the Pentapolis (Ghardaia: 62,251, Beni Isguen-Melika: 21,744, Bou Noura: 18,642, El-Ateuf: 8,713), may be added the Daya ben Dahoua (5,621), which gives a total of 116,691 inhabitants for the valley of the Mzab. Metlili has a further 23,616 residents, Zelfana, 4,345, and four other small settlements, including Sebseb, accommodate a few thousand more. This spectacular demographic increase, by

no means untypical of northern Algeria, has shattered the ancient urban structures. The five ksour, formerly enclosed within their ramparts, are now linked by a virtually continuous strip of urban construction, extending from upstream of Ghardaia to Bou Noura, El Ateuf remaining, for the time being, outside this urban proliferation.

However, the Mzab has been able to preserve its originality, architectural as well as religious, despite the temptations of modernity. The houses of the ksour are often redesigned internally to respond to modern requirements of comfort, and while some have the appearance of somewhat inhospitable blocks of concrete, many have retained their traditional outward aspect, totally integrated into the hierarchical pyramid which rises towards the mosque. The more modern suburbs which have been developed at their feet are composed of villas or town-houses of the European type, with a garage or even a shop on the ground floor, and often with the addition of an extra storey, family resources permitting. More or less rectangular axes are imposed on these new suburbs, but any centrality of symbolic hierarchy is absent from them. The most coveted ones encroach upon the date palm groves, where the vast gardens, formerly affording summer residences for the wealthy, are increasingly threatened by modern housing needs.

The Mzabite Confederation which links the Pentapolis, Berriane and Guerrara, demonstrates the cohesion of this heterodox Berber society. Although Berber-speaking Ibāḍīs represent only about 60% of the population of the Mzab, they remain the dominant elements. The Mālikīs, formerly sedentary or nomadic Arabs tolerated only in peripheral sectors, have been reinforced by migrants from the north, temporary or permanent, providing administrative services and industrial manpower. But Ibāḍī society, whether confined within its ramparts or, apparently, more accessible in the new suburbs, remains in fact closed to them.

Social constraints, such as were described by M. Mercier in 1932, have evolved little, and the fundamentalist drive which has overtaken the whole of Algeria has done nothing to diminish the austerity of the "desert puritans". However, while the situation of women (see A.-M. Goichon, *La vie féminine au Mzab*, Paris 1927) has changed little, except materially (electricity, running water, gas and household appliances), the field of activity open to men has expanded considerably. The ancient and strictly-codified exile of Mzabite grocers in the north having been vigorously opposed but not brought to an end during the Socialist period, the traditional spirit of enterprise has been applied to new sectors. The two largest industrial units, the plaster-works and the tube factory of Noumerate (an industrial zone situated 20 km. south of Ghardaia, near the airfield), as well as the central distribution of electricity and gas, are dependent on the state. But private investment finances long-distance commerce—a Mzabite tradition—as well as the transportation and manufacture of consumer goods: principally textiles (carpets, linen, canvas, woollens, hosiery, including Algeria's first establishment for the production of socks, at Guerrara), and also plastics and metals, while the construction industry is particularly buoyant. The various trades benefit from a skilled and inexpensive workforce, while the local reinvestment of profits also supports the maintenance of the date palm grove, which following the agrarian revolution and the suppression of the *k͟hamāsa* [see MUZĀRAʿA] had often been neglected.

The date palm groves of the ksour have often been considered as a luxury. They are in fact a necessity, not only for the production of food, since they could never claim to feed the entire population of the valley, but for other vital purposes. The only vegetation in this world of stones, they provide shade and shelter for fragrant gardens, the summer residences of the wealthy and places of recreation for city-dwellers fleeing the pressure and the stifling alleyways of the town. Furthermore, the date-production of the more recently established plantations, such as those of Daia ben Dahoua or Zelfana, is by no means negligible, and vegetables and fruit (lemons, pomegranates, medlars or figs) are much prized locally. In 1987, 4,266 farmers were counted among the sedentary population, and 955 farmers or stock-breeders among the nomads of the *wilāya*, i.e., close to 13% of the working population.

Thus the Ibāḍī society of the Mzab, which has sought to preserve its religious and consequently its social identity by means of a radical retreat into an arid and inaccessible desert, has succeeded in finding the means of survival in organised and lucrative commercial activity. Despite its isolation and the absence of any local resources other than energy (the gas of Hassi R'mel = Ḥāsī Rmel), it has shown remarkable aptitude in adapting to the contemporary industrial world. But demographic and urban expansion threatens the unity of its population and of its architecture—the jewel of the Sahara—while rising standards of living, new material needs and the influence of the media threaten its religious cohesion and the traditional structures which provided its former vitality.

(M. ROUVILLOIS-BRIGOL)

The Berber dialect of the Mzab (*tagawbant*/*tamazig͟ht*) has been the object of several studies which are old, but by no means out-of-date, if the requirement is for concrete information and not theorising. In the first place there is the monograph of R. Basset, *Étude sur la zenatia du Mzab, de Ouargla et de l'Oued Rir'*, Paris 1893, followed by Lounis, *Grammaire mozabite*, Algiers 1897; E. Masqueray, *Comparaison d'un vocabulaire du dialecte des Zenaga avec le vocabulaire correspondant des Chawia et des Beni Mzab*, in *Missions scientifiques*, v (1878), 473-533; J. Biarney, *Notes d'ethnographie et de linguistique nord-africaines*, Paris 1924, 165-265; from 1946 onward, the *Fichier de Documentation Berbère* has recorded the results of research carried out in the Mzab.

It is worth noting that the *ʿAḳīda* which provides the

basis of the religious education of the Ibāḍīs of the Mzab, of Djarba and of the Djabal Nafūsa has been written down in Berber and in Arabic letters, then translated into Arabic (see Motylinski, *L'Aqida des Abadhites*, in *Recueil de Mémoires*... Algiers 1905, 505-45). But it is Arabic which the Mzabites used for their religious or historical books, which constitute the greater part of their written literature (see Motylinski, *Les livres de la secte abadhite*, Algiers 1885; H. Basset, *Essai sur la littérature des Berbères*, Algiers 1920, 64-7); worth mentioning in particular are the *Kitāb al-Sīra wa-akhbār al-aʾimma* of Abū Zakariyyāʾ (5th/11th century [*q.v.*]), tr. E. Masqueray, *Chronique d'Abou Zakaria*, Algiers 1879; the *K. Ṭabaḳāt al-mashāyikh* of al-Dardjīnī (7th/13th century [*q.v.*]), supplemented by the *K. al-Djawāhir* of al-Barrādī (8th/14th century [*q.v.*]); the *K. al-Siyar* of al-Shammākhī, Cairo undated. A work dedicated to Ḳurʾānic exegesis is the *Kitāb al-Nayl (al-Nīl) wa-shifāʾ al-ʿalīl* of the *shaykh* ʿAbd al-ʿAzīz (d. 1808 at Beni Isguen), which has been given a lengthy (8 vols.) commentary by ʿAṭfiyāsh (1820-1914 [*q.v.*]) in his *Sharḥ K. al-Nīl wa-shifāʾ al-ʿalīl*, Cairo 1305-43 (see also the list of his works in the article devoted to him in *EI*²).

The individuality of the legislation of the Mzabites has, for its part, attracted the attention of scholars, including the following: Zeys, *Législation mozabite*, Algiers 1886; M. Morand, *Les qanouns du Mzab*, Algiers 1910; M. Mercier, *Étude sur le waqf abadhite*, Algiers 1927.

A French protectorate since 1853, the Mzab was annexed in 1882, and the rules of administration which had been in force there were not retained. In each town there were two *djamāʿas*: the *ḥalḳa* of the *iʿazzaben* or of the *ṭolba* (from a pl* *ṭulabāʾ*) and the *djamāʿa* of the *ʿawāmm*. The first had the primary function of determining, in *ittifāḳāt*, the scale of corporal or other punishments executed by the *djamāʿa* of the *ʿawāmm*, which became, before the independence of Algeria (1962), the essential organ of municipal administration. (M. Mercier*)

N

NAʿĀM (a.) (singular *-a*, pl. *-āt*, *naʿāʾim*) collective noun designating the ostrich (*Struthio camelus*) without any distinction of sex.

The only representative of the family of struthionids, of the sub-class of ratities or runners, the ostrich, sometimes called "ostrich-camel" (Greek στρουθο-κάμηλος, Persian *ushturmurgh* "camel-bird", Turkish *devekushu* "camel-bird"), at present lives only in equatorial and southern Africa, although some were still alive in the deserts of Syria, ʿIrāḳ and Arabia until the first quarter of our century; it is said that it was from the most ancient times familiar to the Arab nomads of these countries, as it was to the Berber tribes of the Maghrib and to the Touareg (in Tamashek, *enhel* pl. *inhal*, fem. *tanhelt* pl. *tinhal*). In Mesopotamia, where the sub-species *Str. cam. syriacus* was known, the Sumero-Akkadian tablets mention it generally (Sumerian *gha-shir-mushen*, Akkadian *lurmu*). The Bedouins had the leisure to observe in detail this large biped with the silhouette of a camel, and its inability to fly caused it not to be regarded as a bird but as a near neighbour of the camel family. An abundant terminology (some fifty adjectives) defined, among the people of the desert, the external characteristics, bearing and habits of the ostrich whose plumage, meat and eggs were quite sought after; fixed by the poets of the tribes, this linguistic baggage was preserved in the works of the Arabic-speaking lexicographers, encyclopaedists and naturalists (see *Bibl.*). The sexual dimorphism of the ostrich was much noted by numerous epithets applied to each sex according to its characteristics. The male (*salḳaʿ*), larger and stronger than the female, is commonly called *ẓalīm* (pl. *ẓulmān*, *ẓilmān*, *aẓlima*) "oppressed", for, according to the Bedouin fable, his ears were cut short when he was attempting to have horns; despite such an explanation, it seems that one should see in *ẓalīm* an intensive with the meaning of "very dark", an attribute of its plumage, similarly as with its other adjectives *asḥam* and *ghayhab*. As it takes its turn sitting on the eggs, as well as the three or four females of its harem, it is surnamed *abu 'l-bayḍ* "father of the eggs" and *abū thalāthīn* "father of thirty [eggs]", as a parallel to the sitting hen, who is *umm al-bayḍ* and *umm thalāthīn* "mother of the eggs", "mother of thirty [eggs]". In the mating season, the male becomes *khāḍib* "red-thighed", for the skin of his thighs and his beak takes on a coral hue; the female always remains *ramdāʾ* or *rabdāʾ* "grey" or *hird* "yellowish" due to her ashen plumage, whereas the male is *akhradj* "mottled black and white" and *akhṣaf* (same meaning). One of the most striking characteristics of the ostrich's anatomy is its long, thin and bare neck, which earned it the names *hayḳ*, *haykam*, *ṣaʿl*, *akhdaʿ*, *askaf*, *asṭaʿ*, *ʿaslaḳ* and, for the female, *khayṭāʾ*; a group of ostriches also used to be called *banāt al-hayḳ* "long-necked ones". The smallness of the flat head with the sparse, wiry hair of the ostrich and the hardness of its skull were also described by the words *ṣuntuʿ* and *ṣiʿwann*, while it is called *aḍdjam* due to its strong beak, elongated like the muzzle of a camel and often slightly curved. The absence of an external ear, common to all birds, led the Bedouins to believe that the ostrich did not have ears and was consequently *maṣlūm*, *muṣallam*, and totally lacking in the sense of hearing (*asakk*); it supplemented this, according to them, with its faculty of sight and a very subtle sense of smell, hence the simile *ashamm min al-naʿāma* "with a better sense of smell than the ostrich". As a means of defence and safeguard, the ostrich only has at its disposal the rapidity of its flight (*zadjadj*), always with its face to the wind, being able to equal the swiftness of a horse spurred into a triple gallop; this aptitude for running has caused many adjectives with the same meaning to be attributed to it, which today have fallen out of use, such as *djafl*, *idjfīl*, *mudjfil*, *arʿash*, *raʿshana*, *zafzaf*, *zafūf*, *hizaff*, *hāliʿ*, *hizrūḳ*, *hadadjdadj*, *ʿasannadj*, *dhiʿlib*, *khafaydad*, *niḳniḳ*, *ṭimm*, *wadjdj* and *safannadj*, most of them quadriliteral words and proper to each particular tribe. Many of them were also applied to the camelids, a fact establishing the constant relationship between ostrich and camel. Both have feet with a flat sole (*khuff*) and very hard horny nails (*mansim*). On their upper feet the young female camel and young

female ostrich have the attribute of *ḳalūṣ* in common. The young ostrich is not lacking in descriptive titles, the most current being *raʾl*, *ḥiḳl*, *d̲j̲aʿwal*, *ḥamak*; in common with the young camel he is described as *ḥaffān* up to one year, and his trembling walk (*hadad̲j̲ān*) is that of the old man. A whole group of young ostriches are defined as *ḥatak*, *ḥars̲h̲af* and *ḥiskil*, while a flock of adults is called *k̲h̲ayṭ*, *k̲h̲ayṭā*, *daysakā* and *rafaḍ*. The ostrich emits sounds, and the cry of the male (*ʿirār*) has a different tone from that (*zimār*) of the female; from the latter, al-Ḥarīrī [*q.v.*], speaking of the ostrich, derived the name *al-zammāra* "flautist" (32nd *maḳāma*, Cairo 1929, 345). In the mating season, the male ostrich, like the camel, has a high-pitched voice (*had̲j̲hād̲j̲*), making different raucous sounds with its complex shrill cry (*naḳʿ*), when it is frightened. Despite being oviparous (*ḍahūl*), the female ostrich does not make a nest; she is content to scratch and flatten in the sand a shallow hole (*udḥī*, *idḥī*, *udḥuwwa*, *udḥiyya*, *madḥā*, *balad*) which is sufficient to accommodate her clutch (*tūm*) of six to eight eggs in general. As several females of the same male pool their eggs in the same breeding place for security and to make it easier to sit on them, the Bedouins used to attribute this behaviour to the stupidity (*k̲h̲urḳ*) of this large bird, which seemed to desert its own eggs for those of others and which, in the hottest hours, going to forage, left it to the sun's heat to take care of the incubation, when "this simpleton" of a male did not take its turn; for them, one could not be *aḥmaḳ min naʿāma* "stupider than an ostrich" or *as̲h̲rad min naʿāma* "more cowardly than an ostrich" or *ad̲h̲all min bayḍat al-balad* "viler than the egg [of an ostrich abandoned] in the sand". Besides, to the credulous and superstitious spirit of the nomads, the ostrich was the mount of the demon ogre (*g̲h̲ūl* [*q.v.*]) of the desert, the terror of travellers. Further, the mania of the ostrich for swallowing indiscriminately all kinds of small objects made them believe that it digested without difficulty stones, metals and even the glowing cinders of a hearth, all being rejected (*ifd̲j̲ād̲j̲*) with its dung (*ṣawm*). Added to these beliefs is the tale according to which the hunted ostrich believes that it screens itself entirely from the view of its pursuer by hiding only its head behind some rugged ground.

At all times, the plumage of the ostrich was, for man, a coveted object; the most sought after was that of a large male (*hiḳab*, *hid̲j̲af*) with black and white contrasted (*ak̲h̲ṣaf*) plumage, which could be compared with a thick-pile carpet (*k̲h̲aml*, *k̲h̲amāla*, *k̲h̲amīla*) due to its fineness, brilliance and softness. Headdresses and princely ornaments, full-dress military uniforms, streamers and banners and, finally, fantasies of Western feminine fashion of "La Belle Époque", when the plumage industry flourished, all paid such tribute to the species of struthionids that it led almost to its disappearance; acclimatisation, domestication and organised breeding have saved it from extinction. Arab authors on hunting such as Kus̲h̲ād̲j̲im [*q.v.*], al-Asadī and Ibn Manglī [*q.v.* in Suppl.] mention, in their treatises, the different methods used in hunting the ostrich. Of these, the most widespread was by pursuit (*ṭarad*); it needed resourceful, swift mounts, specially trained for this race with the support of greyhounds (*salūḳiyya*). It was this kind of hunting that was practised in the Algerian Sahara, to the south of Laghouat, in the middle of the last century by General A. Margueritte; his detailed and spirited account is enough for us to imagine the atmosphere of the Arabs' cavalcades in pursuit of the ostrich, since the pre-Islamic period, of which there is an echo in some ancient poems. In the Middle Ages, the ostrich was also hunted with the coursing of the saker falcon; al-Asadī devotes a chapter to this flight which was practised in the middle of summer. It required five saker falcons got ready and trained upon an artificial ostrich made of gathered sticks baited in places for catching the birds; one of the falcons had to seize its head, two the neck and two the thighs. The assistance of one or two greyhounds was necessary in order to carry back the prey once it was bound. The secret of success was to force the ostrich, by a skilful manœuvre of the beaters, not to flee face to the wind, and the falcons had to be launched into flight as soon as the fleeing bird was in sight; at the same time, the supporting dogs set off on course as fast as their legs would carry them, closely followed by the falconers at full speed. A less supporting and less tiring method, that of the herdsmen without mounts, was to accustom a flock of ostriches to the sight of black rags hooked on sticks fixed in the sand and whose periphery was copiously sprinkled with something that ostriches like. Seeing them fond of the bait and familiarised with the black rags, the hunter himself dressed in black, would take up an immobile position in the midst of this set-up and, armed with a club, could easily knock out the imprudent birds who came within his reach. Another procedure for capturing them was to light, not far from a flock of ostriches, a large brazier; the sight of the flames stupefied the creatures and suppressed for a moment their instinct for flight, which allowed the hunter to approach them without trouble and seize them.

As game, the meat of the ostrich is recognised, in Islamic law, as being licit consumption, but it does not seem, according to the authors, that the Arabs appreciated it as much as that of the large, wild quadrupeds. As for the Mag̲h̲rib, al-ʿUmarī (8th/14th century) and then Leo Africanus (9th/15th century) report that the population of Constantine freely captured young ostriches in large numbers in order to fatten them and put them on the spit. Among the Touaregs, the nobles abstained from eating the meat of the ostrich, but the *img̲h̲ad* and slaves were fond of it, as were the sedentary people of the towns of the Sudan who bought it from the nomads. In the 10th/16th century, al-Maḥallī further mentions in his *Tuḥfat al-mulūk* (*apud* E. Fagnan, *Extraits*, 171) the abundance of ostriches and their eggs between Fās and Tlemcen. This remark confirms the interest shown, even from the prehistoric period, in ostrich eggs. The deposits in the sand of collective clutches, which could reach thirty eggs and more, were assiduously visited; a single egg constituted a substantial dish for several people, its weight equivalent to two dozen hens' eggs. To outwit the distrust of the sitting birds, the collector would content himself with lifting one or two eggs at a time, at the time when they were going to forage. The empty shells (*tarīka*, pl. *tarāʾik*) after the hatching of the chicks and those that were emptied (*ḳayḍ*) for the consumption of their contents, were carefully recovered and fashioned to serve many uses (receptacles, oil lamps, braising pans, etc.). Introduced in the mosques at first as a decorative element, these shells became the subject, in the late Middle Ages, of an export trade to the Christian countries. The early Church had made the egg a symbol of the Resurrection, and each religious building was set on possessing among its treasures one of these enormous and uncommon ostrich eggs, often mounted in an art object and set with precious metals; the first that arrived in Western Europe were taken, in the naive popular imagination, for those of the fabulous gryphon.

In the East, ancient therapeutic lore accorded specific properties to certain anatomical parts of the ostrich; al-Ḳazwīnī and al-Damīrī mention some of them to us. It is known that the gall, considered to be a violent poison, became an efficacious antidote for every other mortal poison, and, prepared as an eye lotion, constituted a beneficial remedy for blindness. On the other hand, the marrow of the long bones could, by absorption, cure consumption. The melted fat, used as an unguent, reabsorbed tumours, while the dung (*ṣawm*) burnt and ground into powder healed ulcers. The roasted meat facilitated the elimination of wind, bad mixtures of humours, warts and itching. Some fragments of ostrich egg shell thrown into the water of a cooking pot on a fire had, it seemed, the property of accelerating boiling considerably. Even more extraordinary, indeed magical, was the fact that the blade of a sword or dagger made of iron, having stayed in the ostrich's gizzard, was unalterable and unbreakable. Finally, a scrap of ostrich skin cut in the shape of a fish floated as soon as it was plunged into a bottle of vinegar. Until quite recent times, the people of the Sahara held in high esteem the marrow of the ostrich bone for, inserted into the ear afflicted with deafness, it woud restore hearing to it. Likewise, melted ostrich fat, a sovereign remedy against rheumatism, was also sold in Agadès by the litre in the last century; it was used, moreover, in the composition of cosmetics for women and served, in cooking, for frying. The extremely resistant tendons of the ostrich provided an excellent thread for shoemaking, for strong bow strings and for staunch binding cords. The ostrich skins plucked of their feathers were tanned to make saddlebags and ornaments of harnesses.

The Arab authors do not tell us explicitly if the ostrich was anywhere tamed and kept in captivity, without going as far as a reasoned and methodical programme of rearing, as it practised today in the South African countries. However, two short pieces of information seem to make allusion to it. The first is from al-Djāḥiẓ (*Ḥayawān*, iv, 333), who writes: "People sometimes keep the ostrich in their homes and it is very harmful there, for, often, catching sight of the ears of the servant-girl or little girl wearing earrings with precious stones or pearl, it catches them in its beak in order to swallow them, and ears get torn! Often also it notices the jewel attached to the chest of a little boy or girl and strikes it with its beak, being able to cause serious injuries to the child." The second piece of information comes from the *Kitāb al-Tabaṣṣur bi 'l-tidjāra* attributed to al-Djāḥiẓ (Fr. tr. Ch. Pellat in *Arabica*, i [1954], 159), according to which the ostrich figured among the imports from Arabia along with thoroughbred horses and camels. There is no way of knowing if the author means to speak of the import of feathers or young ostriches that would have been reared in captivity. It is certain that the ostrich was abundant in Arabia in Islamic times. Indeed, Ḳurʾānic legislation required of the pilgrim in a state of ritual taboo an expiatory fine if he killed an ostrich in the sacred territory or elsewhere; this fine was fixed at the sacrifice of a head of cattle (*badana*) or, in default of this, the distribution of alms in corn to the value of the sacrifice animal, a specified measure (*mudd*) for a poor man, or finally, at a fast of as many days as he would have had measures of corn. In the same conditions, the destruction of an ostrich egg entailed for the pilgrim responsible a reparation in kind according to the estimated value (*ḳīma*) of this egg at the time of the offence.

Such legislation has no longer in practice any justification, due to the fact of the total disappearance of the great running bird of the Near East, whom the poets voluntarily take as a model to boast of the speed and endurance of their mount. In current language, the ostrich has given rise to some metaphors applicable to certain human characters. Thus, of one who devotes himself whole-heartedly to an occupation, it was said *rakiba djanāḥ naʿāma* "he rode the wing of an ostrich", in allusion to the rapid but useless beating of its wings when it runs. The man who says one thing at one time and another thing at another time, did nothing but "join together the moufflon and the ostrich" (*djamaʿa 'l-urwī wa 'l-naʿāma*) because of the profound difference of their respective living areas, mountains and deserts. In the Tunisian South, among the Marāzig, the memory of the ostrich is preserved in this image: *ar-rabdā téled wu-ẓ-ẓelīm irabbī* "the female ostrich brings into the world and the male rears (the young ostrich)", when someone faces the consequences of the acts of others (G. Boris, *Lexique du parler arabe des Marāzig*, Paris 1958, sub *ẓ-l-m*).

In botany, the name ostrich is given to three plants. The first, *al-naʿām*, a nettle, is the pellitory of Judaea (*Parietaria judaïca*). The second, called *kiththāʾ al-naʿām* "the ostrich's cucumber", its real name being *al-ḥanẓal*, is the colocynth (*Citrullus colocynthis*), of whose fruits the ostrich is particularly fond. Finally, *ḥabb al-naʿām* "ostrich berries" designates the red fruit of the sarsaparilla or thorny bindweed (*Smilax bona nox*) of the liliaceae family.

In astronomy, the twentieth lunar house, composed of eight stars of the zodiacal constellation of Sagittarius (*al-Ḳaws*) bears the name *al-Naʿāʾim* "the Ostriches". These eight stars are devided into two groups of four: (a) *al-Naʿāʾim al-wārida* "the incoming ostriches" (because they are situated in the Milky Way) with γ, δ, ε, η Sagittarii; and (b) *al-Naʿāʾim al-ṣādira* "the outgoing ostriches" with φ,σ, τ, ζ Sagittarii. Still in the Milky Way and in the same constellation are to be found *al-Ẓalīmān*ⁱ "the two male ostriches", *al-Ẓalīm al-shimālī* "the northern male" or μ Sagittarii, and *al-Ẓalīm al-djanūbī* "the southern male" or λ Sagittarii that is also called *Rāʿī al-Naʿāʾim* "the ostrich herder". The heliacal rising of the *Naʿāʾim* takes place in mid-December and corresponds to the period of extreme cold; several rhymed sayings note its rigorousness for the flocks and their shepherds (see Ch. Pellat, *Dictons rimés*). Finally, the twenty-first lunar house, *al-Balda* "the nesting place", is also called *al-Udḥī* "the nesting place of the ostrich eggs".

Below the zodiac, in the constellation of the Whale, the stars η, θ, ζ, τ, υ Ceti, situated in the middle of the body of the cetacean, are called *al-Naʿāmāt* "the Ostriches", while, in the constellation of Eridan, the star α Eridani bears the name *al-Ẓalīm* "the male ostrich" and the star group ζ, ρ, η, τ^1, τ^5 Eridani with ε Ceti and π Ceti form the *Udḥī al-Naʿām* "the nesting place of the ostriches"; the numerous small stars surrounding this group constitute *al-Ḳayḍ* "the clutch [of the ostriches]". Between α *Eridani* and α *Piscis australis*, the numerous small stars are called *al-Riʾāl* "the young ostriches".

al-**NABARĀWĪ**, ʿAbd Allāh b. Muḥammad al-Shāfiʿī, Egyptian jurist and grammarian. He was born and lived most of his life in Banhā, and died in 1859 in Cairo, aged about seventy. He was the author of two treatises on *ʿilm al-ʿarabiyya*, and *bayān*, and a number of commentaries: (1) on Ibn Hishām's *Ḳaṭr al-nadā* on grammar; (2) on the *Sharḥ al-khaṭīb al-Shirbīnī, al-Iḳnāʿ fī ḥall alfāẓ Abī Shudjāʿ* on *fiḳh*, Būlāḳ 1289/1872; (3) on al-Suyūṭī's *Tafsīr al-Djalālayn*, entitled *Ḳurrat al-ʿayn wa-nuzhat al-fuʾād*; (4) on the *Sharḥ al-Shabshīrī li 'l-arbaʿīn* of al-Nawawī, entitled *ʿArūs al-afrāḥ* on *ḥadīth*, Būlāḳ 1291/1874; (5) on the *Sharḥ al-Sibṭ ʿalā 'l-manẓūma al-raḥbiyya* entitled *Farāʾid al-farāʾid al-durriyya*, Cairo 1293/1876; and (6) on Ibn ʿAḳīl's *Sharḥ al-Alfiyya*.

Bibliography: Sarkīs, ii, 1837; Brockelmann S I, 684, S II, 180[6n] (who calls him an-Nabrāwī); ʿUmar Riḍā Kaḥḥāla, *Muʿdjam al-muʾallifīn*, Beirut n.d., vi, 142; Khayr al-Dīn al-Ziriklī, *Aʿlām*, Beirut 1979, iv, 131-2. (P.C. Sadgrove)

NABĀT (a.), plants. Mediaeval Islamic interest in plants may roughly be divided into four categories: (a) philological-literary; (b) practical; (c) theoretical-philosophical; and (d) general.

(a) Philological-literary. Bedouin knowledge of desert life included that of desert vegetation, and this found its way into Bedouin poetry. The *nasīb* and *raḥīl* parts of the *ḳaṣīda* contain numerous references to plants, shrubs and trees (e.g. the mention of *ayhuḳān* (wild rocket) and tamarisk in Labīd's *Muʿallaḳa*). A certain amount of botanical lore is also found in proverbs, such as "whiter than truffles"; "like the showering of rain on the *ʿarfadj*". Further, the Ḳurʾān mentions a number of plants, like the lotus (sūra LIII, 14); *yaqṭīn*, probably a kind of Cucurbitacea (XXXVII, 144-6); the olive tree (XXIV, 35); and the date-palm (XIX, 25).

This material found its way into the works of the early lexicographers, who often devoted complete monographs to plants such as the vine and the date palm. Many of those early philological works are lost, such as that of Abū ʿAmr Isḥāḳ b. Mirār al-Shaybānī (d. *ca.* 205/820); al-Kilābī (d. *ca.* 204/820); Ibn al-Aʿrābī (d. 231/844); al-Bāhilī (d. 231/845); and Ibn as-Sikkīt (d. 243/857). Their work, however, is extensively quoted in later works, among others by Abū Ḥanīfa al-Dīnawarī and Ibn Sīda. Well-known in this field is al-Aṣmaʿī [*q.v.*], who wrote a—in its present version probably incomplete, cf. the quotations in Abū Ḥanīfa al-Dīnawarī—*K. al-Nabāt wa 'l-shadjar*, ed. A. Haffner, Beirut 1899; also in Haffner and L. Cheikho, *Dix traités de philologie arabe, 2e ed. revue et corrigée*, Beirut 1914, 17-62. Two chapters on plants are found in the lexicological work of Abū ʿUbayd al-Harawī, *K. al-Gharīb al-muṣannaf*: ch. 12, on trees; ch. 14, on the date palm (ed. Ramadan Abd el-Tawab, diss. Munich 1962, unpubl.). Abū Ḥātim as-Sidjistānī (d. *ca.* 250/864 [*q.v.*]) wrote several monographs on different species, among them one on the date palm (ed. Bartolomeo Lagumina, *Il libro della Palma di 'Abu Hatim as-Sigistani*, in *Atti R. Acc. Lincei*, cclxxxvii [1890], Ser. IV Mem. Cl. di sc. mor., viii/1, Rome 1891, 5-41). Abū Ḥanīfa al-Dīnawarī [*q.v.*] wrote a *Kitāb al-Nabāt* characterised as "the most comprehensive and methodically most superior work of this philologically-orientated botany" (Ullmann, *Nat.*, 66). His information is based on older written sources, on oral information from Bedouins, and, occasionally, on personal observation. The book consisted of two sections, one being an alphabetical inventory of plant names (and thus the first alphabetically-ordered specialised dictionary), the second one containing monographs on plants used for specific practical purposes (kindling; dyeing; bow-making); there also is a very interesting chapter on mushrooms "and similar plants" (to the latter belong the parasitic broomrapes (*Balanophoraceae*)). The chapter (included in Lewin's edition, see below) gives important information on the gathering, use, and growth of a number of mushrooms. Abū Ḥanīfa's work was long considered lost, but subsequently parts of it were discovered in different libraries. Together with the quotations extracted from later authors, they led to several partial editions: B. Lewin, *The Book of Plants of Abū Ḥanīfa ad-Dīnāwarī, Part of the alphabetical section (alif-zāy). Edited from the unique MS. in the Library of the University of Istanbul, with an introduction, notes, indices, and a vocabulary of selected words*, Uppsala-Wiesbaden 1953; idem, *The Book of Plants. Part of the monograph section*, Wiesbaden 1974; and Muhammad Hamidullah, *Le dictionnaire botanique d'Abū Ḥanīfa ad-Dīnawarī (Kitāb an-Nabāt, de sīn à yāʾ) reconstitué d'après les citations des ouvrages postérieurs*, Cairo 1973. The contents and sources of al-Dīnawarī's book are discussed in T. Bauer, *Das Pflanzenbuch des Abū Ḥanīfa ad-Dīnāwarī*, Wiesbaden 1988. The author observes that Abū Ḥanīfa had in mind a scope far beyond a mere botanical dictionary: he intended to describe all the aspects of Bedouin life which had a botanical component. The book also includes a survey of the complicated textual history of the *K. al-Nabāt*. Ibn Sīdā (d. 458/1066) dealt with plants extensively in his *K. al-Mukhaṣṣaṣ*, Cairo 1316-21, 17 vols. The botanical section starts at the end of the 10th volume and goes on till the beginning of the 12th volume.

To eliminate doubt about the correct meaning of a botanical term, the philologists describe the plant, in-

cluding the names of its different parts as well as the synonyms which refer to it, among these the name which the plant carries during its different stages of growth. Literary sources, especially Bedouin poets, are quoted extensively.

As for systematics, there is no attempt in our modern sense; such classifications as are made serve to arrange the material in a more or less accessible way. Here, all kinds of different systems may be encountered, ranging from the simple alphabetical order to divisions according to practical use; divisions in trees, flowers, and garden vegetables; in trees (*s͟had͟jar*, including shrubs) and plants, with a further subdivision of the latter group; trees may also be subdivided according to the edible qualities of the skins and kernels of their fruit, as by al-Nuwayrī (*Nihāya*, Cairo ed., ii, Contents). Given this approach, no systematic description which took into account a set number of unambiguous characteristics was developed. Greek influence can be discerned in occasional attempts at binary nomenclature, such as for instance the adding of *barrī* to wild varieties.

Extensive references to plants and flowers are not only found in the Bedouin poetry, as earlier mentioned, but also in later poetry, especially in the genres called *rawḍiyyāt, rabīʿiyyāt* and *zahriyyāt*, i.e. garden, spring and flower poems. See H. Pérès, *La poésie andalouse en arabe classique, au XI^e siècle*, Paris 1953, 161-201; G. Schoeler, *Arabische Naturdichtung. Die zahrīyāt, rabīʿīyāt und rauḍīyāt von ihren Anfängen bis aṣ-Ṣanawbarī. Eine gattungs-, motiv-, und stilgeschichtliche Untersuchung*, Beirut 1974.

(b) Practical. This category includes:

1. Agriculture (*filāḥa* [*q.v.*]). There are a number of works on this subject in Arabic (see Ullmann, *Nat.*, 427-51, Sezgin, *GAS*, iv, 303-46), one of them being the much-discussed, so-called *Nabataean agriculture* of Ibn Waḥs͟hiyya [*q.v.*]. The discussion, which has gone on for more than a century, is summarised in Sezgin, *op. cit.*, 318-29. Muslim Spain was especially proficient in this field. Latin sources in some form may have been accessible in this region (Sezgin, *op. cit.*, 108-9). A description of the agricultural situation in Islamic Spain is given by Th. F. Glick, *Islamic and Christian Spain in the early Middle Ages, comparative perspectives on social and cultural formation*, Princeton 1979, 51-109. The material provided by the authors in this field is to a large extent included in later compilations such as Ibn al-ʿAwwām's [see FILĀḤĀ. II] *K. al-filāḥā*, which offers descriptions of all the economically-exploited plants (including roses and other garden plants), as well as instructions about their culture, such as preparing the soil, planting, watering; different techniques of grafting, including a method of cutting a plant off at the root, leaving intact the root system, and then embedding the seed of a plant of a different species in the remaining stump; avoiding certain combinations of plants which tended to have a damaging effect on each other, such as palms and junipers, and combining others that furthered each other's growth.

A certain overlap between the literary and the practical genres is found in texts such as a *maḳāma* on palm-protection (*s͟hirāḥa*), written *ca.* 1800 in Ḥaḍramawt, edited by R.B. Serjeant, in *JNES*, xl (1981), 307-22, and Ibn Luyūn's (d. 750/1349) *urd͟jūza* on agriculture, *K. Ibdāʾ al-malāḥa wa-inhāʾ al-rad͟jāḥa fī uṣūl ṣināʿat al-filāḥa*, ed. and tr. J. Eguaras, Granada 1975.

2. Pharmacology. Islamic pharmacology [see ADWIYA], of which knowledge of plants was an important part, largely worked along the lines set out by Dioscorides (1st century B.C. [see DIYŪSKŪRĪDĪS]), whose *Materia medica* was translated into Arabic (via Syriac) in the 3rd/9th century. Several illustrated copies of this translation are known to have existed; on the (mainly botanical) illustrations of the copy in the Leiden University Library see M.M. Sadek, *The Leiden Dioscorides. A study of an Arabic illuminated manuscript of Dioscorides'* De Materia Medica *with special reference to the Vienna and Pierpont Morgan Codices*, diss. New York 1969, unpubl.; idem, *The Arabic* Materia Medica *of Dioscorides*, Quebec City 1983. See also A. Dietrich (ed.), *Dioscurides triumphans: ein anonymer arabischer Kommentar (Ende 12. Jahrh. n. Chr.) zur Materia medica: arabischer Text nebst kommentierter deutscher Übersetzung*, 2 vols., Göttingen 1988. The Persian tradition was also of some importance in pharmacology, as can be inferred from the Persian names of a number of plants and drugs (see Ullmann, *Nat.*, 88-9).

For a survey of the field, see Ullmann, *Med.*, 257-320, and Sezgin, *GAS*, iv; also M. Levey, *Early Arabic pharmacology, an introduction based on ancient and medieval sources*, Leiden 1973 (the subject is treated rather superficially, but the work contains illustrative translations from source material). A recent study of a pharmacological text, the *Aḳrābād͟hīn* of al-Ḳalānisī (*ca.* 1200), was made by J. Feldmann (1986, Beiruter Texte und Studien 35). Among the mediaeval authors, special mention should be made of al-G͟hāfiḳī [*q.v.* in Supplement] (*flor.* probably in the first half of the 6th/12th century), *K. al-Adwiya al-mufrada*, and of Ibn al-Bayṭār (d. 646/1248 [*q.v.*]), *al-D͟jāmiʿ al-kabīr li-ḳuwā al-adwiya wa 'l-ag͟hd͟hiya*, who are considered as the great authorities in this field; their plant descriptions quote intensively from older sources. For botanical descriptions, al-Bīrūnī's [*q.v.*] *K. al-Ṣaydana* deserves attention. It contains elaborate plant descriptions in which the author often refers to Dioscorides, but also gives many details of his own. The latter include, for instance, botanical details such as the question whether flowering is axillary or otherwise; shape, colour and structure of flowers, leaves, tubers and roots; smell and taste; manner of growing; habitat; comparison with other plants which may easily be confused with them; etc.

Modern pharmacological tradition still remains to a large extent continuous with the past. Modern herbalists consult the handbooks of the mediaeval authorities, even though using the results of modern chemistry to give a scientific basis to the traditional practices. A number of studies on herbalists' practices in modern Middle Eastern and North African countries have recently appeared, which include inventories of plants used by these herbalists. These studies have appeared in *Studia Islamica* (Tokyo University), no. 2 (1976), Miki, *Index of the Arab herbalists' materials*; no. 8 (1979), Miki, Honda, Ahmed, *Herb drugs and herbalists in the Arab Middle East*; no. 19 (1982), Miki, Honda, Bellakhdar, *Herb drugs and herbalists in the Maghreb*; no. 27 (1986), Baser, Honda, Miki, *Herb drugs and herbalists in Turkey*, and no. 28 (1986) Ushmanghani, Honda, Miki, *Herb drugs and herbalists in Pakistan*. See further H. Venzlaff, *Der marokkanische Drogenhandler und seine Ware. Beitrag zur Terminologie und volkstümlichern Gebrauch traditioneller arabischer Materia medica*, Wiesbaden 1977 (31-145 about plants). Pharmacological literature, too, gives many interesting details about plants, but no fixed set of characteristics is described. The authors generally add the quality of the plant according to humoral principles (dry, cold) and mention its medical use. In this genre of works illuminated mss. such as the above-mentioned

Dioscorides mss. are found. Some information about the actual practice of botanical illustration is given by Ibn Abī Uṣaybiʿa, *ʿUyūn*, ed. Wüstenfeld, ii, 219, who reports the botanical observations of al-Ṣūrī (7th/13th century, a pupil of ʿAbd al-Laṭīf al-Bag͟hdādī). When going out botanising, al-Ṣūrī took along a painter, whom he made draw the plants in their different stages of development; he also registered such details as colour and size of leaves, branches and roots. The attitude which some Islamic scholars took towards botanical illustrations (lawful) as opposed to zoological ones (unlawful) is noteworthy; about a remark of this kind in al-ʿUmarī's (d. 749/1349) *Mamālik al-abṣār*, which has only botanical, not zoological, illustrations, see B. Farès, *Un herbier arabe illustré du XIV^e siècle*, in *Archaeologica orientalia in memoriam E. Herzfeld*, New York 1952, 86.

(c) Philosophical-theoretical. A very interesting part of mediaeval Islamic botany is found in the work of scholars who discuss botanical problems of a more general nature. Such discussions may also be found in a theological context, where they serve as proof of God's wisdom, for instance in al-G͟hazālī's (d. 505/1111) *al-Ḥikma fī 'l-mak͟hlūḳāt* (ed. Cairo 1934), in which he describes creation, from the heavens down to the plants (not the minerals, as one might expect). Another example is Ibn al-Nafīs's minute description of how the different parts of plants develop from the seed (*al-Risāla al-Kāmiliyya/Theologus Autodidacticus*, ed. and tr. M. Meyerhof and J. Schacht, Oxford 1968, 42). Most important, however, in this respect are the natural philosophers, who discuss subjects such as the place of plants on the scale of living beings (transitional forms between the animal and the vegetable worlds, between the vegetable and mineral world, are discussed); the concept of species, and the measure in which species were fixed or variable; reproduction, including spontaneous and artificial generation, the latter belonging to the field of magic and alchemy; the measure of sensibility of plants; and the function of their different parts.

These topics were already discussed by the Greek philosophers. Theophrastus's *De causis plantarum* was reportedly translated by Ibn Bakkūs͟h in the 4th/10th century, but the translation—if it was ever completed—seems to have disappeared at an early date; no quotations from it are known. Of Aristotle's lost book on plants, the Arabic tradition, just as the older Middle Eastern one, only possessed Nicolaus Damascenus's (b. 40 B.C.) commentary (also lost in the original, but preserved in Syriac and in subsequent Arabic, Hebrew, Latin and even Byzantine Greek (made from the Latin) versions). The Semitico-Latin translations of Nicolaus were published by H.J. Drossaart Lulofs and E.L.J. Poortman, *Nicolaus Damascenus* De Plantis. *Five translations* (Verhandelingen der Koninklijke Nederlandse Akademie van Wetenschappen, afd. Letterkunde, Nieuwe Reeks deel 139, Amsterdam etc. 1989). In this commentary parts of Theophrastus have been incorporated. It is noteworthy that the mediaeval Arabic version contains elements which are alien to Aristotle's thought, such as a reference to astrological influence on the growth of plants (ed. Drossaart Lulofs, 184). It had considerable influence on Arabic philosophers such as the Ik͟hwān al-Ṣafāʾ, Ibn Sīnā, Ibn Bād͟jd͟ja and Ibn al-Ṭayyib [*q.vv.*]; the latter wrote a compendium which closely follows the text (included in Drossaart Lulofs' ed.). The work is also quoted in the botanical section of ʿAbd al-Laṭīf al-Bag͟hdādī's *K. al-Ifāda*, which contains an interesting description of the banana tree.

Special attention should be paid to the concepts of natural philosophy found in the work of Balīnūs (Pseudo-Apollonios of Tyana; 1st century A.D.; see BALĪNŪS). Book IV of his *K. Sirr al-k͟haliḳa* or *K. al-ʿIlal* (ed. Weisser, Aleppo 1979; tr. idem, *Das* Buch über das Geheimnis der Schöpfung *von Pseudo-Apollonios von Tyana*, Berlin-New York 1980) deals with plants. It gives a theory for the development of the vegetable kingdom, based on the author's theory of the four elements. Noteworthy is his insistence on the importance of the airy element in the generation of plants, whereas Aristotle, according to Nicolaus (ed. Drossaart Lulofs, 172) admits here only earthy, watery and fiery powers. Balīnūs also discusses the intermediate forms: corals are of mineral substance, but have a vegetable spirit. A parallel is drawn between the five main divisions of the vegetable kingdom (grasses; aromatic plants; corn; large, non-fruiting trees; fruiting trees) and a similar division in the animal kingdom. The dependence of D͟jābir b. Ḥayyān's [*q.v.*] natural philosophy on Balīnūs has been analysed by Paul Kraus (*Jābir ibn Ḥayyān*, ii, Cairo 1943, 270-303).

The theory of these philosophers concerning the generation and the diversity of plants is largely based on some form of elemental theory, sometimes mixed with astrological influences; from here to the artificial production of plants (not to be confused with artificial pollination, as was practised in date-palm culture), as described in the D͟jābir b. Ḥayyān corpus (in the *K. al-Tad͟jmīʿ*, see Kraus, *Jābir ibn Ḥayyān*, i, *Textes choisis*, Paris-Cairo 1935, 380 ff.) is but a step. In this context, Ibn Waḥshiyya's strange recipes (see Ullmann, *Nat.*, 76) are not as outlandish as they may seem at first sight, and do in fact fit in with generally accepted ideas about the possible artificial generation of, for instance, banana trees (ʿAbd al-Laṭīf al-Bag͟hdādī, *Ifāda*, Ibn al-ʿAwwām, *Filāḥa*). Related to this is the question of the variability of species (denied by the Ik͟hwān al-Ṣafāʾ (Ullmann, *Nat.*, 77) but considered possible by Ibn Sīnā and Ibn Bād͟jd͟ja (Ullmann, *Nat.*, 80 n. 5); Ibn Sīnā points out that the variation of species depends partly on geographical location: cabbages, transported into different regions, change their appearance (*Ḥayawān*, ed. Cairo 1970, 404); it also depends on geographical location whether a palm shoot develops into a date- or a coconut-palm.

(d) General. This category includes the botanical information offered by geographers, who describe the flora, especially the commercially relevant plants, of the countries they are dealing with (material exhaustively collected by A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du 11e siècle. III. Le milieu naturel*, Paris 1980, 391-483). Their information has occasionally found its way even into fictional travel literature: the fifth voyage of Sindbad the Sailor contains a description of the pepper plant, which has a large leaf protecting the flower against sunshine and rain, and bends aside when protection is no longer needed. The information found in the botanical sections of the encyclopaedic works, abundant in the period after 1200, is also of a general nature. These sections compile literary-philological as well as practical information from older sources and thus sometimes preserve material that is otherwise lost. An interesting botanical section is found, for instance, in Ibn al-At͟hīr's (7th/13th century; this is an otherwise unknown Ibn al-At͟hīr) *Tuḥfat al-ʿad͟jāʾib* (for mss., see Ullmann, *Nat.*, 37; two more mss. in Cairo, Dār al-Kutub).

Identification. It is often extremely difficult to discover the botanical identity of plants mentioned in

mediaeval sources. Of invaluable help in this respect is I. Löw, *Die Flora der Juden*, i-iv, Vienna-Leipzig 1924-34, repr. Hildesheim 1967; idem, *Aramäische Pflanzennamen*, Leipzig 1881, repr. Hildesheim 1971. Both works take into account Arabic source material. The modern dictionary of E. Ghaleb, *Dictionnaire des sciences de la nature*, 3 vols., Beirut 1965-6, is useful but should be used with caution in respect to mediaeval sources. M.M. al-Dumyāṭī has gathered the plant names from the *Tādj al-ʿarūs* into a small dictionary which also provides English and scientific names (*Muʿdjam asmāʾ al-nabāt al-wārida fī Tādj al-ʿarūs li 'l-Zabīdī*, Cairo 1965). Muḥ. Ḥasan Āl Yāsīn's *Muʿdjam al-nabāt wa 'l-zirāʿa*, Baghdād 1986, collects the botanical material from 58 classical sources, but without giving modern equivalents of plant names. There is also Ismāʿīl Zāhidī, *Wāzha-nāma-yi giyāhī. Nām-i ʿilmī-yi giyāhān*, Tehran 1337/1958, giving English, French, German, Arabic and Persian equivalents.

Bibliography: Given in the article. An exhaustive bibliography of literature before 1970 is found in the surveys of M. Ullmann, *Die Medizin im Islam*, Leiden 1970 (257-321 on pharmacology); idem, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972 (62-95, 427-51). For the period of the first four centuries of Islam, see the relevant volumes of F. Sezgin's *GAS*, esp. iii, *Medizin, Pharmazie*, and iv, *Botanik, Agrikultur*. In the field of modern botany, a large number of studies on North Africa and the Middle East have appeared. Floras of the different regions are published both by Western and local botanical institutions, e.g. V. and G. Tackholm and M. Drar, *Flora of Egypt*, Cairo 1941-69; V. Tackholm, *Students' flora of Egypt*, 2nd ed. Cairo 1974; A. Parsa, *Flore de l'Iran*, Tehran 1951-60 (includes an index of local names); R. Maire, *Flore de l'Afrique du Nord*, Paris 1952-67; K.-H. Rechinger, *Flora Iranica*, Graz 1963- [in Latin]; P. Davis *et alii*, *Flora of Turkey and the East Aegean Islands*, Edinburgh 1965-88, 10 vols.; E. Nasir and S.I. Ali, *Flora of West Pakistan*, Rawalpindi 1970- ; D. Heller and C. C. Heyn, *Conspectus florae orientalis*, Leiden 1980- ; S.I. Ali and S.M.H. Jafri, *Flora of Libya*, Tripoli 1975- (145 families published so far); M. Zohary, *Flora Palaestina*, Jerusalem 1966-86 (very good illustrations); J. Léonard, *Contribution à l'étude de la flore et de la végétation des déserts d'Iran*, Jardin Botanique National de Belgique, 1981- . For lexicological aspects, see I. Hauenschild, *Türksprachige Volksnamen für Kräuter und Stauden mit den deutschen, englischen und russischen Bezeichnungen*, Wiesbaden 1989. Valuable information on the vegetation of Middle Eastern countries can also be found in the *Beihefte* of the Tübinger Atlas des Vorderen Orients. Of Reihe A (*Naturwissenschaften*), Wiesbaden 1977- , vols. i-iii, v-viii, x-xi, xv, xx, xxii, xxiv-xxv, xxx deal with vegetation aspects. (Remke Kruk)

NABATAEANS [see nabaṭ]

NABAṬ or Nabīṭ (coll.), Nabaṭī (sing.), Anbāṭ (pl.), the name given by the Arabs to the Nabataeans, amongst whom they distinguished the Nabaṭ al-Sham (i.e. of Syria), installed at Petra towards the end of the Hellenistic imperial era and at the beginning of the Roman one, and the Nabaṭ al-ʿIrāḳ (i.e. of ʿIrāḳ).

[The Editors of the *EI* have decided to retain unchanged the following two articles, despite the inevitable overlappings in their present forms.]

1. The Nabaṭ al-Shām. The Arabic term, occurring in Aramaic inscriptions, *nbṭ/nbṭw*, appears very often in the royal titulature of the Nabataeans of Petra in the expression "king of Nabataea" (*mlk nbṭw*). In other contexts, it is clear that *nbṭ* represents an ethnic designation, rather than a geographical region. At Petra, it appears also as a anthroponym, indicating that it probably represents an eponym, which Greek transcriptions suggest was vocalised as *Nabaṭu*. The root **nbṭ* is well known from ancient Semitic languages, attested in both Akkadian *nabāṭu* ("light up, shine, radiate") and in Amorite ("to shine, appear, look") for the illumination of planetary bodies, metallic objects or the human face. In Biblical and post-Biblical Hebrew, *nbṭ* appears almost entirely in *Hiphʿil* with the meaning "to look at, gaze". Nebaṭ is also the name of the father of Jeroboam I, the first king of Israel (I Kings xi, 26). In pre-Islamic Arabic, *nbṭ* is attested as a personal name in Safaitic, Minaic and Sabaic. In the South Arabian onomasticon, it appears also with theophoric elements and in other associations: *nbṭʾl*, *nbṭʿly*, *nbṭkrb*, *nbṭm* and *nbṭyfʿ* are attested in Minaic, Qatabanian or Sabaic. The verb *nbṭ* also occurs in Sabaic texts with the meaning "to dig [a well] down to water"; cf. Arabic *nabaṭa* "to gush out".

The relation of nbṭ *to* nbyt. It remains disputed whether the "Nabataeans" (*nbṭw*) are to be equated with the Aramaean tribe of *Nabayat/Nabaiati* known from Neo-Assyrian cuneiform texts from the reign of Assurbanipal (668-627 B.C.) amd the *Nᵉbāyôt* of the Hebrew Bible, who appear in the biblical geneaologies as the eldest son of Ishmael and brother of Qedar (Gen. xxv, 13). The correspondence of the terms is indicated by the Jewish Targums (for Gen. xxv, 13; I Chron. i, 29; Isa. lx, 7; Ezek. xxvii, 21), and was widely accepted among scholars until J. Starcky argued that the transformation of a *taw* to a *ṭeth* and the loss of the *yodh* made any relationship of the terms highly unlikely. Discovery of several pre-Islamic Thamudic texts on Djabal Ghunaym near Taymāʾ [*q.v.*] that mention a "war against Nabayāt (*ḍr nbyt*)" was considered the *coup-de-grâce* to the theory that the same people were involved, since the Arabic spelling contained neither a *yodh* nor a *ṭeth*. As a result, it was assumed that the *-ati/-ôt/-at* ending of NBYT represented an inflectional suffix. This linguistic argument is not as convincing as it may appear, since the Semitic root *NBY is poorly attested in pre-Islamic Arabic, whereas *NBT is fairly common. It then remains possible that the *y* is not part of the root and has another linguistic explanation. As for the transformation of a final *t* to a *ṭ*, this shift is attested elsewhere in Semitic languages and provides no real obstacle in equating the terms. Nor is Starcky's argument persuasive that the Nabayat/Nᵉbayot were Aramaeans, not Arabs. The names of Natnu and his son Nuḫuru, the kings of the Nebayat in the Assyrian chronicles, are both well represented in the Pre-Islamic Arabic onomasticon.

Of some importance for deciding this issue is the vexed question of the homeland of the Nabataeans. Starcky assumed an origin in South Arabia, but neither the Nabataean pantheon nor their material culture contains any vestiges of South Arabia as their native land. In contrast, Knauf argues the Nabaṭu originally constituted one of the Arab clans of the Qedarite tribal confederation that dominated North Arabia in the 8th-5th centuries B.C. During this time, it is argued, they formed part of the indigenous population of Edom, whereas the Nabayat or Nebayot are placed in the region of Ḥāʾil [*q.v.*]. But other possibilities seem more likely. Of importance in this regard is Diem's observation that the Arabic orthography contained in the Nabataean onomasticon

employs that used in Aramaic of the Neo-Assyrian and Achaemenid Persian period, such as the *-w* suffix in *nbṭw*, which represents the *-u* of the nominative case. These elements embedded in the Arabic dialect of the Nabataeans suggest they arose in the Syrian-Mesopotamian sphere, providing credence for Milik's view that the Nabataeans migrated from the area of the al-Hufūf [*q.v.*] district of north-east Arabia. If this is the case, the equation of the Nabayat with the Nabaṭ or Nabataeans remains feasible, in spite of the linguistic difficulties.

Although no author of a Nabataean Aramaic inscription uses the political or ethnic term *nbṭ* as a self-designation, such references are contained in other Aramaic and Arabic dialects, as well as in Greek. At Palmyra in A.D. 132, a cavalryman probably serving in the Palmyrene cavalry stationed at Ana on the Euphrates, designates himself as "the Nabataean, the Rawāḥaean" (*nbṭyʾ rwḥy*[ʾ], *Corpus Inscriptionum Semiticarum*, ii, 3973 = *Répertoire d'épigraphie sémitique*, no. 285). The tribe of Rawāḥ is known from Safaitic (*CIS*, v, 5162) and Nabataean (*RES*, no. 2065) texts from the vicinity of Umm al-Djimāl in the southern Ḥawrān. At Nemāra, a cavalryman named Mushammar from the III Cyrenaica legion identifies himself as a descendant from the *geno(s) Nabas*, *i.e.* a Nabataean (*Inscriptiones Graecae ad res Romanas pertinentes*, iii, 1257). Finally, a Safaitic text from the *ḥarra* in Jordan indicates he is "Dārib b. Ḳayn the Nabataean" (V. Clark, *A study of new Safaitic inscriptions from Jordan*, Ph.D. diss., Melbourne, unpubl., no.661, *hnbṭy*). All of these texts are from the northern frontier of the Nabataean realm and date to the period after the annexation of the Nabataean kingdom by Rome in A.D. 106. Other references to the NBṬ are from South Arabia and more difficult to interpret. A Sabaean text from Nadjrān [*q.v.*] records a confrontation at a place named NBṬ (Philby-Tritton) or with the people called NBṬ (Beeston, Jamme). Another Sabaean text is dated to the "year 316 (of the era) of NBṬ" (*RES* 4196), one of several co-existing chronological computations used in the region. If the beginning of this era is set in the 1st century A.D., approximately in A.D. 62 (± 15 years) according to J. Pirenne, this text is to be dated to the late 4th century A.D. Just before the dawn of Islam, "Nabataean" merchants (the *nabīṭ* or *anbāṭ*) from Syria were active in Medina (al-Wāḳidī, *Maghāzī*, iii, 989, 1,051; Ibn Hishām, 911) where there was a *sūḳ al-nabaṭ* (al-Waḳidī, *Maghāzī*, i, 395). But the *al-anbāṭ* or *an-nabaṭ* of Syria and ʿIrāḳ of the same period appear to be Aramaic-speaking "soil-tillers" and "hired workers", not the descendants of the Nabataeans (as Nöldeke realised) (see 2. below).

(D.F. Graf)

2. The Nabaṭ al-ʿIrāḳ.

In Arabic, the root *n-b-ṭ* supplies various meanings, including the following: to gush forth (in reference to water), to dig to obtain water (form IV), to extract (products from the land); to explain, draw a conclusion from a text, from a law, etc. (form X), while in Semitic (Hebrew, Aramaic, Akkadian), it signifies "to shine" (moon, stars), "to make resplendent" (in connection with the god Nabū). Cf. *LA*, ed. Dār Bayrut, iii, 568; W. von Soden, *Akkadisches Handwörterbuch*, ii, 697; *The Assyrian dictionary*, Chicago 1980, ii/1, 22-4.

As an ethnic term, Nabaṭū denotes two groups of different origin: in an Aramaic text of Ḥegrā (*CIS*, ii, 199; other references, see G. Cantineau, *Le nabaṭéen*, ii, 123), Nabaṭu is named alongside Shalamu, the Salamians, whom Stephen of Byzantium associates with the Nabataeans (cf. J. Starcky, *Pétra et les Nabaṭéens*, in Pirot, *Dictionnaire de la Bible*, suppl. vii, Paris 1966, cols. 886-1018, where an excellent study of the question is to be found). For relations between the Nabaṭaeans and the Arab tribes of the North, cf. D.F. Graf, *Rome and the Saracens: reassessing the nomadic menace*, in T. Fahd *et alii*, *L'Arabie préislamique et son environnement historique et culturel*, Leiden 1989, 241-400.

In an Akkadian text, cited in Luckenbill, *Ancient records*, ii, no. 274, Nabaṭu denotes an "Aramaean" tribe living in Mesopotamia (cf. J. Starcky, *loc. cit.*, col. 903).

Numerous explanations have been suggested for this name (cf. E.C. Broome, *Nabiati, Nebaioth and the Nabataeans: the linguistic problem*, in *JSS*, xviii [1973], 1-16), but none of them covers both the areas involved. In fact, what we have here are homonyms referring to two groups, one of them inhabiting northern Arabia and the other Mesopotamia. The former group is of Arab origin, as is attested by the personal names of its kings (cd. Th. Nöldeke, *Die Namen der arabischen Nation*

und Sprache, in *ZDMG*, xxv [1871], 122-3; an interpretation shared by J. Starcky, *loc. cit.*, but *contra* E.M. Quatremère, *Mémoire sur les Nabatéens*, in *JA*, xv (1835), 5-55, 97-137, 209-271, who claimed that these people were Aramaeans; this view was repeated by Glaser, *Skizze*, ii; Hommel, *Die altismaelitische Überlieferung*, 202). These Arabs spoke a western Aramaic dialect very close to what was to become the Arabic of the earliest inscriptions. Imperial Aramaic, which had become the language of Persia, was still, at the end of the Greco-Roman period, the official language of the Near and Middle East.

The second group is of Aramaean origin, and spoke an eastern Aramaic dialect, close to Mandaean, from which Syriac was derived, the language in which the *K. al-Filāḥa al-nabaṭiyya* was composed, i.e., *al-suryāniyya al-ḳadīma*, as is stated by the translator Ibn Waḥshiyya [*q.v.*].

The Arabs distinguish between these two groups: they called the first Nabaṭ al-Shām and the second Nabaṭ al-ʿIrāḳ. On the first, we find in Yāḳūt, *Muʿdjam*, s.vv. Salʿ and Wādī Mūsā, the two names designating Petra and its valley (cf. T. Fahd, *Le panthéon de l'Arabie centrale à la veille de l'hégire*, Paris 1968, 218, n. 5), without any reference to the Nabaṭaeans. Dusares (Dhu 'l-Sharā), a god venerated by the Nabataeans and the Dawsites, was part of the Meccan pantheon (on this divinity, see Fahd, *Le panthéon*, 71-5); Yāḳūt mentions him (s.v. Sharā) without any reference to the Nabataeans. The only information which seems to refer to Nabataea, then under Byzantine domination, is the assertion that the descendants of Ḳuṣayy [*q.v.*], the reformer of the cult at Mecca and the rallier of the Ḳurayshites, were Nabataeans (*kawm mutanabbiṭūn*; cf. T. Fahd, *La divination arabe*, Paris 1987, 121 ff.). In the long article which the author of the *LA* devotes to the root *n-b-ṭ*, there is a single reference to the Nabaṭ al-Shām, of whom Ibn Abī Awfā says: "We used to pay the Nabataeans (*nabīṭ*) of Shām in advance for their merchandise".

On the second, al-Masʿūdī, *Murūdj* (ii, 93 = § 520), speaking of the Assyrian kings (*aththūriyyūn*) says that "the inhabitants of Nineveh (were) of those whom we have called Nabataeans (*Nabīṭ*) and Syriac-speaking people (*Suryāniyyūn*); they are", he emphasises, "of the same race and they speak the same language". Speaking of the kings of Babylon (ii, 95 ff. = §§ 522 ff.), he says: "These are the Nabataeans (*Nabaṭ*) and others, known by the name of Chaldaeans (*Kaldāniyyun*)... It is they," he adds, "who erected the buildings, founded the cities, established the administrative divisions, dug the canals, planted the trees, sank the wells, worked the land" (ii, 100 = § 527). Further on, speaking of the Seleucids (*Mulūk al-Ṭawāʾif*), he informs us that "the Ardawān (the Artabanids, last kings of the Parthian dynasty) were kings of the Nabataeans (*mulūk al-Nabaṭ*); they reigned in ʿIrāḳ, from the vicinity of Ḳaṣr Ibn Hubayra, Saḳī 'l-Furāt, al-Djāmiʿayn, Sūrā, Aḥmad Ābād and Nars, as far as Ḥinnabā and Tall Fakhār and the whole of this region" (ii, 134 = § 558). It was Ardashīr I (226-41) who killed the last Parthian, Artaban IV (in 224), in a duel on the bank of the Tigris and seized his crown (ii, 135, 161 = §§ 539, 585). Al-Ṭabarī (i, 737-8), speaking of the Ardawāniyyūn, Seleucid kings, says that "they reigned between Niffar [*q.v.*] (the ancient Nippur), in the Sawād al-ʿIrāḳ, and al-Ubulla and the fringes of the desert. They were at war with the Aramaeans who reigned in Babylonia and as far as the region of Mawṣil. These Aramaeans," he says, "are the Nabataeans of Sawād al-ʿIrāḳ".

For Ibn Khaldūn, in his *Muḳaddima*, the Nabataeans were the native inhabitants of Mesopotamia before the Islamic conquest of ʿIrāḳ (i, 7). Assyrians, Babylonians and Chaldaeans are called Nabataeans (iii, 128); they were renowned for their magical practices (iii, 125) and for their expertise in agricultural matters, an expertise recorded in the *K. al-Filāḥa al-nabaṭiyya* (iii, 120). Speaking of their language, he says that it is the writing system of the Nabataeans and the Chaldaeans (iii, 244 and 283).

This, then, is a summary of what was known by Arab historians concerning the Nabataeans. Besides the confusion between Nabataeans of ʿIrāḳ and Nabataeans of Shām, there was the confusion between Assyrians, Aramaeans, Ardawānites, Djarāmiḳa and Ninevites (Aththūrians), who are, according to al-Masʿūdī (*K. al-Tanbīh*, tr. Carra de Vaux, Paris 1897, 131 ff.) Chaldaean tribes. He speaks of Nabataean Chaldaeans (127), of Aramaean Nabataeans (114) and of Nabataeans or Syrians (265), while acknowledging the antiquity of the Nabataeans who dominated Babylonia following the period of the legendary Nimrūd or Namrūd [*q.v.*] (59). He associates them with the Persians in the divisions of inhabited land (49) and makes them their neighbours, as were the Greeks and the Romans (247). It was, in short, a powerful nation which ruled ʿIrāḳ in the distant past and whose period of domination was brought to an end by the Sāsānids (152).

Of this nation, certain reminiscences survive in folkloristic Arabic accounts. The author of the *LA*, mentioned above, collected several of them. For the Arabs, the Nabīṭ, Nabaṭ or Anbāṭ constitute a nation (*djīl*) inhabiting the Sawād, the Sawād al-ʿIrāḳ, i.e., the cultivated plains of Lower Mesopotamia, and the marshes between the two ʿIrāḳs, i.e., the two cities of Baṣra and Kufā. The denomination of Nabaṭ does not necessarily indicate an ethnic origin; this may be deduced from the following saying of Ayyūb b. al-Ḳirriyya, "The inhabitants of ʿUmān are "Nabaṭised" (*istanbaṭū*) Arabs and those of al-Baḥrayn are "Arabised" (*istaʿrabū*) Nabataeans (*Nabīṭ*). To become "Nabataean" was to practise agriculture and everything associated with it, in particular the quest for subterranean water, as opposed to the pastoral or military life. The caliph ʿUmar b, al-Khaṭṭāb is alleged to have said, "Become "Maʿaddites" (*tamaʿdadū*) and not "Nabataeans" (*lā tastanbiṭū*), in other words, "Imitate Maʿadd [*q.v.*] and not the Nabataeans", the meaning of this being "become nomads Bedouins, and not farmers". He is furthermore supposed to have said "Do not become city-dwellers (*lā tanabbaṭū fī 'l-madāʾin*)", in other words, "Imitate the Nabataeans neither in abode, nor in sedentary living, nor in possession [of land]". Caravan trading also seems to have been one of the occupations of the Nabataeans; in fact, the remark is attributed to ʿAlī: "Whosoever enquires into our genealogy [will find that] we are Nabataeans, originally from Kūthā (Yāḳūt, iv, 488; T. Fahd, *Le panthéon*, 215; on Kūthā (the homeland of Abraham), see *ibid.* and art. s.v.). The same origin is asserted by Ibn ʿAbbās, who says: "We, the Ḳurayshites, we are Nabataeans originally from Kūthā-Rabbā", the town where Abraham was born and where the Nabataeans lived (*LA. loc. cit.*).

Regarding the expertise of the Nabataeans in matters of commerce and the exploitation of the earth, an assessment made by ʿAmr b. Maʿdī Karib, concerning Saʿd b. Abī Waḳḳāṣ, in reply to a question posed by the caliph ʿUmar, gives an impression of this: "Arab in his talents (*hibwatihi*), Nabataean in the levying of taxes (*djibwatihi*)"; meaning that he was as

skilful and as ingenious as the Nabataeans in such matters as the levying of taxes and exploitation of the land. They were, adds the author of the *LA*, "the inhabitants of ʿIrāḳ and its masters (*arbābuhā*)".

A forgotten nation, the Nabataeans of ʿIrāḳ have returned to the attention of scholarship through the efforts of orientalists who, from E.M. Quatremère, in 1835, to M. Plessner in 1929, have applied themselves to study of the *al-Filāḥa al-nabaṭiyya*, an agricultural treatise of controversial origin (for the history of this dispute, see IBN WAḤSHIYYA). The title of this compilation is not original; it was given to it by the translator, Ibn Waḥshiyya, the former title having been *K. Iflāḥ al-arḍ wa-iṣlāḥ al-zarʿ wa 'l-shadjar wa 'l-thimār wa-dafʿ al-āfāt ʿanhā* ("Book of cultivation of the land, the care of cereals, vegetables and crops, and their protection"). In the body of the text, the name Nabaṭ is used in the translator's glosses; the farmers in question are called, according to the manuscripts, Kaldāniyyūn, Kasdāniyyun or Kardāniyyūn. The first of these names was applied to nomads related to the Aramaeans, the Kaldu, who dominated Lower Mesopotamia in the mid-9th century B.C. (cf. Dupont-Sommer, *Les Araméens*, Paris 1949, 24, 73). Thus on the ethnic level, Chaldaeans and Aramaeans are neatly distinguished. There are references, in the inscriptions, to "land of Kaldu" and to "land of Aramu" (*ibid.*, 76 and *passim.*). As for Kardaeans and Kasdaeans, these are probably dialectical modifications. Ancient nomenclature, compared with what has survived, shows many examples of this kind (cf. Melid for Malaṭiya, Gurgum for Djurmuḳ; the inhabitants of the latter, the Djarāmiḳa, are frequently mentioned in the *K. al-Filāḥa*). On this point, a useful reference is *La Toponymie antique*, in *Travaux du Centre de Recherche sur le Proche-Orient et la Grèce antique*, iv, Leiden 1977).

The book is written in "the ancient Syriac language" (*al-suryāniyya al-ḳadīma*). Eastern Aramaic, which is the language in question here, was current "throughout Mesopotamia, from the mountains of Armenia to the Persian Gulf." It was established, at the outset of the Christian era, in literary texts and inscriptions, in three dialects: Judaeo-Babylonian, Mandaean and Syriac (Dupont-Sommer, *op. cit.*, 101; F. Rosenthal, *An Aramaic handbook*, Wiesbaden 1967, i, 1-2 and ii, 1-2). The basic text of the book, developed and embellished by the three compilers (Saghrīth, Yanbūshād and Ḳuthāmā) must have been written in Syriac; originally it would have consisted of long extracts, intermingled in some cases and arranged consecutively in others, from quoted *auctores*. It may be added that Syriac, the language of Edessa, an intellectual metropolis situated within the great loop of the Euphrates not far from the ancient Kharan (Ḥarrān), in a region Aramaicised since the end of the second millenium B.C., had been promoted from the status of a dialect to that of a classical language in the Church of Edessa, and later in the Christian communities of Mesopotamia and Syria. It served as the vehicle for an immense corpus of literature, most of it as yet unpublished. The origin of Syriac was in one of those "eastern" Aramaic dialects spoken by the Aramaeans of Mesopotamia.

The contents of the *Kitab al-Filāḥa* are very rich; it is comparable with that of Greek and Latin geographical writing and, on certain points, much more detailed. The author of the present article has described it at length in *Matériaux pour l'histoire d'agriculture en Irak: al-Filāḥa n-nabaṭiyya*, in *Handbuch der Orientalistik*, i, 6. 6/1, Leiden 1977, 276-377, and a critical edition in three volumes has been prepared for publication by the French Institute for Arabic Studies of Damascus.

Finally, let us glance at the religious concepts and magical data revealed in this work, in the course of long digressions. These data represent only a minute proportion of the whole, but their impact was so great throughout the Middle Ages that the *K. al-Filāḥa* was considered a treatise on magic and classified as such. An Andalusian author, Ibn al-Raḳḳām, purged it of all religious and magical references and another, the Ps.-Madjrītī, used the same data in his well-known work entitled *Ghāyat al-ḥakīm* (ed. H. Ritter, Leipzig 1933), translated into Latin under the title *Picatrix* (ed. M. Plessner, London 1962).

As for the particular character of this material, it may be deduced that the central principle is a variety of solar "theology", where the Moon appears sometimes as subordinate to the Sun, sometimes as an independent divinity. "In fact, sometimes the Sun appears as a unique source of knowledge and revelation, and the other planets, in particular the Moon (as 'god' of fertility) and Saturn (as 'god' of agriculture) serve as intermediaries between him and mankind, sometimes each of the seven planets reveals directly to mankind the knowledge that relates to its own domain" (cf. T. Fahd, *Données religieuses de l'Agriculture nabaṭéenne*, in *ZDMG*, Suppl. iii, 1 (1977), 362-6). We therefore have here a theology where "revelation" plays a pivotal role, a theology with three levels: rational level (*logos*), civic level (*nomos*) and mythic level (*mythos*), a division of theological knowledge which characterises the end of paganism (cf. P. Hadot, *La fin du paganisme*, in *Histoire des Religions*, ii, Paris 1972, 81 ff.). Three major socio-religious groups, clearly defined and differentiated by doctrinal and social disagreements, are opposed on the topic of "messengers" granted astral revelations.

For the Ḳukaeans, known from the Syriac authors, whose leader was Ḳuthāmā, author of the third edition of the *K. al-Filāḥa*, a Kasdaean born at Sūrā and a major landowner, and for the Sethians, disciples of Seth, son of Adam, well-known to historians of gnosticism, it is the revelations made to Adam by the Moon and conveyed in the "Books of Adam" which form the basis of their doctrines. Their disagreements concern the origin, the nature and the modalities of the inspiration (*waḥy*) of Adam (see details in our article mentioned above). For the Messians, disciples of Māsa al-Sūrānī, a "sophist", a native of Sūrā and a landowner, like Ḳūthāmā, whose writings are quoted extensively in the *K. al-Filāḥa*, it was Jupiter who made revelations to Adam. If it could be established that the context in which this compilation was composed was that of Babylonian gnosis, the sectarian group involved would be that of the "followers of Messos to whom, with Seth (the Allogene), Nicotheus, Zostrian and Zoroaster, certain sectarians, such as Adelphius and Aquilinus, opposed by Porphyrus and Amelius, attributed revelations" (cf. J. Doresse, *La Gnose*, in *Histoire des Religions*, ii, 376).

Historically, Sethians, Ḳukaeans and Messians flourished in Mesopotamia during the 2nd century A.D., a period shortly preceding the transfer of power from the hands of the Arsacids to those of the Sāsānids. It is not impossible that this is the political change to which reference is made in the *K. al-Filāḥa*, disguised by the fictitious allusions to Kasdaeans and Canaanites. It may be concluded from this that the work was compiled in an environment where Hellenistic and Roman paganism had a tendency to survive. There is, furthermore, no involvement here of either Judaism or Christianity. The last great upsurge of paganism in ʿIrāḳ was that inspired by Julian the Apostate (d. in Mesopotamia in 363 A.D.). From Apollonius of Tyana (d. 97 A.D.) to Julian the

Apostate, by way of Philostratus (d. 247), author of the legendary *Life of Apollonius*, paganism enjoyed numerous revivals, especially with the Ḥarranians.

Fahd, *Matériaux pour l'histoire de l'Agriculture en Irak: al-Filāḥa n-nabaṭiyya*, in *Handbuch der Orientalistik*, i, 6, 6/1: *Wirtschaftsgeschichte des Vorderen Orients in islamischer Zeit*, Leiden-Cologne 1977, 176-377 (cf. 376, for a list of our studies devoted to this work); idem, *Données religieuses de l'Agriculture nabatéenne*, in *ZDMG*, Suppl. iii, 1 (1977), 362-6. See also J.M. Fiey, *Les «Nabaṭ» de Kaskar-Wāsiṭ dans les premier siècles de l'Islam*, in *MUSJ*, li (1990), 51-87. (T. Fahd)

NABAṬĪ (a.), the name given to the popular vernacular poetry of Arabia. Opinions differ regarding its origin and nomenclature. One view is that it is the direct descendant of Classical Arabic but termed *Nabaṭī* to indicate that it does not conform strictly to the rules of literary Arabic. Another view, one hardly to be taken seriously, holds that *Nabaṭī* poetry is older than Classical Arabic, was colloquial in origin, and flourished under the dynasty of al-Anbāṭ, i.e., the Nabataeans, who ruled in Petra until 105 A.D. and who were said to be originally nomads from the Mecca area [see nabaṭ. 1]. Whatever its precise origins, *al-shiʿr al-nabaṭī* constituted until recently an unbroken link with a poetic tradition created by the particular socio-economic and linguistic conditions of tribal central Arabia, in which poetry had a political as well as a social function. The poet incited his listeners to war by the power of his verse and shaped their conduct by appealing to traditional Bedouin values such as honour and generosity. In pre-modern Arabia, poetry was well-suited to mobilise public opinion, since it was the most popular medium of expression and the most effective channel of communication. The increasing isolation of Arabia after the early period of Islam led to the development and—in the eyes of most mediaeval Arab scholars—the "corruption" of this vernacular poetic variety away from literary Arabic. However, in spite of linguistic differences, *Nabaṭī* poetry and Classical Arabic poetry share many prosodic, thematic, and functional similarities. In the 19th century, early (although unreliable) compilations of *Nabaṭī* poetry appeared, edited by Western orientalists; but it was not until the mid-20th century that definitive collections were published by al-Faradj (1952) and al-Ḥātam (1968), the former being based on the notebooks of devotees of this type of poetry at the court of King ʿAbd al-ʿAzīz Ibn Saʿūd.

Nabaṭī poems vary in length from a few lines to 100 or more verses which are divided into two hemistichs, metrically identical but each having a different rhyme. Transmission was not entirely oral, since by no means all *Nabaṭī* poets were illiterate and some drew deliberately from the Classical tradition in order to enrich their own vernacular compositions.

Since the 1970s, *Nabaṭī* poetry has witnessed something of a revival, being the subject of a Saudi Arabian television series *Min al-Bādiya* and many poems have been saved from extinction by the tape-recorder. There has also been renewed interest in *Nabaṭī* poetry in Arab Gulf states, where it may coexist with other indigenous forms of popular poetry.

Bibliography: A. Socin, *Dīwān aus Centralarabien*, Leipzig 1901, was a pioneer work. Definitive collections of *Nabaṭī* poetry are by Kh. M. al-Faradj, *Dīwān al-Nabaṭ*, Damascus 1952, and A. Kh. al-Ḥātam, *Khiyār mā yultaḳaṭ min shiʿr al-Nabaṭ*, Damascus 1968; Fahd al-Rashīd, *Shuʿarāʾ al-Rass al-Nabaṭiyyūn*, Damascus 1385/1965. The fullest account of the subject is by S.A. Sowayan, *Nabaṭī poetry: the oral poetry of Arabia*, Berkeley, etc. and London 1985. A brief historical overview is by S.M. Bakhīt, *al-Anbāṭ wa 'l-shiʿr al-Nabaṭī*, Kuwait n.d. An interesting treatment of the *Nabaṭī* poet Ḥumaydān al-Shuwayʿir (fl. 12th/18th century) is by A.N. al-Fawzān, *Siḥāfat Nadjd al-muthīra fi 'l-ḳarn al-thānī ʿashar*, Riyāḍ 1989. See also Abū ʿAbd al-Raḥmān b. ʿUḳayl al-Ẓāhirī, *Dīwān al-shiʿr al-ʿāmmī bi-lahdjat ahl Nadjd*, Riyāḍ 1982. (P.G. Emery)

NABHĀN, the name of a tribe in ʿUmān, whose tribes are divided into independent *fakhūdh* (sing. *fakhdh*), with leaders generally denominated *shaykh*, each one considering himself independent of the others, and acknowledging no superior.

S.B. Miles reported in 1881 that 400 "Beni Nebhán", a Ḳaḥṭānī (Ghafirī) tribe, dwelt at Semáil (*sic* for Samāʿīl), on the coast in 23′ 18° N., 58′ 58° E. They appear to have been of minor importance.

J.R.L. Carter gives a genealogy of Nabāhina *shaykhs* of the Banū Riyān, exclusively from traditional oral sources, who used the title *malik*. Of these, Sulaymān b. Sulaymān was elected Imām, reigning as overlord for a short while. A *shaykh* and others were living in 1982.

Sirḥān b. Saʿīd b. Sirḥān (1728) describes a Nabhānī dynasty of rulers of ʿUmān with the title of *malik*. They had an inland capital south of the Djabal Akhḍar, and reigned, he says, over an undefined territory from *ca.* 1100 until 1624, when they were extinguished by the Yaʿrubī dynasty [*q.v.*]. In 731/1330 (Miles) or 732/1331 (Hrbek), Ibn Baṭṭūṭa visited the then ruler, called Abū Muḥammad Ibn Nabhān. He gives him the title *sulṭān*, and says that every Nabhānī *sulṭān* was called by this name. Somewhat disapprovingly, he recorded that Abū Muḥammad was of the Ibāḍī *madhhab*; and that from his capital at Nizwa [*q.v.*] he ruled over a number of coastal villages, including the port of Ṣuḥār [*q.v.*], but that most of ʿUmān was under the government of Hurmuz. The Nabhānī court was very simple, and there was no chamberlain or vizier.

The Nabhānī dynasty of Pate [*q.v.*] in the Lamu archipelago of East Africa is stated in the traditional *Habari za Pate* (History of Pate) to be an offshoot of the Nabhānī dynasty of ʿUmān that fled when the Yaʿāriba extinguished that dynasty. This event took place in 1624, whereas the very full details that we possess of the dynasty of Pate claim that it was founded *ca.* 1200. A living senior representative of the Pate family regards the descent from the ʿUmānī dynasty as unfounded in fact, and it would seem to be a separate *fakhdh*.

On Songo Mnara Island adjacent to Kilwa [*q.v.*], Sir Richard Burton reported a Nabhānī mosque decorated with Persian tiles. He states that his island was conquered by the Nabhānī, and it is possible that this tradition is an echo of the claim in the traditional History of Pate that Sultan ʿUmar the Great (*ca.* 1331-48) conquered the coast as far as Kilwa. The account reads, however, more like one of a raid than as a conquest, and for certain it was not consolidated. The name Nabhānī is still found in the Kilwa area, and the family may constitute a distinct *fakhdh*.

NĀBĪ, YŪSUF, an important, highly renowned Ottoman poet of the second half of the 11th/17th and beginning of the 12th/18th centuries.

He came from Urfa (Ruhā, hence Ruhāʾī); on the members of his family cf. M. Diriöz, *Nâbî'nin âilesine dâir yeni bilgiler*, in *Türk Kültürü*, xiv, 167 (1976), 668-73. From mentions in his writings, we know that he was born in 1052/1642-3 and that he moved to Istanbul in his early twenties, i.e., during the reign of sultan Meḥemmed IV (1058-99/1648-87). In Istanbul he enjoyed the patronage of Muṣāḥib Muṣṭafā Pasha (cf. *Sidjill-i ʿOthmānī*, iv, 403-4), who appointed him *dīwān* secretary. In 1089/1678-9 he made the pigrimage, and upon his return Muṣāḥib Muṣṭafā Pasha made him his steward (*ketkhudā*). Following the Pasha's death in 1097/1686, Nābī settled in Aleppo, where he remained for about 25 years. In 1122/1710 Aleppo's governor Baltadjī Meḥmed Pasha [*q.v.*], in whose entourage he had been, was appointed grand vizier for the second time, and he returned to Istanbul with the Pasha. Here Nābī was first appointed head of the mint office (*ḍarb-khāne emīni*), then of the accounting office for Anatolia (*Anadolu muḥāsebedjisi*), and lastly of the registration office for the particulars and salaries of the *Ḳapīkulu* cavalry other than the *sipāhīs* and the *silāḥdārs* (*süwārī muḳābeledjisi*). He died on 3 Rabīʿ I 1124/10 April 1712 and was buried at Üsküdar in the Ḳaradja Aḥmed cemetery.

Nābī shows great versatility as to subject matter and style in his writings. He wrote both poetry and prose. While some of his work is in more or less straightforward Turkish, some of it is written in a heavily Persianised manner. It can be said that Nābī's prose is generally ornate, whilst his poetry is at least in part composed in relatively plain language. It is his philosophising, moralising tone and his didactic vein that have secured a special position for him in the Ottoman world of poetry. This disposition of his is suitably reinforced by his mastery in the incorporation of proverbs (*irsāl-i methel*). Nābī was immensely popular for a long time, and the title of "king of poets" was bestowed on him. Among his disciples we find Sāmī (d. 1146/1733-4), Rāshid (d. 1147/1734-5), Seyyid Wehbī (d. 1149/1736-7), and Ḳodja Rāghib Pasha (d. 1176/1763).

Nābī's poetical works comprise: (1) His extensive Turkish *Dīwān*, renowned especially for its *ghazels* which dominate in number and in importance. Lyricism, however, is not their strong point; they are characterised by a relatively unadorned language and a sententious style. The *ghazels* are in alphabetical order, with a *rubāʿī* heading each new letter. Nābī's *Dīwān* has been printed twice: in Būlāḳ in 1257 and in Istanbul in 1292. (2) His Persians *dīwānče* containing about 50 poems (*ghazel* and *takhmīs*). (3) *Khayriyye* is Nābī's most famous work. He composed this *methnewī* in Aleppo in 1113/1701-2 for his son Abu 'l-Khayr. It is a book of advice (*naṣīḥat-nāme*) from father to son meant as a guide to life. It is composed in a terse style and contains Nābī's reflections of an educational nature on all aspects of life. This is the work in which his predilection for moralising and philosophising remarks is most in evidence. *Khayriyye* had great popularity and impact; for example, Ibrāhīm Ḥaḳḳī of Erzurum (d. 1194/1780) quoted a number of its *beyts*, albeit without mentioning their provenience, in his *Maʿrifet-nāme* (cf. İ. Pala, *Erzurumlu İbrahim Hakkı'da Nabî tesiri*, in *Osmanlı Araştırmaları/The Journal of Ottoman Studies*, x [1990], 195-209). *Khayriyye* was printed both together with the *Dīwān* and separately (e.g. *Khayriyye-i Nābī*, Istanbul 1307). Cf. also *Conseils de Nabi Efendi à son fils Abou 'l-Khair, publiés en turc avec la traduction française et des notes par M. Pavet de Courteille*, Paris 1857, as well as *Şair Nabî, Hayriye* (*hzl.* İ. Pala), Istanbul 1989. (4) *Sūr-nāme* (full title: *Weḳāyiʿ-i khitān-ī shehzādegān-ī ḥadret-i sulṭān Meḥemmed Ghāzī*): This *methnewī* of almost 600 verses is a description of the festivities on the occasion of the circumcision of sultan Meḥemmed IV's sons in Edirne in 1086/1675. Its diction is clear and simple, and it is of some historic and social interest. It was printed in Roman characters, cf. A.S. Levend, *Nâbî'nin Sûrnâmesi*, Istanbul 1944. (Its only known ms. is in the İstanbul Üniversitesi Kütüphanesi, *Ty*, no. 1774, *Mecmua*, margins of 406-58a.) (5) *Khayr-ābād* is Nābī's last *methnewī* (composed in 1117/1705-6) and is not considered one of his more successful works. It is a story of adventure and love in a language laden with Arabic and Persian words. (6) *Terdjüme-yi ḥadīth-i erbaʿīn*: This is regarded as one of the best translations into Turkish of Djāmī's [*q.v.*] *Ḥadīth-i arbaʿīn*. It is in strophic form in relatively plain Turkish, and the translation is not literal but rather free. This work was printed for the first time in *Millī Tetebbuʿlar Medjmūʿasi*, ii/4 (1331), 155 ff.

Nābī's prose works are: (7) *Fetḥ-nāme-yi Ḳameniče* or *Tārīkh-i Weḳāyiʿ-i Ḳameniče* or simply *Tārīkh-i Ḳameniče*. This is an account of the conquest in 1083/1672 of the fortress town Kamieniec in Podolia (Kamenets Podolskiy; see KAMĀNIČA). Nābī inserted some verses into this *fetḥ-nāme*, which he wrote upon Muṣāḥib Muṣṭafā Pasha's behest in his youth. It was printed under the title *Tārīkh-i Ḳameniče* in Istanbul in 1281. (8) *Tuḥfet el-Ḥaremeyn* is an account of his pilgrimage which he wrote a few years after accomplishing it, that is in 1093/1682. He interspersed the prose text, which is written in a rather heavy style, with verses composed by himself and others. This has been printed twice: *Tuḥfet el-Ḥaremeyn*, n.p. [Istanbul] 1265 and *Tuḥfe*, Istanbul 1288. (9) *Dheyl-i Siyer-i Weysī*: This is Nābī's continuation of Weysī's (d. 1037/1628) *Siyer*; it was printed at Būlāḳ in 1248. His style here is ornate. Nābī wrote a second *Dheyl* after an interval of about twenty years: *Dheyl dheyl el-Nābī*. These two *Dheyls* are together in some mss., separate in others. (10) *Münsheʾāt*: This is a collection of official and private letters and as such not devoid of interest.

NABĪ DJIRDJĪS [see DJIRDJĪS].

NABĪ YŪNUS [see NĪNAWĀ].

NABĪDH (A.), a comprehensive designation for intoxicating drinks, several kinds of which were produced in early Arabia, such as *mizr* (from barley), *bit^c* (from honey: al-Bukhārī, *Maghāzī, bāb* 60, *Ashriba, bāb* 4; *Adab, bāb* 80) or from spelt (Aḥmad b. Ḥanbal, iv, 402), *faḍīkh* (from different kinds of dates (al-Bukhārī, *Ashriba, bāb* 3, 21). These ingredients were steeped in water until they were fermented, and the result of this procedure was a slightly intoxicating drink. There were also combinations of raisins, dates and honey to be found. *Nabīdh* was sometimes consumed mixed with strong intoxicating ingredients like St. John's wort or different kinds of cannabis, so that it had strong intoxicating and hallucinogenic effects (al-Mas^cūdī, *Murūdj*, viii, 243 = § 3391; al-Washshā', *K. al- Muwashshā*, 196). Later on, in some countries of the Islamic world, there has been a change of meaning. In today's Syria, for example, *nbīd* is used for any kind of intoxicating drinks, while in Egypt *khamr* and *nibīd* are used with the same meaning.

Side-by-side with milk and honey, *nabīdh* was also a beverage that was offered to the pilgrims in Mecca. The institution of *al-siḳāya* (also the name of the building, close to Zamzam, where the distribution took place), was an office held by the ^cAbbāsī family (Aḥmad b. Ḥanbal, *Musnad*, i, 372; Muslim, *Ḥadjdj*, trad. 347; Abū Dāwūd, *Manāsik, bāb* 90). The descriptions by Ibn Sa^cd (d. 230/845) and al-Azraḳī (d. 244/858) give the impression of referring to the present state of things; in the time of al-Muḳaddasī (d. *ca.* 1000 A.D.) the institution had already passed into desuetude. For details, cf. Gaudefroy-Demombynes, *Pèlerinage*.

There was a lively discussion among the *fuḳahā'* as to whether the consuming of this kind of beverage is allowed or forbidden. One argument in favour of *nabīdh* was put forward, for example, by the Mu^ctazilī al-Djubbā'ī [*q.v.*], who argues that God has created things which resemble those things which were allowed in Paradise but are forbidden on earth. Among them is *nabīdh*, which is allowed for the believers so that they can guess what *khamr* will be like in the hereafter (al-Tanūkhī, tr. Margoliouth, *Tabletalk*, 1931, 575; for details on the legal discussion, see KHAMR and MASHRŪBĀT).

Nabīdh, like *khamr*, was used to discredit certain individuals or groups. Thus the calligrapher Ibn al-Waḥīd (647-711/1249-50 to 1312) was suspected of putting wine or *nabīdh* in the ink which he used for copying the Ḳur'ān (Rosenthal, *The herb*, 154), or else there was a rumour about the Ḳarmaṭians, that among them *nabīdh* was forbidden and wine allowed in order to underscore the antinomian character of this movement (Ibn al-Athīr, vii, 488).

HEINE)

AL-NĀBIGHA AL-DHUBYĀNĪ, Ziyād b. Mu^cāwiya (var. ^cAmr) b. Ḍabāb b. Djābir (var. Djanāb) b. Yarbū^c b. Salāma of the Banū Murra (Ghaṭafān), one of the most renowned poets of the *Djāhiliyya*. With Imru' al-Ḳays and Zuhayr [*q.vv.*] he eclipsed the earlier poets (Ibn Sallām, *Ṭabaḳāt*, ed. Shākir, i, 50, 56-9; Abu 'l-Baḳā' Hibat Allāh al-Ḥillī, *al-Manāḳib al-mazyadiyya*, Amman 1984, i, 172).

The traditions relating to al-Nābigha are concerned with a brief period of his life, confined to the years 570-600, and show the poet being received by the Ghassānid tribal chieftains at Djābiya and subsequently by al-Nu^cmān III at Ḥīra. The rest is enveloped in total silence.

From the time of his arrival on the scene, at an unknown date but certainly prior to 580, he pleaded the cause of keeping the defeated ^cAbs within the fold of the Banū Ghaṭafān and preventing at any price their migration and installation among the Banū ^cĀmir, the consequences of which would be inauspicious (*Dīwān*, ed. Abu 'l-Faḍl Ibrāhīm, Cairo 1985, xii, xvii, xviii; Caskel, *Djamhara*, ii, 607d; E. Landau-Tasseron, *Ridda*, 140-1 and n. 41-5, 149-50; ^cU. al-Dusūḳī, *al-Nābigha al Dhubyānī*, Cairo 1956, 121-3). At a later date, he is seen calling upon his fellow-tribesmen, on numerous occasions, to renew their *ḥilf* (alliance) with the Asad (Banū Murra [*q.v.*]; see *Dīwān*, IV, V, XI, XXIII, XXXIX). In a very finely wrought *ḳaṣīda*, he states that the Asad have fought courageously to defend their Dhubyānī allies (Dhubyān and Murra being interchangeable in ancient times) and to assure their glory (*Dīwān*, V; al-Baghdādī, *Khizānat al-adab*, ii, 132-8, v, 169; Derenbourg, *Nābigha*, in *JA* [Sept. 1868], 214-17). Furthermore, history has justified the poet in adopting these positions; the alliance, declared in the mid-6th century on Mount Khāl, seems to have well served both economic interests, in guaranteeing the protection of zones of pasture and the palm-groves of Wādī 'l-Ḳurā, and military interests since it enabled them to resist the expansionist aspirations of the Ghassānids. The area of contention seems to have been Dhū Uḳur, a fertile oasis full of water and salsuginous grass (*aḥmāḍ*), ideal for camels. This territory had belonged since time immemorial to the Banū Murra, but it was forcibly appropriated by the Ghassānids who declared it a forbidden zone (*Dīwān*, title of IX; al-Ḥasan b. ^cAbd Allāh al-Iṣfahānī, *Bilād al-^cArab*, Riyāḍ 1388/1968, 73-81, 153-4, 400; Yāḳūt, *Buldān*, s.v. *Uḳur*; Derenbourg, *op. cit.*, 211; Nöldeke, *The Princes of Ghassān from the House of Djafna*, Beirut 1933, 42-3; cf. art. MURRA, BANŪ, the last two references relating to the conquest of fertile lands formerly the property of the Asad Dhubyān). This alliance, which proved its worth at Yawm al-Nisār, seems to have entered into customary thought; the two tribes are habitually named the *ḥilfānⁱ* or the *aḥlāf* (al-Djāḥiẓ, *Ḥayawān*, i, 362; E. Landau-Tasseron, *Ridda*, 100-33). However, certain reservations seem to have been evident among the Banū Murra in relation to this activity on the part of the poet, to such an extent that he found himself obligated to seek aid and protection from the ^cUdhra, his neighbours to the north (*Dīwān*, XIV, and title of XVI).

In the same period, he made his first visit to the

house of Djafna. Six poems dedicated to al-Nuᶜmān, the son of al-Ḥārith al-Aṣghar, survive (*Dīwān*, IV, IX, XIV, XIX, XXII, XXXII; Nöldeke, *op. cit.*, 41-2). The first three represent a fine example of tribal poetry at its highest level: intercession for his fellow-tribesmen and reproofs are intermingled; moreover, the poet went so far as to warn al-Nuᶜmān that his army would be defeated if he dared to attack the *aḥlāf* (*Dīwān*, XIV). Among the three poems, which relate to specific circumstances, special mention should be made of the lament which he composed on the death of al-Nuᶜmān, considered a very fine specimen of the genre.

The death of the latter marks a turning-point in the life of al-Nābigha, who seems to have understood that the dispute between Banū Djafna and Dhubyān proceeded from a long-lasting geopolitical situation, and that it was thus impossible to bring about peace and harmony between the two parties. On the other hand, al-Nuᶜmān III (who reigned at Ḥīra from 580 to 602, see LAKHMIDS) had inaugurated a new policy, abandoning the major confrontations of his predecessors with the Ghassānids and supporting the tribes established to the north of the Nadjd with the objeet of embroiling his Syrian enemies in a guerilla war with the Bedouin [see LAKHMIDS]; al-Nābigha was received at the court of Ḥīra with all the respect due to his dual status as representative of the Asad-Murra allies and as a distinguished poet. According to the sources, he became the intimate companion and poet laureate of the sovereign, at the expense of other poets who arrived in large numbers hoping to benefit from his patronage.

For a reason which remains obscure, the king decided to execute the poet. Various fanciful theories, which seem hardly credible, have been presented; almost all of them concern a scurrilous portrait of the queen al-Mutadjarrida; Murra b. Ḳurayᶜ al-Tamīmī or al-Munakhkhal al-Yashkurī [*q.v.*] are cited in turn as protagonists. Others mention a *hidjā*ʾ against al-Nuᶜmān, which is just as problematical since the identity of the author is not definitely known. He owed the saving of his life to the chamberlain ᶜIṣām b. Shahbar al-Djurhumī. This Lakhmid episode does not seem to have encouraged al-Nābigha's inspiration. Only three fragments of eulogies have been gleaned by all the collected editions (*Dīwān*, XXVII, XXXVII, LX). Their mediocre quality contrasts vividly with the outstanding poems dedicated to the Ghassānids.

The poet found a refuge in the household of ᶜAmr b. al-Ḥārith at Djābiya. This second period among the Ghassānids, in spite of a poem in which the bitter defeat of the Lakhmids at Yawm Ḥālima is evoked (*Dīwān*, III, V, 20), could not have been seen by him as other than an interim arrangement. In fact, he sent to al-Nuᶜmān three compositions, in which his excuses are intermingled with dithyrambic eulogies; these are the famous *iᶜtidhāriyyāt* (*Dīwān*, I, VIII, LXXV). Evidently both parties were in favour of a reconciliation, and normality was restored through the good offices of two Fazārī *sayyids*, Manẓūr b. Zibbān and Sayyār b. ᶜAmr, influential friends of the king of Ḥīra. The poet was not to enjoy his regained favour for long. Al-Nuᶜmān was deposed by Khusraw Parwīz and died a hideous death. The aged poet abandoned all his activities and returned to his tribe, where he sank into total anonymity.

The *Dīwān* of al-Nābigha has earned the greatest of respect: it has been the object of a dozen *riwāyas* and commentaries; al-Mufaḍḍal al-Ḍabbī (d. 164/780), Abū ᶜAmr (al-Shaybānī) (d. 203/820, *Dīwān*, editor's introd., 6), Abū ᶜUbayda (d. 209/825, quoted in numerous instances by al-Aṣmaᶜī, see *Dīwān*, 54, 121, 143, 167, 192), al-Aṣmaᶜī (d. 213/818, see introduction by al-Aᶜlam al-Shantamarī, 11) (all quoted by Ibn ᶜAshūr, *Dīwān*, Algiers-Tunis 1976, introd., 8), Ibn al-Sikkīt (d. 224/859, published by Shukrī Fayṣal, Beirut 1388/1988), Ibn al-Aᶜrābī (d. 231/846), al-Sukkarī (d. 275/888; al-Dusūḳī, *op. cit.*, 98), Ibn al-Anbārī, Ibn al-Naḥḥās (d. 337/950, published at Algiers-Tunis, 1976), al-Ṭūsī (d. 340/958, *Dīwān*, editor's introd., 6, 124-5), al-Baṭalyawsī (d. 494/1100, numerous editions, the best that of Nāṣīf ᶜAwwād, Beirut 1968) and al-Tibrīzī (d. 502/1109; the annotated *dāliyya* has been published by Ch. Lyall, *A commentary on ten ancient Arabic poems*, Calcutta 1894, 152 ff.; on the ms. of Feyzullah, see Sh. Ḍayf, *Taʾrīkh al-adab al-ᶜarabī*, i, Cairo 1976, 276)—all of these have had their contribution to make. Blachère rightly comments that this abundance of material points to the undeniable interest and considerable success of the work of al-Nābigha (*HLA*, ii, 299). Profound differences exist between these diverse editions; they relate to the variants, the number of verses and of poems. The collection in the edition of al-Aṣmaᶜī comprises 22 poems and fragments combined according to the conceptions of the Baṣran school. Although excellent, the edition of al-Aṣmaᶜī has been judged too strict and fragmentary by al-Aᶜlam al-Shantamarī, who added to it 7 poems from the *riwāya* of al-Ṭūsī which was influenced by the school of Kūfa. With the benefit of this surplus, important details of biography and works have been made clearer. The most extensive edition is unquestionably that of Ibn al-Sikkīt. No fewer than 46 poems and fragments, of which the mode of transmission is completely unknown, have been added. All of this shows that in the final analysis, the *dīwān* of an ancient poet reflects a choice on the part of the transmitter and that the edition of al-Aṣmaᶜī cannot make exclusive claims to authenticity.

The quality of the poetry of al-Nābigha amply justifies the interest of the transmitters. Undeniably his *hidjā*ʾ, generally very short, his *nasīb*, certain panegyrics quoted especially in the edition of Ibn al-Sikkīt (*Dīwān*, Beirut 1968, X, XI, XVIII) and his laments appear rather impersonal (with two exceptions in the case of the laments: the poem composed at the time of the death of al-Nuᶜmān b. al-Ḥārith and that which mourns his brother, mentioned by Abū Tammām, *Ḥamāsa*, Bonn 1828, 408). The *dāliyya* with which the *Dīwān* opens was not included by Ḥammād al-Rāwiya at the time of the definitive codification of the *Muᶜallaḳāt* (it is known that various written collections of these poems which feature the piece by al-Nābigha were in circulation between the reign of Muᶜāwiya and the end of the reign of ᶜAbd al-Malik, see M.J. Kister, *The Seven Odes*, in *RSO*, xliv [1969], 27-36). Later, it might have been added by Ibn al-Naḥḥās on account of its superior quality (*Khizānat al-adab*, iii, 186-7, iv, 5, viii, 450). The *iᶜtidhāriyyāt*, hybrid pieces containing a combination of excuses and panegyric, were particularly appreciated by ancient criticism (whence the judgment that attained the status of an aphorism: al-Nābigha is the best of poets when he is gripped by panic, *al-Aghānī*, viii, 77, xv, 97; Ibn Saᶜid, *Nashwat al-ṭarab*, ii, 567; *Khizānat al-adab*, i, 175).

However, the essential genius is to be sought elsewhere: by virtue of his verbal imagination, the poet has raised the poems appropriate to circumstances, the panegyrics and tribal addresses, to the status of vivid and colourful representations. For this purpose, he resorts to metaphor drawn from the pictorial register. Thus, in Piece I, on the theme of the

generosity of al-Nuʿmān IV, the sovereign is compared with the Euphrates. A description, which stands in a purely hypothetical relationship to reality, transports the hearer towards an impressive rolling river with enormous waves; like a skilled painter, the poet then introduces a human element, the mariners and their embarkation and a series of dialectical contrasts between the power of the river/king and the weakness of the men/mariners, the grandiose opposed to the limited and the imperturbable opposed to the fearful. This passage (three verses, 44-6) establishes the symbol and gives to a problematical poetic genre, *madḥ* (eulogy), a certain artistic dimension. This method is one to which al-Nābigha frequently returns; in his address to the Banū Ḥunn, the clan of ʿUdhra, the description of the date-palms, symbolising the power of the tribe, is drawn on the same register (*Dīwān*, XIV, 5-7). The same applies to his impassioned appeal for the preservation of the Asad-Dhubyān alliance (*Dīwān*, V); here he presents two very expressive imaginary tableaux, the Banū Ghāḍir (Asad) embroiled in warfare, their women abandoned as if they had been impure (verses 14-20), and the bucolic tableau of the horses of al-Rumaytha (verses 24-6). Finally, in more than one instance, in addresses to his fellow-tribesmen, he readily sketches hypothetical scenes in which their women-folk, taken captive, would be subjected to the most hideous treatment: forced marches, rape, etc. (*Dīwān*, III, 12-16, XXV, 8-13, XXVI, 12-17), set-pieces of the kind which would not be out of place in an epic poem.

From another angle, al-Nābigha has to a considerable extent given expression in his poetry to the customs, folklore and legends current in Djāhilī society. In particular, he evokes the myth of the foundation of Palmyra (Tadmur) by Solomon, who imposed on the *djinns* the task of constructing the city (*Dīwān*, I, 21-3). Some critics have protested that this is a forgery, seeing here the hand of Muslim transmitters. However, Buhl (see PALMYRA in *EI*[1]) and the Jewish sources (*Encyclopedia Judaica*, Jerusalem 1973, xv, 107b, ll. 5-7) have suggested that Solomon (Sulaymān) and this legend were known in the pre-Islamic period (Arabic sources: al-Tibrīzī in *Sharḥ al-Ḥamāsa*, 435; al-Djāḥiẓ, *op. cit.*, vi, 223; the legend would have been propagated by Djāhilīs who had embraced the Jewish faith). The well-known parable of the two brothers and the serpent could be seen as an experiment in the introduction of fable into ancient poetry (Blachère sees here an Arab response to Aesop's fable "The Labourer and the Serpent"; his reservations arise from the plain style, differing from that of the poet; cf. al-Djāḥiẓ, *op. cit.*, iv, 203-5; Ibn Ḳutayba, *Shuʿarāʾ*, ed. De Goeje, 73).

This great creator of images was incapable of using dialogue in his poems, where no example is evident. We know to what extent Zuhayr and his school had shown their predilection for this process, which was such an integral part of the development of the *ḳaṣīda*. Moreover, he seems to have been completely lacking in narrative sense; al-Nābigha is incapable of telling a story. It is for this reason that his few attempts at composing poems according to the tripartite scheme came to an abrupt end: his passages dealing with camels appear lifeless; the dramatic tension inherent in descriptions of the wild bull at bay and the arrangements required for the slaughter of the wild ass, is stylised in his work and far from convincing. This being the case, the claim that al-Nābigha belonged to the school of Zuhayr, who accorded the greatest importance to these elements, appears debatable (the thesis developed by Ṭāha Ḥusayn, *Fi ʾl-adab al-djāhilī*, Cairo 1968, 265-8, according to which al-Nābigha belonged to the school of Zuhayr, is matched by the point of view of G.E. von Grunebaum, *Pre-Islamic poetry*, in *MW*, xxxii [1942], 147-53).

The surname of the poet reflects the quality and the limitations of his poetry. The term signifies, according to Derenbourg's fine expression (*op. cit.*, 206-8), "a sudden gushing" or better "gushing spring" (cf. the "master poet" of Blachère, *HLA*, ii, 334). A maxim attributed to al-Aṣmaʿī clarifies well the meaning of this surname: al-Nābigha, he says, is a *maṭbūʿ* (born) poet who gives free rein to his inspiration without undue effort at working on his verses; he compares him with Zuhayr and al-Ḥuṭayʾa, who accorded a primordial importance to *ṣanʿa* (*Aghānī*, ii, 25). A number of clues support al-Aṣmaʿī's view: a number of cases of enjambement (*taḍmīn*) are attested (*Dīwān*, I, 39-40, 44-7, VI, 11-12, VII, 17-18, XXIII, 16-17; in the last case he uses *innī* for the rhyme and relegates the rest of the phrase to the following line). The vice of *iḳwāʾ* occurs frequently in his poetry (Ibn Saʿīd, *op. cit.*, 563-4; *Dīwān*, XIII, 3 and 18, XIV, 6, XV, 1, XXV, 10). As regards metre, he employs *iḳʿād* in the *ṭawīl* where *mafāʿīlun* in the *ʿarūḍ* is transformed into *mafāʿil* (*Dīwān*, LIV, 1), a procedure condemned by scholars.

However, all of this should be kept in proportion, and these are merely the minor solecisms of a poet confident in his talent. This *faḥl* poet set his seal on classical poetry for many centuries. The greatest poets were influenced by his art (al-ʿAskarī, *Ṣināʿatayn*, 203-4, 242, 252-3; Bashshār, Abū Nuwās and Ibn al-Rūmī took inspiration from his poetry; al-Baghdādī, *Khizānat al-adab*, iv, 289-92); in this context, a special place belongs to al-Mutanabbī, who mentions him by name in his poems and imitates him in several instances (Ps.-al-ʿUkbarī, *al-Tibyān*, Cairo 1355/1956, iv, 55-6; see also, i, 25, 22, 110, 287, 299, ii, 255).

(A. ARAZI)

AL-NĀBIGHA AL-DJAʿDĪ, Ḳays b. ʿAbd Allāh, according to Ibn al-Kalbī, Ḥibbān (var. Ḥassān) b. Ḳays b. ʿAbd Allāh, according to al-Ḳahdhamī, of the Banū Djaʿda (ʿĀmir b. Ṣaʿṣaʿa), poet of the *mukhaḍramūn* [*q.v.*] and a Companion famed for his longevity, to which he owes the honour of being included among the *muʿammarūn* [*q.v.*] by Abū Ḥātim al-Sidjistānī.

The biographical details concern the Islamic period only, and nothing or virtually nothing is known of his origins (the sole vestige, *Dīwān*, ed. Maria Nallino, no. IX, vv. 8-16). In 9/630, he took part in the *wafd* or deputation of the Banū Djaʿda to Medina. His gift

of repartee and his youth having probably pleased the Prophet, the latter blessed him and he retained right up to his death at a very advanced age a perfect set of teeth. In 21-2/641-3, he migrated in company with his tribe to Baṣra (*Dīwān*, no. XI, vv. 6-8, an evocation of the journey). Certain episodes of this stay there, punctuated by an expedition for the conquest of Khurāsān, have been presented in his *Dīwān* (a, no. XII; M. Nallino, in *RSO*, xiv [1934], 383-4). They bear witness to the influence of the desert and the tribe, and it is within this context that one should place the contests in *hidjāʾ* [*q.v.*] which set him up against Aws b. Maghrāʾ and al-Akhṭal around 40/660 on the famous Mirbad [*q.v.*] of Baṣra. Al-Nābigha is reported to have replied to an accusation hurled at one of his fellow-tribesmen of having handed over the Banū ʿAwf to Busr b. Arṭāt (*Dīwān*, a, no. VII). It was on this occasion that al-Akhṭal used a key term of tribal *hidjāʾ*, the diminutive *ḳubayyila* (i.e. a wretched mini-tribe, see *Ḥamāsa*, Bonn 1828, 758), to designate the Banū Djaʿda (on al-Nābigha's invective, see *Dīwān*, no. XI, vv. 14-16).

Under ʿAlī b. Abī Ṭālib, he took part at the latter's side at al-Nukhayla and at Ṣiffīn [*q.vv.*] (Dhu 'l-Ḥidjdja 36-Ṣafar 37/656-7) (*Dīwān*, no. V, vv. 33-6; a, no. V). This gained him mention in one of the most prestigious of Imāmī Shīʿī *ridjāl* books, the *Tanḳīḥ al-maḳāl* of al-Māmaḳānī (no. 12, 367) and led to his suffering grave harm under Muʿāwiya's rule; his property was confiscated and only given back to him after two supplications addressed to the caliph (*Dīwān*, no. I, vv. 5-19; b, no. IV). A little later, the poet found himself at Iṣfahān in the company of his fellow-tribesmen and of the Banū Ḳushayr. There he exchanged invectives with Laylā al-Akhyaliyya and her husband Sawwār b. Awfā al-Ḳushayrī, who seems to have taken the initiative in the hostilities by attacking the poet and his maternal uncles, the Azd. Al-Nābigha replied savagely and composed *al-ḳaṣīda al-fāḍiḥa* which listed the *mathālib* [*q.v.*] of Ḳushayr and ʿUḳayl; Laylā intervened, and the quarrel got even more acute (*Dīwān*, a, nos. VII, XII; b, nos. XXIX, XXX). However, very remarkably, the remainder of his poetry gained in depth; he set about reflecting on the first civil war, and his past mistakes seem to have preoccupied him to the highest degree (*Dīwān*, no. V, vv. 4-30; VIII).

Between 63 and 65/683 and 684-5, he gave his allegiance, not without reluctance, to ʿAbd Allāh b. al-Zubayr. After Mardj Rāhiṭ [*q.v.*], the poet made himself the defender of the Ḳays supplanted by the Kalb or Yemenites. The policy of reconciling and appeasing tribal conflicts followed by ʿAbd al-Malik caused a change of tone in al-Nābigha, and he now preached harmony between the two groups (*Dīwān*, no. I, 20-7, with reference to the Djaʿdī Ziyād b. al-Aṣbaḥ, who had vainly tried to make peace between ʿAlī and Muʿāwiya). His last years were spent in Khurāsān in relative tranquility, and he died there in *ca.* 79/698-9.

Al-Nābigha al-Djaʿdī's poetry does not seem to have been made the subject of an independent recension; the various *riwāyāt* of the 2nd-3rd/8th-9th centuries seem to have been collected together in the work of Abū ʿAmr al-Shaybānī (d. 203/820), the *K. Banī Djaʿda*. The present edition of Maria Nallino is an excellent reconstitution from all points of view (the edition of ʿAbd al-ʿAzīz Rabāḥ, Damascus 1964, brings nothing new, and simply reproduces Nallino's edition). It is very hard to estimate the quality of his poetry and his conception of the *ḳaṣīda*. However, in regard to his themes, one can discern a profound influence from Labīd [*q.v.*], notably in the confrontation between the poet and his time and the unavoidable triumph of death. Especially worthy of mention in this connection is piece no. III, whose 48 verses form a reminiscence of the *Muʿallaḳa* of his ʿĀmirī predecessor on all levels, including those of style and the use of metaphors and comparisons; the central episode, that of the wild cow and her calf devoured by wolves, is identical in both poets. Moreover, Ibn Sallām places him at the side of Labīd in the company of al-Shammākh b. Ḍirār and of Abū Dhuʾayb al-Hudhalī in the third class of *fuḥūl* (*Ṭabaḳāt fuḥūl al-shuʿarāʾ*, Cairo 1974, 123). The main contribution of this mediocre satirist—he was in actuality *mughallab*, i.e., defeated in the verbal jousts—apart from his animal descriptions (his description of the horse, al-Djāḥiẓ, *Ḥayawān*, i, 330) and his tribal poetry resides in the strongly marked expression of the poetry of the *muʿammarūn*. In his collection, it has a depth and thematic variety rarely equalled. His poetry is in fact dominated by death and by his weariness in having to continue living when his dear ones, his seven brothers and the great men of his tribe, have departed and he has to take over their memory. The vocabulary of recollection frequently recurs in his poems; he recalls his carefree youth, the bacchic gatherings, his lives and the encampments of his tribe in the Faladj which he can never see again.

NĀBITA, (A.). a term of Classical Arabic which means in particular "rising generation", but one which today has acquired the pejorative sense of "bad lot, rogue" which the plural *nawābit* and the expression *nābitat sharr* previously possessed. These meanings were noted by the mediaeval lexicographers, but one finds in Ibn al-Nadīm a section (*Fihrist*, ed. Cairo, 255-7, ed. Tadjaddud, 229-31) devoted to the *mutakallimū 'l-mudjbira* [see DJABRIYYA] and to the *nābitat al-ḥashwiyya*, amongst whom the main exponent was allegedly Ibn Kullāb [*q.v.* in Suppl.], whilst al-Zamakhsharī specifies (*Asās al-balāgha*, s.v.) that the *nābita/nawābit* are the Ḥashwiyya. This last author belonged to the Muʿtazilī school, and it is precisely in an ardent exponent of *iʿtizāl* [see MUʿTAZILA] that the Nābita are denounced with the greatest vigour, sc. al-Djāḥiẓ, who has left behind an opusculum called *Risāla fī 'l-Nābita* (see Ch. Pellat, *La nâbita de Djâhiz*, in *AIEO Alger*, x [1952], 302-25). For al-Djāḥiẓ, the term applies essentially to the Ḥanbalīs [see AḤMAD B. ḤANBAL], whom he stigmatises as adherents of the Umayyads (the *risāla* has the alternative title of *Risāla fī Banī Umayya*), denouncing the veritable cult which they have built up around the memory of Muʿāwiya (see Pellat, *Le culte de Muʿāwiya*, in *SI*, vi [1956], 53-6). He further condemns their use of *kalām* [*q.v.*] for combatting the Muʿtazila, and the different points in their doctrine, sc. the created Ḳurʾān, a refusal to

anathematise tyrants, *tadjwīr* (the attribution to God of evil actions as well as good ones), anthropomorphism and determinism, these last two articles of faith clearly pinpointing their impiety.

Ibn Ḳutayba, for his part, avoids all links with the Ḥanbalīs but castigates the extremist traditionists who behave in a disordered fashion and are called "sometimes *ḥashwiyya, nābita* or *mudjbira*, and sometimes *djabriyya*" (*Mukhtalif al-ḥadīth*, 96, tr. G. Lecomte, §§ 108-9). Because of their predilection for the Umayyads, there is a tendency to link the Nābita with the ʿUthmāniyya, but these last, like the ʿAlids, rejected the dynasty founded by Muʿāwiya. On the other hand, against the partisans of ʿAlī, they recognised the caliphate of ʿUthmān and, through that, those of his two predecessors (cf. Lecomte, *Ibn Qutayba*, Paris 1965, p. XXIII, 336-41, who appears to follow I. Goldziher (in *Muh. St.*, ii, 119-20), who mistakenly makes the equation ʿUthmāniyya = partisans of the Umayyads).

Bibliography: On the mss. and edition of the *Risāla fi 'l-Nābita*, see Brockelmann, S I, 242, no. 7, and Pellat, *Nouvel inventaire*, in *Arabica*, xxxi (1984), 151, no. 162. In addition to the references given in the article, see further A. Khālid, *Shakhṣiyyāt wa-ṭayyārāt*, Sousse 1970, 236-40; Rashīd Riḍā, in *Manār*, vii (1904-5), 620-4; C.E. Bosworth, *Al-Maqrīzī's "Book of Contention and Strife"*, JSS Monographs no. 3, Manchester 1980, 38-40; and *Bibl.* to ḤASHWIYYA. Starting from the mention, by al-Fārābī, of the *nawābit* who are, grosso modo, the opposition, Ilai Alon has been led to analyse the concept expressed by the term, not only by the author of *al-Madīna al-fāḍila*, but additionally in the works where it figures, from the time of al-Djāḥiẓ onwards; see his *Fārābī's funny flora: al-nawābit as "opposition"*, in *Arabica*, xxxvii (1990), 56-90.

(CH. PELLAT)

NABOB [see NAWWĀB].

NĀBULUS, a town in central Palestine, the name of which is derived from that of Flavia Neapolis built in honour of Vespasian. Its Old Testament predecessor was Shechem, which however lay more to the east on the site of the present village of Balāṭa (the name is explained by S. Klein, in *ZDPV*, xxxv, 38-9; cf. R. Hartmann, in *ibid.*, xxxiii, 175-6, as "platanus", from the evidence of the pilgrim of Bordeaux and the *Midrash Gen. rb.*, c. 81, § 3). According to Eusebius, the place where the old town stood was pointed out in a suburb of Neapolis. The correctness of this identification of the site of Shechem has now been completely proved by Sellin's excavations; and this also explains how the old name did not as usual drive out the late Greek one. In the time of the Arab writers, the name Shechem was long forgotten and what they tell us refers to Neapolis-Nābulus.

Nābulus is in a long valley (running form east to west) formed by two chains of hills, on the south side Garizim, Arabic Djabal al-Ṭūr or al-Ḳiblī (2,900 feet high), on the north side Ebal, Arabic Djabal Islāmiyya or al-Shamālī (3,140 feet high). G. Hölscher (*ZDPV*, xxxiii, 98) refers the older name of Neapolis, Mabartha (Mamortha) in Pliny and Josephus, i.e. "crossing", *maʿbartā*, to the low saddle running right across the valley. The town with its 22 springs is unusually rich in water, which can be heard running everywhere and produces a very luxuriant vegetation. Where the road from the south turns westwards into the valley there is a well with the ruins of a church. Unanimous tradition since the 4th century A.D. locates here Jacob's well, and it is undoubtedly the same as is mentioned in John, iv, 5. About a thousand yards to the north is a building where tradition locates Joseph's grave.

In the post-exilic period, Shechem belonged to the territory of the mixed people of the Samaritans, whose capital it became after they had built on the hill of Garizim (the Samaritan text of Deut., xxvii, 5, has this name instead of Ebal) a temple as a rival to that of Jerusalem. They were continually at strife with the Jews, and in the end John Hyrcanus in 129 B.C. destroyed Shechem and its temple. At a later date, this always turbulent people was equally hostile to the Romans, which caused Vespasian to attack them on Garizim, when a large number were slain. Christianity gradually spread in the country and Neapolis became a bishopric. The result was that the Samaritans now turned their arms against the Christians and treated them with great cruelty. After a deadly raid by them, the Byzantine Emperor Zeno (474-91) had them driven from Garizim and built a church there. They wrought still greater havoc in the time of Justinian, who punished them with great severity and destroyed their synagogues while he rebuilt the churches. This finally broke their spirit; many of them fled to Persia while others became Christians. Their part had been played out by the time that Nābulus, with many other towns, fell into the hands of the Muslims.

The notices of the Arab authors about the town are very scanty. They know that it was inhabited by Samaritans [see SĀMIRIYYA] and some add that, according to the Jews, they are found nowhere else; but it should be noted that al-Balādhurī, *Futūḥ*, 158, speaks of Samaritans in Filasṭīn and Urdunn. Al-Yaʿḳūbī mentions (*Buldān*, 328, tr. Wiet, 181), Nābulus as a town near two sacred hills with a population of Jews, foreigners and Samaritans. Below the town is a subterranean city, hewn out of the rock. Al-Muḳaddasī says "Nābulus lies in a valley between two hills, is rich in olive-trees and a stream flows through it. The houses are of stone and there are mills there; the mosque in the centre has a beautiful paved courtyard". In the Crusading period, Nābulus is mentioned as unfortified. On 23 Jan. 1120, an assembly of prelates and secular notables was held here with the object of improving the morals of the Christians. Al-Idrīsī mentions the well of Jacob where Christ had the conversation with the woman of Samaria; a fine church had then been built on the spot. The Jewish traveller Benjamin of Tudela (1160-73) records that there were no Jews in Nābulus, but about 100 Kutaeans (Samaritans), who offered burned offerings on the altar on Garizim at the passover and on other feast-days. His contemporary ʿAlī al-Harawī says the Samaritans are very numerous. He, as does Yāḳūt, always writes Garizim as Kazirim, a corruption which we already have in the "Agazaren" of the pilgrim of Bordeaux. A terrible earthquake in 1202 added to the miseries inflicted on the town by the continual wars between Franks and Muslims. Under the great Mamlūk Sultan Baybars [*q.v.*] it finally passed into possession of the Muslims. Yāḳūt remarks on the wealth of water and fertility of the district; here, he says, is the hill on which according to the Jews, Abraham wanted to sacrifice Isaac (not Ishmael as many of the Muslims say). When praying, the Samaritans turn towards Garizim. Al-Dimashḳī says that Nābulus is like a palace surrounded by gardens; he mentions the pilgrimages of the Samaritans to Garizim where they sacrificed lambs. The Muslims had a fine mosque in the town, where the Ḳurʾān was recited day and night. Accord-

ing to Khalīl al-Ẓāhirī (d. 872/1467), the area included 300 villages.

During the Ottoman period, and till the time of the appearance of the Egyptian commander Ibrāhīm b. Muḥammad ʿAlī Pasha in the 1830s, Nābulus and the Jordan valley to the east remained virtually independent of Istanbul and under the control of local feudal lords. During the First World War, the Turks constructed a 37 km./23 mile-long narrow gauge railway from Ṭulkarm eastwards into the hills via Masʿūdiyya to Nābulus.

Nābulus has always been a strongly Muslim town, with few Jews and Christians and a very small community of Samaritans (161 in the 1931 census), and from the 1930s onwards became a centre of resistance to Jewish immigration into Palestine; it was there in 1936 that the first "Arab National Committee" was founded in the wake of the communal violence at that time. Until 1931, Nābulus had been a flourishing centre of olive-oil pressing and the manufacture of olive-oil soap, but the export of this soap was hit by Egyptian protective tariffs and the rise of an indigenous Egyptian soap-making industry.

al-**NĀBULUSĪ** [see ʿAbd al-Ghanī b. Ismāʿīl].

NADHĪR (a., pl. *nudhur*, Ḳurʾān, LIII, 57), from form IV of *n-dh-r*, with the meaning of warner; sometimes also as a verbal noun, e.g. LXVII, 17. The plural *nudhur* is also found in the sense of an infinitive, e.g. LXXVII, 6. The term occurs frequently in the Sacred Book, where it is even said to be synonymous with *rasūl*; its opposite is *bashīr, mubashshir. Nadhīr* as well as *bashīr* are applied to the prophets, the former when they are represented as warners, the latter as announcers of good tidings (cf. XVII, 106; XXV, 58; XXXIII, 44; XLVIII, 8; *mubashshiran wa-nadhīran*). As an epithet it is used especially in connection with Noah, the great warner before the Deluge, and with Muḥammad himself who thereby receives the stamp of a second Noah (cf. XXVI, 115; L, 51; LXXI, 2, with XXIX, 49; XXXV, 21; XXXVIII, 70; LXVII, 26). Sometimes the Ḳurʾān insists on the fact of Muḥammad's being only a warner (sūra XLVI, 8), or his being the first warner who was sent to his people (XXVIII, 46; XXXIV, 43).

The term is found in *ḥadīth* apart from the common use, known from the Ḳurʾān, in the curious expression *al-nadhīr al-ʿuryān* (Bukhārī, *Riḳāḳ*, *bāb* 26; *Iʿtiṣām*, *bāb* 2; Muslim, *Faḍāʾil*, trad. 16) with which Muḥammad denotes himself when he says: "Myself and my mission are like a man who went to some people saying: I have seen the army (of the enemy) with my eyes, and I am the naked warner". Several anecdotal stories are told by the commentators in explanation of this expression. It is also said, by some of them, that in early Arabia, a man who saw an approaching danger stripped himself of his clothes and wound them around his head in order to warn his tribespeople. The meaning "Nazirite", which in several dictionaries is given to the term *nadhīr*, in the first place does not occur in the Kurʾān, nor in *ḥadīth*, nor in *Lisān al-ʿArab* nor in *Tādj al-ʿarūs*, it is however, used in translations of the Bible.

(A.J. Wensinck)

NADHĪR AḤMAD DIHLAWĪ (Mawlwi/Deputy) (1836-1912), Urdu prose writer, is often described as "the first real novelist" in the language. But this description presupposes that by "novels" we mean fiction dealing with contemporary social themes, more or less following Western models (for fiction prior to Nadhīr Aḥmad, and that on other themes, see ḳiṣṣa 5. In Urdu. The same article provides information on five of Nadhīr Aḥmad's novels).

He was born in a village of Bidjnawr district, not far from Dihlī, of an impoverished and improvident father, who also tried to prevent him from studying English. The family moved to Dihlī where, at the age of nine, he was admitted to a *madrasa* attached to a mosque. He had to support himself by begging and working as a servant. In 1847, an injury that he sustained in a crowd outside Dihlī College brought him to the attention of the Principal, who was so impressed by him that he gave him a scholarship to study there. Nadhīr Aḥmad left in 1854, and began his working life as a teacher in the Pandjāb. It would appear that his early success in his career stemmed, in part, from the gratitude of the British authorities for his "support". During the Mutiny (1858) he saved the life of an English lady, and he was appointed Deputy Inspector of Schools at Allāhābād. He had already begun teaching himself English, and made such progress that he was appointed to translate into Urdu first the Income Tax Regulations (1861), and then the Indian Penal Code. His career thus changed from education to finance, and in 1867 he was appointed Deputy Collector of Settlements. In 1877 he was invited to Hyderabad, and earned a high salary as a member of the State Revenue Board. He retired on pension in 1883, and returned to Dihlī, where he remained till his death.

Nadhīr Aḥmad's work as a translator must have enhanced his command of language, and his literary works indicate an extensive Urdu vocabulary, including many Persian, and more especially Arabic, words. At the same time, the efforts he had made in mastering English must have commended him to British government officials. This in its turn encouraged his work as a novelist, though it was only a part-time occupation; seven novels spread over more than twenty years hardly constitute a large output.

His first novel, *Mirʾāt al-ʿarūs* (1869), was written for his daughters, as he was struck by the lack of Urdu educational material suitable for Muslim girls. Its theme is the aptitude of girls for marriage, two sisters being contrasted. The manuscript was seen by the British Director of Public Instruction for the North

eastern Provinces, with the result that it was published with the support of the Indian Government, and became not only a text book but also a best-seller. Equally successful was his third novel, *Tawbat al-Naṣūḥ* (1877), the subject of which is a father's duty to give his children moral guidance. Both these two books have run into numerous editions for over a hundred years, and until the end of British rule, they were used as set books for the Higher Urdu Examination for expatriate Indian Government officials.

Naḏhīr Aḥmad's final two novels, *Ruʾyā-yi-ṣādiḳa*, an exposition of the fundamentals of Islam, and *Ayāma*, a plea for widows' re-marriage, rely too much on dialogue and discussion. These were important elements in his previous novels but had been kept in check. All his novels are didactic in aim, as he freely admits in his prefaces. This accords with ideas of the ʿAlīgarh Movement, which did not set much store by "art for art's sake", and tended to give content and meaning precedence over style and form. This is, perhaps, the reply to those critics who complain—with justice—that the characters in these novels are types rather than individuals. Naḏhīr Aḥmad was himself a trustee of ʿAlīgarh College and a supporter of the Movement.

The language of his novels is generally regarded as a model of the Classical Urdu of Dihlī—*Dihlī kī ṭaksālī* (literally, "mint") *zabān*, though some do not approve of his use of the colloquial while others think there are too many Arabic words. As for the plots, some modern critics find that they do not sustain interest and are at times thin and unequal. This is the view of Muhammad Sadiq (*op. cit.* in *Bibl.*, 320), but he excludes *Tawbat al-naṣūḥ* from this criticism.

Naḏhīr Aḥmad also wrote theological works: *al-Ḥuḳūḳ wa 'l-farāʾiḍ*, *Idjtihād* and *Ummahāt al-umma*. The last-named is an attempt to answer criticisms of the Prophet (no doubt made by Christian missionaries) for the number of his wives. This naturally gave offence, and unsold copies were publicly burnt (Sadiq, 317).

More recently, his letters have aroused interest. A collection of them was published in Lahore in 1963, ed. Iftikhār Ahmad Ṣiddīḳī (see *Bibl.*).

Bibliography: There are many studies of Naḏhīr Aḥmad, now acknowledged as one of the great Urdu writers. However, *Ḥayāt al-Naḏhīr*, by ʿĀlim Bilgrāmī, Dihlī 1912, is still a standard reference. Among shorter accounts, that in Muhammad Sadiq, *A history of Urdu literature*, London 1964, must take pride of place. For the letters, see Naḏhīr Aḥmad, *Mawʿiẓat-i-Ḥasnā*, ed. Iftikhār Aḥmad Ṣiddīḳī, Lahore 1963, with introduction and notes. For Naḏhīr Aḥmad's novels, there are so many editions that it is pointless to list them. For further references, particularly to place these novels in the context of the general history of Urdu fiction, see ḲIṢṢA. 5. In Urdu. (J.A. HAYWOOD)

NAḎHR (A.), vow. This procedure was taken over into Islam from the pre-Islamic Arabs and underwent modification by the new religion. The idea of dedication is associated with the root *n-ḏh-r* which is also found in South Arabian, Hebrew and Aramaic and to some extent in Assyrian. An animal could be the object of dedication among the Arabs. For example, they dedicated by *naḏhr* certain of their sheep etc., for the *ʿatīra* feast in Radjab (*Lisān al-ʿArab* and al-Djawhari, s.v.); the dedication, which was expressed in solemn formulae, signified that the animals were removed from the mundane sphere and placed in the sacred one.

As a rule, a sacrifice was dedicated in order to obtain good fortune in a particular respect. The promise to dedicate an animal when the herd had reached the number of a hundred (*op. cit.*) had an effect on the prosperity of the animals because the word anticipated the fact. According to the story, ʿAbd al-Muṭṭalib similarly dedicated a son to be slain beside the Kaʿba if he should have ten sons and they grew up (Ibn Hishām, 97-8) but for his *naḏhr* 100 camels were substituted.—A childless woman could also vow if she had a son to dedicate him to the sanctuary (*ibid.*, 76; perhaps this story is a literary borrowing). According to the *ḥadīth* of Maymūna bint Kardam, her father promised to sacrifice 50 sheep if he had a son (Yāḳūt, i, 754; Abū Dāwūd, *Aymān*, *bāb* 19; Ibn Mādja, *Kaffārāt*, *bāb* 18). If a child was sick, its mother could dedicate it by a vow as *aḥmas* (from *ḥums* [*q.v.*]) if it recovered (al-Azraḳī, 123, 8 ff.). Escape from every difficulty was sought by a *naḏhr*. During a battle, a camel used to be dedicated as a sacrifice (al-Wāḳidī-Wellhausen, 39). The traveller in the desert used to make a vow on account of the danger (see the verse in Lane and *Lisān al-ʿArab*, s.v.). In distress at sea one promised offerings to God or a saint or vowed to do something oneself, such as fasting (sūra X, 23, XXIX, 65; Abū Dāwūd, *Aymān*, *bāb* 20; see also Goldziher, *Muh. Stud.*, ii, 311). During a drought ʿUmar vowed to taste neither *samn* (i.e. ghee), nor milk nor meat till the rain fell (al-Ṭabarī, i, 2573, 12 f.).

Even if a sacrifice were promised, the vow also affected the person concerned, as we see from the fact that he had his hair shorn not only on the *ḥadjdj* but also, for example, when sacrificing after a journey (Ibn Hishām, 15, 749; al-Wāḳidī-Wellhausen, 324, 381, 429-30; al-Bukhārī, *Ḥadjdj*, *bāb* 125); for the cutting of the hair ended, as in the case of the Israelite Nazirite, the state of consecration. The vow therefore had always more or less the character of a self-dedication. This aspect was often quite prominent. Ordinary sacred duties such as participation in the *ḥadjdj* were assumed as a consecration by *naḏhr* (sūra XXII, 30) at which special obligations were assumed e.g. to go to the sanctuary on foot, or barefooted (al-Bukhārī, *Djazāʾ al-ṣayd*, *bāb* 27; al-Tirmidhī, *al-Nuḏhūr wa 'l-aymān*, *bāb* 17). The sacred condition of *iʿtikāf* was assumed as a *naḏhr*; thus before his conversion ʿUmar vowed to make a nightly *iʿtikāf* in the Meccan sanctuary (al-Bukhārī, *Maghāzī*, *bāb* 54; *Aymān*, *bāb* 29). Such a vow to separate oneself from everyday life in some special way was very frequent among the ancient Arabs; for Labīd (17, 17) compares an antelope buck alone among the bushes to one fulfilling his vow (*ḳāḍī 'l-nuḏhūr*).

This isolation had the definite object of spiritual concentration and strengthening the soul and thereby influencing the deity. Abstinence was therefore practised in preparation for great deeds, especially in war. The Arabs "touched no perfume, married no woman, drank no wine and avoided all pleasures when they were seeking vengeance, until they attained it" (*Ḥamāsa*, 447, v. 5 schol.); avoidance of wine (*Ḥamāsa*, 237, v. 4 ff.) and women (*Kitāb al-Aghānī*[2], xv, 161, 154) is specially mentioned. These abstentions like the *ḥadjdj* rites and the *iʿtikāf* are also the objects of a *naḏhr*. The form of this vow is for example "wine and women are *ḥarām* to me until I have slain 100 Asadīs" (*Aghānī*, viii, 68, [2]65). A definite term may be fixed, such as drinking no wine for 30 days in order to obtain vengeance (Ḳays b. al-Khaṭīm, ed. Kowalski, iv, 28). Forms of abstention are not to eat meat, not to wash the head, so that the *djanāba* is not removed (*Aghānī*, ix, 149, [2]141, xiii, 69, [2]66; Ibn Hishām, 543, 980;

Hudhailitenlieder, ed. Wellhausen, no. 189), not to anoint oneself (al-Wāķidī-Wellhausen, 201). Refraining from meat, wine, ointment, washing and sexual intercourse are mentioned together (*Aghānī*, vi, 99, [2]97, viii, 68, [2]66; Ibn Hishām, 543; al-Wāķidī-Wellhausen, 73, 94). There is also evidence of complete fasting (al-Wāķidī-Wellhausen, 105, 402). The abstentions, the offering and the deed to be done form the content of the *nadhr*. It is said: *nadhartu ʿalā nafsī* and *nadhartu mālī* (al-Djawharī and *Lisān al-ʿArab*, s.v.) as well as *nadhara dam^a fulān* (ʿAntara, 21, 84; Ibn Ķays al-Ruķayyāt, 52, 5). After a wish has been fulfilled a vow of gratitude may also be taken (al-Wāķidī, 290).

The consecration placed the person making the vow in connection with the divine powers, the *nadhr* was an *ʿahd* (sūra IX, 76, XXXIII, 27 XLVIII, 10), whereby he pledged himself. A neglect of the *nadhr* was a sin against the deity (Imruʾ al-Ķays, 51, 10). The sacred obligation of living made this a *nadhr* or (synonymous) *naḥb*, which one should fulfil (*ķaḍā*), instead of wandering aimlessly (sūra XXXIII, 23; al-Wāķidī, 120; Labīd, 41, 1; Kumayt, *Hāshimiyyāt*, ed. Horovitz, 4, 48). The importance of the binding pledge gradually becomes more prominent (cf. *Lisān al-ʿArab*, where *nadhara* is explained by *awdjaba*, ironically *Aṣmaʿiyyāt*, 7, 2); the emphasis on the material dedication gradually became less. The abstinences mentioned receive their importance on the one hand from works meritorious to the deity, on the other from the unpleasant deprivations, by which the person taking the vow disciplines himself. Both points of view are seen in the examples quoted. The releasing of slaves or divorcing of wives often form the subject of a kind of vow by which a man pledges himself under certain conditions. A man may also vow to sacrifice all his camels if he is lying (*Ḥamāsa*, 667, v. 3). The strict obligation inherent in the *nadhr* makes it closely related to the oath [see ĶASAM].

One can also bind one's family by a vow. A mother swears not to comb her hair or to seek shade until her son or daughter fulfils her wish (*Aghānī*, xviii, 205, [2]205; Ibn Hishām, 319, ii, 90). The strength of this kind of "conjuration" is based on the relationship between the two partners. If a dying man vows that his tribe shall slay 50 to avenge him, this binds the tribe (*Ḥamāsa*, 442-3). There thus arose in Islam the problem of how far unfulfilled vows had to be fulfilled by the descendants (Muslim, *Nadhr*, trad. 1; al-Bukhārī, *Waṣāyā*, *bāb* 19; cf. Goldziher, *Ẓâhiriten*, 80).

In Islam the vow and the oath are treated together. In the Ķurʾān it is prescribed that unconsidered expressions (*laghw*) in an oath may be broken and expiated (sūra II, 225, V, 91). The context shows that the reference is to vows of abstinence, especially relating to food and women. Sūra II, 226-7, in continuation says that those who bind themselves by *īlāʾ* not to touch a woman should either break the vow after 4 months or pronounce the formula of divorce. The breach of the oath then requires the *kaffāra*. The *ẓihār* formula is absolutely forbidden (sūra LVIII, 1-5; cf. XXXIII, 4); it is a great sin in the eyes of the law, while the *īlāʾ* is not a sin (see Juynboll, *Handbuch*, 284 ff.; Sachau, *Muh. Recht*, 13, 68 ff.). The "release from the oath" promised in sūra LXVI, 2 refers to a vow of continence. The same *kaffāra* holds for a broken vow as for an oath. It is probable in this case that we have Jewish influence (cf. *Mishna*, *N^edārīm*) but the principle of releasing oneself from a vow by doing something else is certainly also originally Arab. But with Islam comes the view that *nudhūr* are useless because they cannot influence God (al-Bukhārī, *Aymān*, *bāb* 26; *Ķadar*, *bāb* 6; Muslims, *Nadhr*, trad. 2). Thus we find *ḥadīths* which urge the fulfilment of vows as well as those that forbid them. Following hints in the *ḥadīths*, we find a systematic division into vows of piety (*nadhr al-tabarrur*), which are intended to acquire merit by a pious deed (*ṭāʿa*), and vows by oaths which, since they are conditioned, serve to incite, prevent or strengthen. The latter are called *nadhr al-ladjādj wa 'l-ghaḍab*. They are deprecated but must be treated like oaths. Their matter must not be sinful; according to some, such a vow is invalid, according to other, it is valid but must be broken. Their matter must not already be an individual duty (*wādjib ʿaynī*). The person taking the vow must, like him taking an oath, be *mukallaf* and be acting of his own free-will.

NADHR AL-ISLĀM, ĶĀḌĪ, Kazi Nazrul Islam, (1899-1976), revolutionary Bengali poet, and the greatest Muslim contributor to modern Bengali literature.

He was born on 24 May 1899 to Ķāḍī Faķīr Aḥmad and Zāhida Khātūn of Čurūliyā, a village in the district of Burdwān in what is now the Indian province of West Bengal, to which his ancestors had moved from Patnā in the reign of the Mughal emperor Shāh ʿĀlam. As the title of *Ķāḍī* denotes, his ancestors were judges in the Muslim administration. His father, a lover of Persian and Bengali poetry, died while Nadhr al-Islām was only eight years old. He had a miserable childhood, which explains why he was nicknamed *Dukhū Miyān* ("the unhappy one"). He had his primary education in the village *maktab*, reading Ķurʾān, Arabic and Persian, and taught there for a year. He then joined the village *Lētō* (folk drama) group for about three or four years, composing songs and plays. Thereafter, he moved to the nearby town of Āsansōl and worked there at a bread shop. His talents attracted the attention of a Muslim police officer, who got him admitted to the high school in his village in the district of Mymensingh, now in Bangladesh; a year later, he moved to study in Burdwān. Before he could appear for the matriculation examinations, he joined the army in 1917 at the age of 18, influenced by one of his teachers who was a member of the revolutionary Djugantar Party. The idea was that the military training thus acquired could be used later in the anti-British struggle. He was posted at Karachi as part of the 49th Bengali Regiment with a rank of havildar (sergeant) quartermaster.

Nadhr al-Islām's first published poem, *Muktī* "Release", sent from Karachi, appeared in the July-August 1919 issue of the Calcutta journal *Bangiya Musalmān Sāhitya Patrikā*, organ of the Bangiya Musalmān Sāhitya Samitī (BMSS), a literary platform established by Bengali Muslim writers and poets who were not taken seriously by the Hindu-dominated Bangiya Sāhitya Parishad (Bengali Literary Academy). His first short story in print,

Bhānduler Ātamkathā ("Autobiography of a vagabond"), believed to be his own story, was also published the same year by a Calcutta Muslim journal, Sawghāt. During his military days, Nadhr al-Islām wrote two short story collections, Bāythar Dān ("Gift of pain"), in which he was influenced by the Communist Revolution in Russia, and Rikter Bēdan ("Open pain"), consisting of love stories, mainly tragic. While in Karachi, Nadhr al-Islām befriended a Pandjābī mawlawī in his regiment who taught him Persian and helped him translate selections from Ḥāfiẓ Shīrāzī's Rubāʿiyyāt into Bengali. These were published in various magazines and later completed and collected as Rubāʿiyyāt-i Ḥāfiẓ (Calcutta 1930). He continued this interest into the 1930s and translated the Rubāʿiyyāt of ʿUmar Khayyām, published in book form in 1960.

With the end of the First World War, Nadhr al-Islām's regiment was disbanded in March 1920. He returned to live in Calcutta and became closely associated with the BMSS, where his friends persuaded him not to seek government employment but to promote his literary potentialities. It was a time of great turmoil with the Non-Cooperation and Khilāfat movements raging in India against the British colonial rule. The BMSS's Muẓaffar Aḥmad, later founder of the first Communist Party in India, proved a vital factor in Nadhr al-Islām's evolution as the first poet of avowedly Communistic inspiration in Bengal, if not in India. He soon took to political journalism and joined in July 1920 a daily evening paper, Nawa Djug ("New era") as a co-editor with Muẓaffar Aḥmad. The government imposed various fines on the radical paper until its financier, A.K. Faḍl al-Ḥakk, a prominent Calcutta lawyer, advised the editors to tone down its anti-British line. This prompted Nadhr al-Islām to quit the paper in December 1921. Two months later he returned to the paper for a short while. His editorials were collected in a book, Djugabānī (Calcutta 1922) which was promptly proscribed by the government.

Nadhr al-Islām, popularly called "Nadhrul", became the poet of the Swarādj (freedom) era, just as Tagore was the poet of the Swadēshī days when the emphasis was on self-reliance and use of local products. He wrote the immortal song of the Swarādj movement, Bhangar Kathā ("Story of destruction"), which was a forerunner of Bidrōhī. It was banned by the British, but people sang it from thousands of platforms throughout the years of the national struggle right up to 1947. Many of Nadhr al-Islām's earliest published poems are on Islamic themes, like Ḳurbānī ("Sacrifice"), Muḥarram, Shaṭṭ al-ʿArab (an address by a Bengali soldier to ʿIrāḳ about the common slavery of his country and "the land of the great martyrs"), and Fātiḥa dawāzdahum (on the Prophet's birthday). He also wrote poems in praise of Muslim leaders like Muṣṭafā Kemāl, Enwer Pasha, Saʿd Zaghlūl and Muḥammad ʿAlī.

In December 1921, Nadhr al-Islām composed his immortal poem Bidrōhī ("The rebel"), which expressed the popular mood of rebellion against British rule. It was an event in the literary and political life of Bengāl and was warmly received in all parts of the country. It established him as a great Bengali poet, as a result of which he was often called Bidrōhī Kabī ("the rebel poet"), an apt description of the first phase of his literary life.

Nadhr al-Islām served the daily Sēbak for two months in the summer of 1922 before launching his own bi-weekly Dhūmkētū ("Comet") on 12 August 1922, "first and foremost to demand the full and complete independence of India", as one of its editorials said. The first issue came out with a revolutionary poem bearing the same title, Dhūmkētū. Soon his militant writings and fiery poems landed him into trouble, and he was sentenced to a year's rigorous imprisonment in January 1923 on charges of sedition. The magazine had to be closed down before he could be released in December.

In April 1924, Nadhr al-Islām married a Hindu girl, Pramīlā, to the dislike of both Hindus and Muslims. A year later he participated in the foundation of the (pro-Communist) Labour Swarādj Party of the Indian National Congress (subsequently the Workers' and Peasants' Party) and became the co-editor of its weekly organ Lāngal ("Plough"). Its first issue appeared on 25 December 1925. He published in Lāngal a series of sarbahārā ("have-nots") poems, each with a sub-title like "God", "Man", "Sin", "Prostitute", "Woman", "Workers", etc. These were the first such poems in Bengali in honour of the proletariat. He sang for the rights of the poor, equality of men and women and proclaimed revolt against orthodoxy. Lāngal later changed its name to Gānābānī in September 1926 to become the first professed organ of Marxism in India. Nadhr al-Islām was the first to translate the Communist Internationale into Bengali, but he never became a member of the Communist Party because political polemics did not interest him. He was considered to be the leader of the rebel Kallōl group of writers who challenged the existing literary norms and moral values of the Bengali educated élite.

The 1920s were Nadhr al-Islām's most productive years. He produced a large number of collections of poems, essays, plays, short stories and novels, including poems and plays for children. His collection of poems, Prālāy shīkhā ("Flame of destruction"), published in 1930, was found by the authorities to be preaching sedition. The publisher was sentenced to two years' jail, while Nadhr al-Islām was sentenced to six months' imprisonment. He was released, however, before reaching jail as a result of the Irwin-Gandhi pact in March 1931.

Nadhr al-Islām was far from being financially well-off with his prose and poetry until 1928 when he was introduced to HMV, a British gramophone company. His songs were sung first by professional artists, then by himself. He took expert lessons in music and was soon employed by HMV as a music composer. Now in his second and last literary phase, Nadhr al-Islām softened his militant approach and wrote sweet love and devotional songs and ghazals which were produced by various gramophone companies. Two of his stories, Widdyābatī and Sapērā, were filmed. He acted as a music director of an Urdu film, Čowrangī. He also wrote plays and composed their music. Towards the end of the second phase, he again started writing Muslim songs for the record companies. These include Ḥamd and Naʿt, poems and songs in praise of Allah and the Prophet respectively, Marthiyas [q.v.] (elegies, especially of the Imām Ḥusayn), as well as songs for Muslim festivals. During his editorship of the revived Nawa Djug (1940-2), he wrote many songs and poems dedicated to Muslims. He also wrote Hindu devotional songs like Bhadjans and Kīrtans. He makes frequent use of Hindu mythology in his poetry. It has been estimated that Nadhr al-Islām composed about 3,500 songs, out of which about 2,500 are largely difficult to trace.

Nadhr al-Islām's luck proved to be brief. His second son Bulbul (born 1926), to whom he was highly attached, died suddenly in May 1930. He never recovered from the shock of Bulbul's death, and

with it ended his apparent atheism. Henceforth, his work was marked by a new seriousness and sadness. He became increasingly preoccupied with dubious Tāntric (Hindu occult) practices, yearning to establish communion with Bulbul. In the later phase of his life, a return to Islam is visible, with repentence and a confession of sinfulness. He also started to write a biography of the Prophet in verse. This incomplete work was later published as *Marū Bhāskar* ("Moon of the desert") (Calcutta 1957)).

Na<u>dh</u>r al-Islām returned to political journalism in 1940 when *Nawa <u>Dj</u>ug* was re-published, again with him as its editor. In the same year, his wife was paralysed and remained so until her death in 1964. Soon he too was totally crippled on 9 July 1942 by an incurable brain disease. Despite local and foreign medical attention, he never recovered from his semi-conscious condition. He received great recognition and tributes during his lifetime. In 1945 he was granted by the Calcutta University the <u>Dj</u>ugātarīnī Medal, until then the greatest Bengali literary award. The governments of West Bengal and Pakistan (Bangladesh since 1971) granted him special pensions. In 1976 he was moved to Dhākā, where he died on 29 August of the same year and was buried with full state honours in the Dhākā University campus.

Na<u>dh</u>r al-Islām is generally placed next only to Rabindra Nath Tagore in modern Bengali literature. He was fond of using Urdu and Persian words in his poems and writings, and introduced *<u>gh</u>azal* into Bengali in 1926. He also started the translation of the Ḳur'ān into Bengali verse, but the work was never completed. His translation of the last (30th) part of the Ḳur'ān was published as *Kawya ʿamm pārah* (Calcutta 1933). For all his multi-faceted contributions, Na<u>dh</u>r al-Islām was basically a poet. He had great command over rhyme and metre, using Arabic and Persian ones as well as inventing new ones. The basic theme of his poetry was to arouse people to struggle for the freedom of their country and recover their rights, but he had no coherent philosophy to offer. As he said in his "explanation" (*Amār kafiyat*, 1926) he was "a poet of the present, not the prophet of the future".

Bibliography: Na<u>dh</u>r al-Islām wrote poetry, prose, short stories, novels, songs, plays, books for children as well as the translations mentioned above. *The national bibliography of Indian literature, 1901-53* (ed. Kesavan and Kulkarni, New Delhi 1962, i, 94, 120, 193, 220) lists 35 works by him, but the National Library of India at Calcutta has on its shelves 77 of his works without taking reprints into account. Several attempts have been made to collect Na<u>dh</u>r al-Islām's works; the biggest collection, apparently incomplete, is *Na<u>dh</u>rul račanāwalī* (Dhākā 1984).

There is a rich literature on Na<u>dh</u>r al-Islām in Bengali, published in both West Bengal and Bangladesh. Important works include: Aẓhar al-Dīn <u>Kh</u>ān, *Bangla sāhityē Na<u>dh</u>rul*, 3rd ed., Calcutta 1959; Muẓaffar Aḥmad, *Ḳāḍī Na<u>dh</u>rul prasangē*, Calcutta 1959; idem, *Ḳāḍī Na<u>dh</u>r al-Islām samritī kathā*, Calcutta 1965; Sūshīl Kumār Guptā, *Na<u>dh</u>rul čarit mānas*, Calcutta 1960; Ṣūfī <u>Dh</u>u 'l-Fiḳār Ḥaydar, *Na<u>dh</u>rul <u>Dj</u>īwaner sēs adhyāy*, Dhāka 1964; Wiswānāth Dē, *Na<u>dh</u>rul samritī*, Calcutta 1970; Prantōs Čattōpādhyāy, *Ḳāḍī Na<u>dh</u>rul*, 2nd ed., Seorāphūlī 1973; ʿAṭā al-Raḥmān, *Na<u>dh</u>rul kawya samikshā*, 3rd ed., Dhakā 1974; Gawrī Sankar <u>Bh</u>aṭṭāčāryā *et al.*, *Na<u>dh</u>rul sangā-o prasangā*, Calcutta 1976; Sudhīr Ran<u>dj</u>an Gūhā, *Martālōker Dhūmkētū*, Calcutta 1978.

Works on Na<u>dh</u>r al-Islām in other languages include: Kazi Abdul Wadud, *Creative Bengal*, Calcutta 1950; Yūnus Aḥmar, *Ḳāḍī Na<u>dh</u>r al-Islām, zindagī awr fann*, Karachi 1967; Basudha Chakravarti, *Kazi Nazrul Islam*, New Delhi 1968; Gopal Haldar, *Kazi Nazrul Islam*, New Delhi 1973; Serajul Islam Choudhury, *Introducing Nazrul Islam*, Dhākā 1974. Shorter accounts of his life and literary career are found in S.P. Sen (ed.), *Dictionary of national biography*, Calcutta 1973, ii, 309-11, and Naresh Kumar Jain (ed.), *Muslims in India — a biographical dictionary*, New Delhi 1983, ii, 89 f. Selections from Na<u>dh</u>r al-Islām have been translated into English and various Indian and Soviet languages. These include: *Bā<u>gh</u>ī*, tr. Dayānand Keshawdās Manshāramānī, Karachi 1944; *Ṭu<u>gh</u>yān*, tr. Yūnus Aḥmar, Delhi 1945; *Selected poems*, tr. Kabir Chowdhury, Dhākā 1963; *The Rebel and other poems*, tr. Basudha Chakravarty, New Delhi 1974) and *The fiery lyre of Nazrul Islam*, tr. Abdul Hakim, Dhākā 1974.

(ẒAFARUL-ISLĀM <u>KH</u>ĀN)

NA<u>DH</u>R MUḤAMMAD B. DĪN MUḤAMMAD B. <u>Dj</u>ānī Muḥammad b. Yār Muḥammad, the fifth great <u>kh</u>ān of Mā warā' 'l-nahr and Bal<u>kh</u> [*q.vv.*] of the Tuḳāy-Tīmūrid (<u>Dj</u>ānid [*q.v.*], A<u>sh</u>tar<u>kh</u>ānid) family of the <u>Dj</u>ūčid line of Čingiz <u>Kh</u>ān. Na<u>dh</u>r Muḥammad was born in 1000/1591-2, probably at <u>Kh</u>argird in eastern <u>Kh</u>urāsān to a descendant of Čingīz <u>Kh</u>an and the daughter of a Riḍawī *<u>sh</u>aykh* from Ma<u>sh</u>had. He was given an appanage at Bal<u>kh</u> *ca.* 1015/1606-7 during the <u>kh</u>ānate of his uncle Walī Muḥammad. For thirty-five years, until <u>Sh</u>aʿbān 1051/November 1641 when he succeeded his brother, Imām Ḳulī <u>Kh</u>ān, as grand <u>kh</u>ān at Bukhārā, he governed a region south of the Amū Daryā corresponding to what is today northern Af<u>gh</u>ānistān, including Bada<u>kh</u><u>sh</u>ān. He died at Simnān while making the *ḥa<u>dj</u><u>dj</u>* on 29 <u>Dj</u>umādā al-<u>Th</u>ānī 1061/19 June 1651.

During his tenure, Bal<u>kh</u> witnessed its last florescence as a great urban centre. Art, architecture, and literature all blossomed under Na<u>dh</u>r Muḥammad's sponsorship. His most important act of patronage was commissioning the universal history *Baḥr al-asrār fī manāḳib al-a<u>kh</u>yār* which is the only detailed account of the rise of the Tuḳāy-Tīmūrid family. Its author, Maḥmūd b. Amīr Walī, credits him with some twenty-five major building projects, including several hunting lodges, a palace complex, a congregational mosque, several *čahār bā<u>gh</u>s*, a *madrasa* with a 2,000 volume library and four lecture halls, and several hydraulic works. (*Baḥr al-asrār*, vi/4, *passim* but esp. fols. 213a-216a).

Bibliography: Maḥmūd b. Amīr Walī, *Baḥr al-asrār fī manāḳib al-a<u>kh</u>yār*, vi/4, India Office Library ms. 575, London; Iskandar Beg Mun<u>sh</u>ī, *Tārī<u>kh</u>-i ʿālam-ārā-yi ʿAbbāsī*, ed. Īra<u>dj</u> Af<u>sh</u>ār, 2 vols. Iṣfahān n.d.; Ināyat <u>Kh</u>ān, *The Shah Jahan Nama of ʿInayat Khan*, tr. A.R. Fuller, edited and completed by W.E. Begley and Z.A. Desai, Delhi 1990; B.A. Akhmedov, *Istoriya Bal<u>kh</u>a* (*XVI-pervaya polovina XVIII v.*) ("A history of Balkh from the 16th to the first half of the 18th century"), Tashkent 1982.

(R.D. MCCHESNEY)

NADĪM (A.) "drinking companion" and, by extension, friend, courtier (or confidant) of kings or of wealthy persons; his function is to entertain them, eat and drink in their company, play chess with them, accompany them in hunting and participate in their pastimes and recreations.

Lexicography (*LA*, xvi, 50 f.; *TA*, ix, 74; the Concordance of Ancient Arabic Poetry, edited by A.

Arazi, contains more than 90 references to *nadīm*) and mediaeval Arabic literature (which includes, among other literary forms, a special branch of anthologies devoted to drinking, feasting and pleasure; see *Bibl.*) supply an etymological explanation according to which the term *nadīm* (pl. *nidām*, *nudamāʾ*, *nudmān*; sing. *nadmān* and pl. *nadāmā* are also encountered) would be derived from the verb *nadima* "to regret". Writers (e.g., Kus̲h̲ād̲j̲im, *Adab al-nadīm*, ed. Cairo, 3; al-Ḳayrawānī, *al-Mukhtār min ḳuṭb al-surūr*, 136; and the bibliographical sources noted above) disagree as to the reason for this "regret": does the friend of the *nadīm*, or his master, regret the fact that the convivial experience, enjoyed in the company of the *nadīm*, must come to an end, or, on the contrary, does the *nadim* regret indiscretions, of deed or of word, which he has committed while in a state of intoxication? This disagreement reveals the artificial nature of the false etymology proposed by mediaeval authors. The *nadīm* already appears in accounts relating to the pre-Islamic period, such as the account concerning *al-Farḳadān*, the two *nadīms* (*nadmāns*) of the Arab prince D̲j̲ad̲h̲īma al-Abras̲h̲ [*q.v.*]. His court, situated at Ḥīra, was dominated and influenced by that of the Sāsānids. However, the style and the vocabulary of these Arabic accounts are the handiwork of writers of the Islamic period. These texts may be of assistance in clarifying the origin of the *nadīm* concept (see below, the Persian influence), but not the etymology of this term.

However the term *muʿāḳara*, denoting the action of two or more friends who drink together, is an ancient Arabic word dating back to the pre-Islamic period. This term presents the mutual aspect of the verbal form III *ʿāḳara* and the noun of action *mufāʿala*; the same applies to the action of the *nadīm*, which is *munādama* = "drinking together", as *muʾānasa*, *mud̲j̲ālasa*, *mulāʿaba* and *musāmara* refer to the activities of courtiers in the court and elsewhere, which will be examined in the course of this article. The Arabic lexicographers (*LA*, vi, 8-9top; *TA*, ii, 414) explain that the term *muʿāḳara* is derived from *ʿuḳr* (which also resembles *ḳaʿr*, having the same or almost the same sense), meaning "the bottom of a glass or a cup"; the action in question would thus consist of draining the cup to the dregs. *Muʿāḳara*, in the sense of a meal taken with friends, is explained, however, as deriving from the ancient Arab custom of competing in generosity with rivals, all being members of the same tribe. Each, in turn, attempts to outdo the others in slaughtering camels (by cutting the veins of the lower limbs) and distributing the meat to the people of the tribe. *Muʿāḳara* thus possesses two senses at once: eating and drinking, in other words, a meal and wine. But the question then arises as to why there should be two different etymologies for the two senses. It is evident that the explanation linking *muʿāḳara* with a competition of some sort is very revealing as to the initial sense which is likewise concealed in the custom of *munādama*; this sense will be elucidated below.

The concept of *munādama*, for its part, also in fact retains the mutual aspect and the competitive spirit of the activity. Certain rules concerning the etiquette of the *nadīm* bear indirect witness to the primal importance of the competitive spirit in this occupation. The rules forbid a *nadīm* to leave the presence of his "superior" (one of the *ʿuẓamāʾ* = the aristocracy, of the *mulūk* = kings, *raʾīs* = chief, even *raʾs* = head, assuming that this is not the result of an error on the part of the copyist or the printer) after an even number of glasses have been drunk. He is permitted to leave after an uneven number. It cannot be doubted that the authors dealing with this subject (see, e.g., Ibn al-Muʿtazz, *Fuṣūl al-tamāt̲h̲īl*, Cairo 1925, 71) have not succeeded in perceiving the significance of this evidence which they copy or reformulate in terms of the code of etiquette. The explanation which they propose is insufficient: "so that he (i.e., the *nadīm*) should leave a remainder..." as if the uneven number is incomplete and thus encourages the *nadīm* to return to his "superior" and resume the feast. What we have in fact is an important leap in the evolution of etiquette which presents, at the same time, an anthropological aspect. It is permissible to compete in generosity with an "equal" (*naẓīr*) friend, of the same social class, in a drinking session. But this is not allowed with the sovereign who is the "superior" of the drinking companion. Even in the court, an archaic notion of competition has been preserved: in the past (long before the Islamic period, apparently), the first glass was reckoned to be the gift of the "superior", the second to be provided by his companion, the third to be a gift of the "superior", etc. But, according to an unstated rule, it is always appropriate to let the king win in this supposed competition (to all appearances, the totality of drinks served comes from the king's cellars). It is for this reason that all those who wish to leave must do so after the "uneven number".

A similar code of etiquette is found in the Bible, in the Book of Esther (i, 8), which attributes it to the Persian court of the Achaemenids. Here there are three types of behaviour appropriate to a feast: (a) drinking in free fashion (the text does not specify what this means; it emerges from the presence of the two following possibilities), probably in reference to feasts held on other occasions, or by other groups, outside the royal court; (b) drinking under obligation, because the king imposes it (Hebrew: *onés* = "one who forces"), with the aim of preventing those invited from drinking each to his own taste; and (c) drinking according to the code, according to some custom (= *kad-dat̲h̲*, an expression which has given rise to various interpretations, in ancient and mediaeval translations and commentaries). This possibility finds expression in certain limits which occupy an intermediate position between total liberty and constraint. Obviously, there are no exact parallels to be established between the ancient Persian court, described in the Bible, and that of the ʿAbbāsid caliphs (influenced, besides, by the Sāsānid Persian kings, as will be seen in the course of this article), in the Islamic Middle Ages. However, there is a certain similarity to be noted between the two royal courts.

The rules of conduct observed by the *nadīm* symbolise, at least in part, the evolution of ceremonial in the courts of Muslim sovereigns. The commensal is in effect a special case of the more general concept of "companion of the sovereign" (*ṣāḥib al-sulṭān*, *i.e.*, one who belongs to the entourage and plays a role in the service of the sovereign). The diverse activities, political intrigues and secrets associated with this occupation have been minutely described by Ibn al-Muḳaffaʿ, at the dawn of the development of Arabic literature (cf. M. Inostranzev, *Iranian influence*; F. Gabrieli, in *RSO*, xi, 292-305; Ch. Pellat (tr.), *Couronne*, Introd., 8-10). Mediaeval readers were enabled to discover some traits characteristic of Sāsānid ceremonial in certain sources such as the *Tād̲j̲* ("Book of the Crown") attributed to al-D̲j̲āḥiẓ and the "Meadows of Gold" (*Murūd̲j̲*) of al-Masʿūdī, which reflect the ambience in Muslim courts, as well as the Persian precedents (cf. Christensen, *L'empire des Sassanides*; idem, *L'Iran sous les Sassanides*; Sadan, in *Studies in memory of Gaston Wiet*, 138-9). Certain advice

given in the text of the above-mentioned book of pseudo-Djāḥiẓ, and especially in Kushādjim's book (for example 27-8, giving detailed instructions as to how and in the company of whom one may wash one's hands), is formulated in a fashion which suggests that the rules of the Persian court were not followed, in the ʿAbbāsid period, with absolute rigour. However, in courts situated to the east of the ʿAbbāsid empire, there is evidence of a more pedantic tendency in this respect (see Sadan, in *REI*, liv, 295, 299: an episode at the Sāmānid court).

The fact that the Sāsānid code served as a model for the etiquette of the commensal is clearly attested by a series of instructions addressed to the royal *nadīm*. While stressing the danger which attends the occupation of the *nadīm*, these instructions teach him to combine opposing qualities and patterns of behaviour: serenity and gaiety, or "the respectable behaviour of old men with the joy (*mirāḥ*, which alternates in the texts with *mizāḥ* = humour) or urchins". A drinking companion who is unable to decide, on the basis of the gestures and reactions of his master during the *munādama*, which quality would be appropriate to a given situation, risks his life (al-Masʿūdī, *Murūdj*, ii, 155-6 = § 580; Kushādjim, *op. cit.*, 7-8 (cf. *addenda*, supplied by I. ʿAbbās, in *ʿAhd Ardashīr*, 94-5); al-Ḳayrawānī, *Ḳuṭb al-surūr*, (incomplete Damascus edition), 289; idem, *al-Mukhtār min Ḳuṭb al-surūr*, 136; anon., *Ādāb al-mulūk ʿalā 'l-sharāb*, m.s. B.L. Or. 5314, fol. 2b; anon., *Nuzhat al-aṣḥāb*, ms. Cairo, Taymūriyya, *Adab*-152, fol. 95b). The Arab authors, with the exception of al-Masʿūdī, do not mention the source of these instructions, which is the *ʿAhd Ardashīr*, bequeathed to Arab culture by Persian literature. It is impossible to know how many other fragments of the Persian code are cited by Arab authors in such a way that their origin cannot be identified. Furthermore, even when the sources reflect the courtly life of the Muslim era, they describe customs influenced by the Persian heritage (see D. Sourdel, in *REI*, xxviii, 121-48; only M. Canard, in his magisterial study of comparative ceremonial in *Byzantion*, xxi, 355-420, further stresses the Byzantine influence on the Fāṭimid court; but when he wrote this, Canard lacked additional detailed sources concerning the ʿAbbāsid ceremonial which influenced the Fāṭimids. Certainly, their court rivalled that of their adversaries, the ʿAbbāsids, in its sumptuous conditions; nevertheless, in an earlier period, among the Umayyads, the Byzantine influence is discernible (see O. Grabar, in *Studies in memory of Gaston Wiet*, 51-60).

Ibn al-Muʿtazz (*loc. cit.*) indicates that the role of the *nadīm* is exceedingly complicated, and he declares his intention of tackling the subject elsewhere (in another work, unknown to bibliographers, which must have been composed specifically for this purpose). Al-Ghuzūlī, *Maṭāliʿ*, i, 182, and al-Nawādjī, *Ḥalba*, 25-6, cite a variant version of these remarks of Ibn al-Muʿtazz and continue to describe in detail the rules of conduct of the *nadīm*, as if they were conversant with this lost work. However, it is quite reasonable to see here a later blending of instructions belonging to the code of conduct of commensals, which these two authors have found elsewhere and which they quote (without indicating the title of their common source), immediately after the remarks of Ibn al-Muʿtazz.

The rules of conduct which the *nadīm* must observe envisage all situations which are liable to arise in the court and in the homes of wealthy people. The Arabic sources advise him to show good taste and perfect cleanliness. He should perfume himself, clean his teeth, purify his breath by chewing aromatic herbs, take good care of his clothing (including undergarments), conform to the rules of politeness and observe the rules of good manners as determining the choice of seat at the table (al-Nawādjī, *op. cit.*, 26; al-Ghuzūlī, *op. cit.*, 180: according to his rank = *martaba*; knowledge of the arrangement of seats in hierarchical terms was a firm requirement; cf. Sadan, in *REI*, xl, 51-70), as well as the manner of sitting, posture, drinking (always in moderation; see al-Nawādjī, *loc. cit.*; al-Ghuzūlī, *loc. cit.*; Sadan, in *Studies in memory of Gaston Wiet*, 258-66, 271) and conversation. He must observe table manners during the meal (al-Djāḥiẓ, *Bukhalāʾ*, ed. Ḥādjirī, 67-8, 76-7, speaks of table manners known in a certain class of the Persian aristocracy, the *dahāḳīn*, but not observed by the purely Arab aristocracy, *ahl al-buyūtāt* (cf. H. Kindermann, *Sitten*, 1964, *passim*; see also al-Aḳfahsī, *Ādāb al-akl*, Beirut 1986; al-Ghazzī, *Ādāb al-muʾākala*, Rabat 1984; Ibn Ṭūlūn, *K. al-Walāʾim*, Damascus 1987). It is thus appropriate that the *nadīm* should be one of the *ẓarīfs* (the "refined ones" described by al-Washshāʾ in al-*Muwashshā*; cf. M.F. Ghazi, in *SI*, xi, 40-41; M. Bergé, *Abū Ḥayyān al-Tawḥīdī*, Damascus 1979, 55-6), but it cannot be deduced from this that every *ẓarīf* is necessarily a *nadīm*; *munādama* often consists of *muʾānasa* (= maintaining the friendship of somebody, participating in a reunion of friends), *mudjālasa* (= being seated in the company of some person, or in the company of friends) *musāmara* (= keeping company, at night, with one or more friends, telling them stories), *mulāʿaba* (= playing with somebody at chess, etc.) and *muzāmala* (= accompanying, on horseback, some person setting out for the hunt, or on a journey; see al-Masʿūdī, *Murūdj*, vii, 108 ff. = §§ 2791 ff., for a summary of the rules). In mediaeval courts, it was most often the case that poets, *adībs* (men of letters), singers (Ibrāhīm al-Mawṣilī and his son Isḥāḳ) and even grammarians (al-Aṣmaʿī) belonged to the entourage and played the role of *nadīm*, *djalīs*, etc. This latter had to have a repertoire of captivating stories and amusing anecdotes, for the purpose of entertaining his master. Furthermore, it is preferable that he be a man of letters, or a scholar, and that he possess poetic and artistic talents. All in all, the activities of the *nadīm* reflect the ambience prevailing in the courts and literary circles of the Islamic Middle Ages and colour in, at least in part, the image of the *muḥāḍarāt* (gatherings in the course of which the participants converse and exchange information, quotations and stories) of oral *adab* [*q.v.*].

AL-**NADĪM** [see IBN AL-NADĪM].

AL-**NADĪM**, AL-SAYYID ʿ**ABD ALLĀH** B. MIṢBĀḤ AL-ḤASANĪ, (1843-96), radical Egyptian orator and propagandist, noted for his daring use of the vernacular in print and his caustic journalism, endeavouring *inter alia* to stem European intervention and limit the power of the Khedives. He was born in Alexandria, and he studied at the mosque of Shaykh Ibrāhīm Pasha. Running away from there, he worked as a telegraph officer in Banhā, and then later at the residence of the mother of the Khedive Ismāʿīl in Cairo. While in the capital he followed courses at al-Azhar, and met the leading literati. On his dismissal, he pursued various occupations in the Delta, spending years as an itinerant versifier (*udabātī*), entertaining village notables, earning the epithet of *nadīm*, "boon companion." On returning to Alexandria in 1879, he participated in the secret political society Djamʿiyyat Miṣr al-Fatāt/Union de la Jeunesse Egyptienne, a group of young intellectuals challenging Riyāḍ Pasha's authoritarian government, but not long afterwards he left it to found a more open charitable society, al-Djamʿiyya al-Khayriyya al-Islāmiyya in 1879. As head of its school he wrote two plays: *al-ʿArab* or *al-Nuʿmān*, and *al-Waṭan wa-ṭāliʿ al-tawfīḳ* in colloquial. He was forced to leave the school in 1881, allegedly at the instignation of Riyāḍ.

He contributed, in the main anonymously, to several newspapers, *Ḥaḳīḳat al-Akhbār*, *Miṣr*, *al-Maḥrūsa*, and *al-ʿAṣr al-Djadīd*, the last three belonging to Salīm al-Naḳḳāsh [*q.v.*], and founded in 1881 his own satirical paper, *al-Tankīt wa 'l-Tabkīt*, and then *al-Ṭāʾif*, that became before and during the revolt the organ of the ʿUrābists [see ʿURĀBĪ PASHA], for whom he had been an early and popular campaigner. He pioneered a new, less heavily ornamented style of prose in his newspapers, and ventured as far as writing entire articles in colloquial Arabic. After the collapse of the revolt, accused with others of responsibility through his speeches for inciting the massacre of 11 June in Alexandria, of calling for rebellion, and of participating in the burning of the city on 11 July, he spent years in hiding. In 1891 he was arrested and then released on condition that he leave Egypt. He went to Palestine, but in 1892 was pardoned by the Khedive ʿAbbās II. Returning to Egypt, he founded the satirical magazine *al-Ustādh* (1892-93), opposing the British occupation. Exiled again to Jaffa and then Istanbul, Sultan ʿAbd al-Ḥamīd II [*q.v.*] thought to silence him with a sinecure, appointing him to the Education Ministry, and then inspector of publications until his death.

Various selections from his works have been published: *Madjmūʿat muḥāwarāt fukāhiyya*, Alexandria n.d.; *Kāna wa-yakūnu*, Cairo 1892, 1926; Alexandria 1893; *Sulāfat al-nadīm fī muntakhabāt al-Sayyid ʿAbd Allāh al-Nadīm*, Cairo 1896, n.d. (1897?)-1901, 1914 (with a biography by Aḥmad Samīr, 3-23); *Maḳālāt ʿAbd Allāh al-Nadīm*, Cairo 1909 and *Mukhtārāt li-ʿAbd Allāh al-Nadīm*, Alexandria 1911. *al-Masāmīr*, n.p. (Cairo?) n.d., a violent satire lampooning the Sultan's advisor Abu 'l-Hudā al-Ṣayyādī, was published after his death. Many of his works have been lost, including his three *dīwāns* of poetry. With his brother ʿAbd al-Fattāḥ al-Nadīm he published *Tahniʾa saniyya bi 'l-afrāḥ al-riyāḍiyya*, Cairo 1310. His *zadjal* [*q.v.*], unsurpassed by his contemporaries, was innovative, inspired as it was by his political fervour.

NADĪM, AḤMAD [see NEDĪM, AḤMED].

NADIR [see NAẒĪR AL-SAMT].

NAḌĪR, BANU 'L-, one of the two main Jewish tribes of Medina, settled in Yathrib from Palestine at an unknown date, as a consequence of Roman pressure after the Jewish wars. Al-Yaʿḳūbī (ii, 49) says they were a section of the Djudhām Arabs, converted to Judaism and first settled on Mount al-Naḍīr, whence their name; according to the *Sīra Ḥalabiyya* (Cairo, iii, 2) they were a truly Jewish tribe, connected with the Jews of Khaybar [*q.v.*]. This seems the more probable, but a certain admixture of Arab blood is possible; like the other Jews of Medina, they bore Arabic names, but kept aloof from the Arabs, spoke a peculiar dialect, and had enriched themselves with agriculture, money-lending, trade in armour and jewels.

They were clients of the Aws, siding with them in their conflicts with the Khazradj, and entering with them into the compact with Muḥammad known as the Constitution of Medina in 1 A.H. Their most important chief at this time was Ḥuyayy b. Akhṭab, whose daughter Ṣafiyya became Muḥammad's wife in 7 A.H. For a list of Muḥammad's worst enemies among the Banu 'l-Naḍīr, see Ibn Hishām, *Sīra*, 351-2.

Their fortresses were half a day's march from Medina, and they owned land in Wādī Buṭḥān and Buwayra; their dwelling places were south of the city.

The Banu 'l-Naḍīr seem to have been in (commercial?) relations with Abū Sufyān before the battle of Uḥud. In 4 Rabīʿ I, owing to difficulties about the Banu 'l-Naḍīr's contribution to a certain payment of blood-money which was being collected from the whole Muslim community in Medina, Muḥammad, who had personally negotiated the matter with their chiefs, became convinced of their enmity towards himself and suspected them of intending to kill him. He decided to get rid of such dangerous neighbours, and ordered them through Muḥammad b. Maslama al-Awsī to leave the city within ten days, under penalty of death, allowing them to take with them all their movable goods, and to return each year to gather the produce of their palm-groves.

The tribe, having no hope of help from the Aws, agreed to leave, but ʿAbd Allāh b. Ubayy al-Khazradjī, chief of the *Munāfiḳūn* [*q.v.*], persuaded them to resist in their fortresses, promising to send 2,000 men to their aid. Ḥuyayy b. Akhṭab, hoping the Banū Ḳurayẓa [*q.v.*] would also help them, prepared to resist, in the face of opposition from moderate elements in the tribe.

The siege lasted about a fortnight, help from the *Munāfiḳūn* was not forthcoming, and when the Muslims began to cut down their palms the Banu 'l-

Naḍīr surrendered. Muḥammad's conditions were much harder than formerly; their immovable property was forfeited, and nothing left to them but what they could take away on camels, arms alone excepted. After two days' bargaining, the tribe departed with a caravan of 600 camels; some went to Syria, others to Khaybar.

The Banu 'l-Naḍīr's booty Muḥammad did not divide in the usual manner; the land was distributed among the *Muhādjirūn*, so as to relieve the *Anṣār* of their maintenance; part of it the Prophet kept for himself.

Sūrat al-Ḥashr (LIX) was revealed upon the expulsion of the Banu 'l-Naḍīr.

From Khaybar, the exiles planned with the Ḳuraysh the siege of Medina in Dhu 'l-Ḳaʿda 5/April 627. The treasure of the Banu 'l-Naḍīr was captured by Muḥammad in Khaybar in 7 A.H.

Leszynski, *Die Juden in Arabien*, Berlin 1910; see also the general biographies of Muḥammad. (V. VACCA)

NĀDIR SHĀH AFSHĀR, ruler of Persia (1147-60/1736-47).

Nadr- (or Nādir-)ḳulī Beg was born in Muḥarram 1100/November 1688 into an undistinguished family of the Ḳïrḳlu (Ḳïrkhlu) clan of the Afshār Turkoman tribe, at Dastgird in northern Khurasan, during the seasonal migration to winter pastures in Darra Gaz district. As a youth, Nādir joined the retinue of Bābā ʿAlī Beg Kūsa-Aḥmadlū, governor of Abīward, who gave him successively two daughters in marriage (one bore his eldest son Riḍā-ḳulī, and the other Naṣr Allāh and Imām-ḳulī) and left him his property on his death in 1723. In the anarchy that followed the invasion of Persia by the Ghalzay Afghāns, Nādir entered the service of Malik Maḥmūd of Sīstān, who had occupied Mashhad. After various intrigues with chieftains of the Afshār and Djalāyir Turkomans, Nādir formed his own band of raiders and, in alliance with the Čamishgazak Kurds of Khabūshān (Ḳūčān), contested control of Mashhad with Malik Maḥmūd. This brought him to the notice of the Ṣafawid heir-apparent Ṭahmāsb Mīrzā who, together with his chief supporter, Fatḥ ʿAlī Khān Ḳādjār, in 1139/1726 recruited Nādir and his force of some 2,000 to their cause. The intense rivalry between the prince's Ḳādjār and Afshār "protectors" was soon settled in Nādir's favour: Ṭahmāsb had Fatḥ ʿAlī executed on suspicion of plotting against him. Nādir then secured Mashhad through treachery; Malik Maḥmūd was permitted to retire to a cell in the shrine of Imām Riḍā, but was later executed after allegedly instigating a revolt.

The Ṣafawid restoration. Nādir was now appointed *ḳūrčī-bāshī* (guard commander) with the honorific Ṭahmāsb-ḳulī (slave of Ṭahmāsb: the name by which, corrupted as e.g., [Tamas] Couli-cam, he came commonly to be known in Europe of the time). Nevertheless his relations with the indecisive young prince—or rather, the prince's jealous ministers—remained strained. After crushing repeated local rebellions, Nādir secured Ḳāʾin on his southern flank and prepared to subdue the Abdālī Afghāns of Herat, in his strategic rear, before acceding to Ṭahmāsb's desire for a march on Iṣfahān. The clash of wills stalled effective operations during 1727-8; then in 1729 Nādir subdued the Abdālīs, taking some chiefs into Ṭahmāsb's service, though diplomatically confirming their leader, Allāh-yār Khān, as governor of Herat. That same autumn he relieved Simnān, under siege by the Ghalzay leader Ashraf, and decisively defeated the Ghalzay at Mihmāndūst, near Dāmghān, on 6 Rabīʿ I 1142/29 September 1729. Ashraf evacuated Iṣfahān after further defeats and fled via Shīrāz and Lār into Ḳandahār province, where it appears he was killed by a Ghalzay rival, Ḥusayn Sulṭān. Ṭahmāsb was installed in the former Ṣafawid capital as *shāh*, though clearly on sufferance (Nādir married one of his sisters, Raḍiyya Begum, without the *shāh*'s prior consent).

Ṭahmāsb now wrote to the Ottoman sultan demanding the return of the occupied territories. Without waiting for a reply, Nādir in 1730 marched from Shīrāz to defeat Ottoman forces at Nihāwand and Malāyir and recapture Hamadān. By 12 August he had recovered Kurdistān and entered Tabrīz. In July the sultan had declared war on Persia, but mutinies and disturbances at Istanbul prevented any action being taken. Nādir returned to Mashhad in November and the following spring marched on Herat to subdue the Abdālīs, who had raided up to the gates of Mashhad during his absence. After a ten-months' blockade and several reverses, Nādir finally occupied Herat; on 1 Ramaḍān 1144/27 February 1732 his rebellious client, Allāh-yār Khān, was exiled to Multān, and 60,000 Abdālīs were deported to Khurāsān.

During Nādir's absence, Ṭahmāsb was persuaded by his ministers to reopen hostilities on the Turkish front. Having appointed his own governor in Tabrīz, the *shāh* marched on Erivan in the spring of 1731. He was outmanoeuvred and forced to withdraw; soon afterwards, Aḥmed Pasha of Baghdād, having captured Kirmānshāh, routed Ṭahmāsb's force near Hamadān. The *shāh* retired to Iṣfahān, and in the ensuing peace negotiations regained only Tabrīz (10 January 1732). Three weeks later, at Rasht, the *shāh*'s representatives signed a treaty with Russia, by which the latter relinquished Gīlān; Bākū and Darband were to be held until Persia had regained her territories beyond the Araxes from Turkey. Nādir in a public manifesto denounced the treaty with Turkey, dismissed many of Ṭahmāsb's governors, and in August arrived in force at Iṣfahān. Here he convened a conference (*kingāsh*) of the Ḳïzïlbāsh and leaders and persuaded them to depose Ṭahmāsb on grounds of drunkenness and incompetence and in favour of his infant son ʿAbbās. The ex-*shāh* was sent under guard to Mashhad; Nādir now dropped his sobriquet of Ṭahmāsb-ḳulī and adopted the viceregal titles of *wakīl al-dawla* and *nāʾib al-salṭana*.

Nādir as regent. Having put down revolts among the Bakhtiyārī, Nādir pushed through the Turkish defences west of Kirmānshāh and by January 1733 was blockading Baghdād. Aḥmed Pasha sued for terms, but prevaricated until a large Ottoman force under Ṭopal ʿOthmān Pasha was approaching the city. On 7 Ṣafar 1146/19 July 1733, the Turks won a pitched battle and recovered Baghdād; Nādir withdrew to Hamadān, where within two months he had replaced and re-equipped his army. Ṭopal ʿOthmān, on the other hand, received none of the reinforcements and supplies requested from Istanbul. Nādir lured the Turkish army into the defile of Aḳ Darband, north of Kirkūk, and on 9 December defeated them decisively; Ṭopal ʿOthmān fell in battle. Nādir, however, threatened by a rebellion of Muḥammad Khān Balūč in Fārs, soon raised the siege of Baghdād. He marched across Khūzistān, routed the rebel army, and on 1 February 1734 re-occupied Shīrāz.

Returning to Iṣfahān, Nādir received envoys from

Istanbul and St. Petersburg in quick succession. Each power was determined not to relinquish its foothold in northwestern Persia until the other had first withdrawn. The Ottoman envoy was informed that no peace was possible until Armenia, Georgia and Ādharbāydjān were retroceded; the Russian delegate, Prince S.D. Golitsïn, was promised a mutual alliance against Turkey, and accompanied Nādir on his next campaign. Nādir began with an attack on an Ottoman vassal, Surkhāy, the Ghāzī-Ḳumūḳ governor of Shīrwān. After occupying Shamākhī, Nādir pursued Surkhāy into his mountain fastnesses and destroyed Ḳumūḳ; he received the submission of Khāṣṣ Fūlād Khān, the former *shamkhāl* of Tarkhān, and restored him in that office. In November 1734 Nādir laid siege to Gandja, assisted by Russian engineers and artillery. The fortress held out for over eight months, until after Nādir's defeat of a relief force under ʿAbd Allāh Pasha Köprülüzāde on 27 Muḥarram 1148/19 June 1735 at Baghāward, near Erivan. Tiflīs also surrendered on 12 August, and Erivan on 3 October, after Aḥmed Pasha (appointed as successor to ʿAbd Allāh) sued for peace. Nādir accordingly raised his siege of the Ottoman frontier fortress of Ḳārṣ and proceeded personally to settle affairs at Tiflīs, the capital of the Christian Georgian kingdom of Kakheti-Kartli, which had been the Ṣafawid state's most important vassal and buffer in the region. Here he departed radically from Ṣafawid precedent in appointing as governor the Muslim ʿAlī Mīrzā, nephew of King Taymurāz II, with Ṣafī Khān Bughāyirī and a Persian garrison as watchdogs. Taymurāz fled to Circassia; later he was reinstated, and his son Irakli accompanied Nādir on his Indian expedition.

Already on 10 March (21 N.S.) 1735 Nādir had signed the Treaty of Gandja with Russia, whereby he agreed to a defensive alliance and the Empress Anna undertook to return Darband and Bākū to Persia. Though Nādir refused to sign a treaty with Turkey unless Russia was also included, it was now evident that his recent campaigns had secured Russia from the threat of a Turkish advance to the Caspian and had freed Persia from both these menaces. Ḳaplan Girāy, the *khān* of the Crimea, who on orders from Istanbul had advanced to Darband and appointed governors in the towns of Dāghistān, then withdrew, and Nādir spent the early winter months re-establishing control over this strategic region.

Nādir as king. In January 1736 Nādir presided over a national assembly (*ḳūrūltāy*) on the Mughān Steppe to which he had summoned army commanders, governors, nobles and *ʿulamāʾ* from all over his realms. The dignitaries (perhaps as many as 20,000, and including the Ottoman envoy Gandj-ʿAlī Pasha) were informed that Nādir, having liberated Persia, now wished to retire to Khurāsān, and they were free to choose a Ṣafawid scion to rule them. Of course, all protested that only Nādir should be their *shāh*. After a few days, Nādir generously relented, on condition that the Sunnī faith be adopted in place of the heretical Shīʿī cult introduced by Shāh Ismāʿīl, which had caused much bloodshed between Persia and Turkey. This was agreed in a document signed by all present. The terms of the treaty with Turkey were next drafted, including stipulations that the Persians, having abjured Shīʿism, were to be recognised as a fifth orthodox rite, the *madhhab-i Djaʿfarī* (i.e. that of the Imām of Djaʿfar al-Ṣādiḳ); this was to be accorded a place of prayer (*rukn*) at Mecca, and a Persian *amīr al-ḥadjdj* was to be recognised equally with the Syrian and Egyptian leaders of the annual Pilgrimage. Nādir Shāh was formally enthroned on 24 Shawwāl 1148/8 March 1736.

Resuming his progress south by way of Ḳazwīn, he quelled a pro-Ṣafawid revolt among the Bakhtiyārī and wintered in Iṣfahān. Ṭahmāsb and his sons were imprisoned at Sabzawār. (In 1740, after rumours of Nādir's death arrived from India, they were massacred by Muḥammad Ḥusayn Khān Ḳādjār on Riḍā-ḳulī's orders; Ṭahmāsb's sister—Riḍā-ḳulī's wife—committed suicide on learning of this.)

India and Turkistān. The following spring Nādir led a large army against Ḳandahār, where Ḥusayn Sulṭān Ghalzay, brother of the Invader Maḥmūd, was the last reminder of Persia's humiliation. Ḳandahār capitulated on 3 Dhu 'l-Ḥidjdja 1150/24 March 1738, after a year's siege; the Ghalzay citadel was demolished and the population of the city resettled in Nādirābād, a new city built by Nādir on the site of his camp. This success marks the completion of Nādir's irredentist and essentially conservative campaigns to restore the territorial extent of the Ṣafawid empire. His army reinforced with Abdālī and Ghalzay recruits, he now embarked on an invasion of India. Kābul, Djalālābād and Peshāwar fell before the end of the year, and Lahore on 23 January 1740. Nādir's seventeen-year-old son Riḍā-ḳulī Mīrzā was sent back to Mashhad as viceroy of Persia. The Mughal emperor Muḥammad Shāh [*q.v.*] had by now gathered an army reportedly of 300,000 men with 2,000 elephants and artillery at Karnāl, seventy-five miles from Dihlī. On 15 Dhu 'l-Ḳaʿda 1151/24 February 1739, the Persians decisively defeated this force. Muḥammad Shāh, after a ceremonial luncheon with the victor (which followed the traditional etiquette of the Ṣafawid and Mughal courts, the conversation being conducted in Turkī), was escorted to Dihlī. Here the *khuṭba* was read and coins were struck in Nādir's name. On 15 Dhu 'l-Ḥidjdja/26 March a rumour spread that Nādir had been assassinated, and in a popular uprising thousands of Persian soldiers were massacred. The next day Nādir ordered a general massacre and sack of all quarters where his men had been attacked, in which perhaps 20,000 Dihlī citizens perished.

Twelve days later, Naṣr Allāh Mīrzā was married to a Mughal princess. At a grand *darbār* on 3 Ṣafar 1152/12 May, Nādir reinstated Muḥammad Shāh as king of Hindustān, in return for which all lands west of the Indus were ceded to Persia. Nādir exacted an enormous sum as reparations (at least 700,000,000 rupees in cash and kind, including the Peacock Throne [see TAKHT-I ṬĀWŪS] and the Kūh-i Nūr diamond [*q.v.*]), and declared a three-year tax amnesty in Persia. A week later Nādir's army with its huge baggage-train left Dihlī for Kābul. After a detour south into the desert to chastise the rebellious Khudāyār Khān, ruler of Sind, they reached Nādirābād on 7 Ṣafar 1153/4 May 1740, having lost several thousand men and a quarter of the booty in crossing the swollen Čenāb and Kurram rivers.

During Nādir's campaigns south of the Hindu Kush, Riḍā-ḳulī Mīrzā had extended his father's realms in Balkh and the steppes south of the Oxus. This had provoked threats from Īlbars Khān of Khwārazm, whom Nādir resolved to punish on his way back. Arriving at Herat on 10 June, he crossed the Oxus at Čārdjūy late in August, by means of boats specially constructed by Indian shipwrights. Abu 'l-Fayḍ Khān of Bukhārā resisted in vain; Nādir reinstated him as ruler, while annexing all lands south of the Oxus. With reinforcements of Özbegs and Turkomans, Nādir set off in October 1740 for Khīwa, the army and fleet proceeding parallel along the Oxus. The city and several other fortresses were bombarded into submission, and Īlbars Khān was put to death. At

least 12,000 Persians (and ten Russians) were liberated from slavery. On 10 December Nādir left Khwārazm and reached Mashhad at the end of Shawwāl/17 January 1741.

Return to the western fronts. During Nādir's Indian expedition, his brother Ibrāhīm had been killed on campaign in Dāghistān. In spring of 1741 Nādir marched to exact vengeance on the Lazgīs, who had moreover renewed their raids on Georgia. On his arrival at Shīrwān, the rulers of the Caspian littoral (including Surkhāy Khān) hastened to make obeissance, but Nādir's attempts to subdue the mountaineers of Avaria were frustrated. The Russians, suspecting that he had designs on the northern Caucasus, in May 1742 reinforced their base at Kizlyar (Ḳîzlar). For eighteen months the Persian army suffered Lazgī ambushes, lack of provisions, an epidemic, and severe winter weather, but Nādir refused to quit; only a message from the Ottoman ambassador rejecting his proposals concerning the Djaʿfarī rite provided him with the excuse, on 15 Dhu 'l-Ḥidjdja 1155/10 February 1743, to march south in preparation for a new campaign against Turkey.

During the *shāh*'s passage through Māzandarān in May 1741, an unknown sniper had wounded him. Later the marksman was found, and denounced Riḍā-ḳulī Mīrzā as the author of the attempt. The prince was brought to Dāghistān and, despite his protestation of innocence (which most accounts endorse), was blinded. Nādir was grief-stricken. Soon afterwards he learned that his vassal in Khwārazm had been ousted and killed by rebels.

Nevertheless, the suspended hostilities with the Ottoman empire were now resumed. Marching via Kirmānshāh, where he began construction of a large fortress and arsenal and reviewed an army of a nominal 375,000 men from all over his empire, Nādir bombarded Kirkūk into submission in Djumādā II 1156/August 1743. Mawṣil resisted stoutly; Nādir negotiated a truce and, under the aegis of his old adversary Aḥmed Pasha of Baghdād, visited both Shīʿī and Sunnī shrines in ʿIrāḳ. On 24 Shawwal/12 December, at Nadjaf, he convened a council of *ʿulamāʾ* from ʿIrāḳ, Persia, Afghānistān and Turkistān, to discuss the religious question. In the resulting communiqué, all deplored the extremist Shīʿī policies of the Ṣafawids, and approved the device of the Djaʿfarī rite (Suwaydī, 1906 and 1973); whether this reflected more the disinterested magnanimity of theologians, or Nādir's prompting and his wife's presents to the shrine, it was doomed in the face of popular and political realities. Meanwhile, a Persian force that had been besieging Baṣra was withdrawn in December. In order to fund these campaigns in the west, Nādir had rescinded the tax amnesty declared in India and redoubled his exactions from the Persian populace. The consequent insurrections in his rear were now too serious to ignore.

Rebellion and disintegration. Pretenders to the Ṣafawid throne provided the focus in several disaffected areas. In Ādharbāydjān and Dāghistān, revolts led by one Sām Mīrzā were defeated in turn by Nādir's nephew Ibrāhīm Khān and his younger son Naṣr Allāh in 1743, and in October of that year one Ṣafī Mīrzā, his cause sponsored by the Ottomans, was reported to be advancing via Ḳārṣ. In January 1744 the Beglerbegī of Fārs, Taḳī Khān Shīrāzī, a favourite of Nādir's, led a widely-supported revolt; Nādir's forces stormed and sacked Shīrāz in June, and Taḳī Khān was blinded in one eye and castrated. In Khwārazm, the Yomud and Salur Turkomans rebelled against Nādir's appointees in Khīwa, and order was restored only in 1745 by the *shāh*'s other nephew, ʿAlī-ḳulī. Despite these dangers, Nādir himself had not withdrawn farther east than Hamadān, and when in February 1744 he was informed of Turkey's refusal to ratify the treaty, he marched northwest and besieged Ḳārṣ from May until early October. Nādir wintered north of the Kura, surprising the Lazgīs and forcing their submission. Next summer the Ottoman *serʿasker* Yegen Pasha crossed the frontier, and in Radjab 1158/August 1745, at Baghāward, Nādir repeated his victory of 1735, aided by a mutiny in the Turkish camp and the death of Yegen Pasha. Nādir again opened peace talks, this time without insisting on recognition of the Djaʿfarī rite.

Returning to Iṣfahān in December, Nādir extorted funds and punished officials with renewed ferocity, as he did at each stage of his return journey to Khurāsān during February and March 1746. From Mashhad he went to inspect the construction of the new treasury at his fortress of Kalāt [see KILĀT-I NĀDIRĪ]. Soon after, he set out westward again with an imposing entourage to meet the Ottoman ambassador at Kurdān, near Sāwdj Bulāgh (Mahābād); here on 17 Shaʿbān 1159/4 September 1746 was signed the treaty with Turkey, which essentially restored the frontiers of 1639. At Iṣfahān once more, Nādir again behaved with arbitrary cruelty; reports of contemporary Europeans confirm that he was widely judged to be deranged (Lockhart, *Nadir Shah*, 258-9). A levy of 300,000 tumans imposed on Sīstān provoked an insurrection, to subdue which the *shāh* dispatched ʿAlī-ḳulī Khān; on arrival, however, his nephew—learning that he, too, had been assessed 100,000 tumans—made common cause with the rebels. Nādir left Iṣfahān for Kirmān and Khurāsān, erecting towers of heads wherever he halted. From Mashhad he moved first against the Kurds of Khabūshān, who had declared for ʿAlī-ḳulī. While encamped near their fortress on 11 Djumādā II 1160/20 June 1747, a group of his Persian, Afshār and Ḳādjār officers, fearing that he had already ordered his Afghān troops to arrest them, cut him down in his tent. Nādir's army disintegrated, his treasure was plundered and his progeny killed (with the exception of a grandson, Shāhrukh Mīrzā). On 27 Djumādā II/6 July, ʿAlī-ḳulī was raised to the throne as ʿĀdil Shāh.

Policies and achievements. Nādir Shāh excelled as a strategist, and is to be credited with rescuing Persia from partition and foreign domination. His campaigns against Turkey indirectly benefited Russia, and his humiliation of the Mughal empire hastened its eventual demise under British suzerainty. His career of conquest parallels that of Tīmūr (Tamerlane), and even argues conscious emulation: e.g., his grandson was named Shāhrukh, after Tīmūr's third son, and Nādir removed Tīmūr's tombstone from Samarḳand to Mashhad (Lockhart, *Nadir Shah*, 186, 188). He employed freely the traditional policy of deporting tribal populations (notably Kurds and Afghāns, to Khurāsān), but this was disruptive rather than constructive (Perry, *Forced migration*). He appreciated the advantages of seaborne commerce and power, and purchased or built ships for both the Caspian Sea and the Persian Gulf. His background was Shīʿī, and his periodic gifts to Shīʿī shrines indicate that his declared aim of restoring a form of Sunnī Islam to Persia was more a matter of pragmatics than of conscience (i.e., to facilitate a treaty with Turkey, and perhaps as a preparation for a greater Islamic empire). His imperious personality and ruthlessness ensured obedience even after his con-

quests turned sour; but the cumulative effect of his reversal of Ṣafawid policies—his confiscation of *waḳf* properties and threatened abolition of state Shīʿism, his favouring of (Sunnī) Afghāns and Özbegs over his original (Shīʿī) Persian and Turkoman *Ḳizilbāsh* officers, his unmitigated *Raubwirtschaft* and arbitrary punishment of officials—alienated key elements of society whose attitudes and expectations had been formed under the Ṣafawids.

NĀDIRA (A.) pl. *nawādir*, literally "rare thing, rarity", denotes a pleasing anecdote containing wit, humour, jocularity and lively repartee, (*nukta*, pl. *nukat*; *mulḥa*, pl. *mulaḥ*; *fukāha*, etc.) of the type which has never ceased to be an integral feature of all social gatherings, whether intimate or official.

A taste for this variety of entertainment seems to have developed in the 1st/7th century in the Holy Cities of Islam, especially at Medina, where instruction in the art of composing and delivering anecdotes [see AL-DJIDD WA 'L-HAZL] began at a very early stage, in the same period that saw the birth of schools of music and singing, for reasons which have been revealed in the above-mentioned article. With the arrival of the ʿAbbāsids, demand increased; instruc-

tion in the art of the anecdote was transferred to the cities of ʿIrāḳ, prospering in Baṣra and most of all in Baghdād, where the caliphs, the aristocrats and the wealthy merchants maintained entertainers charged with the task of distracting them from the cares of the world, and felt no qualms about listening to and rewarding individuals otherwise known for the gravity of their activities, such as al-Aṣmaʿī (d. 213/828 [*q.v.*]), to whom the following admission is attributed: "through knowledge, I have received gifts, and through pleasantries (*mulaḥ*) I have attained riches" (al-Djāḥiẓ, *Bayān*, i, 199; al-Ḥuṣrī, *Zahr*, i, 160).

Literature has preserved the names of a score of raconteurs from the earliest centuries of Islam; a list of them is to be found in F. Rosenthal, *Humor*, 7 ff., and mention here will be limited to those who seem to be the best known: Ashʿab [*q.v.*], Muzabbid al-Madanī, Abu 'l-Ḥārith Djummayn, al-Djammāz, for example. It is probable that the répertoire of the entertainers mentioned in later works was in part their own invention, but they also had the opportunity of drawing from the dozens of anonymous collections which existed in the time of Ibn al-Nadīm (end of 4th/10th century [*q.v.*]); among these works, some bear more or less expressive titles which cannot be identified, but a more interesting series presents real or fictitious characters around whom a lasting legend is woven, such as Abū Ḍamḍam, Abū Nuwās, Djuḥā [*q.vv.*]; another in this line who was to be distinguished much later is Naṣr al-Dīn Khodja [*q.v.*]. A third category of sources is constituted by anthologies owed to compilers who, although capable of devising their own anecdotes, seem rather to have collected here and there material which they reckoned worthy of handing on to posterity, to be placed at the disposal of future entertainers; among this group are distinguished names such as those of al-Madāʾinī, Isḥāḳ al-Mawṣilī [*q.vv.*], Abu 'l-ʿAnbas and Abu 'l-ʿIbar [*q.vv.* in Suppl.].

Following a puritan reaction, the copyists, deprived of a readership, ceased reproducing these collections, which are therefore not preserved in their entirety and are not easily reconstructed today, although the materials that they contained are to be found in part, reproduced and enriched, in later literature. It should in fact be stated that the genre known as *adab*, which seeks to instruct and to edify without being tiresome, implied on the one hand the insertion into the most solemn, even severe, or austere of topics, of anecdotes intended to distract the reader and awaken a flagging attention, and on the other hand, the choice of witticisms and vignettes as an element in conversation as a means of impressing others with the breadth and versatility of one's cultural attainments. It is thus possible to trace the progress of this corpus of entertainment which, exclusively oral at the outset, has been the object of a specific treatment which can be tentatively analysed: collected and put into writing, from the 2nd/8th century onward, by compilers anxious to ensure its preservation and working in parallel with the *ruwāt* [see RĀWĪ], with editors of ancient poetry and transmitters of historico-literary traditions, a mass of anecdotes has constituted a very rich source which has subsequently been divided into categories and exploited by the authors of works of *adab*, before finally falling back into the oral domain.

Among these latter authors, some were content to make use of the collections at their disposal whenever they felt the need to quote a *nādira* to illustrate or enliven a passage considered somewhat tedious, but others, and not the least of them, proceeded to the stage of synthesis, in the sense that they also used the material compiled by their predecessors, added to them personal or borrowed elements and in their turn compiled special collections intended to enrich the general culture of contemporary and future generations. One of the most striking examples of such collections is certainly the *Djamʿ al-djawāhir* of al-Ḥuṣrī (d. 412/1022 [*q.v.*]) which is remarkable for the propriety of the material assembled. Other authors concentrated their attention on a particular theme and collected vignettes which could, if detached from these syntheses, have resulted in the composition of comedies. Worthy of particular note are anecdotes concerning misers (al-Djāḥiẓ; al-Khaṭīb al-Baghdādī (d. 463/1071 [*q.v.*]), *al-Bukhalāʾ*, ed. A. Maṭlūb and others, Baghdād 1384/1964); women (Ibn Ḳayyim al-Djawziyya (d. 751/1350 [*q.v.*]), *Akhbār al-Nisāʾ*, ed. N. Riḍā, Beirut 1964); simpletons (Ibn al-Djawzī (d. 597/1200 [*q.v.*]), *Akhbār al-ḥamḳā wa 'l-mughaffalīn*, ed. ʿAlī al-Khāḳānī, Baghdād 1386/1966); blunderers (Ghars al-Niʿma Ibn al-Ṣābiʾ (416-80/1025-87 [see AL-ṢĀBIʾ]), *al-Hafawāt al-nādira*, ed. Ṣ. al-Ashtar, Damascus 1386/1967); etc. A rather specific genre is that known under the title *al-Faradj baʿd al-shidda*; authors whose concern was to show that misfortune (*al-shidda*) is not necessarily lasting and that relief (*al-faradj*) can always be expected, naturally called upon all kinds of more or less authentic stories. The creator of this genre was said to be al-Madāʾinī (135-228/752-843 [*q.v.*]), whose collection, entitled *al-Faradj bayn al-shidda wa 'l-ḍīḳ*, was reckoned too short by al-Tanūkhī; he was followed by Ibn Abi 'l-Dunyā [*q.v.*]), who was an author concerned mainly with the edification of his readers, and a *ḳāḍī* named Abu 'l-Ḥusayn ʿUmar b. Abī ʿAmr. The master of the genre was nevertheless the *ḳāḍī* al-Tanūkhī (d. 384/994 [*q.v.*]) who made use, not without criticism, of the works mentioned above. (For an overall view of this genre, see A. Wiener, *Die Farağ baʿd aš-Šidda Literatur*, in *Isl.* iv [1913], 270-98, 387-420.)

Proof of the interest taken in the profession of raconteur and quite simply in the narration of amusing stories is to be found in the fact that several authors enunciate the rules which should be followed, if the narrator is to win success and to be assured, in the case of professionals, of a reasonable income. The first, naturally, was al-Djāḥiẓ who, in the introduction to his *Bukhalāʾ* (ed. Ḥādjirī, 6, tr. Pellat, 11), wrote: "Anecdotes are only truly interesting when one knows the characters and can trace them back to their sources by establishing a kind of contact with their protagonists. If they are separated from their elements and their context, then a half of their piquancy and originality is suppressed." On the other hand, specifying the identity of the heroes presented two dangers: first, there was the risk of offending them if they were still living and, second, the risk of supplying historians with invented facts, especially when it was a matter of stories concerning eminent persons allegedly recounted by equally distinguished narrators, as in the cases of ʿĀʾisha and of Ibn Abī ʿAtīḳ, related in the *Bighāl* (ed. Pellat, §§ 12-13) βυ αλ-Djāḥiẓ, who declares elsewhere that his work on misers would be irrevocably damaged by the suppression of anecdotes the heroes of which could be recognised and which would nevertheless constitute "the most important and most interesting chapter".

Al-Ḥuṣrī, for his part, gives a series of useful tips in his *Djamʿ al-djawāhir* (7 ff.). First, he observes that a "tepid" anecdote is fatal to the narrator since, being neither entertaining nor serious, neither hot nor cold, it becomes boring, as is demonstrated by the proverbial saying "more boring than a mediocre enter-

tainer''. The person telling stories should be sparing of gestures, should express himself with elegance and eloquence, and display neither violence nor cruelty. He should adapt himself to all situations, be capable of utilising all his abilities adeptly, and be ready to discontinue when he senses that his presentation is not appreciated by the audience. As regards the form of anecdotes, it is appropriate to conform to the normal language of the persons depicted and to avoid the use of *iʿrāb*, except when the story concerns scholars who generally respect grammar and do not omit the endings of words. On the other hand, it is possible to make comedy out of the faults committed by the semi-educated, who say, for example, *radjul māta wa-taraka abīh wa-akhīh*. As for the substance, no rule is enunciated, no advice is given to the composers of anecdotes. It should be said that in principle the materials constituting the collections intended for the instruction and edification of readers are carefully chosen and contain nothing at all indecent, while those required only to entertain are very often characteristic specimens of obscenity and scatology, such that the texts which have preserved them are difficult to translate; this applies, for example, to the anonymous *Nuzhat al-udabāʾ wa-sulwat al-ghurabāʾ* (mss. B.N. of Paris 6008 and 6710). To show that there were all the same some decent anecdotes, the following are two examples which must have been composed in the 4th/10th century to illustrate the legendary ugliness of al-Djāḥiẓ. The first is constructed on a formula of which the western equivalent is as follows. A well-known woman says to an eminent man: "You should marry me; I would give you a son who would have your intelligence and my beauty".—"Yes, but supposing he has your intelligence and my beauty?" In the Arabic text, it is a slave who asks al-Djāḥiẓ to buy her and not to marry her. One only lends to the rich, and yet it is curious that the latter here occupies the same place as Mark Twain in an American version and as Sacha Guitry in a French one. In the second anecdote, the same al-Djāḥiẓ is accosted one day, in the street, by a woman who invites him to follow her; being of a curious nature, he agrees willingly, even eagerly, to join in this game. So he allows himself to be led by the unknown woman to the workshop of a jeweller, to whom she says only "like him", before leaving hurriedly. Intrigued, al-Djāḥiẓ asks the meaning of this laconic phrase and the artisan replies: "A few days ago, she asked me to engrave an image on the jewel in a ring, and because I couldn't imagine what it looked like, she brought you here".—"And what was this image?"—"That of Satan!"

The titles of the collections cited in the *Fihrist* of Ibn al-Nadīm are presented under the form *Kitāb Nawādir fulān*; later, as has been seen with Ibn al-Djawzī and Ibn Ḳayyim al-Djawziyya, it is *akhbār* which is employed in place of *nawādir*, perhaps to confer a sort of respectability on the documents collected and to prepare them to be treated as accounts of historical facts, although most often these are clearly anecdotes produced by the imagination of entertainers or of writers. In this regard, attention should be drawn to the biographical notices of famous men which in many cases contain doubtful *akhbār*. Elsewhere (s.v. MUKADDĪ) there has been mention of a person, Khālid b. Yazīd, to whom Yāḳūt devoted a biography drawn from a chapter of the *Bukhalāʾ*!

The substitution of the word *akhbār* for *nawādir* was perhaps dictated by the possibility of confusion arising at a time when very diverse authors started adopting the latter term and entitling their works *Kitāb al-Nawādir*, often without any other specification. In such cases, *nawādir* generally has the sense of "curiosities, originalities, rarities" and is applied to studies of religion, philology, mathematics, astrology, botany, medicine, etc. Sezgin cites a total of 144 titles in which *nawādir* never has the meaning of anecdotes (*GAS*, i, 900:16; ii, 789:54; iii, 561:2; iv, 384:2; v, 495:3; vii, 463:8; viii, 366-7:51; ix, 376-7:16), but since of these only two apply to medicine and three to mathematics, more than a hundred are to be located in the linguistic sciences, grammarians and lexicographers being particularly interested in discovering and defining "rarities".

Bibliography: See AL-DJIDD WA 'L-HAZL as well as the references cited in the present article. The most complete study is that of F. Rosenthal, *Humor in Islam and its historical development*, Leiden 1956, which is centred on Ashʿab; see also the notices devoted to the humorists mentioned above. Among collections available to western readers, worthy of note are A. Galland, *Les paroles remarquables, les bons mots et les maximes des Orientaux*, Paris 1694; [J. von Hammer], *Rosenöl, erstes Fläschchen oder Sagen und Kunden des Morgenlandes aus arabischen, persischen und türkischen Quellen gesammelt*, Stuttgart-Tübingen 1813, 2 vols.; R. Basset, *Mille et un contes, récits et légendes arabes*, Paris 1924-7, 3 vols. See also M. Cardonne, *Mêlanges [sic] de littérature orientale, traduits de différens [sic] manuscrits turcs, arabes & persans de la Bibliothèque [sic] du Roi*, 2 vols., Paris 1770; Sam Kabbani (tr.), *Altarabische Esclesien. Humor aus dem frühen Islam*, Stuttgart etc. 1965; U. Marzolph, *Arabia ridens. Die humoristisch Kunstprosa der frühen adab-Literatur im internationalen Traditionsgeflecht*, 2 vols., Frankfurt 1992.

(CH. PELLAT)

NADJADĀT, Khāridjite sub-sect which was especially widespread in Baḥrayn and Yamāma.

The name derives from that of its founder Nadjda b. ʿĀmir al-Ḥanafī al-Ḥarūrī. It is known of him that he rebelled in Yamāma at the time of al-Ḥusayn's death in battle (61/680) and that in 64/683 he gave military help to ʿAbd Allāh b. al-Zubayr when he was besieged in Mecca by the Syrian army. Once the siege was raised, Nadjda, in company with other Khāridjite chiefs, including Nāfiʿ b. al-Azraḳ and ʿAbd Allāh b. Ibāḍ, went first to Baṣra, where he was amongst those who in 65/684, under the leadership of Nāfiʿ, took part in the *khurūdj* against Muslim b. ʿUbays who, at the head of the Meccan troops sent by ʿAbd Allāh b. al-Zubayr, was posed to attack the city. He was subsequently in al-Ahwāz, which was to become the headquarters of the Azāriḳa [*q.v.*]. But Nadjda did not remain here for long; his differences with Nāfiʿ, above all concerning the fate of the quietists (*ḳaʿada*), led him, during this same year, to separate from him and to return to Yamāma. We have a great deal of information about his activities in this region from Balādhurī, *Ansāb*, xi, 125-47.

The Yamāma Khāridjites had chosen Abū Ṭālūt Sālim b. Maṭar as chief, as a temporary stop-gap until they could find a better candidate. In 65/684, Abū Ṭālūt seized control of Djawn al-Khaḍārim, a large expanse of Yamāma occupied by Muʿāwiya, established himself there and divided up as plunder, amongst his partisans, the agricultural lands and the 4,000 slaves who worked them. In the next year, Nadjda, captured at Djabala a caravan coming from Baṣra and destined for Ibn al-Zubayr in Mecca. He led it to Abū Ṭālūt in Khaḍārim, divided up the booty among his partisans, allowed the slaves to cultivate once again the communally-held lands, as had been the previous practice and proposed himself as chief in place of Abū Ṭālūt. The Khāridjites present there, including Abū Ṭālūt, unanimously recognised his merits and gave him formally their *bayʿa*, assuring

him that they would have deposed him only if he had been guilty of a clear injustice. Some short time afterward, Nadjda, at the head of the Yamāma Khāridjites, attacked the Banū Kaʿb b. Rabīʿa b. ʿĀmir b. Ṣaʿṣaʿa at Dhu 'l-Madjāz, and, after a bloody battle, captured from them the provisions of corn and dates which they had plundered from the market. This event, which became widely known, marked the beginning of an uninterrupted series of victories which, helped by the feebleness of Ibn al-Zubayr's rule, enabled in a very short time, as we shall see, the Nadjadāt to subjugate almost the whole of Arabia. It seems that the caliph ʿAbd al-Malik even had the intention of making Nadjda his lieutenant in central Arabia and that he briefly discussed this idea with Nadjda, naturally without result.

In 67/686, leaving behind a governor in Yamāma, Nadjda went personally to Baḥrayn and, helped by the Azdīs, defeated the ʿAbd al-Ḳays in Ḳaṭīf and installed himself in the town. Ḥamza b. al-Zubayr b. ʿAbd Allāh, who represented his father at Baṣra, sent an expedition, commanded by ʿAbd Allāh b. ʿUmayr al-Laythī, to expel Nadjda from Ḳaṭīf. The Zubayrid troops were put to flight and the Nadjadāt, under ʿAṭiyya b. al-Aswad al-Ḥanafī's leadership, invaded and conquered ʿUmān. A local rising then expelled them, and ʿUmān returned to the control of the two sons of ʿAbbād b. ʿAbd Allāh. Nevertheless, Nadjda extended his territory into northern Baḥrayn (Kāẓima), and forced the Banū Tamīm to pay him the *zakāt*. In 68/687, some divisions arose among the Nadjadāt. One group, under ʿAṭiyya b. al-Aswad, who reproached Nadjda strongly for his friendly relations with the caliph ʿAbd al-Malik, seceded from him and migrated to Kirmān, thence to Sidjistān, where he founded his own subsect, called after him the ʿAṭawiyya. In the same year, Nadjda raided westwards from Yamāma and conquered part of Yemen, with its capital Ṣanʿāʾ, and one of his lieutenants, Abū Fudayk, also subjugated Ḥaḍramawt. At the end of the year, Nadjda appeared at Mecca and took part in the Pilgrimage rites; on this felicitous occasion, not less than four chiefs conducted groups of mutually-hostile partisans: Ibn al-Zubayr, Nadjda himself, an Umayyad and Muḥammad b. al-Ḥanafiyya. In the following year, he marched on Medina, renouncing however attacking it when he heard that the son of ʿUmar, the caliph particularly venerated by the Khāridjites, was preparing to oppose him. He then turned aside towards Ṭāʾif, isolating it completely from the Ḥidjāz, and advanced as far as Tabāla. In this district he organised his own administration and, after having appointed deputies, returned to Baḥrayn. Whilst avoiding launching his arms against the Holy Cities of Mecca and Medina, he nevertheless did not hesitate in blocking their food supplies, until the moment when Ibn ʿAbbās, comparing his conduct with that of Muḥammad, demonstrated to him that this was not a legitimate action.

Thus Nadjda was near to dominating the whole Arabian peninsula. But his authority was already being undermined by divisions among his partisans who, like all the Khāridjites, disliked any long period of domination. The opposition to Nadjda, which naturally manifested itself in the form of religious criticism, was led by two of his most capable deputies, ʿAṭiyya b. al-Aswad, who came out worst and had to flee, as noted above, to Kirmān, and Abū Fudayk [*q.v.*], who, in 72/691-2, killed him and made himself master of Baḥrayn. At the end of this same year, the latter repelled an attack sent against him from Baṣra by ʿAbd al-Malik and commanded by Umayya b. ʿAbd Allāh, brother of the governor of Baṣra Khālid b. ʿAbd Allāh al-Ḳasrī; but in the next year (73/692-3), a second expedition, under ʿUmar b. ʿUbayd Allāh b. Maʿmar, managed to defeat him at al-Mushakkar [*q.v.*] and to put him to death. This marked the end of the Nadjadāt principality in Yamāma and Baḥrayn, but not of their school; ʿAbd al-Ḳāhir al-Baghdādī, who lived at a period straddling the 4th/10th and 5th/11th centuries, tells that there were still Nadjadāt in Sidjistān during his time.

Doctrines. The main religious ideas attributed to the Nadjadāt were, according to al-Ashʿarī, the following: (1) the admissibility of *idjtihād* and *raʾy*; (2) justification for an error committed in ignorance of the law, with the exception of the obligatory precepts (*wādjib*); (3) those who lagged behind in making the *hidjra* to their own group were branded as *munāfiḳūn* [*q.v.*]; (4) those who declared it illicit to shed the blood of the *ahl al-muḳām* (= *dhimmīs*) *fī dār al-taḳiyya* and to confiscate their goods, were to be branded with *takfīr*; (5) the assertion that it is not known whether God will punish the believers for their sins, but if He does, it will not be with Hell Fire; and (6) the one who commits lesser sins and persists in his error is a *mushrik*, whereas the one who commits graver sins without persisting in them is a *muslim*. Other details are provided by al-Shahrastānī and al-Baghdādī: (7) permission for *taḳiyya*, whether in words or in actions; (8) the world does not need an *imām*, but it is sufficient that it should be well governed; (9) *ḳuʿūd* is permissible, but *djihād*, where possible, is better; (10) those who declare *ḳuʿūd* illicit are to be branded with *takfīr*; and by Ibn Ḥazm, curiously. Finally, according to al-Mubarrad, *Kāmil*, 615, there was no difference between the Ibāḍiyya [*q.v.*] and the Nadjadāt.

(R. RUBINACCI)

AL-**NADJAF** or MASHHAD ʿALĪ, a town and place of pilgrimage in ʿIrāḳ 10 km 6 miles west of al-Kūfa. It lies on the edge of the desert on a flat barren eminence from which the name al-Nadjaf has been transferred to it (A. Musil, *The Middle Euphrates*, 35), at an altitude of 37 m/120 feet in lat. 31°59′ N. and long. 44°20′ E.

According to the usual tradition, the Imām al-Muʾminīn ʿAlī b. Abī Ṭālib [*q.v.*] was buried near al-Kūfa, not far from the dam which protected the city from flooding by the Euphrates at the place where the

town of al-Nadjaf later arose (Yāḳūt, *Muʿdjam*, iv, 760), also called Nadjaf al-Kūfa (al-Zamakhsharī, *Lexicon geographicum*, ed. Salverda de Grave, 153). Under Umayyad rule, the site of the grave near al-Kūfa had to be concealed. As a result, it was later sought in different places, by many in al-Kūfa itself in a corner above the *ḳibla* of the mosque, by others again 2 *farsakhs* from al-Kūfa (al-Iṣṭakhrī, 82-3; Ibn Ḥawḳal[1], 163). According to a third story, ʿAlī was buried in Medina near Fāṭima's grave (al-Masʿūdī, *Murūdj*, iv, 289 = § 1612), according to a fourth, at Ḳaṣr al-Imāra (Caetani, *Annali dell' Islām*, x, 1926, 967-8, A.H. 40, § 99). Perhaps, then, the sanctuary of al-Nadjaf is not the real burial-place but a tomb held in reverence in the pre-Islamic period, especially as the graves of Adam and Noah were also shown there (Ibn Baṭṭūṭa, *Riḥla*, i, 416; G. Jacob, in A. Nöldeke, *Das Heiligtum al-Husains zu Kerbelâ*, Berlin 1909, 38, n. 1). It was not till the time of the Ḥamdānid of al-Mawṣil Abu 'l-Haydjāʾ that a large *ḳubba* was built by him over ʿAlī's grave, adorned with precious carpets and curtains and a citadel built there (Ibn Ḥawḳal, 163). The Shīʿī Būyid ʿAḍud al-Dawla [*q.v.*] in 369/979-80 built a mausoleum, which was still in existence in the time of Ḥamd Allāh Mustawfī, and was buried there, as were his sons Sharaf al-Dawla and Bahāʾ al-Dawla. Al-Nadjaf was already a small town with a circumference of 2,500 paces (Ibn al-Athīr, viii, 518; Mustawfī, *Nuzhat al-ḳulūb*, ed. Le Strange, 32: in the year 366/976-7). Ḥasan b. al-Faḍl, who died about 414/1023-4, built the defensive walls of Mashhad ʿAlī (Ibn al-Athīr, ix, 154). The Mashhad was burned in 443/1051-2 by the fanatical Sunnī populace of Baghdād, but must have been soon rebuilt. The Saldjūḳ sultan Malikshāh and his vizier Niẓām al-Mulk, who were in Baghdād in 479/1086-7, visited the sanctuaries of ʿAlī and Ḥusayn (Ibn al-Athīr, x, 103). The Īlkhān Ghāzān (694-703/1295-1304), according to Mustawfī, built in al-Nadjaf a Dār al-Siyāda and a dervish monastery (*khānaḳāh*). The Mongol governor of Baghdād in 661/1263 led a canal from the Euphrates to al-Nadjaf but it soon became silted up and was only cleared out again in 914/1508 by order of Shāh Ismāʿīl. This canal was originally called Nahr al-Shāh (now al-Kenāʾ) (*Lughat al-ʿArab*, ii, Baghdād 1930-1, 458). This Shīʿī Ṣafawid himself made a pilgrimage to the *mashhadān[i]* of Karbalāʾ and al-Nadjaf. Süleymān the Magnificent visited the holy places in 941/1534-5. A new canal made in 1793 also soon became silted up, as did the Zherī al-Shaykh and al-Ḥaydariyya canals, the latter of which was made by order of ʿAbd al-Ḥamīd II. In 1912 iron pipes were laid to bring water from the Euphrates to al-Nadjaf (*Lughat al-ʿArab*, ii, 458-9, 491).

A considerable part of ʿIrāḳ, with Baghdād, al-Nadjad and Karbalāʾ, was temporarily conquered by the Persians in 1032/1623, but restored to Ottoman control in the winter of 1048/1638-9. Over the next two centuries or so, al-Nadjaf was at times harried by Bedouins from the direction of the Syrian Desert and also by Wahhābī raids [see WAHHĀBIYYA], culminating in those of 1806 and 1810; and a recurrent factor within al-Nadjaf during this period was also factional strife between the two groups of the Zugurt and Shumurd. Nevertheless, the town, with its Shīʿī religious leadership of *mudjtahids* and of the *kilīd-dār* or guardian of the shrine, managed to retain a virtual autonomy under Ottoman rule, at times rebelling against what was regarded as the Porte's heavy hand, so that Ottoman troops had severely to repress revolts there in, e.g., 1842, 1852 and 1854; and attempts to introduce conscription there in 1915-16 caused a further outbreak.

During all these centuries, al-Nadjaf maintained its function as a centre for Shīʿī pilgrimage and burial, and in the 19th century its *mudjtahids* benefitted from the Oudh Bequest, that of the Shīʿī king of Oudh [see AWADH], distributed till the First World War by the British Resident. In the post-war years, it remained a centre of disaffection, a focus for anti-British opposition during the Arab revolt in ʿIrāḳ of 1920 and subsequently of opposition to King Fayṣal; and the residence in al-Nadjaf from 1965 to 1978 of the Āyatallāh Rūḥ Allāh Khumaynī helped revive the role of the ʿIrāḳī shrine cities as centres of clerical opposition immune from Persian official control.

In present-day ʿIrāḳ, al-Nadjaf falls within the *muḥāfaẓa* of Karbalāʾ, and in 1970 had an estimated population of 180,000, of whom some quarter (at least before the expulsions of Persians from ʿIrāḳ during the recent ʿIrāḳ-Īrān War) have always been Persians; the population has of course tended to become swollen seasonally by the pilgrimage traffic.

According to the Arab geographers, al-Ḥīra [*q.v.*] lay on the eminence of al-Nadjaf (al-Yaʿḳūbī, *Buldān*, tr. Wiet, 140, 309, Massignon (*MIFAO*, xxviii, 28, n. 1) thinks that al-Ḥīra lay on the site of the present al-Nadjaf, while Musil, (*op. cit.*, 35, n. 26) places the centre of the ruins of al-Ḥīra south-east of the *tell* of al-Knēdre which lies half-way between al-Kūfa and al-Khawarnaḳ. Ibn Baṭṭūṭa entered Mashhad ʿAlī, which he visited in 726/1326, through the Bāb al-Ḥaḍra gate which led straight to the Mashhad. He describes the town and sanctuary very fully. According to al-Yaʿḳūbī (*loc. cit.*), the ridge on which al-Nadjaf stands once formed the shore of the sea which in ancient times came up to here. For the number of its inhabitants and its architectural beauty, Ibn Baṭṭūṭa reckoned the town among the most important in ʿIrāḳ. It now has a Shīʿī college and celebrated cemetery in the Wādī al-Salām. Near al-Nadjaf were the monasteries of Dayr Mār Fāthiyūn (Yāḳūt, ii, 693) and Dayr Hind al-Kubrā (Yāḳūt, ii, 709), also al-Ruhba (5 hours southwest of the town; Yāḳūt, ii, 762; Musil, *op. cit.*, 110, n. 61) and Ḳaṣr Abi 'l-Khaṣīb (Yāḳūt. iv, 107). The lake of al-Nadjaf marked on many older maps has long since completely dried up (Nolde, *Reise nach Innerarabien*, 105).

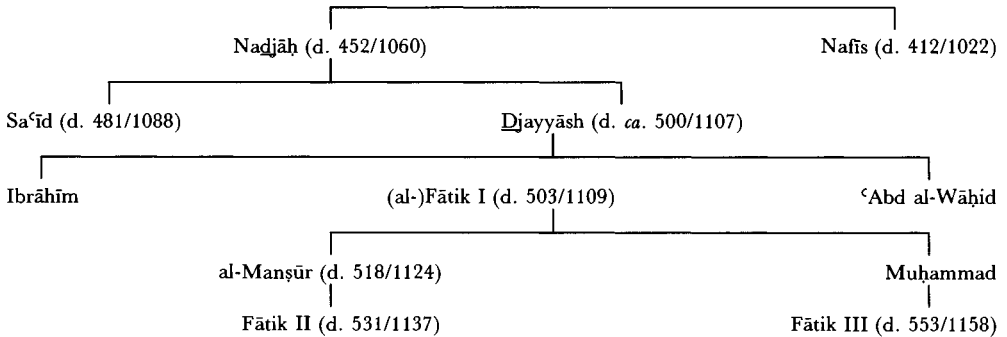
(E. HONIGMANN-[C.E. BOSWORTH])

NADJ̲ĀḤIDS, a dynasty of Abyssinian slaves with their capital in Zabīd [*q.v.*], reigned 412-553/1022-1158.

- Nadj̲āḥ (d. 452/1060)
  - Saʿīd (d. 481/1088)
  - Dj̲ayyāsh (d. *ca.* 500/1107)
    - Ibrāhīm
    - (al-)Fātik I (d. 503/1109)
      - al-Manṣūr (d. 518/1124)
        - Fātik II (d. 531/1137)
      - Muḥammad
        - Fātik III (d. 553/1158)
    - ʿAbd al-Wāḥid
- Nafīs (d. 412/1022)


The best historical source for an understanding of the dynasty is ʿUmāra (see Kay, in *Bibl.*), but it should be stressed that ʿUmāra's account is sometimes confused, frequently anecdotal with interruptions of little or no relevance and lacking in dates. Other published sources which can be used as a control on ʿUmāra's text are listed below, though many depend ultimately on him, being transmitted in the main through other writers.

When the last Ziyādid [*q.v.*] had been put to death during the rule of the Abyssinian *wazīr*, Mardj̲ān, by one of his slave governors, Nafīs, the other, Nadj̲āḥ, came forward to avenge him. After fighting, Nafīs was killed and Nadj̲āḥ in D̲h̲u 'l-Ḳaʿda 412/February 1022 entered Zabīd, where he had the vizier built alive into a wall in exact revenge for the Ziyādid. As his rival, Nafīs, had already done, Nadj̲āḥ assumed the insignia of royalty, struck his own coins and inserted his own name in the *k̲h̲uṭba* after that of the ʿAbbāsid caliph. The latter recognised him under the title of al-Muʾayyad Nāṣir al-Dīn. His territories extended northwards from Zabīd as far as Ḥaraḍ in northern Tihāma [*q.v.*], while the highlands remained divided among petty rulers. When among the latter the Ṣulayḥids [*q.v.*] came to considerable power, their relations with the Nadj̲āḥids decisively affected the history of the latter. The first Ṣulayḥid, ʿAlī, is said to have had Nadj̲āḥ poisoned about 452/1060 through a slave girl sent to him as a gift. In the confusion that followed, ʿAlī occupied Zabīd and Nadj̲āḥ's sons fled to the Red Sea island of Dahlak [*q.v.*]. While the eldest, Muʿārik, committed suicide, the other two resolved to regain power in their lands: Saʿīd al-Aḥwal and Abu 'l-Ṭāmī Dj̲ayyāsh, whose lost work, *al-Mufīd fī ak̲h̲bār Zabīd*, is much quoted by ʿUmāra. Saʿīd made his preparations in a hiding place in Zabīd and arranged for Dj̲ayyāsh to arrive later. The two then came out openly, fell upon and killed ʿAlī al-Ṣulayḥī, who was heading for Mecca, in 473/1081. Zabīd at once recognised Saʿīd as lord, he appealing in particular to the large number of Abyssinian slave troops. But Asmāʾ, the widow of ʿAlī al-Ṣulayḥī who was kept prisoner in Zabīd, persuaded her son, al-Mukarram, to rescue her in 475/1083. The Nadj̲āḥids again escaped to Dahlak. In 479/1086 Saʿīd returned as ruler, but in 481/1088 he was put to death at the instigation of the Ṣulayḥid queen, al-Sayyida, al-Mukarram's wife. Dj̲ayyāsh escaped to India with his vizier K̲h̲alaf b. Ṭāhir, returned to Zabīd disguised as an Indian, plotted with his compatriots and easily regained power in 482/1089. With his death in 498/1105 or 500/1107, confusion reigned. He himself had domestic difficulties and his former helper, K̲h̲alaf, had to flee and there were fierce family feuds among his descendants. His son, Fātik I, the son of a slave girl bought in India, had to defend himself against his half-brothers, Ibrāhīm and ʿAbd al-Wāḥid. He died young in 503/1109. The latter's infant son, al-Manṣūr, was set aside by his uncles, who were quarrelling with one another, and fled to al-Sayyida, whose favourite, al-Muẓaffar b. Abi 'l-Barakāt brought him back in 504/1111 as a vassal of the Ṣulayḥids.

Because he was still a minor, the dynasty's viziers began to take full control. Al-Manṣūr's vizier, Anīs, even assumed royal honours. When he attained his majority, al-Manṣūr murdered him with his own hand in 517/1123. Al-Manṣūr, however, in his turn was at once poisoned by the next vizier, Mann Allāh. The latter made the boy Fātik II ruler, the son of al-Manṣūr and a slave, ʿAlam. This woman, who died in 545/1150, endeavoured with great skill to preserve the rights of her house against the encroachments of the viziers. Mann Allāh was killed at her instigation in 524/1130. His successors were the slaves Ruzayḳ and later al-Mufliḥ. Against the latter ʿAlam put forward her favourites Surūr and Iḳbāl, who were however not themselves on good terms. During their quarrels the various parties brought other petty Arab rulers against Zabīd. Iḳbāl had Fātik II killed in 531/1137. He was followed by his cousin, Fātik III. Surūr, who had been in effective control since 529/1135, was murdered in a Zabīd mosque in 551/1156 by an envoy of the Mahdids [*q.v.*]. When the Zaydī Imām al-Mutawakkil Aḥmad b. Sulaymān was summoned to help by the Nadj̲āḥids, he made it a condition that Fātik should be deposed and he himself recognised as lord of Zabīd. This was agreed, but in 554/1159 the Mahdids entered Zabīd.

The Ziyādids before them and the Nadj̲āḥids continually brought over to the Yemen shiploads of Abyssinian slaves to recruit their troops and thus continued that mixture of races which had already existed and is still very marked in Tihāma today. There is a further point to note in this regard. Although he appears to get the date of the building of Ḥays [*q.v.*] wrong—it was probably built in earlier Ziyādid times—Ibn al-Mudj̲āwir (*Mustabṣir*, 235) indicates that the new town in Tihāma was populated by

Abyssinians brought over specifically for that purpose: "It is said that there was not a single house of Arabs, every one of them being of blacks."

The striking of Nadjāḥid coins is mentioned by most of our sources, although no great caches of such coins have been discovered. Bikhazi (*Coins*, 1970, 106) claims to have read the legend of a coin struck in Zabīd in 534, although the ruler's name is illegible. The coin is otherwise unpublished and is in the British Museum. He lists three others minted in Ṣanʿāʾ and suggests all are Nadjāḥid coins. He does not, however, explain how the Nadjāḥids were minting coins in Ṣanʿāʾ. Much more promising is the research carried out by Lowick (*Coins of the Najāḥids*, 1976) and, despite problems, he argues convincingly that the four coins listed in his publication, all minted in Zabīd, are indeed Nadjāḥid.

AL-**NADJĀSHĪ**, loanword from the Ethiopic, used in Arabic to designate the ruler of Ethiopia at the time of the Prophet and in the early period of Islam. In Geʿez, *nägâśi*, pl. *nägäśt* is the *nomen agentis* of the verb *nägśä* "to rule, to become king" (Leslau, *Comparative dictionary, 392-3*), used both as a proper noun (cf. *ḳayṣar*) and as a *nomen appellativum*, yielding the form in western European languages *negus*. For the evolution of ancient Semitic *g* to *dj*, see DJĪM and Nöldeke, *Neue Beiträge*, 47. Ethiopic *ś* (known as *negus śä* i.e. the *ś* used in the word *neguś*), is rendered in Arabic by *sh* (*shayṭān*, *nadjāshī*), see Nöldeke, *ibid.*, and Beeston, *Sabaic grammar*, 9-10. The formula *ḥeyäw aba nägâśi* "long live the king" (e.g. I Samuel, x, 24), probably borrowed from the spoken language when the Bible was translated into Geʿez, may indicate that the Abyssinian king was addressed or spoken of as *nägâśi* instead of the more common *negus* (Dillmann, *Lexicon*, *s.v.*). Nägâśi meaning "King" (of Aksum) also occurs in Sabaic, see Beeston *et alii*, *Sabaic Dictionary*, Louvain etc. 1982, 93, *sub* NGS² [ngs²y-n, pt.ngs²t].

The Nadjāshī is not mentioned in the Ḳurʾān, but to a considerable extent in the *Sīra*. It may well be that the Prophet in his youth acquired some knowledge about Abyssinia and its king through his paternal grandfather ʿAbd al-Muṭṭalib [*q.v.*], who is said to have had relations with Abraha [*q.v.*] and to have entertained trading relations with Abyssinia (Ibn Isḥāḳ, tr. Guillaume, *Sīra*, 24 ff.). According to Ibn Ḳutayba (d. 276/889), Muḥammad's nurse was an Ethiopian woman named Umm Ayman (Lecomte, *Ibn Qutayba*, 367), and Ibn Saʿd (*Ṭabaḳāt*, iv/1, 72) remarks that Muḥammad spoke Abyssinian (see also al-Suhaylī (d. 581/1185-6), *Rawḍ*, i, 205; al-Bukhārī, 56, 188). Ibn Isḥāḳ relates (Ibn Isḥāḳ, tr. Guillaume, 180) that, according to his information, the Prophet "used often to sit at al-Marwa at the booth of a young Christian called Djabr, a slave of the Banu 'l-Ḥaḍramī". Al-Bayḍāwī adds that the Prophet used to stop and listen to Djabr and his fellow-Christian Yasāra as they read aloud the Torah and the Gospel (Parrinder, *Jesus in the Qurʾan*, 161). The use of some two hundred words in the Ḳurʾān that are connected with Geʿez—many of them are loan words from Greek and Syriac—indicate some early contact with Christian elements from Abyssinia (Jeffery, *The foreign vocabulary*, 305-7; Fraenkel, *Aramäische Fremdwörter*, 323).

According to al-Balādhurī, *Ansāb*, i, 32, the Nadjāshī was invited to act as an arbitrator in the case against Ḥarb b. Umayya, accused of killing a Jew who was a neighbour and a protégé of ʿAbd al-Muṭṭalib. The Nadjāshī is said to have refused to act thus. (Hamidullah, *Le Prophète*, i, 34-5). In any case, his name is connected with Islam as early as 615 A.D. Since the events of the 6th century [see ABRAHA; AL-FĪL; Conrad, *Abraha and Muḥammad*], Aksum and its Christian kings had been well-known in Mecca, and the Prophet must have considered the Nadjāshī as an ally, at least not as an adversary, when he gave some of his followers the advice to emigrate to Abyssinia (Montgomery Watt, *Muḥammad at Mecca*, 109 ff.; Ibn Isḥāḳ, tr. Guillaume, *Sīra*, 146; Rodinson, *Mahomet*, 142 ff.). In Arabic sources, the Abyssinian king is named Aṣḥama, Aṣmaḥa, Ṣaḥama, etc. (Weisweiler, *Buntes Prachtgewand*, 49; M. Hartmann, *Der Naǧāšī Aṣḥama*; Caetani, *Annali*, i, 736). An unpublished Ethiopian chronicle (Hable Sellasie, *Ancient history*, 185) relates that in the times of a certain king Adriaz (603-23 A.D.), "the infidel Mohammad arose in the East, occupied all countries, killed the magicians of Egypt, burned their books and came as far as Habab, the land of Sudan. But he could not subdue the kingdom of Abyssinia".

A group, sent by the Ḳuraysh in pursuit of the emigrants, arrived too late at the bay of Shuʿayba near Djudda [*q.v.*]. Whether there were two separate and distinct emigrations to Abyssinia or a single stream of emigrants, all sources agree that the Muslims were well-received by the Nadjāshī. He supported them against ʿAbd Allāh b. Abī Rabīʿa b. al-Mughīra and ʿAmr b. al-ʿĀṣ [*q.v.*], who had come on behalf of the Ḳuraysh to persuade the king to expel the Muslims. At an audience before the king and his bishops, Djaʿfar b. Abī Ṭālib, the Prophet's cousin, summarised Muḥammad's achievements (Ibn Isḥāḳ, tr. Guillaume, *Sīra*, 151), and by quoting sūras IV, 169, and XIX, 16-34, he made it appear as if Islam was a form of Christianity. ʿAbd Allāh and ʿAmr returned to Mecca and the Muslims continued to live in peace.

While Muḥammad's followers were in Abyssinia, the Nadjāshī was accused by his people of having left his religion, but he succeeded in placating them in a way which, according to Ibn Isḥāḳ, could be explained as favourable towards Islam. The Nadjāshī permitted some thirty-three followers to return to Mecca, and also agreed to Muḥammad's betrothal to Umm Ḥabība after her husband ʿUbayd Allāh b. Djaḥsh, who had become a Christian while in Abyssinia, had died. Khālid b. Saʿīd b. al-ʿĀṣ [*q.v.*]

acted as *walī*. This daughter of Abū Sufyān b. Ḥarb [*q.v.*] had been among the first emigrants and it was she who, together with Umm Salāma who had also been to Abyssinia, described for the Prophet on his deathbed the wonders of the church of St. Mary in Aksum (W. Muir, *The Life of Mohammed*, 490).

According to Ibn Saᶜd (*Ṭabaḳāt*, i/2, 15 ff.), the Prophet in 7/628 sent envoys to six rulers of the surrounding countries, among whom the Nadjāshī, summoning them to embrade Islam. The letter for the king of Abyssinia, who is named as al-Aṣḥam b. Abdjar, was delivered by ᶜAmr b. Umayya al-Damrī (see the references in Van Donzel, *A Yemenite embassy*, 239 n. 8; on the historicity of these letters, see Montgomery Watt, *Muḥammad at Medina*, 345-6; Hamidullah, *Documents*, 19; idem, *Le Prophète*, i, 205-7; Dunlop, *Another Prophetic letter*). According to Muslim tradition, the Nadjāshī became a Muslim so that "when the Negus died, the Prophet prayed over him and begged that his sins might be forgiven" (Ibn Isḥāḳ, tr. Guillaume, *Sīra*, 155; cf. Raven, *Some early Islamic texts*, 209).

In 9/630-1 the Prophet sent ᶜAlḳama b. Mudjazzaz al-Mudlidjī to chase Abyssinian pirates from an unnamed island (Ibn Saᶜd, *Ṭabaḳāt*, ii/1, 117-8), but this expedition was not directed against the Nadjāshī himself. Neither was this the case with the naval expedition which ᶜUmar b. al-Khaṭṭāb in 19/640 is reported to have sent against the Abyssinians under the command of the same ᶜAlḳama. The outcome was so disastrous for the Muslims that ᶜUmar would have no more to do with the sea (Caetani, *Annali*, iv, 219, 366-7).

It is not known whether the perhaps regular raids against the Arabian coast by Abyssinian pirates—or by those who were said to be Abyssinians—have influenced the attitude of the Muslims towards the Nadjāshī. According to Trimingham (*Islam in Ethiopia*, 46), Abyssinian pirates raided and sacked al-Djudda in 83/702. However, his references to Wüstenfeld, *Chroniken*, ii, 44, and to Sprenger, *Mohammed*, iii, 430, are not correct, since the first, *loc. cit.*, deals with Abraha's expedition against Mecca and the second with ᶜAlḳama's expedition.

The Nadjāshī is again met with under the reign of the Umayyad caliph al-Walīd (86-96/705-15), who built the famous palace at Ḳuṣayr ᶜAmrā in Transjordan [see ARCHITECTURE], where, according to the traditional interpretation, are represented "the enemies of Islam defeated by the Umayyads" (*ibid.*). The question may be asked whether the presence of the Nadjāshī among the *Ḳayṣar* (the Byzantine emperor), Rōdorīk (the Visigoth's king of Spain), Khusraw (Chosroes) and two others whose names have been obliterated, reflects a change in the mentality towards the Abyssinians since the time of the Prophet.

In later times, the Nadjāshī held a special place in Muslim historiography because of his role in early Islam. Abu 'l-Faradj ᶜAbd al-Raḥmān Ibn al-Djawzī [*q.v.* (d. 597/1200]) wrote his *Tanwīr al-ghabash fī faḍl al-sūdān wa 'l-ḥabash* (see Van Donzel, *Quelques remarques*), and the Zaydī Imām of Yemen al-Mutawakkil ᶜalā 'llāh Ismāᶜīl (d. 1079/1668) quotes the Prophet's letter and the Nadjāshī's reply in his correspondence with the Ethiopian king Fāsiladas (see Van Donzel, *A Yemenite embassy*, 237 ff.).

Another element in Muslim tradition about the Nadjāshī is that his land was said to be exempt from *djihād*. According to a tradition recorded by Abū Dāwūd (d. 275/889) and Aḥmad b. Ḥanbal (d. 241/855; references in Wensinck, *Handbook*, s.v. *Abyssinians*), the Prophet said: "leave the Abyssinians as long as they leave you" (*atrukū 'l-ḥabasha mā tarakūkum*) and elsewhere in Abū Dāwūd and in al-Nasāʾī (d. 303/915): "let the Abyssinians be as long as they let you be, and leave the Turks alone as long as they leave you alone" (*daᶜū 'l-ḥabasha mā waddaᶜūkum wa-trukū al-turk mā tarakūkum*). Apart from the pun between *taraka* and *turk*, the presence of the Turks in this tradition weakens its value as far as the Abyssinians are concerned. Whether traditions such as these have led to statements like "Abyssinia is territory not subject to the *djihād*" (Trimingham, *Islam in Ethiopia*, 52) cannot be ascertained. But it should be remarked that the reference in this connection to Ibn Ḥawḳal (*ibid.*) is wrong. In his *Kitāb Ṣūrat al-arḍ* (*Opus geographicum*, i, 56), Ibn Ḥawḳal speaks of the Budja [see BEDJA] and remarks *wa-laysa dāruhum bi-dār ḥarb*, which Kramers-Wiet (*Configuration*, i, 54) translate with "and their region is not a territory of war", i.e. no war is going on there. This passage in Ibn Ḥawḳal's text thus does not contain any reference to *djihād* at all. The reason why Abyssinia was not overrun by the Muslims in the 7th and 8th centuries is not to be found in the fact that tradition judged favourably on the Nadjāshī and his land, but in the fact that Abyssinia could only be reached through naval expeditions, a technique not well developed in early Islam. Another reason may have been that the Nadjāshī's kingdom was poor in comparison with the Byzantine and Sasanid empires (Hourani, *Arab seafaring*, 46). On the gradual penetration of Islam into the highlands of Ethiopia, see ḤABASH, ḤABASHA.

NADJĀT, MĪR ʿABD AL-ʿĀL, a Persian poet, born about 1046/1636-7, the son of a Ḥusaynī Sayyid Mīr Muḥammad Muʾmin of Iṣfahān.

Little is known of his life. Only this much is certain, that he, like many other Persian poets of this time, worked in the offices of different Persian dignitaries. For example, he was a *mustawfī* [*q.v.*] with the *Ṣadr* Mirzā Ḥabīb Allāh, later occupied the same office in Astarābād and ended his career in 1126/1714 after being for many years *munshī* with the Ṣafawid princes Shāh Sulaymān (1077-1105/1666-94) and Shāh Sulṭān Ḥusayn (1105-35/1694-1722). He owes his fame mainly to a long poem *Gul-i kushtī* ("The rose as a challenge to fighting") which he finished in 1112/1700-1 and which deals with the theme of the *zūr-khāna* [*q.v.*] still very popular in Persia. As the Persian athletes still form a special closed corporation they use a special language (an argot) which is full of the technical terms of their art and is not intelligible to the outsider. Nadjāt used these technical terms very skilfully in his poem, which makes it very difficult for laymen to understand. This produced several commentaries on his work, of which those of Ārzū, Ratan Singh Zakhmī (printed Lucknow 1258/1842) and Gobind-Rām (lith. Murādābād 1884) are the best known. Of Nadjāt's contemporaries, some did not approve of his peculiar style and thought his poem degraded the poet's art with its vulgar expressions and low humour. As a matter of fact, Nadjāt's tone suffers considerably from the traditional lofty style of Persian court poetry and approaches the language of the Persian middle classes; this makes his work of considerable importance for the history of the Persian language. Besides the poem, we only know of a collection of lyrics by Nadjāt of which there are manuscripts in several libraries (see below).

NADJĀTĪ [see NEDJĀTĪ].

NADJD (A. "uplands"), conventionally defined as the plateau region of the Arabian peninsula lying to the east of the Red Sea lowlands (al-Tihāma [*q.v.*]) and the mountain barrier running down through the western side of the peninsula (al-Ḥidjāz [*q.v.*]).

1. Geography and habitat.

The exact application of this originally topographical conception is very differently understood, and sometimes it means more generally the elevated country above the coastal plain or the extensive country, the upper part of which is formed by the Tihāma and the Yaman and the lower by Syria and ʿIrāḳ, or the part of Arabia which stretches from the frontiers of al-Yamāma to al-Madīna and thence across the desert from al-Baṣra to Baḥrayn on the Persian Gulf (al-Iṣṭakhrī, Ibn Ḥawḳal) or the territory between ʿIrāḳ (al-ʿUdhayb) and Dhāt ʿIrḳ (Ibn Khurradādhbih) or from ʿIrāḳ to al-Tihāma (Ḳudāma) or the land which lies behind the so-called Ditch of Chosroes (Kisrā) as far as the Ḥarra (al-Bāhil), or lastly, the territory between the depression of the Wādi 'l-Rumma and the slopes of Dhāt ʿIrḳ (al-Aṣmaʿī). That originally the name was applied to the plateau only is evident not only from the fact that Nadjd appears in combination with various place-names; thus al-Aṣmāʿī (Yāḳūt, iv, 745) knows of Nadjd Barḳ (in al-Yamāma), Nadjd ʿUfr, Nadjd Kabkab (near ʿArafāt), Nadjd Marīʿ (in the Yaman), al-Bakrī (ii, 574) besides the three last named mentions Nadjd al-Yaman, Yāḳūt (iv, 750-1) further mentions Nadjd al-Ḥidjāz, Nadjd Alwadh in the country of Hudhayl, Nadjd al-Sharā, and al-Hamdānī (55) Nadjd Ḥimyar and Nadjd Madhḥidj along with a number of places not otherwise known which are combined with Nadjd. Al-Hamdānī (177) further makes a distinction between upper Nadjd (*Nadjd al-ʿUlyā*) which is regarded as Nadjd proper (*al-Nadjd*) and in which he includes the district (*kūra*) of Djurash and the town of Yabambam, and lower Nadjd (*Nadjd al-Suflā*) which is described as *Arḍ Nadjd* and with the Ḥidjāz and al-ʿArūḍ forms Central Arabia (1,$_5$-2, 36,$_{18}$-37), the territory in which pure Arabic is spoken (136,$_{18}$-137). The original meaning is also seen in the dual Nadjdān[i], which, it is interesting to note, is used for two mountains in the Adjaʾ range, as well as in the place-name Nadjdā Marīʿ and in the spring pasture ground Nadjdān[i] in the land of the Khathʿam mentioned by the poet Ḥumayd b. Thawr (Yāḳūt, iv, 745).

That the wide interpretation of the name Nadjd above given is not unjustified is shown by the foundation in the second half of the 5th century A.D. by al-Ḥārith, chief of the Kinda, of a short-lived kingdom which extended from the Syrian *limes* and Medina to al-Yamāma or from the hill of Ṭumīya in the N.E. on the Wādi 'l-Rumma to Dhāt ʿIrḳ. At a later date, the whole of al-Nadjd belonged to the administrative district of al-Yamāma (Yāḳūt, iv, 746).

The widest idea to which the name Nadjd has ever been applied is probably that of the present kingdom of Saudi (Suʿūdī) Arabia, which owes its origin to the Wahhābī chief ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd, who, as Amīr of Nadjd conquered al-Riyāḍ [*q.v.*] in 1903, was chosen as ruler of Nadjd and the adjoining lands in the summer of 1921, on 10 January 1926 conquered the Ḥidjāz and on 19 January 1927 was proclaimed king of Nadjd and its dependencies at al-Riyāḍ. The northern frontier of his territories, which was delineated by treaties between the ruler of Nadjd with ʿIrāḳ and Great Britain on the one side (signed at ʿUḳayr on 2 December 1922) and Nadjd, Great Britain and Transjordan on the other (signed on 2 November 1925 at Ḥadda in the Ḥidjāz) runs along the neutral zone between Nadjd and ʿIrāḳ (29-30°N. lat. and 45-46°E. long.) and is then continued in a line running N. and N.W. to the intersection of 39°E. long. and 32°N. lat. and leaves the Djabal ʿAnēze on its north, then S.W. to the Wādī

Radjil and passing through the S.E. the point where 38°E. long. and 30°N. lat. intersect. The Wādī Sirḥān is thus still in Nadjd. This line continues towards the south from 25' to 38°E. long. and crosses the former Ḥidjāz railway towards ʿAḳaba. The extent of the territory is estimated at 900,000 square miles. The capital is al-Riyāḍ; the more important towns are Burayda (Berēde), ʿAnayza (ʿAnēze), Ḥāʾil (Ḥāyil), Tharmala, Shaḳrā, Madjmaʿa, Ḥuraymala (Ḥarēmle), al-Hufhūf and al-Ḳaṭīf. The population, which with the exception of al-Ḥasā with a considerable number of Shīʿīs, has almost entirely adopted Wahhābism, belongs to the tribes of Muṭayr (Meṭēr), Ḥarb, ʿUtayba (ʿAtēbe), Subayʿ, Dawāsir, al-ʿUdjmān, al-ʿAwāzim, al-Suhūl, Banī Murra and Ḳaḥṭān [see further, SUʿŪD, ĀL-].

The North Arabian Nadjd forms a part of the great desert plateau, which is formed of primary rock with overlying sandstone and volcanic outbursts and has two great mountain ranges running through it; that in the north is about 64 km/40 miles long and at its northeastern end some 1,470 m/4,500 feet high, known in ancient times as Djabal Ṭayyiʾ or Djabalā Ṭayyiʾ, i.e. Adjaʾ and Salmā (al-Hamdānī, 125,$_{15}$) is now called Djabal Shammar or Djabal Idjā (Adjaʾ).

Both ranges, which rise out of a table land levelled by weathering, are of granite. The Djabal Adjaʾ stretches from N.N.E. to S.S.W., about 56km/35 miles S.E. of it in approximately the same direction the Djabal Salmā, in front of which in the S.W. lies the Djabal Ramān, while S.E. of the Djabal Salmā lies the Ḥarra of Fayd, of volcanic origin.

S.E. of this rises the sandstone plateau, overlaid with limestone, of Djabal Ṭuwayḳ (Ṭuēḳ) running N.W. to S.E., which forms the western declivity of a plateau which has come into existence through weathering and slopes towards the Persian Gulf on the one side and the sands of the desert of Rubʿ al-Khālī on then other. It begins S.E. of the district of al-Ḳaṣīm (S.E. of the Ḥarra) and stretches E. from al-Washm to al-ʿĀriḍ with the town of al-Riyāḍ and then turns, west of the Khardj oasis, S.S.W. towards the Wādī 'l-Dawāsir. The most important peak on this edge of the plateau is the Djabal ʿAmmāriyya or Djidd, which towers some 152m/500 feet above the ridge usually 610-1070 m/2,000-3,500 feet high. The long southern part of the Ṭuwayḳ is intersected by numerous *wādīs* which lead the water that falls in the rainy season to the Rubʿ al-Khālī. Its most important part is the Aflādj, 64 km/40 miles long, with the oasis of Layla.

Nadjd is in the main steppe and desert. The Nafūd and Dahnāʾ [*q.vv.*] occupy the greater part of northern Nadjd, while the Rubʿ al-Khālī joins them on the S.E. There are no perennial streams in Nadjd, so that the country has to rely upon subterranean channels of supply which are at various depths and have to be reached by wells. In the oasis of al-Khardj the wells are from 6m to 12m/ 20 to 40 feet deep, in Aflādj 15 to 18m/50-60 feet, in Ḥāʾil and al-Riyāḍ about 24m/80 feet. Sometimes these springs form ponds, for example, in al-Khardj, the springs of which form three pools, the largest of which is 150 paces long and 80 broad (cf. the picture in Philby, ii, 34) while the springs of Aflādj feed a lake nearly a mile long and a quarter of a mile broad (Philby, ii, pl. at p. 86). These supplies sometimes dry up suddenly, probably because they have found a subterranean exit, as has happened in the case of two waterholes in Aflādj and the two larger ponds in al-Khardj. The hydrographic conditions of the country are therefore exceedingly dependent on the rainfall from the summer and winter rains. The former (*wasmī* or *maṭar al-ṣayf*) fall in August and September and particularly refresh the pastures which the summer sun has dried up, while the latter produce a springlike effect in the land on which they fall. The classic phrase *saḳā 'llāh^{u} Nadjd^{an} min rabīʿ^{in} wa-ṣayf^{in}* (al-Bakrī, ii, 627) eloquently sums up this state of affairs. Heavy rainfalls were also observed in April 1871 in the central Wādi 'l-Rumma and in May in ʿAnēze between Djabal Salmā and ʿAnēze (1884, Ch. Huber), and Philby (ii, 10) noticed thunder showers in May as well as drizzle, while Doughty met with hail at Khabra (near ʿAnēze) in April. That the climate here cannot have changed very much is evident from Ibn Djubayr, who records very heavy showers in this district in Ṣafar 584/April 1184. Huber met with rain in June 1884 between ʿAnēze and Mecca, Sadlier at the end of July 1819 between al-Ḥasā and Ḍarʿiyya heavy thunderstorms and rain, which however was described by the natives as unprecedented. Philby (i, 141, 147) records thunder and rain in December. The rainwater collects in the hollows below the thick layer of sand and enables palms to grow and also, on chemically decomposed fertile soil, wheat and barley, vegetables and fruit trees. The hot summer of course everywhere makes it necessary to water the crops from wells. On the other hand, the frequently very sudden flooding of the water-courses led in quite early times to the building of dams to hold back and store the water; such were built in the Wādī 'l-Rumma at ʿAneize (al-Bakrī, i, 207; Yāḳūt, iii, 738), Ḍarʿiyya (al-Bakrī, ii, 637) and on the road from al-Yamāma to ʿAneize (al-Hamadhānī, 174, 192). Doughty found remains of such dams in the Djabal Adjaʾ.

The district of al-Sharaf is the richest part of al-Nadjd, and the valleys of the Wādī 'l-Djarīr and Wādī 'l-Miyāh are celebrated for their pastures. Here the early caliphs had vast grazing grounds (*ḥimā*) e.g. in Ḍarʿiyya [see AL-DIRʿIYYA], al-Rabadha [*q.v.*], Fayd [*q.v.* in Suppl.], al-Nīr, Dhu 'l-Sharā and Naḳīʿ. The most famous was that of Ḍarʿiyya, where the caliph ʿUmar I secured an area six Arab miles in diameter as pasture for 300 horses and 30,000 camels for the army. ʿUthmān extended this area until the diameter was ten miles. The ʿAbbāsid al-Mahdī abandoned it, as the policy of this dynasty was to neglect Arabia deliberately, in contrast to the Umayyads who, for example, intensively colonised western Nadjd. In the 6th century A.D. Nadjd was still well wooded, and al-Sharuba, south of the Wādī 'l-Rumma, and Wadjra were particularly celebrated in this respect, while at the present day they only possess scanty remnants of these forests. Many areas seem to have been ruined by drought or disastrous inundations (Philby, i, 115; ii, 9); the decline of al-Yamāma is probably due to the latter cause. Crops are sometimes damaged by sharp frosts—in winter (January) the temperature sometimes sinks from a maximum of 53° F. by day to below 23° and ice and snow have been occasionally seen at the higher levels—while the summer drought with a maximum temperature of 113° destroys the crops. The two most important *wādīs* are the Wādī 'l-Rumma about 650 miles long, which runs right across the plateau of North Arabia, rising in the Ḥarra of Khaybar and entering the Euphrates plain at Baṣra, and the Wādī 'l-Dawāsir. These have formed since ancient times the two main routes of traffic in Central Arabia.

With the aim of sedentarising the Bedouin, King ʿAbd al-ʿAzīz Ibn Suʿūd established in Nadjd, in the first quarter of the present century, settlements called *hidjra*, pl. *hidjar*; on these, see AL-ḤIDJAR and J.S.

3. The period since the development of the oil industry.

The Kingdom of Saudi Arabia was proclaimed on 22 September 1932, and the east of the country was allotted for oil exploration to Standard Oil of California (later operating within Aramco) in 1933, thus setting the political and economic stages for the development of the country as one of the world's most important oil economies during the following decades.

Saudi Arabia's greatest oilfields are found mainly in the east of the country, but Nad̲j̲d, in the contemporary period named Central Province, including al-Riyāḍ, al-Ḳaṣīm and Ḥāʾil [*q.vv.*] districts loosely extending over the region traditionally called Nad̲j̲d, has benefited from the rapid expansion of the oil industry which began in earnest during the 1950s. Crude oil, natural gas and oil products have been made readily available in Nad̲j̲d as part of a deliberate national policy. An oil pipeline was built from al-Dammām [*q.v.*] to al-Riyāḍ refinery, while during the 1970s Petroline carried crude from the east to the west coast via Nad̲j̲d, making oil available for industrial and related developments on a large scale. More important than the direct effects of the oil industry was the growing amount of government expenditures within a series of economic development plans permitted by augmenting oil revenues, especially in the years after 1973. Nad̲j̲d was central to this development process, containing the capital, al-Riyāḍ, and receiving earliest and most favoured treatment in the allocation of financial resources.

Agriculture retains importance in the oases and smaller towns of the Nad̲j̲d. Good quality dates are grown in the oases. Other crops include wheat and barley, while the livestock holding in the region is large and increasing. A modern dairy industry containing a third of all the kingdom's cattle, is based on al-K̲h̲ard̲j̲ [*q.v.*]. Al-Riyāḍ has one of the most rapidly growing populations of the country, totalling 1.3 million in 1987. Many of the small villages around al-Riyāḍ have been absorbed into the metropolitan area. The greatest growth of the city is taking place through immigrants concentrating in the areas around the railway station and the adjacent industrial area. Recent development has been notable along the airport road and in the vicinity of the royal palace at al-Nāṣiriyya. Principal employers in al-Riyāḍ are the expanding government ministries and official agencies. Marked expansion is characteristic of all other towns of Nad̲j̲d area.

In all, the population of the Central Province was put at 3.6 million in 1985. Well over half of the Nad̲j̲d's population is urban resident, and approximately a quarter of the urban dwellers are foreign immigrants. Nad̲j̲d is favoured by recent transportation development. A railway was opened between al-Riyāḍ and al-Dammām in 1951, while al-Riyāḍ is the central node of the trans-Arabian highway completed in 1957 and of the remainder of the national road network.

NAD̲J̲DA B. ᶜ**ĀMIR** [see NAD̲J̲ADĀT].

NAD̲J̲D̲J̲ĀR, carpenter [see K̲H̲AS̲H̲AB, MAS̲H̲RABIYYA, etc.].

AL-**NAD̲J̲D̲J̲ĀR**, AL-ḤUSAYN B. MUḤAMMAD ABŪ ᶜABD ALLĀH, Murd̲j̲iʾī D̲j̲abrī theologian of the period of al-Maʾmūn. Born in the city of Bamm, he apparently grew up there as well, and worked as a weaver at the embroidery house (*dār al-ṭirāz*); according to another version, he worked at a factory which

produced metal weights. The sources are silent with regard to the dates of his birth and death; however, if we accept as true the report that he died of sorrow over his argument with al-Naẓẓām, the Muʿtazilī theologian, it is reasonable to assume that al-Nadjdjār died after the end of the third decade of the 3rd/9th century.

Al-Nadjdjār's doctrine became well-known towards the end of the reign of al-Maʾmūn (198-218/813-33) in the region of Rayy in the eastern provinces, in the shadow of the Ṭāhirid line of governors. Although he was still alive at the beginning of the *miḥna* [*q.v.*] or inquisition, we have no proof that he himself took part in it, as did his teacher and contemporary Bishr al-Marīsī [*q.v.*]. But there is no doubt that his opinions contributed to the spread of the inquisition, through his follower, the theologian Muḥammad b. ʿĪsā, known as Burghūth [*q.v.*], who was invited to Baghdād from Baṣra by al-Muʿtaṣim (218-27/833-42), together with Muʿtazilī theologians, in order to participate in the controversy with the leader of the traditionalist party Aḥmad b. Ḥanbal; his active role and tough stance was a considerable burden to the persecuted *imām*.

The very fact that al-Nadjdjār was a follower and pupil of the Murdjiʾite theologian Bishr al-Marīsī, did not prevent him from being influenced in certain issues by the opinions of Ḍirār b. ʿAmr [*q.v.* in Suppl.], who wrote a number of books attacking the Murdjiʾa, although al-Nadjdjār did not follow Ḍirār blindly. He rejected a number of his opinions, presenting totally contradictory opinions in their place. His circle of sources was not limited to these two figures; rather, it was broad enough to include as Ibāḍī and Ḥanafī sources, but his openness to a variety of viewpoints was not enough to remove him from the ideological framework characterised by the school headed by Ḍirār b. ʿAmr.

However, this was not the picture of al-Nadjdjār painted by Islamic heresiographic literature. Reports concerning his doctrinal identity are not unanimous: while al-Ashʿarī classifies him amongst the Murdjiʾa, al-Shahrastānī places him amongst the Djabriyya "determinists", and stresses that most of the Muʿtazila around the Rayy region were faithful to his doctrine. On the other hand, several reports associate him decisively with the Muʿtazila, while others classify him and his followers as belonging to the *ahl al-ithbāt* "the affirmationists", i.e. those who affirm God's *ḳadar*. (It is reasonable to assume that the *ahl al-ithbāt* were those who emphasised the createdness of the Ḳurʾān.) The lack of unanimity regarding al-Nadjdjār's views undoubtedly stems from the fact that his opinions on the theological questions which interested the *ahl al-kalām* were not all alike: on some issues his opinions suited those of the *ahl al-sunna*, while on others they suited the views of the Muʿtazila, as reflected in the heresiographic works that have reached us, which enumerate the points of discord and of accord between al-Nadjdjār on the one hand and the two opposing doctrines on the other. Disputes on various occasions between al-Nadjdjār and his follower Burghūth, on the one hand, and the two Muʿtazilīs Ibrāhīm al-Naẓẓām and Abu 'l-Hudhayl al-ʿAllāf [*q.vv.*] on the other, as well as the keen argument between Burghūth and Aḥmad b. Ḥanbal, not only corroborate reports regarding the doctrinal dispute between him and them; they also point to the independent orientation which characterises the man and his doctrine. The stormy dispute between al-Nadjdjār and upholders of the Sunnī doctrine lacked the power to distort the ideological proximity bonding some of the basic principles common to both doctrines; the scholars of the Sunna continued to consider al-Nadjdjār the closest to them amongst all the other doctrinal streams; on certain issues his views were even adopted by al-Ashʿarī, and it is reasonable to assume that because of this relationship, al-Nadjdjār's opinions were preserved and did not vanish. But his views, as reported by the heresiographers, were not well-formed enough and were even quoted in a disjointed and out-of-context fashion, whence the lack of clarity which characterises his opinions with regard to certain issues. Nor is the long list of monographs attributed to him able to dispel this lack of clarity.

Nevertheless, the general account of his views as represented in the heresiographical works may help to identify the main concepts distinguishing him from the contemporary theologians. Faith (*īmān*), according to him, consists in the knowledge of God, of His apostles and His commandments and in the profession of this knowledge by the mouth. It consists of several qualities (*khiṣāl*), each of which is an act of obedience (*ṭāʿa*); complete faith is the sum of all the *ṭāʿāt*. Faith may increase but not diminish; it can be completely lost only through unbelief. Al-Nadjdjār's concept of faith is closer to the Sunnī one, but it is not the same as that of the Murdjiʾa. Concerning the attributes of God (*ṣifāt*), al-Nadjdjār has a special stand which differs from that of the proponents of the Sunna and the Muʿtazila; he has taken over Ḍirār's view of the negative character of the divine attributes, claiming, for example, that God is ceaselessly generous (*lam yazal djawād^an^*) in that avarice is denied of Him. (This theory of the negative character is not Islamic; its origins are related to Albinus of the 2nd century A.D., and it seems that this idea became known to Muslim theologians through Plotinus' works; see ʿAbd al-Madjīd ʿIrfān, *Dirāsāt al-firaḳ wa 'l-ʿaḳāʾid*, Baghdād 1967.) He also maintains Ḍirār's doctrine concerning God's quiddity (*māhiyya*) but rejects his innovation of the sixth sense as a means of seeing God on the Resurrection Day; instead, he maintains that the eye may be given the power of knowing. As for human power (*istiṭāʿa*), introduced as an atomistic conception in contrast to Ḍirār's view, he claims that power never precedes an act but accompanies it; for each act there is a power originated when the act is originated, and the power does not endure. According to him, the body consists of assembled accidents (*aʿrāḍ mudjtamiʿa*); those accidents which do not form part of the body do not endure. This view was probably developed by Ḍirār and then adopted by al-Nadjdjār and some Ibāḍī theologians.

In accordance with his deterministic orientation, al-Nadjdjār presumed that all that takes place in the world comes from the incessant and unrestricted activity of God; He who creates the actions of man, who himself can do nothing to avoid the will of God. But God is able to do favour (*luṭf*) by which the unbeliever becomes believer. The activity of man is restricted to *kasb*, i.e. to his appropriation of divine will. Like the Muʿtazila, he presumed that he who commits a heinous sin is doomed to Hell, but (in contrast to the view of the latter) will emerge from there. Moreover, like Bishr al-Marīsī, his master, he claimed that infidels would not remain forever in Hell; similarly, believers not deserving an eternal stay in Paradise would not remain there forever. He also denied the punishment of the tomb (*ʿadhāb al-ḳabr* [*q.v.*]), probably because of his deterministic tendency. As for the word of God (*kalām Allāh*), he maintains like Bishr that it is created; is is accidental (*ʿaraḍ*) when it is read, and it is body (*djism*) when it is written. Clearly, al-

Nadjdjār was a prominent thinker whose views influenced the Muʿtazila in their formative period by his keen opposition to some of their views. In the meantime, his opinions paved the way for the Sunnī scholars' defence of their doctrine on the basis of reasoned arguments which were unavailable before him.

(H.S. Nyberg-[Khalīl ʿAthāmina])

AL-NADJDJĀRIYYA, also called AL-ḤUSAYNIYYA, the followers of al-Ḥusayn al-Nadjdjār [*q.v.*], an early, specifically Ḥanafī sect of *kalām* (see W. Madelung, *Religious trends in early Islamic Iran*, Albany 1988, 29) which flourished during the reign of al-Maʾmūn (198-218/813-33), and whose representatives took part in the controversies throughout the course of the *miḥna* [*q.v.*] or inquisition. But this doctrine, unlike the Muʿtazila, was compelled to withdraw from Baghdād and from the borders of ʿIrāḳ and to move on to the eastern provinces in the wake of the abolition of the *miḥna* by al-Mutawakkil (232-47/847-61) and the bold reaction of adherents of the Sunna against opposing doctrines. There, and particularly in the provinces of Rayy, Ṭabaristān and Djurdjān, the Nadjdjāriyya took root and even attracted a large following; testimony from the 4th/10th century shows that it became one of the four main doctrines in those provinces, at a time when its followers had dwindled to a very small minority in Baghdād, although the doctrine had not completely disappeared there.

Heresiographers are not unanimous in their classification of the followers of this doctrine: in one case they classify them as Muʿtazila and in another as Murdjiʾa—a situation which probably arises from the fact that this doctrine presents opinions identical to those of other doctrines on specific theological subjects. Particularly prominent are reports which emphasise the connection between the Nadjdjāriyya and the doctrine attributed to Djahm b. Ṣafwān [*q.v.*], a context which is undoubtedly intended to discredit the doctrine in the eyes of its opponents. Still, there are reasonable grounds to assume that the eminent proponents of this doctrine were part of the group of theologians known as *ahl al-ithbāt* "those who affirm God's *ḳadar*". Nevertheless, and despite the diversity of the origins of the ideas of al-Nadjdjār, who founded this doctrine, it is possible to discern the independent orientation of this group, which cultivated its own unique theological principles and which had its own characteristic traits. The Nadjdjāriyya, like other doctrines, gave rise to various sectarian sub-groups—in this case over ten of them—the most prominent of which was known as Burghūthiyya, named after Muḥammad b. ʿĪsā Burghūth [*q.v.*], who disagreed with al-Nadjdjār on the question of *mutawallidāt* "generated effects", attributing them to the nature (*ṭabʿ*) concealed by God within objects themselves. He also disagreed with al-Nadjdjār on the question of *iktisāb*, "acquisition", claiming that one who acquires an act cannot be called the doer (*fāʿil*) of it.

A second sub-group was known as Zaʿfarāniyya, composed of the followers of a man known as Abū ʿAbd Allāh Ibn al-Zaʿfarānī. This group disagreed with the mainstream with regard to the matter of the createdness of the Ḳurʾān and developed paradoxical opinions in this context; they displayed extreme enmity toward the Muʿtazila in the region of Rayy.

A third sub-group was known as Mustadrika, "revisionists", and these developed contradictory opinions on the same question and displayed considerable admiration toward the first generations of Islam.

Despite the controversy which evolved amongst the various streams, all of them remained loyal to certain fundamental principles which al-Nadjdjār, in particular, had established: the rejection of divine attributes and the notions that seeing God is impossible and that the divine word is created.

Bibliography: See that for AL-NADJDJĀR.

(Khalīl ʿAthamina)

NĀDJĪ, IBRĀHĪM (1898-1953), influential Egyptian Romantic poet. He graduated from the Medical School in 1923, going into private practice. He was then employed by Egyptian Railways, and later became Director of the Medical Department of the Ministry of *Waḳfs*. He associated with and influenced the Romantic poets ʿAlī Maḥmūd Ṭāhā, Muḥammad ʿAbd al-Muʿṭī al-Hamsharī and Ṣāliḥ Djawdat, like him all connected with the *Apollo* magazine, founded

by Aḥmad Zakī Abū Shādī [*q.v.*] in 1932. An outstanding lyrical poet, much of his work concerns his personal relationships, in particular his second collection *Layālī al-Ḳāhira* (Cairo n.d. and 1988). According to Jayyusi (*Trends*, 397) "he restored to Arabic love poetry, a tenderness, a sustained devotion and a direct, uncomplicated, even humble approach unknown since the days of the bedouin Umayyad poets." His first *dīwān*, *Warāʾ al-ghamām* (Cairo 1934, Beirut 1973, Beirut-Cairo 1983) shows the influence of the English romantics. The third, *al-Ṭāʾir al-djarīḥ*, was published posthumously (Cairo n.d. and 1983, Beirut 1973). His by no means complete poetic works, *Dīwān Nādjī* (Cairo 1961), mistakenly includes poems by Kamāl Nashʾat. Further *dīwāns* have appeared, *Dīwān Ibrāhīm Nādjī* (Beirut 1973, 1980 and 1988), as has other poetry, *Fī maʿbad al-layl* (Beirut 197?, Beirut-Cairo 1983), and *Ḳaṣāʾid madjhūla* (Cairo 1958). Amongst other works he translated Dostoyevsky's *Crime and punishment*, and poetry by Baudelaire, *Les Fleurs du mal* (Cairo 1954). Though editor of *al-Ḳiṣṣa* magazine, his fictional writing is of much less importance. He founded the monthly medical magazine *Ḥakīm al-Bayt* in 1934.

Bibliography: See his list of works in J. Brugman, *An introduction to the history of modern Arabic literature in Egypt*, 1984, 167-73; Sāmī al-Kayyālī, *Dīwān Ibrāhīm Nādjī*, Beirut 1973, 783-855; Aḥmad Māhir al-Baḳarī, *Ibrāhīm Nādjī min shiʿrih*, Alexandria 1403; Aḥmad al-Muʿtaṣim Billāh, *Nādjī, shāʿir al-widjdān al-dhātī*, Cairo n.d.; Ṣāliḥ Djawdat, *Nādjī, ḥayātuh wa-shiʿruh*, Cairo 1960 and Beirut 1977; ʿAlī M. al-Fiḳī, *Ibrāhīm Nādjī*, Cairo 1977; Niʿmat Aḥmad Fuʾād, *Nādjī al-shāʿir*, Cairo 1954, and *Shuʿarāʾ thalātha—Nādjī, al-Shābbī, al-Akhṭal al-Ṣaghīr*, Cairo 1987; Ṭāhā ʿImrān Wādī, *Shiʿr Nādjī al-mawḳif wa ʾl-adāt*, Cairo 1976 and 1981; S.K. Jayyusi, *Trends and movements in modern Arabic poetry*, 1977, ii, 394-7. (P.C. Sadgrove)

NADJĪB (Neguib) [see MUḤAMMAD NADJĪB].

NADJĪB b. Sulaymān al-**ḤADDĀD** (1867-99). Syro-Egyptian journalist, poet, novelist, playwright and prolific translator, born in Beirut. His family moved to Alexandria in 1873. He was a journalist on *al-Ahrām* for more than ten years, founded the *Lisān al-ʿArab* and *al-Salām* newspapers, and edited the *Anīs al-Djalīs* magazine. Considered an excellent poet, his youthful *dīwān* was published as *Tadhkār al-ṣibā* and later selections from his poetry and prose appeared. One of the most competent translators of the period, he translated fiction by Alexandre Dumas *père*, Lamartine and others. His greatest contribution to literature was, however, his twenty or so plays, written in prose and verse in literary Arabic, into which he interpolated songs. These did much to invigorate the theatre in Egypt at the turn of the century. Amongst his own works were his popular *Ṣalāḥ al-Dīn al-Ayyūbī*, inspired by Walter Scott's *Talisman*; a tragedy *ʿAmr b. ʿAdī*; *al-Mahdī*; and a drama about Iphigenia, *al-Radjāʾ baʿd al-yaʾs*. His usually faithful, if melodramatic, adaptations include the classical tragedies of Corneille, *Le Cid, Oedipe* and *Cinna*; Victor Hugo's *Les Burgraves*/*Thārāt al-ʿArab*, and *Hernani*/*Ḥamdān*; Molières *L'avare* and *Le médecin malgré lui*; Racine's drama *Bérénice*, and the tragedies *Phèdre* and *La Thebaïde*; Shakespeare's *Romeo and Juliet*/*Shuhadāʾ al-gharām*; Voltaire's *Oedipe* and tragedy *Zaire*. The actor Salāma Ḥidjāzī's performance as Romeo became the talk of the town. Most plays were published, and five of his adaptations have been reissued in Muḥammad Yūsuf Nadjm's *al-Masraḥ al-ʿArabī*, vi (Beirut 1966). His plays, performed by all the leading troupes, remained popular for a decade or so after his death.

Bibliography: Biographies by Ṭānyūs ʿAbduh and Yūḥannā Sarkīs appear in *Dīwān Nadjīb al-Ḥaddād* 1905; ʿĀdil al-Ghaḍbān, *al-Shaykh Nadjīb al-Ḥaddād 1867-1899*, Beirut and Cairo 1953 and Cairo 1983; Idwār Sāmī Sabānikh al-Yāfī, *Nadjīb al-Ḥaddād al-mutardjim al-masraḥī*, Cairo 1976. (P.C. Sadgrove)

NADJĪB al-**DAWLA**, Afghān commander in northern India during the 18th century, whose power-base was in Rohilkand, where he founded the town of Nadjībābād [*q.v.*].

Involved in the confused struggles for power in Dihlī during the reigns of the *fainéant* Mughal Emperors Aḥmad Shāh Bahādur [*q.v.*] and ʿĀlamgīr II in the 1750s, as opponent of the *Nawwāb-wazīr* of Awadh (Oudh) [*q.v.*] Ṣafdār Djang, he worked closely with the Afghān ruler Aḥmad Shāh Durrānī [*q.v.*] and received from him in 1757 the title of *amīr al-umarāʾ* and custodianship of the Emperor ʿĀlamgīr II. At this period, strong pressure was being exerted on the Muslims' position by the expansionist Marāthas [*q.v.*], and in 1759 Nadjīb al-Dawla invited Aḥmad Shāh Durrānī to intervene in India for a fourth time, himself fighting at the third battle of Pānīpat [*q.v.*] (14 January 1761), when the Marāthās were decisively crushed. Over the next few years, he became regent and virtual ruler for the puppet Shāh ʿĀlam II, holding the title also of *Mīr Bakhshī*. His main preoccupation was to ward off the militant Sikhs from the upper Dōāb and to stem pressure from the Djāt ruler Suradj Mal and his successors (repelled in 1765). He thus managed, with consummate military skill and diplomacy, to maintain the integrity of the truncated Mughal empire before retiring with failing health to Nadjībābād (March 1768), leaving power in the hands of his deputy Ḍābiṭa Khān. But a new, massive Marāthā invasion of Hindūstān in 1770 brought him back to negotiate a settlement with them just before he died in October 1770.

Haig (ed.), *The Cambridge history of India*, iv, *The Mughal period*, Cambridge 1937, index; R.C. Majumdar (ed.), *The history and culture of the Indian people. The Maratha supremacy*, Bombay 1977, ch. VII. (C.E. Bosworth)

NADJĪB MUḤAMMAD SURŪR (1932-78), a leading experimental Egyptian dramatist, director, actor and poet. He studied law at the College of Law and drama in Cairo and Moscow, working for several years in the Arabic section of Radio Moscow. Back in Cairo from 1964 onwards, in a flourishing era of Egyptian theatre, using Brechtian devices, he utilised the Egyptian folk heritage and music, and classical and modern poetry as source material for his colloquial plays, telling the story of the struggle of the ordinary Egyptian people for social justice against foreign and local forces of oppression. In his verse tragedies, *Yāsīn wa-Bahiyya, Yā Sittī Bahiyya, Yā Bahiyya wa khabbirīnī* (published in his critical work *Ḥiwār fi ʾl-masraḥ*, Cairo 1969), *Āh, yā layl, yā ḳamar*, he tells the epic story of the eponymous ill-fated lovers. In the seventies his plays *Ḳūlū li-ʿAyn al-Shams* and *al-Kalimāt al-mutaḳāṭiʿa* (unpublished), were performed. Several of his dramas, the tragic folk tale of Ḥasan and Naʿīma *Min ayn agīb nās?*, the prose play *al-Ḥukm ḳabl al-mudāwala*, and *al-Dhubāb al-Azraḳ* (unpublished), on the aftermath of Black September, were not performed in his life time. He translated and directed Chekhov and successfully adapted Bertolt

Brecht's *The Threepenny Opera* (1928)/*Malik al-shaḥḥātīn*, setting it at the time of the British occupation of Egypt. Four *dīwāns* of his poetry, *al-Tradjīdiyā al-insāniyya*, *Luzūm mā yalzam*, *Brūtūkūlāt ḥukamāʾ Rīsh*, and *Rubāʿiyyāt* have been published. His short caustic articles about cultural life in Egypt have appeared as *Hākadhā ḳāl Djuḥā*.

Bibliography: Sulaymān Fayyāḍ, *Iḥtifāl mutawādiʿ...fī dhikrā fannān kabīr*, in *al-Ādāb*, xxvii/11 (November 1979) 75-7; Shams al-Dīn Mūsā, *al-ʿAnāṣir al-tradjīdiyya fī shiʿr Nadjīb Surūr*, in *ibid.*, 34-9; Muḥammad al-Sayyid ʿĪd, *al-Turāth fī masraḥ Nadjīb Surūr al-shiʿrī*, Cairo 1989; Khayrī Shalabī, *al-Shāʿir Nadjīb Surūr: masraḥ al-azmina*, Cairo 1989.

(P.C. SADGROVE)

NADJĪBĀBĀD, a town in the western part of the Rohilkhand region of modern Uttar Pradesh state in India (lat. 29° 37′ N., long. 78° 19′E.), the centre of a *taḥsīl* of the same name in the Bijnor District. The town was founded by the Afghān commander and *wazīr* of the Mughal Emperors, Nadjīb al-Dawla [*q.v.*], who in 1168/1755 built a fort, Patthagarh, one mile to the east. Sacked by the Marāthās [*q.v.*] in 1186/1772, it passed two years later to the *Nawwābs* of Awadh [*q.v.*] (Oudh). Nadjīb al-Dawla's great-grandson Maḥmūd participated in the Great Rebellion of 1857-8, and his palace was destroyed. In 1901 the population of the town was 40% Muslim. According to the 1961 census, the total population was 34,310.

NADJIS (A.), impure, the opposite of *ṭāhir* [see ṬAHĀRA]. According to the Shāfiʿī doctrine, as systematised by al-Nawawī (*Minhādj*, i, 36 ff.; cf. Ghazālī, *al-Wadjīz*, i, 6-7), the following are the things impure in themselves (*nadjāsāt*): wine and other spirituous drinks, dogs, swine, *mayta*, blood and excrements; and milk of animals whose flesh is not eaten.

Regarding these groups, the following may be remarked. On wine and other spirituous drinks cf. the arts. KHAMR and NABĪDH.—Dogs are not declared impure in the Ḳurʾān; on the contrary, in the description of the sleepers in sūra XVIII [see AL-KAHF] the dog is included (verses 17, 21). In *Ḥadīth*, however, the general attitude against dogs is very strong, as may be seen in KALB. Goldziher considered this change due to an attitude of conscious contrast (*mukhālafa*) to the estimation of dogs in Zoroastrianism. It must not, however, be forgotten that the Jews also declared dogs to be impure animals, just as were swine. The latter are already declared forbidden food in the Ḳurʾān (XVI, 116; VI, 146; V, 4; II, 168). Regarding the eating of meat which has not been ritually slaughtered, see MAYTA. Blood is mentioned in the Ḳurʾān (XVI, 116; VI, 146; V, 4; II, 168) as prohibited food; for the religious background of this prohibition see DAM in Suppl. As for excrements, and several kinds of secretions of the body, the theory and practice of Jews and Christians sufficiently explain the attitude of Islam in this respect. It must also be admitted, though data are very scarce, that in early Arabia religious impurity included some of these things. Details are to be found in the large legal works of each of the *madhhabs* (see *Bibl.*).

Of the differences of the schools regarding this subject, the most important only may be mentioned. Spirituous drinks are not impure according to the Ḥanafīs [see NABĪDH]. Living swine are not impure according to the Mālikīs. The Shīʿa add to the things mentioned above the human corpse and the infidels. The human corpse was one of the chief sources of impurity according to Jewish ideas (cf. already Num., xix). A current in early Islam tending to follow the Jewish customs in ceremonial law was very strong; the Shīʿī view regarding the human corpse may be a residuum of it. The impurity of infidels is based upon sūra IX, 28, where the polytheists are declared to be filth (*nadjas*). The Sunnī schools do not follow the Shīʿa in the exegesis of this verse.

The *nadjāsāt* enumerated above cannot be purified, in contradistinction to things which are defiled only (*mutanadjdjis*), with the exception of wine, which becomes pure when made into vinegar, and of hides, which are purified by tanning. On purification, see ṬAHĀRA, GHUSL, WUḌŪʾ.

NADJM AL-DĪN KUBRĀ [see KUBRĀ].

NADJM AL-DĪN RĀZĪ DĀYA, Abū Bakr ʿAbd Allāh b. Muḥammad b. Shahāwar Asadī (573-654/1177-1256), Ṣūfī of the Kubrawī order [see KUBRĀ, NADJM AL-DĪN] and author of several important works in Persian and Arabic. He left his native city of Rayy at the age of twenty-six and travelled widely in Syria, Egypt, the Ḥidjāz, ʿIrāḳ, and Ādharbāydjān. He ultimately turned eastwards, passing through Nīshāpūr before arriving in Khʷārazm where he became a *murīd* of Nadjm al-Dīn Kubrā [*q.v.*], eponym of the Kubrawiyya. Kubrā assigned his training to a senior disciple, Madjd al-Dīn Baghdādī (d. 607/1204), and it is to him that Dāya refers as "our *shaykh*". He is strangely silent concerning Kubrā himself, although he sometimes cites the Persian quatrains that are attributed to him.

At a date that cannot be precisely determined, Dāya—clearly a restless man, even by the peripatetic standards of the age—left Khʷārazm to resume his wanderings in western Persia. Sensing the onset of the Mongol storm, he abandoned his family in Rayy (by his own admission), and after a return visit to the Ḥidjāz travelled by way of Hamadān, Irbīl and Diyārbakr to central Anatolia, arriving in Kayseri in Ramaḍān 618/October 1221.

Saldjūḳ-ruled Anatolia offered a haven to many scholars and mystics, and among those Dāya is reputed to have encountered there were Ṣadr al-Dīn Ḳūn(y)awī, Djalāl al-Dīn Rūmī and Awḥad al-Dīn

Kirmānī. The first figure of note he met was Shihāb al-Dīn Abū Ḥafṣ ʿUmar Suhrawardī; Dāya crossed paths with him in Malaṭya as the latter was returning from a mission to the Saldjūḳ ʿAlāʾ al-Dīn Kayḳubād [*q.v.*] on behalf of the ʿAbbāsid caliph al-Nāṣir li-dīn Allāh. According to Dāya, Suhrawardī suggested to him that he compose a work on Ṣūfism and present it to Kayḳubād in order to gain his patronage. However, Ibn Bībī's chronicle of the Saldjūḳs reports not only that Dāya had completed the work in question—*Mirṣād al-ʿibād ilā 'l-mabdaʾ wa 'l-maʿād*—before his arrival in Malaṭya but also that he had already decided to dedicate it to Kayḳubād (*Histoire des Seldjoucides d'Asie Mineure*, Turkish text, ed. M.Th. Houtsma, Leiden 1902, 226). The two recensions in which the *Mirṣād* exists may explain the contradiction. One was completed soon after his arrival in Kayseri and intended as "a gift to true seekers and veracious lovers", and the other in Sivas, in Radjab 620/August 1223, dedicated to Kayḳubād.

Despite the generally acknowledged excellence of the *Mirṣād* and the encomium to Kayḳubād with which it concludes, Dāya was evidently disappointed by his reception in the Saldjūḳ capital of Konya, for before long he moved on to Erzincan. There he composed another work in Persian, *Marmūzāt-i Asadī dar mazmūrāt-i Dāwūdī*; the second half of the title contains an allusion to ʿAlāʾ al-Dīn Dāwūd, the Mengüček ruler of Erzincan. It seems that Dāya did not fare much better in Erzincan than in Konya. He quit Anatolia definitively less than four years after his arrival in Kayseri, and in 622/1225 we find him travelling from Baghdād to Tabrīz on a diplomatic mission for the caliph al-Ẓāhir. While in Tabrīz, Dāya met Djalāl al-Dīn Khwārazmshāh, who was fleeing before the Mongol invaders, and it was in the company of his ambassador, Ḳāḍī Mudjīr al-Dīn, that he returned to Baghdād. It was probably in Baghdād that he spent the rest of his life. He died there in 654/1256 and was buried in the Shunayziyya cemetery near such luminaries of Ṣūfism as Maʿrūf Karkhī and Djunayd Baghdādī.

Dāya trained no *murīds*, with a single exception, and his posthumous fame and influence were due entirely to his writings. Among them, the *Mirṣād* clearly stands out as a masterpiece, being comprehensive in its treatment of the major themes of Ṣūfism and written with a fluency, vigour and eloquence that qualify it for comparison with the best of classical Persian prose. Among its themes, logically and systematically arranged, are the origins of the various realms and orders of creation; prophethood and the different dimensions of religion; the ritual practices, mores and institutions of Ṣūfism; and the ways in which different professions and trades may yield spiritual benefit if properly practised. The interest of the Kubrawī masters in dreams, visions and the phenomenology of the Ṣūfī path is apparent on many pages of the *Mirṣād*, as is—more subtly and without direct attribution—the influence of Ibn ʿArabī.

The *Mirṣād* exercised wide and lasting influence throughout the lands where Persian was spoken or understood; manuscripts of it are numerous. It was known in India at least as early as the 8th/14th century, thanks to the efforts of the Čishtī order, and some hundred years later a Turkish translation was made for Sultan Murād II. It was known even in China; manuscripts of the work exist with marginal glosses in a North Chinese idiom written in the Arabic script. Echoes of the *Mirṣād* and quotations from it are to be found in a wide variety of Persian, Turkish and Pashto works.

The *Marmūzāt-i Asadī* may be characterised as a "special edition" of the *Mirṣād*. It contains much of the material of Dāya's masterpiece with the strictly Ṣūfī portion diminished and the sections on kingly power greatly expanded. Extant only in a single manuscript, the *Marmūzāt-i Asadī* appears not to have exerted great influence.

The second major work of Dāya consists of his contribution to a Ṣūfī *tafsīr*—known varyingly as *Baḥr al-ḥaḳāʾiḳ*, *ʿAyn al-ḥayāt*, and *al-Taʾwīlāt al-Nadjmiyya*—begun before him by Nadjm al-Dīn Kubrā and completed after his death by another Kubrawī, ʿAlāʾ al-Dawla Simnānī. Dāya took up this commentary at *Sūrat al-Baḳara* and was able to advance it as far as *Sūrat al-Nadjm*; the major portion of it is thus his. His relentless insistence on discovering metaphorical senses for nearly every verse of the Ḳurʾān sometimes verges on the arbitrary and the artificial, but there can be no denying the popularity and influence of the work. It has never been printed, but substantial portions of it are quoted in a *tafsīr* of which several printings do exist: the *Rūḥ al-bayān* of Ismāʿīl Ḥaḳḳī al-Burūsawī.

Dāya also wrote several minor works, of which *Risāla-yi ʿIshḳ u ʿaḳl*—a preliminary essay for certain sections of the *Mirṣād*—deserves mention.

(HAMID ALGAR)

NADJRĀN, a city in northern Yaman and a major urban centre in the Arabian Peninsula in ancient times. It was an agricultural, an industrial, and a trade centre, owing all this to the facts of geography. It was celebrated for its cereals, fruits and vegetables and also for its leather and textiles, situated as it was in the midst of a fertile *wādī*, which also bore the name Nadjrān. Its importance as a caravan city was owed to the fact that it was located at the intersection of two main caravan routes, one that ran from Ḥaḍramawt through Ḥidjāz to the eastern Mediterranean and another that ran to the northeast through Yamāma into Mesopotamia-ʿIrāḳ.

It was important enough early in the 4th century A.D. to attract the attention of Imruʾ al-Ḳays, "king of all the Arabs" (d. A.D. 328), and three centuries before, it was captured by Aelius Gallus, whom Augustus dispatched against South Arabia. But it was really in the 6th century that it attained international fame through an extraordinary sequence of events, the prime mover of which was the introduction of Christianity into the city in the previous century, by one of its native merchants (Ḥayyān or Ḥannān).

Although the initial Christian impulse came from Ḥīra, where Ḥayyān was baptised, other Christian missionary currents converged on Nadjrān from Byzantine Syria and from Ethiopia, all of which made Nadjrān the main centre of Christianity in South Arabia. Various Christian denominations existed side-by-side in Nadjrān, but Monophysitism was the one that prevailed.

Around A.D. 520 the Judaising king of Ḥimyar Dhū Nuwās [*q.v.*] captured Nadjrān and faced its inhabitants with the dilemma of either apostasy or death. Consequently, many of the Christians of Nadjrān became martyrs. The Christian world, represented by Byzantium and Ethiopia, responded by sending a joint expedition against South Arabia, the former contributing a fleet, the latter an army, which under the command of Negus Ella-Aṣbeḥa conquered South Arabia around A.D. 525 and converted it into an Ethiopian dependency and a Byzantine sphere of influence for some fifty years. This half-century was the golden period in Nadjrān's history, during which it functioned as an Arabian martyropolis, a city of martyrs, a great pilgrimage centre for the Christians of the Peninsula. Monophysitism and the cult of relics in the 6th century received a great impetus from the blood and bones of so many martyrs in Nadjrān. The chief among them was al-Ḥārith b. Kaʿb, the *sayyid* of the city and of the Arab tribe in Nadjrān; and as St. Arethas, he became a saint of the Universal Church whose feast is celebrated on 24 October. The chief Arab tribe in Nadjrān was also called al-Ḥārith b. Kaʿb, (Balḥārith), and it most probably belonged to the large tribal group of al-Azd, to whom belonged the Ghassānids, the Arab allies of Byzantium in Oriens, Bilād al-Shām, and this tribal affinity was an important fact in the history of the Ghassānids. In this half-century, Nadjrān became a city of churches and monasteries, but above all the city of Kaʿbat Nadjrān, the great martyrion to which the pilgrimage was performed. Its custodians were from Banū ʿAbd al-Madān, the chief clan or house within the tribe of Balḥārith. Thus Nadjrān became the Holy City of the Christian Arabs at this time, and one of the holy cities of the Christian Orient, alongside Edessa in Mesopotamia, Etchmiadzin in Armenia and Axum in Ethiopia.

The year 570 brought about a sharp reverse in the fortunes of Nadjrān when the Persians occupied South Arabia. The region was no longer under the domination of a Christian protective power, Ethiopia. Zoroastrian Persia was hostile to both Christianity and Byzantium, and naturally, Nadjrān as a great Christian centre was adversely affected. But it was the rise of Islam and the Muslim conquest of Arabia that finally dealt Christian Nadjrān a fatal blow, and this eclipse and final extinction during the Islamic period falls into three phases: (a) in the Meccan period of Muḥammad's mission (610-22) the Ḳurʾān is well disposed to Christianity, and Nadjrān was possibly implied in Sūrat al-Burūdj (LXXXV, 4-9) in which there is reference to the Aṣḥāb al-Ukhdūd [*q.v.*]; (b) in the Medinan period (622-32), there was a hardening of attitude. In 630, a delegation from Nadjrān came to Medina. This was a significant Muslim-Christian confrontation which was to have included a *mubāhala* [*q.v.*], an objurgation, but the Nadjrānites decided to withdraw from the contest. The Prophet then let the Nadjrānites practise their religion, but demanded from them the payment of the tribute and especially the contribution of 2,000 robes; and (c) in the caliphate of ʿUmar (634-44), the Nadjrānites were ordered to evacuate the city, which they did, and they emigrated to ʿIrāḳ where most of them settled in a locality called al-Nadjrāniyya not far from Kūfa. But apparently not all of them left the city, since Christians are attested in Nadjrān in later Islamic times, including bishops in the 9th and 10th centuries.

Nadjrān survived its evacuation by most of its Christian inhabitants. Some of the Balḥārith evidently converted to Islam and decided to stay on in their city, but apparently evacuated the pre-Islamic site at a later date in favour of a locality a few miles to the north-west, which grew into Islamic Nadjrān. Situated in the midst of a rich oasis, Islamic Nadjrān continued to prosper and remained an important centre in the economic life of the region. Its chiefs were influential in early Islamic times, especially as the mother of the first ʿAbbāsid caliph al-Saffāḥ (750-4) was Rayṭa, a woman from Banū ʿAbd al-Madān, who were thus referred to as al-Akhwāl, the maternal uncles of the ʿAbbāsids.

Ancient pre-Islamic Nadjrān, nowadays called Ukhdūd, survives as a heap of ruins to the southeast of the present-day city of Nadjrān, which is in the province of ʿAsīr [*q.v.*] in Saudi Arabia, but in the consciousness of mediaeval Christendom it vividly survived as the city of the Arab martyrs, as it still does in the churches of the Christian Orient.

(IRFAN SHAHÎD)

AL-NAḌR B. AL-**ḤĀRITH** b. ʿAlḳama b. Kalada b. ʿAbd Manāf b. ʿAbd al-Dār b. Ḳuṣayy, a rich Kurayshite who, in the pre-Islamic period, carried on trade with al-Ḥīra and Persia, from where he is said to have brought back books (?) and to have brought back also one or more singing slave girls (*ḳayna* [*q.v.*]).

He represented ʿAbd al-Dār in the group of the *muṭʿimūn*, i.e. the Meccans who were charged with supplying food for pilgrims, and he occupied a fairly eminent position in the town. He was a strenuous opponent of the Prophet, scoffing at him and not failing to speak up and evoke the glories of the kings of Persia when Muḥammad recalled the miserable fate of past nations. In particular, he accused Muḥammad of retailing tales of the ancients (*asāṭīr al-awwalīn* [*q.v.* in Suppl.]), and two Ḳurʾānic verses containing precisely this expression (VIII, 31; LXXXIII, 13) are stated to have been specifically connected with him. The Ḳurʾān is likewise said to have alluded to this personage, amongst other enemies of the Prophet, in various passages, notably VI, 8-9, XLV, 6-7/7-8. He fought at Badr [*q.v.*] in the pagan ranks and was captured. Muḥammad then killed him personally and ʿAlī cut off his head with a blow of his sword, but the fact is disputed since a *ḥadīth* says that the damned who will suffer the cruellest punishment on Judgement Day are those who have killed a prophet or whom a prophet has killed. The most accredited version is that ʿAlī b. Abī Ṭālib executed him in cold

blood after having secured him in bonds (*ṣabr^an*) in a place called al-Ṣafrāʾ; but al-Uthayl is also cited (see Yāḳūt, *Buldān*, s.v., i, 121). (On the reproaches launched at "orientalists" that they have exploited this incident, see A. Wessels, *A modern Arabic biography of Muḥammad*, Leiden 1972, 240 n.)

His death inspired his sister (or his daughter) Ḳutayla (al-Djāḥiẓ, *Bayān*, iv, 44, calls her Laylā) to compose verses in which she weeps over him but nevertheless does not blame Muḥammad, who is said to have regretted this execution. Although doubt has been expressed regarding their authenticity (see al-Ḥuṣrī, *Zahr al-adab*, i, 28-9), these verses, frequently cited and highly appreciated, have perpetuated al-Naḍr's memory. He has, moreover, a place in the history of Arabic music as poet, singer and lute player, who is said to have learnt this last instrument at al-Ḥīra and to have introduced it amongst the Meccans (see Nāṣir al-Dīn al-Asad, *al-Ḳiyān wa 'l-ghināʾ*, 2nd ed. Cairo 1968, 115, 116, 118, 131).

(CH. PELLAT)

AL-**NAḌR** B. **SHUMAYL** b. Kharasha al-Māzinī, Abu 'l-Ḥasan, Arab scholar who, born in Marw al-Rūdh in 122/740, was brought up at Baṣra.

He led a miserable life there, but was able to derive instruction from the most famous masters of the time (see Pellat, *Milieu*, *passim*), notably al-Khalīl b. Aḥmad [*q.v.*], whose *K. al-ʿAyn* he was to enrich by an introduction. He probably lived for some time (allegedly 40 years, which must be an exaggeration) among the Bedouins, whom he was also able to question at the Mirbad [*q.v.*]. He was interested in the various branches of knowledge cultivated in his time and became an expert in matters of lexicography, grammar, poetry, *ḥadīth* and even *fiḳh* and the history of the Arabs. Since his activities were not bringing him adequate means of subsistence, he decided to return to his native land, with which he must have kept up links. In Baṣra he had nevertheless acquired such renown that, according to tradition, not less than 700, even 3,000 (*sic*) traditionists, *fuḳahāʾ*, grammarians, etc. came to greet him on the Mirbad at the time of his departure and expressed their regret at seeing him go; he replied that he would be ready to stay if anyone would guarantee a measure (*kayladja*) of beans for him each day, but no-one was willing to promise this. It seems that Abū ʿUbayda [*q.v.*] exploited this incident in his book on the *mathālib* [*q.v.*] of the Arabs. He therefore returned to Marw, where he held the office of *ḳāḍī* and "made the Sunna dominant" (*aẓhara al-sunna*), which was one of his specialities. It was there that he had occasion to frequent al-Maʾmūn's *madjlis* and to display to him his knowledge of grammar and poetry; he accordingly received from the prince and his entourage a rich reward. He is said to have died in Dhu 'l-Ḥidjdja 204/May-June 820, but the year 203 is also mentioned.

Al-Naḍr b. Shumayl's work was copious, judging by the lists given by his biographers, but none of these works has survived. Probably the most important was the *K. al-Ṣifāt fi 'l-lugha* in 5 volumes, of which the *Fihrist* (52; ed. Cairo, 77; ed. Tehran, 58; cf. Sezgin, *GAS*, viii, 58) provides a fairly detailed summary. This work was a kind of dictionary or encyclopaedia— the first of its genre —and it was used by authors fairly near to it in time, such as Abū ʿUbayd al-Ḳāsim b. Sallām (d. 224/838 [*q.v.*]) in *al-Gharīb al-muṣannaf*. His other works bear witness to his erudition and to his intellectual curiosity: *Gharīb al-ḥadīth*, *al-Maʿānī*, *al-Wāḍiḥa* or *Mathālib al-ʿArab wa-manāḳibuhā*, *al-Anwāʾ*, *al-Djīm* and *al-Shams wa 'l-ḳamar*.

Bibliography: Ibn Ḳutayba, *Maʿārif*, 542; Masʿūdī, *Murūdj*, see index s.v.; Marzūḳī, *Azmina*, i, 324, 325, 331, ii, 181-5, 223; Anbārī, *Nuzha*, 52-4 and index; Ibn Khallikān, no. 736; Zubaydī, *Ṭabaḳāt*, 121; Nawawī, *Tahdhīb al-asmāʾ*, 593-6; Yāḳūt, *Buldān*, index; idem, *Irshād*, vii, 218-22 = *Udabāʾ*, xix, 238-43; Suyūṭī, *Bughya*, 404-5; idem, *Muzhir*, ii, 287; Ḳifṭī, *Inbāh*, iii, 348-52; Ibn al-ʿImād, *Shadharāt*, ii, 7; Ziriklī, viii, 357-8; Kaḥḥāla, xiii, 101; Brockelmann, I², 101, S I, 161; Rescher, *Abriss*, ii, 123-4; Goldziher, *Muh. St.*, ii, 71; Sezgin, *GAS*, i, 113, 114, 262, 509, ii, 58, 60, iii, 363, 365, 367, iv, 308, 332, vii, 340, viii, 58-9 (biog.) and index, ix, 43, 312. (CH. PELLAT)

NADRŪMA, NEDROMA, a small town of northwestern Algeria, situated 58 km/33 miles from Tlemcen, 45 km/28 miles from the Moroccan border and only 17 km/10 miles from the coast, from where in clear weather the dark mountains of the Sierra Nevada can be seen. It lies in the heart of the Traras, the coastal chain of moderate altitude, which is nevertheless very broken by the eroding effects of the hydrographic system, where Nedroma spreads along the lower slopes of the ridge of the Dj. Fillawsen. Thus it dominates a mass, until recently compact, of orchards and gardens intersected by a network of irrigation channels, bearing witness to the long-established occupation of these lands by successive generations intimately linked with the life of the town, which has itself been the centre of extensive connections and varied relations in a zone directly open to interventions by neighbouring principalities situated on both sides of the Straits of Gibraltar.

Despite the divisive effects of the physical relief of the area, Nedroma has constantly evolved within the shade and the orbits of these principalities, whilst nevertheless tenaciously retaining its own personality and economy. Hence it has been able to survive after the successive disappearance of the Naṣrids [*q.v.*] of Granada and the ʿAbd al-Wādids of Tlemcen. Indeed, the vestiges and the memories of this long and rich past, essentially an urban one, are perceptible until now in the poorly-preserved architectural remains and in certain structures of the historic town, as well as in the vigorous remnants of ancient families who have, since 1962, regularly engendered technocrats, ministers and diplomats.

If Nedroma still preserves some ruins of constructions attribuable to the Almohad ʿAbd al-Muʾmin and represented by a city wall dating to 555/1160, the town nevertheless emerges into history well before then. In this connection, the details given by al-Yaʿḳūbī in the 3rd/9th century are very useful for the exact identification, in particular, of the site. It must be admitted, following R. Basset, that the name given by this geographer, Fallawsen, must correspond to that of the foundation of Nedroma and consequently to the locality itself. But there must have been a town already fairly well developed and forming part of the Idrīsid realm and governed by Muḥammad b.

Sulaymān. This accordingly marks a definite stage, but one whose distant origins cannot be brought into the clear light because of the lack of documentation. However, the succeeding stages which are at the same time the origin of the leading dynasties working towards a unification of both sides of the western Mediterranean, and of the trans-Mediterranean commercial movements, brought Nedroma definitively into being, strengthening its urban character and its main functions, well noted by al-Idrīsī.

Hence the Almoravids provided it with an important mosque and *minbar*, clearly reminiscent of that in the famous great mosque of Cordova, according to G. Marçais. Such attention on the part of these prestigious rulers was well-deserved, since, according to al-Bakrī, the diversity of its agricultural produce, and the nearby inlet to the sea, that of Māsīn, making possible maritime transactions, gave Nedroma the merited appellation of "a considerable town". In this way it acquired a religious dignity and even an official character, shown in the acquisition of typical urban features. But under the Almohads it was unable to claim any other dignity, considering its geographical position. At all events, the founder of the dynasty assigned to it a strategic role, which at the same time entailed a depopulation of the Traras, given the importance of the military contingents from this region which followed the monarch towards Marrakesh in the 6th/12th century, the Kūmya.

Whatever the case, the unification of the two coasts of the Mediterranean was beneficial in that it permitted the continuation and the intensifying of multifarious exchanges, material and cultural in origin, in the latter case, of the Andalusian heritage of Nedroma as visible at the present day in its musical heritage, the origin of certain families and, above all, in deep-rooted cultural traditions.

Regarding the appearance of the ʿAbd al-Wādids [*q.v.*], this is marked by the strengthening of links with their nearby capital, Tlemcen [see TILIMSĀN]. The two towns, both enjoying the charm of the Traras mountain chain and the proximity of the coast, came to complement each other. Nedroma became a place of rural retreat for certain rulers of Tlemcen and their descendants, as happened with Abū Yaʿḳūb Yūsuf when he renounced the throne in 749/1348. The residence takes the shape of a fortress, the Ḳaṣaba, of which some traces are still visible below the Maghniyya road, to the south of the heart of the old town, and whose toponym *ḳṣar es-solṭān* still today recalls a lively chapter from that brilliant period. Other princes furthermore honoured this residence by prolonged stays, such as that of Abū Ḥammū II, who reigned 760-91/1359-89 at Tlemcen, and it was there that the latter's son Abū Tashfīn II was born.

Subsequently, Tlemcen's decay and the constant ambitions and aims of its rival Fās had a certain direct effect on the commercial movements beyond the region and on the general balance of forces in the town. With the final end of the kingdom of Granada (897/1492), parallel to the dislocation of the trans-Saharan trade in the wake of the great oceanic movements, Nedroma became necessarily more thrown back on its own resources, aggravated more and more by the physical relief of the coastlands and, at the beginning of the 10th/16th century, by the *Reconquista*, with the occupation of the former main port of the ʿAbd al-Wādids, Oran, in 913/1507 and then of Ḥunayn [*q.v.*] in 941/1535. Hence a certain shrinkage of horizons was inevitable and enduring, but not entirely without some continuation of liveliness, as the information from this date from Leo Africanus shows with regard to the vigour of artisanal activity and the continuation of the irrigated system of agriculture in the rural hinterland of the town. Cotton goods were spun there, showing how the town adapted to the new conditions caused by change, both internal and those common to the Maghrib, and also to the whole Mediterranean-Atlantic region. It was as a result of these two activities, henceforth the exclusive ones of the town and its hinterland, that the commercial effects began to affect the whole Trara region and beyond, into the areas of traders coming from Tlemcen, Maghniyya, Oudjda, and even Sefrou and "beyond". In this period, Nedroma had a garrison representing the *beylik* of the West, bringing with it some oppressive effects but more often inciting the citizens to further efforts, the origin of the remarkable diversity of artisanal activities before the French occupation of Algeria (see *Nedroma 1954-84*).

Throughout this latter period, the town's being thrown back on its own resources necessarily increased by continual emigration to the urban centres and also abroad, to France, movements not always by the less privileged classes but in good measure by the relatively better-off and by those who acquired a bilingual culture in particular. The first official school opened in 1865, and one can trace from 1880 onwards the emergence of the first elements of the present-day élite, seen in the physician M. Nekkach, the first doctor from the colony itself to practice in Orania (Sari, 1990) and Si M'hamed ben Rahal, a personality of the political, religious and literary world from the end of the 19th century (Djeghloul, 1977), illustrating the continuing effects of the ancient heritage of Nedroma, even though the town is still affected by the rural exodus caused by the national war of liberation and its consequences in a frontier zone, which efforts to stabilise the population have not succeeded in stemming; its population of 17,175 in the 1987 census shows a rate of growth below the national average.

NADWA [see DĀR AL-NADWA].

NADWAT AL-ʿULAMĀʾ, a Muslim educational and reform society established at Kānpūr (Cawnpore) in north India in 1310/1892 (moved to Lucknow in 1316/1898) to (a) evolve a new educational system by amalgamating the "old" and the "modern" curricula, and (b) to eliminate sectarian differences among Muslims. As *Nadwa*, as it is popularly called, failed to impress upon other *madrasas*

to adopt its suggested curricula, it established in 1898 at Lucknow its own educational institution, Dār al-ʿUlūm, which is now more famous than the society itself.

During the first half of the 19th century, English-language schools had cropped up all over British India but certificates of the usually state-run *madrasas* teaching basically *Dars-i Niẓāmī*, the curriculum laid down by Mullā Niẓām al-Dīn (d. 1679) to produce administrators for the Mughal state, were generally recognised up to the Sepoy Mutiny of 1857-8 as sufficient qualifications to join the state machinery. After the events of 1857 and the subsequent attitudes of disfavour towards Muslims by the British, the former started to establish private *madrasas* geared only to imparting religious education. The first such *madrasa*, Ḳāsim al-ʿUlūm (now known as Dār al-ʿUlūm), was established at Deoband in north India in 1865 and soon a chain of similar private *madrasas* sprang up all over India.

It was soon felt, especially by Shiblī Nuʿmānī [*q.v.*], that new *madrasas* should be set up in order to integrate the "old" and the "new". The new movement was called *Taḥrīk-i Iṣlāḥ-i Niṣāb* ("curricula reform movement"). The "reform", however, did not exceed the deletion of some old textbooks and the introduction of some new ones on history, geography, mathematics in addition to English, as well as the replacement of Persian by Urdu as the medium of instruction.

Nadwa aroused great controversy in its early years among the Muslims of India. Opponents published dozens of pamphlets against the society, which they considered another form of the ʿAlīgaṙh movement of Sayyid Aḥmad Khān. Supporters of the *Nadwa* responded with counter-pamphlets (some of these are found in the *Nadwa* library).

Annual conferences to popularise its ideas and to ensure mass participation in various Indian cities continued from 1894 to 1927 (printed and ms. reports are available in the library and archives of *Nadwa*). The only other general conference was the institution's 85th anniversary celebrated in 1975 (report in Muḥammad Ḥasanī, *Rūdād-i čaman*, Lucknow 1976).

Nadwa has a big library which includes 650 rare books and 3,000 mss. It published an Urdu journal, *al-Nadwa* (1904-12, 1912-16, 1940-5) and an Arabic journal *al-Ḍiyāʾ* (1932-5). Currently, its various wings publish three periodicals, monthly *al-Baʿth al-Islāmī*, the fortnightly *al Rāʾid* (both since 1959) in Arabic, and the fortnightly *Taʿmīr-i Ḥayāt* (1964-) in Urdu. Dār al-ʿUlūm has a printing press as well as a publishing arm in addition to the *Nadwa*'s Academy of Islamic Research and Publications (established 1959) which has published over 250 titles in various languages including Arabic and English.

In addition to primary and secondary education (5 years each), the Dār al-ʿUlūm awards the degree of *ʿĀlimiyya* after a study of 4 years in its "Arabic", i.e. Islamic, section. After a further two years' study and presentation of a small dissertation graduates are given the degree of *faḍīla*, with specialisation (*takhaṣṣuṣ*) in either Islamic *Sharīʿa* or Arabic literature. Dār al-ʿUlūm, like other *madrasas*, does not charge tuition fees. Most of the students live in dormitories and the majority of them are provided with free board and lodging. As with similar institutions in the Subcontinent, expenses are met by voluntary Muslim donations and *zakāt*. Degrees are generally recognised by the departments of Islamic Studies and Arabic in Indian, as well as by some Arab, universities. In the 1970s and 1980s Dār al-ʿUlūm has seen great progress in terms of buildings, but its overall impact on the intellectual life of Muslims in India remains marginal. Dār al-ʿUlūm today is in practice yet another *madrasa* which positively discourages modern education. Its point of distinction is the emphasis on Arabic as a living language. Among its outstanding graduates was Sayyid Sulaymān Nadwī (d. 1953 [*q.v.*]) who besides other works, completed the *Sīrat al-Nabī* left incomplete by his mentor Shiblī Nuʿmānī. *Nadwīs*, i.e. the graduates of Dār al-ʿUlūm, were the mainstay of India's premier institution of Islamic research, Dār al-Muṣannifīn, at Aʿẓamgaṙh.

Bibliography: In addition to the material referred to above, the official, albeit sanitised, history of the *Nadwa* is found in *Tārīkh Nadwat al-ʿUlamāʾ*, vol. i by Muḥammad Isḥāḳ Djalīs Nadwī and vol. ii by Shams Tabrīz Khān, Lucknow 1983-4. Other material may be found in ʿAbd al-Ḥalīm al-Nadwī, *Marākiz al-Muslimīn al-taʿlīmiyya wa 'l-thaḳāfiyya wa 'l-dīniyya fi 'l-Hind*, Madras *ca.* 1967, 34-52; Shaykh Muḥammad Ikrām, *Mawdj-i Kawthar*, Lahore 1979, 187-93, 221-48; Mushīr al-Ḥaḳḳ, *Musalmān awr secular Hindustān*, New Delhi 1973, 47-81. More material will be found in the following works on personalities closely connected with the *Nadwa*'s early years: Sayyid Sulaymān Nadwī, *Ḥayāt-i Shiblī*, Aʿẓamgaṙh 1943; Sayyid Muḥammad al-Ḥasanī, *Sīrat-i Mawlānā Sayyid Muḥammad ʿAlī Mungayrī*, Lucknow 1964; Abu 'l-Ḥasan ʿAlī Ḥasanī Nadwī, *Ḥayāt-i ʿAbd al-Ḥayy*, Lucknow 1970; Shams Tabrīz Khān, *Ṣadryār Djung*, Lucknow 1972.

(ẒAFARUL-ISLĀM KHĀN)

NADWĪ, Sayyid Sulaymān (1884-1953), Indian scholar of Islam. He was born at Desna, near Paṫnā, on 22 November 1884. After receiving traditional Urdu and Persian education in his village and neighbouring towns, he joined Dār al-ʿUlūm of the Nadwat al-ʿUlamāʾ [*q.v.*] at Lucknow in 1901 and graduated in 1906. His talents were recognised by Shiblī Nuʿmānī [*q.v.*] who became his mentor and appointed him as the assistant editor of *al-Nadwa* magazine in 1907. He also started teaching *kalām* and Arabic literature in Dār al-ʿUlūm (1908-13) and in 1923, became the chairman of its educational committee (*Muʿtamad taʿlīmāt*), a post which he held for over two decades. He helped Shiblī in his *Sīrat al-Nabī* project launched in 1910, and later completed this encyclopaedic work on the life of the Prophet (vols. iii-vi published during 1924-38) after Shiblī died leaving it incomplete in 1914. The incomplete seventh volume of this work was published posthumously in 1980.

In 1915 Nadwī established the Dār al-Muṣannifīn at Aʿẓamgaṙh [*q.v.*], the most notable Muslim research institution in India, and launched its magazine *Maʿārif* a year later. He took part in Indian nationalist and Muslim politics in the 1910s and 1920s and was a member of delegations sent to London (1920) and the Ḥidjāz (1924, 1926). As a rare recognition in those days, Nadwī was awarded an honorary D.Lit. by the ʿAlīgaṙh Muslim University (AMU) in 1943.

He was appointed the Chief Justice (*Ḳāḍī al-Ḳuḍāt*) of the princely State of Bhopāl [*q.v.*] as well as the rector of its Djāmiʿa Mashriḳiyya in June 1946. His status was devalued after the absorption of Bhopāl into the Indian Union in 1947, but he stayed on until April 1950. He migrated to Pakistan in June the same year and was appointed in August 1952 as the chairman of the Idāra Taʿlīmāt Islām, an official body instituted to assist the new government in framing the constitution according to the teachings of Islam.

Nadwī, generally considered to be the greatest

Indian Muslim scholar of this century, died at Karachi on 23 November 1953. An enlightened traditionalist, Nadwī later reverted to rigidness in the wake of initiation in 1940, by the Ṣūfī *murshid*, Ashraf ʿAlī Thānawī (d. 1943), to the point of recanting in January 1943 some of his earlier views.

Bibliography: In addition to the volumes iii-vii of *Sīrat al-Nabī*, cited above, Nadwī's other works include: *ʿArḍ al-Ḳurʾān*, 2 vols., Aʿẓamgaṙh 1916, 1918; *Sīrat-i ʿĀyisha*, Aʿẓamgaṙh 1924; *Khuṭbāt-i Madrās*, lectures on the life of the Prophet in 1925, Aʿẓamgaṙh 1926; *ʿArab awr Hind ke taʿallukāt*, lectures on the Indo-Arab relations at Allāhābād in 1929, Allāhābād 1930; *Khayyām*, Aʿẓamgaṙh 1933; *ʿArabon kī djahāzrānī*, lectures on the history of the Arab navigation, at Bombay in March 1930, Bombay 1935; *Nuḳūsh-i Sulaymānī*, a collection of Urdu literary articles and lectures, Aʿẓamgaṙh 1939; *Raḥmat-i ʿālam*, a book on *Sīra* for children, Aʿẓamgaṙh 1940; *Ḥayāt-i Shiblī*, the life of his mentor, Aʿẓamgaṙh 1944; *Yād-i raftagān*, Karachi 1955. *Maḳālāt-i Sulaymān* (3 vols.) is a posthumous collection of Nadwī's articles. Collections of his letters have also been published in India and Pakistan. A collection of his Urdu poems has been compiled by Ghulām Muḥammad as *Armughān-i Sulaymān* (see *Maʿārif*, 108/1 [July 1971], 5).

Maʿārif, 75/5 (May 1955) and *Riyāḍ*, Karachi (March 1954), published special issues on Nadwī. Other works on him include: Ghulām Muḥammad, *Tadhkira-yi Sulaymān*, Karachi 1960; Shāh Muʿīn al-Dīn Aḥmad Nadwī, *Ḥayāt-i Sulaymān*, Aʿẓamgarh, 1973; Sayyid Muḥammad Hāshim, *Sayyid Sulaymān Nadwī: ḥayāt awr ʿilmī kārnamey*, unpubl. Ph.D. thesis, AMU 1982; ʿAbd al-Ḳawī Desnawī, *Yādgār-i Sulaymān*, Patnā 1984; ʿAtiḳ Aḥmad Ṣiddīḳī (ed.), *Sayyid Sulaymān Nadwī*, proceedings of a seminar held by the Department of Urdu, AMU in 1984, ʿAlīgaṙh 1985; Āfāḳ Ṣiddīḳī (comp.), *Awrang-i Sulaymān*, Karachi 1985; Muḥammad Naʿīm Ṣiddīḳī Nadwī, *ʿAllāma Sayyid Sulaymān Nadwī*, Lucknow 1985; Masʿūd al-Raḥmān Khān Nadwī and M. Ḥassān Khān (eds.), *Muṭālaʿa-yi Sulaymānī*, proceedings of a seminar in 1985, Bhopāl 1986; Khalīḳ Andjum (comp.), *Sayyid Sulaymān Nadwī*, Delhi 1986; Sayyid Ṣabāḥ al-Dīn ʿAbd al-Raḥmān, *Mawlānā Sayyid Sulaymān Nadwī kī taṣānīf*, i, Aʿẓamgarh 1988. (Ẓafarul-Islām Khān)

NAFAL [see GHANĪMA].

NAFAS [see NAFS. I. *c*, and NEFES].

NĀFIʿ, the *mawlā* of ʿAbd Allāh b. ʿUmar b. al-Khaṭṭāb [*q.v.*], according to early tradition sources a major transmitter of Prophetic *ḥadīth* [*q.v.*], who is described as having been a resident of Medina. His year of birth does not seem to be recorded and his year of death is variously given as 117/735, 118/736, 119/737 or 120/738 (cf. Ibn Ḥadjar, *Tahdhīb*, x, 414, Khalīfa b. Khayyāṭ, *Ṭabaḳāt*, ed. A.Ḍ al-ʿUmarī, 256).

The sources contain hardly any information on his person and the little they say is often contradictory. Ibn ʿUmar is alleged to have acquired Nāfiʿ on a campaign in which he participated but which one is left unspecified. Nāfiʿ is said to have hailed from Abrashahr (Nīsābūr) according to Ibn Ḳutayba, *K. al-maʿārif*, ed. ʿUkāsha, 190, 460, but according to Khalīfa, *Taʾrīkh*, ed. A.Ḍ. al-ʿUmarī, 206, he was one of the captives at the conquest of Kābul in 44/664. What is most striking about him in the early sources is his near-absence from those in which he should have been mentioned in the first place. Thus there is no trace of him in Ibn Saʿd's *Ṭabaḳāt*, in which one would expect his name to be included among the *mawālī* Successors of Medina (ed. Sachau *et alii*, v, 208-29), which, by all standards, presents a seemingly exhaustive list. (Ibn Ḥadjar, *Tahdhīb*, x, 413, quotes a remark attributed to Ibn Saʿd that he was a *thiḳa* and *kathīr al-ḥadīth*; whether or not this non-committal evaluation was an original part of the *Ṭabaḳāt* remains to be investigated). Even if it is maintained that Ibn Saʿd's text in its current editions may not be complete, the reason why Nāfiʿ did not receive mention among Medina's Successors in Ibn al-Djawzī's *Ṣifat al-ṣafwa*, ii, 42 ff., or for that matter in a number of comparable sources, remains to be explained. In sources other than *ḥadīth* he turns up only occasionally as a purveyor of legal as well as historical data. He never does so, however, as a person whose historicity could be postulated, acting or speaking against a tangible historical backdrop, but rather as a mechanical *isnād* insert. If Nāfiʿ was indeed a historical figure, he received singularly little attention in all those sources which are otherwise typified by their generous treatment of Nāfiʿ's peers, those who preceded him as well as those who came later.

His fame rests mainly in his alleged position in *isnāds* [*q.v.*] in the canonical *ḥadīth* collections. One *isnād* in particular was considered by al-Bukhārī [*q.v.*] as the soundest in the entire tradition literature: Mālik b. Anas [*q.v.*] → Nāfiʿ → ʿAbd Allāh b. ʿUmar → Prophet (cf. Ibn Ḥadjar, *Tahdhīb*, x, 6). Moreover, Mālik is reported to have said: When I hear Nāfiʿ transmit traditions on the authority of Ibn ʿUmar, I do not mind that I did not learn them from somebody else (cf. Ibn Ḥadjar, *Tahdhīb*, x, 413). This encomium, although at first sight undeniably positive, may not be rooted in reality: if we set store by the age Mālik is said to have reached at his death in 179/795, namely *ca.* eighty-six (lunar) years, and if he did hear traditions directly from Nāfiʿ, he must have been still very young at the latter's death, which fell sometime between 117 and 120 (735 and 738). And this does not tally with another piece of information describing Mālik as still a *shābb*, or (in a variant) even a *fatā*, some 14 or 17 years after Nāfiʿ's death (see Yaʿḳūb b. Sufyān al-Fasawī, *K. al-Maʿrifa wa 'l-taʾrīkh*, ed. A.Ḍ. al-ʿUmarī, i, 682; Ibn Ḥadjar, *Tahdhīb*, x, 7). If the indications *shābb* or *fatā* for Mālik in the year 134/751 are taken as factual, he must have been born approximately at the time Nāfiʿ is recorded to have died, a computation more in line with Mālik's year of death, and this especially in view of the life expectancy for a man in those days. (For studies on the 7th and 8th century practice of artificially stretching one's age into the past, see *Bibl.*) On the basis of the latter chronology, traditions on the alleged authority of Nāfiʿ cannot have reached Mālik in a way other than as written material, which must have come into his possession a good number of years after Nāfiʿ's reported year of death.

That Mālik may eventually have come by one or more *ṣaḥīfas* [*q.v.*] in circulation which purportedly contained traditions recorded by Nāfiʿ on the authority of Ibn ʿUmar and others, is not entirely out of the question, although this is suggested nowhere in the sources. Transmitting traditions according to the procedure that goes by the technical term *ʿarḍ* or *muʿāraḍa* (which means that someone claimed that he had "presented" a *ṣaḥīfa* in which he had copied a certain master's traditions to that master for approval, after which he was free to transmit them to his own pupils) was a practice which seems to have come into existence some 110 years after the death of the Prophet (cf. al-Fasawī, ii, 157). The general practice

was that these pupils then passed on to their pupils what they had copied on the direct authority of the first master, with or without mention of the intermediary, the original owner of the *ṣaḥīfa*. (For a convincing example of this practice, compare Fasawī, ii, 157, 176 f. and al-Khaṭīb al-Baghdādī, *K. al-Kifāya fī ʿilm al-riwāya*, 267, with al-Mizzī [*q.v.*], *Tuḥfat al-ashrāf*, vi, nos. 8452 ff.) For good measure, Mālik is recorded to have stated that he saw no difference in acceptability between *samāʿ* (i.e. the pupil listening to the personal instruction of the *shaykh*, either memorising or taking dictation) and *ʿarḍ* (*Kifāya*, 270).

Further reports in the early sources involving Nāfiʿ's person are for the most part equally noncommittal. The one alleging that ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*] sent him to Egypt to teach the population the *sunan* (Ibn Ḥadjar, *Tahdhīb*, x, 414), is questionable, not only because of the doubtless topical mention of ʿUmar II, but also because it has not left a trace in the source best known for information on Egypt, al-Kindī's *K. al-Wulāt wa'l-ḳuḍāt*. Nāfiʿ did receive a brief reference as one of the *fuḳahāʾ* of the 2nd/8th century in al-Yaʿḳūbī's *Taʾrīkh* (cf. index s.n.), but that is about all. However, if Nāfiʿ had indeed been a *fiḳh* expert, it is incomprehensible why the early sources such as the pre-canonical *muṣannafs* [*q.v.*], which have preserved countless legal opinions (*aḳwāl*) of the great Ḥidjāzī *fuḳahāʾ* of the 1st/7th century, have preserved hardly any attributed to him.

Of the traditions with Nāfiʿ in the *isnād* listed in the canonical collections, the most striking feature is the supposedly overwhelming reliance on Ibn ʿUmar: al-Mizzī (*Tuḥfa*, vi, nos 7469-8549) lists in all 1,080 *isnād* bundles and strands ending in Nāfiʿ → Ibn ʿUmar → Prophet (with just 22 in *Tuḥfa*, viii, nos. 10550-71, in which ʿUmar's name is inserted between that of his son and the Prophet, but mostly presenting equivalents of Ibn ʿUmar-supported *matns*), whereas he is recorded with only one to ten traditions or so on the alleged authority of each of just a handful of other Companions. Of those 1,080 Ibn ʿUmar strands, some three-fifths are supposedly passed on by Nāfiʿ to just a few later transmitters: 90 to Ayyūb b. Abī Tamīma al-Sakhtiyānī from Baṣra, 435 to ʿUbayd Allāh b. ʿUmar al-ʿUmarī, a man who is said to hail from Medina, 50 to the Egyptian Layth b. Saʿd, 82 to Mālik b. Anas and 58 to Mūsā b. ʿUḳba from Medina. Of these 715 strands, the majority are single strands (in other words: not showing up common links), while of the remaining strands from Nāfiʿ to others than the persons just mentioned, the vast majority are also single strands.

What this quantification amounts to is that Nāfiʿ in the *isnād*s of the canonical tradition literature constitutes a well-nigh perfect example of a "seeming" or, depending on one's outlook, an "artificial common link" (for a definition of these and other newly-coined technical *ḥadīth* terms, see *Bibl.*). In sum, the Nāfiʿ → Ibn ʿUmar → Prophet strand is a prime example of such late strands as were used by late collectors to "snow under" older Medinese as well as ʿIrāḳī bundles. This is confirmed by another salient feature of Nāfiʿ strands, namely that they almost invariably support *matn* versions which fit into clusters of at times wholly similar, other versions of that *matn*. These *matn* clusters consist more often than not of *matn* versions of non-Ḥidjāzī as well as Ḥidjāzī origin, both with relatively early common links. Differently put, the Nāfiʿ → Ibn ʿUmar → Prophet strand supports in the main the relatively late Ḥidjāzī counterparts of *matns* first brought into circulation elsewhere, as well as *matns* of earlier Ḥidjāzī origin. Thus, because of all these numerous versions of one particular *matn*, which are tantamount to as many repetitions, with just a few, mostly irrelevant, modifications added or none at all, the bulk of the material registered in the canonical collections as allegedly supported by the Nāfiʿ → Ibn ʿUmar → Prophet *isnād* strand should not be conceived of as in any way commensurate with the huge numbers of strands all separately listed in al-Mizzī's *Tuḥfa*. Rather, conspicuous accumulations of one particular strand, which all allegedly figure the same transmitters, such as the more than thousand numbers in al-Mizzī with the Nāfiʿ → Ibn ʿUmar → Prophet strand, constitute a sure sign of *matn* clusters covering just a limited number of legal and/or ritual-related issues.

(G.H.A. JUYNBOLL)

NĀFIʿ B. AL-**AZRAḲ** al-Ḥanafī al-Ḥanẓalī, Abū Rāshid (said to be the son of a freedman of Greek origin who was a blacksmith; al-Balādhurī, *Futūḥ*, 56), Kharidjite who played quite a considerable role in Islamic history as leader of an extremist fraction of that sect known after him as the Azāriḳa [*q.v.*] or Azraḳīs, which lived on substantially after his death; he is furthermore said to have laid down their doctrines.

The sequence of events in which he was involved is difficult to establish, since there is a certain confusion in the narratives involving him. From them one learns first of all that, after having given military assistance to ʿAbd Allāh b. al-Zubayr [*q.v.*], besieged in Mecca by the Syrian troops (64/683), he went to Baṣra with his followers and, taking advantage of the troubles consequent on the death of Yazīd b. Muʿāwiya (54/684), he seized control of the town, opened the doors of the prisons and brought about the assassination of the governor appointed there by ʿUbayd Allāh b. Ziyād [*q.v.*], Masʿūd b. ʿAmr al-ʿAtakī. However, the Azd in Baṣra reacted strongly against the murderers of Masʿūd, their fellow-tribesmen, and temporarily expelled the Azraḳīs. After a fresh attempt against the town, Nāfiʿ and his partisans were forced to flee to al-Ahwāz, where they set up their headquarters and from which they continued to threaten the recently-founded metropolis of southern ʿIrāḳ. The new governor there, ʿAbd Allāh b. al-Ḥārith al-Hāshimī, called Babba, took energetic measures against them and sent the Zubayrid general Muslim b. ʿUbays to combat them. In the course of a battle which took place at Dūlāb (Yāḳūt, *Buldān*, ii, 574, 622-3), Nāfiʿ and the leader of his opponents were both killed (65/685).

Nāfiʿ is considered as the first theoretician of

Khāridjism. His doctrines, still rudimentary, included in particular *istiᶜrāḍ* [*q.v.*], which his partisans practised shamelessly, and if one leaves aside a few details clearly added by the Azraḳīs at a later time, these doctrines can be summed up under four headings: separation from the quietists; putting intending adherents of Khāridjism to the test; "excommunication" of those Muslims who did not make the migration to their group; and the licitness of killing the women and children of their enemies.

(A.J. Wensinck*)

NĀFIᶜ b. ᶜAbd al-Raḥmān b. Abī Nuᶜaym **al-Laythī**, one of the seven canonical Ḳurʾān "readers" who was born in Medina and died there in 169/785 (other dates between 150/767 and 170/786 are also mentioned in biographies). He is reported to have studied with 70 of the *tābiᶜūn* in Medina. He transmitted one of the seven Ḳurʾān readings [see ḳirāʾa] which were recognised by Ibn Mudjāhid [*q.v.*]. Two of his pupils, Warsh (d. 197/812) and Ḳālūn (d. 220/835), are recognised as the main transmitters of his reading. The transmission of the Ḳurʾān from Warsh on the authority of Nāfiᶜ is still used in the Muslim world, especially in West Africa. This transmission has certain noticable characteristics: for example, it has fewer instances of *hamzat al-ḳaṭᶜ* compared to the more widespread transmission of Ḥafṣ *ᶜan* ᶜĀṣim. The actual significance of this and other variations within the system of the "seven readers" is not certain.

Bibliography: Ibn al-Djazarī, *Ghāyat al-nihāya fī ṭabaḳāt al-ḳurrāʾ*, ed. Bergsträsser, Cairo 1932-3, no. 3718; Sezgin, i, 9-10; Nöldeke, *et alii*, *Gesch. des Qor.*, iii, 160-205; A. Brockett, *The value of the Ḥafs and Warsh transmissions for the textual history of the Qurʾān*, in A. Rippin, *Approaches to the history of the interpretation of the Qurʾān*, Oxford 1988, 31-45 and references.

(A. Rippin)

NĀFILA (a.), pl. *nawāfil*, from *n-f-l* "to give something freely", a term of law and theology meaning supererogatory work.

1. The word occurs in the Ḳurʾān in two places. Sūra XXI, 72, runs: "And we bestowed on him [viz. Ibrāhīm] Isaac and Jacob as an additional gift" (*nāfilat^an*). In XVII, 81, it is used in combination with the vigils, thus: "And perform vigils during a part of the night, reciting the Ḳurʾān, as a *nāfila* for thee".

In *ḥadīth* it is frequently used in this sense. "Forgiveness of sins past and future was granted to him [Muḥammad] and his works were to him as supererogatory works" (Aḥmad b. Ḥanbal, vi, 250). In another tradition, it is said with reference to the month of Ramaḍān, that God "writes down its wages and its *nawāfil* even before its beginning" (Aḥmad b. Ḥanbal, ii, 524). Of peculiar importance, also in a different respect, is the following *ḥadīth ḳudsī*: "When My servant seeks to approach to Me through supererogatory works, I finally love him. And when I love him I become the hearing through which he heareth, the sight through which he seeth, the hand with which he graspeth, the foot with which he walketh", etc. (al-Bukhārī, *Riḳāḳ, bāb* 38).

Finally, the following tradition may be translated: "Whoso performs the *wuḍūʾ* [*q.v.*] in this way (viz. in the way described in the foregoing part of the tradition), receives forgiveness of past sins and his *ṣalāt* and his walking to the mosque are for him as a *nāfila*" (Muslim, *Ṭahāra*, trad. 8; Mālik, *Ṭahāra*, trad. 30). In the parallel tradition (Muslim, *loc. cit.*, trad. 7), the term used is *kaffāra* "expiation". This parallelism is an indication of the effect ascribed to supererogatory works in Muslim theology, viz. the expiation of light sins (cf. al-Nawawī on Muslim, Cairo 1283, i, 308).

Further, it must be observed that in theological terminology *nāfila* is often applied to those works which are supererogatory in the plain sense, in contradistinction to other works which have become a regular practice. The latter are called *sunna muʾakkada*, the former *nāfila* or *sunna zāʾida* (cf. below, 2).

The place of supererogatory works in theology is further accurately defined in the *Waṣiyyat Abī Ḥanīfa*, art. 7: "We confess that works are of three kinds, obligatory, supererogatory and sinful. The first category is in accordance with God's will, desire, good pleasure, decision, decree, creation, judgment, knowledge, guidance and writing on the preserved table. The second category is not in accordance with God's commandment yet according to His will, desire" etc.

The term for supererogatory works used here is not *nāfila* but *faḍīla*.

2. *Nāfila* is used in *ḥadīth* especially as a designation of the supererogatory *ṣalāt* (al-Bukhārī, *ᶜĪdayn, bāb* 11; *Tahadjdjud, bāb* 5, 27). Sometimes it appears in the combinations *ṣalāt al-nāfila* (Ibn Mādja, *Iḳāma, bāb* 203) and *ṣalāt al-nawāfil* (al-Bukhārī, *Tahadjdjud, bāb* 36).

In *fiḳh* this terminology is often, but not always followed, the other term for the supererogatory *ṣalāts* being *ṣalāt al-taṭawwuᶜ* (e.g. Abū Isḥāḳ al-Shīrāzī, *Kitāb al-Tanbīh*, ed. A.W.T. Juynboll, 26), a term that goes back to Ḳurʾān II, 153, 180; IX, 80, and which occurs also in canonical *ḥadīth* (Abū Dāwūd has a *Kitāb al-Taṭawwuᶜ* in his *Sunan*). The whole class of supererogatory *ṣalāts* is called *nawāfil* as well as *sunan*. *Nawāfil*, as a general designation of supererogatory *ṣalāts* covers three subdivisions. The following juxtapositions may give a survey of the terminology:

Nawāfil	*sunna* *muʾakkada* *mandūba*	(Khalīl, tr. Guidi, 95, Mālikī)
Nawāfil	*sunna* *mustaḥabba* *taṭawwuᶜ*	(al-Ghazālī, *Iḥyāʾ*, i, 174, Shāfiᶜī)
Nawāfil	*sunna* *mandūba* *taṭawwuᶜ*	(*Fatāwī ᶜĀlamgīriyya*, i, 156, Ḥanafī)
Sunan	*muʾakkada* *raghība* *nāfila*	(Fagnan, *Additions*, 23, Mālikī)

It may be added that the term *rawātib* is used especially for the supererogatory *ṣalāts* preceding or following the *maktūba*; they belong to the first subdivision.

In Shīʿī *fikh*, *nawāfil* is the widest term; by *muraghghabāt* the daily and non-daily supererogatory prayers are designated.

NAFĪR [see NEFĪR].

NAFĪSA, AL-SAYYIDA, a mausoleum situated to the south of the Fāṭimid city of al-Ḳāhira in the northern part of the cemetery area of the City of the Dead (al-Ḳarāfa), to the south of the Mosque of Aḥmad b. Ṭūlūn in the direction of the sepulchral mosque of al-Shāfiʿī. Among the female saints [see WALĪ] in Cairo next to Sayyida Zaynab bint Muḥammad [*q.v.*] and "Sitt Sekīna" (Sukayna) "Sitt Nefīsa" takes a very prominent place. In the official recitations of the Ḳurʾān, al-Sayyida Nafīsa, where the reading is held on Sundays, takes third place among them all, immediately after Imām al-Shāfiʿī and Imām al-Ḥusayn (see Bergsträsser, in *Isl.*, xxi [1933], 110). The sanctuary is visited by both men and women, especially in the evening. The door leading to the sarcophagus itself is only opened once a year, on the occasion of the *mawlid* [*q.v.*] of "Sitt Nefīsa". The foundation contains a number of other buildings besides a mosque, including a library and Ṣūfī cells. The land around it is a much sought-after place of interment.

Nafīsa was a daughter of al-Ḥasan b. Zayd b. al-Ḥasan [*q.v.*]. She came to Egypt with her husband Isḥāḳ al-Muʾtamin, a son of Djaʿfar al-Ṣādiḳ [*q.v.*]. She had a reputation for learning and piety. Al-Shāfiʿī frequently visited her to collect traditions; on his death, his body was brought to her house so that she might say the prayer for the dead over him. She had children, but her descendants soon died out. She herself died in Ramaḍān 208/January 824. Legend credits her with great *karāma* [*q.v.*]; for example, as is told of several Egyptian, and not only Muslims saints, it is said that her prayers produced a great rising of the Nile in a single night. In contradiction of a story that her husband wanted to take her body to the family burial place in the al-Baḳīʿ [*q.v.*] cemetery in Medina but was prevented by her devotees, is the general opinion that this is her tomb which she built with her own hands and in which she read the Ḳurʾān long before her death. Several rulers took part in the development of the sanctuary, ʿAbbāsids and later Fāṭimids and Ottoman governors. The cupola over the grave was restored by the caliph al-Ḥāfiẓ in 532/1138 and the mosque in 693-4/1294-5 by the Mamlūk al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn.

NAFĪSĪ, SAʿĪD, Persian scholar, fiction writer and poet, was born on 8 June 1896 in Tehran.

His family on his father's side had a long medical tradition, which also included his father, ʿAlī Akbar Nafīsī (d. 1303/1924), who held the title of Nāẓim al-Aṭibbāʾ, and was a distinguished physician of his time. Nafīsī received his early education in Madrasa-yi Sharaf and Madrasa-yi ʿIlmiyya, and in 1288/1909 went to Neuchâtel, in Switzerland, for further studies. His family wanted him to go into medicine. In Neuchâtel, Nafīsī joined the Collège Latin and learned Greek and Latin, which were necessary for one's enrolment in Swiss and French medical schools. After a year's residence in Switzerland, Nafīsī went to France. In 1290/1911 he published his first work, a translation concerning dental care. From his residence in Switzerland and France, Nafīsī acquired a great love of the French language and its literature. Hence on returning to Iran in 1297/1918 he was hired to teach French in the nationally famous Aḳdasiyya School and in the Saint Louis Catholic School, later called the Tehran School. In Tehran he was drawn to the capital's literary milieu. He became acquainted with the celebrated poet Malik al-Shuʿarā Muḥammad Taḳī Bahār (1886-1950), and helped him in the production of his literary journal, *Dānishkada*, which appeared from April 1918 to April 1919. Nafīsī's publishing experience contributed to his appointment in 1918 as editor of *Falāḥat wa tidjārat*, a journal issued by the Ministry of Agriculture, Commerce and Public Welfare. He held this job until 1921 and also worked with the ministry in several other positions, finally ending as director of its advanced business school. Subsequently, he served under the Ministry of Education teaching history and literature in various institutions. When Tehran University was founded in 1935, Nafīsī joined its staff, and in Shahrīwar 1315/August-September 1936 he was confirmed as professor to teach the history of Islam in Persia. Meanwhile, he was elected as one of the first permanent members of the Iranian Academy. In 1949 he took premature retirement from teaching, but returned to the university in Bahman 1337/January-February 1959, and joined its College of Literature. During his career he made numerous trips to foreign countries, where he was frequently invited by universities, cultural societies and government bodies. A few years before his death he was appointed to the government's Educational Council as well as to the board of trustees for the Pahlawī Library. Towards the end he settled down in Paris, visiting Iran periodically. He attended the International Congress of Iranologists when it was convened in Tehran from 31 August to 7 September 1966. This was his last visit to Iran, for he died in Tehran on 12 November 1966.

Saʿīd Nafīsī was a prolific writer and the author of an exceedingly large number of books, monographs and articles. His scholarly and literary activity covered a wide and varied field which included political and literary histories, accounts of poets and their writings, editions of manuscripts, lexicons, original works of fiction poetry, and translations from foreign literature. Among his better known literary works is the collection of historical short stories entitled *Māh-i Nakhshab* ("Moon of Nakhshab"), first published in 1328/1949. He also wrote three novels, namely *Farangīs* (1311/1932), *Nīma rāh-bihisht*

("Halfway to paradise", 1332/1953) and *Ātis͟h-hā-yi nihufta* ("Hidden fires, 1339/1960). His important translations include Homer's *Iliad* (1334/1955) and *Odyssey* (1337/1958). In addition to *Falāḥat wa tid͟jārat*, mentioned earlier, he edited three other journals, *Ummīd*, *S͟harḳ* and *Payām-i naw*. He commanded a facile pen, and his prose style has won generous acclaim for its polished and lucid expression.

(MUNIBUR RAHMAN)

NAFS (A.), soul. *Nafs*, in early Arabic poetry meant the self or person, while *rūḥ* meant breath and wind. Beginning with the Ḳurʾān, *nafs* also means soul, and *rūḥ* means a special angel messenger and a special divine quality. Only in post-Ḳurʾānic literature are *nafs* and *rūḥ* equated and both applied to the human spirit, angels and *d͟jinn*. Since the two concepts of *nafs* and *rūḥ* are so closely connected, both will be considered here.

I. The Ḳurʾānic uses. *A*. *Nafs* and its plurals *anfus* and *nufūs* have five uses: 1. In most cases they mean the human self or person, e.g. III, 54: "Let us call... ourselves and yourselves"; also XII, 54; LI, 20, 21. 2. In six verses *nafs* refers to Allāh: V, 116b, "Thou [Allāh] dost know what is in myself [says ʿĪsā], but I do not know what is in Thyself (*nafsika*)"; also III, 27, 28; VI, 12, 54 and XX, 43. 3. One reference, XXV, 4 (cf. XIII, 17), is to gods: "They [*āliha*] do not possess for themselves (*anfusihim*) any harm or benefit at all!" 4. in VI, 130 the plural is used twice to refer to the company of men and *d͟jinn*: "We have witnessed against ourselves (*anfusinā*)". 5. It means the human soul: VI, 93: "While the angels stretch forth their hands [saying,]. Send forth your souls (*anfus*)"; also L, 15; LXIV, 16; LXXIX, 40, etc. This soul has three characteristics: *a*. It is *ammāra bi 'l sūʾ*, commanding to evil (XII, 53). Like the Hebrew *nefes͟h*, the basic idea is "the physical appetite", in Pauline usage ψυχή, and in the English New Testament "flesh". It whispers (L, 15), and is associated with *al-hawā*, which, in the sense of "desire", is always evil. It must be restrained (LIXXIX, 40) and made patient (XVIII, 27) and its greed must be feared (LIX, 9b). *b*. The *nafs* is *lawwāma*, i.e. it upbraids (LXXV, 2); the souls (*anfus*) of deserters are straitened (IX, 119). *c*. The soul is addressed as *muṭmaʾinna*, tranquil (LXXXIX, 27). These three terms form the basis of much of the later Muslim ethics and psychology. It is noteworthy that *nafs* is not used in connection with the angels.

B. *Rūḥ* has five uses: 1. Allāh blew (*nafak͟ha*) of His *rūḥ*, *a*. into Adam, giving life to Adam's body (XV, 29; XXXVIII, 72; XXXII, 8), and *b*. into Maryam for the conception of ʿĪsā (XXI, 91 and LXVI, 12). Here *rūḥ* equates with *rīḥ* and means the "breath of life" (cf. Gen. ii, 7), the creation of which belongs to Allāh. 2. Four verses connect *rūḥ* with the *amr* of Allāh, and the meanings of both *rūḥ* and *amr* are disputed. *a*. In XVII, 87, it is stated: "They ask thee [O Muḥammad] about *al-rūḥ*; say: *al-rūḥ min amrⁱ rabbī*, and ye are brought but little knowledge". *b*. In XVI, 2, Allāh sends down the angels with *al-rūḥ min amrihi* upon whomsoever He wills of His creatures to say: "Warn that the fact is, There is no God but Me, so fear". *c*. In XL, 15, Allāh "cast *al-rūḥ min amrihi* upon whomsoever He wills of His creatures to give warning". *d*. In XLII, 52: "We revealed (*awḥaynā*) to thee [O Muḥammad] *rūḥᵃⁿ min amrinā*; thou knewest not what the book was, nor the faith, but We made it to be a light by which We guide whomsoever We will of Our creatures". Whatever meanings *amr* and *min* may have, the contexts connect *al-rūḥ* in *a*. with knowledge; in *b*. with angels and creatures, to give warning; in *c*. with creatures, for warning, and in *d*. with Muḥammad, for knowledge, faith, light and guidance. Therefore this *rūḥ* is special equipment from Allāh for prophetic service. It reminds one forcibly of Bezalel, who was "filled with the spirit of God in wisdom, in understanding and in knowledge" (Exodus, xxxv, 30, 31). 3. In IV, 169, ʿĪsā is called a *rūḥ* from Allāh. 4. In XCVII, 4; LXXVIII, 38 and LXX, 4, *al-rūḥ* is an associate of the angels. 5. In XXVI, 193, *al-rūḥ al-amīn*, the faithful *rūḥ*, comes down upon Muḥammad's heart to reveal the Ḳurʾān. In XIX, 17, Allāh sends to Maryam "Our *rūḥ*", who appears to her as well-made man. In XVI, 104, *rūḥ al-ḳudus* sent the Ḳurʾān to establish believers. Three other passages state that Allāh helps ʿĪsā with *rūḥ al-ḳudus* (II, 81; ii, 254; v, 109). This interrelation of service and title imply the identity of this angelic messenger, who may be also the *rūḥ* of 4. Thus in the Ḳurʾān *rūḥ* does not mean angels in general, nor man's self or person, nor his soul or spirit. The plural does not occur.

C. *Nafas*, breath and wind, cognate to *nafs* in root and to *rūḥ* in some of its meanings, does not occur in the Ḳurʾān, but is used in the early poetry (F. Krenkow, *The poems of Ṭufail and aṭ-Ṭirimmāḥ*, London 1927, 32). The verb *tanaffasa* (sūra LXXXI, 18) is derived from that meaning, while the only other Ḳurʾānic forms from the same radicals are *fa-l-yatanāfasⁱ 'l-mutanāfisūnᵃ* (LXXXIII, 26) and are derived in al-Ṭabarī, *D͟jāmiʿ al-bayān*, Cairo 1321, xxx, 57, probably correctly, from *nafisa* "he desired".

II. Umayyad poetry first uses *rūḥ* for the human soul (*Kitāb al-Ag͟hānī*, xvi, 126, last line; Cheikho, *Le Christianisme*, Beirut 1923, 338) where the Ḳurʾān had used *nafs* as in no. 5 above.

III. Of the early collections of traditions, Mālik's *al-Muwaṭṭaʾ*, Cairo 1339, i, 126, uses *nasama*, which does not occur in the Ḳurʾān, and *nafs* (ii, 262) for the soul or spirit, while Ibn Ḥanbal's *Musnad* uses *nasam* (vi, 424), *nafs* (i, 297, ii, 364, vi, 140) and *nafs* and *rūḥ* (iv, 287, 296). Muslim, *al-Ṣaḥīḥ*, Constantinople 1331, viii, 44, 162-3, and al-Buk͟hārī, *al-Ṣaḥīḥ*, Cairo 1314, iv, 133, both use *rūḥ* for the human spirit.

IV. The *Tād͟j al-ʿarūs* (iv, 260) lists 15 meanings for *nafs* and adds two others from the *Lisān al-ʿArab*, as follows: spirit, blood, body, evil eye, presence, specific reality, self, tan, haughtiness, self-magnification, purpose, disdain, the absent, desire, punishment, brother, man. It states that most of these meanings are metaphorical. The *Lisān* (viii, 119-26) finds examples of these meanings in the poetry and the Ḳurʾān. Lane's *Lexicon* faithfully reproduces the material (2827b). The lexical treatments of *nafs* disclose these facts: 1. Any attribution to Allah of *nafs* as "soul" or "spirit" is avoided. 2. In man, *a*. *nafs* and *rūḥ* are identified, or *b*. *nafs* applies to the mind and *rūḥ* to life, or *c*, man has *nafsānⁱ*, two souls, one

vital and the other discriminative, or *d.* the discriminative soul is double, sometimes commanding and sometimes forbidding.

V. The influences that affected the post-Ḳurʾānic uses of both *nafs* and *rūḥ* were the Christian and Neo-Platonic ideas of *rūḥ* with human, angelic and divine applications, and the more specifically Aristotelian psychological analysis of *nafs*. These influences are clearly shown in the records of the religious controversies.

A. Al-As͟hʿarī [*q.v.*] (H. Ritter, *Die dogmatischen Lehren der Anhänger des Islam von Abu 'l-Ḥasan ʿAlī bin Ismāʿīl al-Asʿarī*, Istanbul 1929) reports the Rāfiḍiyya doctrines of the incarnation of *rūḥ Allāh* in Adam and its transmigration through the prophets and others (6, 46), as well as the conflicting positions that man is body (*d̲j̲ism*) only, body and spirit, and spirit (*rūḥ*) only (61, 329 ff.). His creed of the orthodox (290-297) omits any statement about the nature of man.

B. Al-Bag͟hdādī [*q.v.*] (*al-Farḳ bayn al-firaḳ*, Cairo 1328) records the same heretical doctrines about man's nature (28, 117 ff., 241 ff.), says the transmigration theories were held by Plato and the Jews (254) and describes the incarnation beliefs of the Ḥulūliyya sects [see ḤULŪL] among whom he includes the Ḥallād̲j̲iyya (247). His position is "The life of Allāh is without *rūḥ* and nourishment and all the *arwāḥ* are created, in opposition to the Christian doctrine of the eternity of the Father, Son and Spirit" (325).

C. Ibn Ḥazm [*q.v.*] uses *nafs* and *rūḥ* interchangeably of man's soul (*Kitāb al-Fiṣal fi 'l-milal*, Cairo 1317-21, v, 66). He excludes from Islam all who hold metempsychosis views, among whom he includes the physician-philosopher Muḥammad b. Zakariyyāʾ al-Rāzī (i, 90 ff., iv, 187-8). He rejects absolutely the doctrine of some of the As͟hʿariyya of the continual re-creation of the *rūḥ* (iv, 69). He taught that Allāh created the spirits of all Adam's progeny before the angels were commanded to prostrate to him (sūra VII, 171), and that these spirits exist in al-Barzak͟h [*q.v.*] in the nearest heaven until the angel blows them into embryos (IV, 70).

D. Al-S͟hahrastānī [*q.v.*] (*Kitāb al-Milal wa 'l-niḥal*, ed. Cureton, i, London 1842), in his description of the belief of the pagan Arabs concerning survival after death, does not use the terms *nafs* or *rūḥ*, but says the blood becomes a wraith-like bird that visits the grave every hundred years. One of his most important sections (203-40) deals with the orthodox and heterodox doctrines of *al-rūḥ*. Al-Ḥunafāʾ [see ḤANĪF], or true believers, debate with al-Ṣābiʾa [*q.v.*], who are dualists, emanationists and gnostics. His account of the views of the Ṣābiʾa faithfully reflects the doctrines of the Ik͟hwān al-Ṣafāʾ (*Rasāʾil*, Bombay 1305), who taught that man is a whole compounded of a corporeal body and a spiritual *nafs* (i/2, 14), and that the substance (*d̲j̲awhar*) of the *nafs* descended from the spheres (*al-aflāk*). But al-S͟hahrastānī rejects the Neo-Platonic idea that human souls (*nufūs*) are dependent upon the souls of the superhuman spirit world (*al-nufūs al-rūḥāniyyāt*) (210, 224-5), and the Hermetic doctrines that the *nafs* is essentially evil (236) and that salvation consists in the release of the *rūḥ* from material bodies (226-7). He applies the term *rūḥānī* to all spirits, good and evil (213). His description of the natural man (216 ff.) with three souls, vegetative, animal and human, each with its own source, place and powers, resembles that of the Ik͟hwān al-Ṣafāʾ (*Rasāʾil*, i/2, 48 ff.). Indeed, the Aristotelian analysis of the human soul as given in *De Anima*, and handed on by Alexander of Aphrodisias and Porphyry, had been adopted with little modification by the Muslim philosophers, such as al-Kindī [*q.v.*], al-Fārābī [*q.v.*] each of whom wrote a *Kitāb al-Nafs*, Ibn Sīnā [*q.v.*] who wrote two, and Miskawayh [*q.v.*], whose *Tahd̲h̲īb al-ak͟hlāḳ* has the same immaterial (1) and functional (7) psychology for its ethical basis. Al-S͟hahrastānī achieved the long-needed interpretation of the conflicting usages of *nafs* and *rūḥ* in the Greek and Christian heritage, and in the Ḳurʾān and Muslim tradition. But the philosophers, even with his support, were not able to force the Greek psychology upon orthodox Islam. The *mutakallimūn* [see KALĀM] and the great majority of Muslims broadened the Ḳurʾānic terminology, but retained the traditional views of the nature of the soul as a direct creation of Allāh having various qualities.

VI. Aristotle's principle of the incorporeal character of spirit had nevertheless found a permanent place in Muslim doctrine through the influence of Islām's greatest theologian, al-G͟hazālī [*q.v.*]. In al-Tahānawī's *Dictionary of the technical terms*, ed. Sprenger, Calcutta 1862, are extracts of the doctrines of al-G͟hazālī on man's *rūḥ and nafs*. He defines man as a spiritual substance (*d̲j̲awhar rūḥānī*), not confined in a body, nor imprinted on it, nor joined to it, nor separated from it, just as Allāh is neither without nor within the world, and likewise the angels. It possesses knowledge and perception, and is therefore not an accident (547 at top; cf. *Tahāfut al-falāsifa*, Cairo 1302, 72). He devotes the second section of *al-Risāla al-laduniyya* (Cairo 1327, 7-14) to explain the words *nafs*, *rūḥ* and *ḳalb* (heart), which are names for his simple substance that is the seat of the intellectual processes. It differs from the animal *rūḥ*, a refined but mortal body in which reside the senses. He identifies the incorporeal *rūḥ* with *al-nafs al-muṭmaʾinna* and *al-rūḥ al-amīn* of the Ḳurʾān. He then uses the term *nafs* also for the "flesh" or lower nature, which must be disciplined in the interests of ethics.

VII. This position of al-G͟hazālī's was that of the theistic philosophers in general, as well as some of the Muʿtazila and the S͟hīʿa, but it has never dominated Islam. The great analytical philosopher and theologian, Fak͟hr al-Dīn al-Rāzī [*q.v.*], could not bring himself to accept it. In his *Mafātīḥ al-g͟hayb*, v, 435, commenting on sūra XVII, 85, he quotes as the opinion of al-G͟hazālī the statement that is in the latter's *Tahāfut* (72; cf. also al-Rāzī's *Muḥaṣṣal*, Cairo 1323, 164), but on 434 (l. 9 and 8 from below) of the *Mafātīḥ*, he acknowledges the strength of the corporeal doctrine, and in his *Maʿālim uṣūl al-dīn*, on the margin of the *Muḥaṣṣal*, 117, he definitely rejects as baseless (*bāṭil*) the view of the philosophers that the *nafs* is a substance (*d̲j̲awhar*) which is not a body (*d̲j̲ism*) and not corporeal.

VIII. Al-Bayḍāwī's [*q.v.*] system of cosmogony and psychology is given in his *Ṭawāliʿ al-anwār* (lithograph ed. with commentary by Abu 'l-T̲h̲anāʾ al-Iṣfahānī and gloss by al-D̲j̲urd̲j̲ānī, Istanbul 1305, 285 ff.; Brockelmann, I^2, 533, S I, 742-3). He discusses 1. the classes of incorporeal substances; 2. the heavenly intelligences; 3. the souls of the spheres; 4. the incorporeality of human souls; 5. their creation; 6. their connection with bodies; and 7. their survival. His cosmogony follows: Allāh, because of his unity, created only one Intelligence (*ʿaḳl*). This Second Intelligence, that emanated first (*al-ṣādir*) from Allāh, is the cause (*ʿilla*) of all other potentialities and is not body (*d̲j̲ism*), nor original matter (*hayūlā*) nor form (*ṣūra*). It is the secondary cause (*sabab*) of another intelligence with soul (*nafs*) and sphere (*falak*). There emanates from the second a third intelligence and so on to the tenth (288) who is the *rūḥ* of sūra LXXVIII,

38 (cf. al-Bayḍāwī's *Anwār al-tanzīl*, ed. Fleischer, ii, 383, l. 4), whose effective influence is in the world of the elements and who is the producer of the spirits (*arwāḥ*) of mankind. Below these intelligences are the high or heavenly angels, which the philosophers call *al-nufūs al-falakiyya*, and the low *nufūs*, which are in two classes: earthly angels, in control of the simple elements and the earthly souls, such as the reasoning souls (*anfus nāṭiḳa*) controlling particular persons. In addition (285), there are the incorporeal substances, without effect or control, who are angels, some good (*al-kurūbiyyūn*) and some evil (*al-shayāṭīn*) and the *djinn*, who are ready for both good and evil. This is the classification he refers to in his comment on sūra II, 28 (ed. Fleischer, i, 47, 25). His psychology resembles that of al-Ghazālī, whom he mentions (294). For the incorporeality of the soul (*tadjarrud al-nafs*) he presents five arguments from reason, four Ḳurʾānic verses and one tradition. His commentator remarks (300) that these prove only that the soul differs from the body. He then argues that all *nufūs* are created when their bodies are completed. The *nafs* (303) is not embodied in and is not close to the body, but is attached as the lover to the beloved. It is connected with that *rūḥ* which comes from the heart and is generated from the finest nutritive particles. The reasoning *nafs* produces a force that flows with that *rūḥ* through the body, producing in every organ its proper functions. These functional powers are perceptive, which are the five external senses, and the five internal faculties of the *sensus communis*, imagination, apprehension, memory and reason, and the active (*al-muḥarrika*) which are voluntary (*ikhtiyāriyya*) and natural (*ṭabīʿiyya*, 308).

IX. The dominant Muslim doctrine concerning the origin, nature and future of *al-rūḥ* and *al-nafs* is most fully given in the *Kitāb al-Rūḥ* of Ibn Ḳayyim al-Djawziyya [*q.v.*] (Ḥaydarābād ²1324). Of his 21 chapters, Ibn Ḳayyim devotes the 19th to the problem of the specific nature of the *nafs* (279-342). He quotes the summaries given by al-Ashʿarī (*op. cit.*, 331-5), and by al-Rāzī (*Mafātīḥ al-ghayb*, v, 431-4). He denies al-Rāzī's statement that the *mutakallimūn* consider man to be simply the sensible body, and says all intelligent people hold man to be both body and spirit. The *rūḥ* is identified with the *nafs*, and is itself a body, different in quiddity (*al-māhiyya*) from this sensible body, of the nature of light, high, light in weight, living, moving, interpenetrating the bodily members as water in the rose. It is created, but everlasting; it departs temporarily from the body in sleep; when the body dies it departs for the first judgement, returns to the body for the questioning of Munkar and Nakīr [*q.v.*], and, except in the cases of prophets and martyrs, remains in the grave foretasting bliss or punishment until the Resurrection. He rejects (256) Ibn Ḥazm's doctrine that Adam's progeny are in al-Barzakh [*q.v.*] awaiting their time to be blown into embryos. He presents 116 evidences for the corporeality of the *rūḥ*, 22 refutations of opposing arguments and 22 rebuttals of objections. He represents traditional Islam.

X. The earlier Ṣūfīs had accepted the materiality of the *rūḥ*. Both al-Kushayrī [*q.v.*] (*al-Risāla*, with commentary of Zakariyyāʾ al-Anṣārī and gloss of al-ʿArūsī, Būlāḳ 1290, ii, 105 ff.) and al-Hudjwīrī [*q.v.*] (*Kashf al-maḥdjūb*, ed. Nicholson, London 1911, 196, 262) call the *rūḥ* a fine, created substance (*ʿayn*) or body (*djism*), placed in the sensible body like sap in green wood. The *nafs* (*al-Risāla*, 103 ff.; *Kashf al-maḥdjūb*, 196) is the seat of the blameworthy characteristics. All together make the man.

In addition to the philosophical position of the immateriality of *al-rūḥ* that al-Ghazālī had made orthodox, another interpretation of spirit developed which is essentially philosophical. Ibn al-ʿArabī [*q.v.*] (H.S. Nyberg, *Kleinere Schriften des Ibn al-ʿArabī*, Leiden 1919, 15, 11, 7 ff.) divides "things" into three classes: Allāh, Who is Absolute Existence and Creator, the world, and an undefinable *tertium quid* of contingent existence that is, joined to the Eternal Reality and is the source of the substance and the specific nature of the world. It is the universal and common reality of all realities. Man likewise is an intermediate creation, a *barzakh* (22, 42) between Allāh and the world, bringing together the Divine Reality and the created world (21, 42) and a vicegerent connecting the eternal names and the originated forms (96). His animal spirit (*rūḥ*) is from the blowing of the divine breath (95), and his reasoning soul (*nafs nāṭiḳa*) is from the universal soul (*al-nafs al-kulliyya*), while his body is from the earthly elements (95-6). Man's position as vicegerent (45-6) and his resemblance to the divine presence (21) come from this universal soul, who has various other names, holy spirit (*rūḥ al-ḳudus*), the first intelligence (51), vicegerent (*khalīfa*), the perfect man (45) and the *rūḥ* of the world of command (*ʿālam al-amr*), which al-Ghazālī held to be Allāh's direct creation (122,₁). In his *Fuṣūṣ*, lith. ed., with commentary by al-Ḳāshānī, Cairo 1309, 12 ff., he says that Allāh appears to Himself in a form which thus becomes the place of manifestation of the Divine essence. This place receives a *rūḥ*, who is Adam, the *khalīfa* and the perfect man. He discusses (Nyberg, *op. cit.*, 129 ff.) the essence and properties of the *rūḥ*, quoting among others the view he says is "attributed" to al-Ghazālī which is in *al-Tahāfut* (as above). He finds the differences of doctrine harmless, since all agree that the *rūḥ* is originated. In his tractate on the *nafs* and *rūḥ* (M. Asín Palacios, *Tratado acerca del conocimiento del alma y del espíritu*, in *Actes du XIVème Congrès international des Orientalistes*, Paris 1906, iii, 167-91), he describes how men may reach the distinction of "the perfect man" through the cultivation of the qualities of the *rūḥ* and the suppression of the *nafs*.

Ibn al-ʿArabī's contemporary, the poet Ibn al-Fāriḍ [*q.v.*] (Nicholson, *Studies in Islamic mysticism*, Cambridge 1921, ch. iii), at times identifies his own *rūḥ* with that from which all good emanates (*al-Tāʾiyya al-kubrā*, on margin of *Dīwān* of Ibn al-Fāriḍ, Cairo 1319, ii, 4-5) and with the "pole" (*ḳuṭb*) upon which the heavens revolve (113, 115). Al-Kāshānī, the commentator of *al-Tāʾiyya*, explains that this identity is with the greatest spirit (*rūḥ al-arwāḥ*) and the greatest "pole". The compiler of the commentaries on the *Dīwān* states (ii, 196) that incarnation (*ḥulūl*) and union (*ittiḥād*) with Allāh are impossible, but there is real "passing away" (*fanāʾ*) and attainment (*waṣl*) of the *rūḥ* and *nafs* in the *nafs* of Allāh, for His *nafs* is their *nafs*.

ʿAbd al-Karīm al-Djīlānī carries his position of existential monism on to straight animistic pantheism. In *al-Insān al-kāmil*, Cairo 1334, the terms *rūḥ al-ḳudus*, *rūḥ al-arwāḥ* and *rūḥ Allāh* stand for a special one of the aspects of the Divine Reality (*al-Ḥaḳḳ*), not to be embraced under the command "be" nor created. This spirit is the divine aspect in which stand the created spirits of all existences, sensible and intelligible (94). Existence itself subsists in the *nafs* of Allāh, and His *nafs* is His Essence (*dhāt*). Moreover, every sensible thing has a created spirit (*rūḥ*) (194). One of the aspects of the angel of sūra XLII, 52, who is named the command (*amr*) of Allah, and who is an aspect of Allah as above, is given to the *rūḥ* mentioned

in the verse. That angelic and divine *rūḥ* thereby becomes the Idea (*ḥaḳīḳa*) of Muḥammad (95-6) and he thereby becomes the "perfect man" (96, 131 ff.). The *rūḥ* which is the specific nature of the human *nafs* has five names: animal, commanding to evil, instinctive (*al-mulhama*), reproving, and tranquil. When the divine qualities actually describe the *nafs*, then the names, qualities and essences of the gnostic (*ʿārif*) are those of the One Known (*Maʿrūf*) (130-1).

XI. In geomancy (*ʿilm al-raml*), the first "house" (*bayt*) of the *ummahāt* is called *nafs* because it guides to problems concerning the soul and spirit of the inquirer, and to the beginning of affairs (Muḥammad al-Zanātī, *Kitāb al-Faṣl fī ʿilm al-raml*, Cairo n.d., 7; cf. Henr. Corn. Agrippae, *Opera*, Leiden, n.d., but early 17th century, 412: *nam primus domus personam tenet quaerentis*).

NAFṬ. 1. In pre-Islamic times. The Greek word *naphtha* is probably borrowed from Semitic, for in Akkadian literature from Northern ʿIrāḳ the word *napṭu* is well attested. There the substance could be easily found and its special qualities soon discovered. In Sumerian it is described as "mountain oil", in contrast to "fish oil" and "vegetable oil". In Aramaic it has been linked by assonance with the root *n-ṭ-p*, which commonly describes oozing blood or dripping water, but the link is weak and it is safer to assume the nominal stem has been simply borrowed in Greek.

Akkadian literature distinguishes between clear and dark naphtha. Esarhaddon, for example, describes a "well of white naphtha" he discovered, but one of the melancholic poets speaks of human skin turning "as black as pitch or naphtha". It may be thick enough to eat, according to a description of a particular dream, or thin enough for the oleomancer to mix with water. The ancient physician would make an ointment by compounding naphtha with fish oil or honey, but it may well have been a painful treatment since political rebellion was discouraged with the threat of making dissidents "eat bitumen, drink donkey's urine, and be smeared with naphtha".

The danger of using naphtha as fuel is emphasised within Judaism by the prohibition on using it for lamps, but this legislation produced questions about whether that law should apply equally to the Jews of Cappadocia, who were presumably used to handling it. The word does not occur in Biblical Hebrew, where vegetable oil seems to have been the normal fuel source, but its discovery is graphically described in the intertestamental book of Maccabees where the legend of Nehemiah's sacrifice is recounted.

Nehemiah chose to make an important sacrifice after he had rebuilt the temple in Jerusalem. To mark the solemnity of the occasion he sent to Persia for a secret substance, which the earlier exiles were supposed to have hidden there, and this was added to the sacrifice. Everyone present was astounded when the heat of the rising sun caused a sudden explosion on the altar. According to tradition this was the event that gave rise to a word in Hebrew, *nephthar*, apparently from the important root *p-ṭ-r*, "free, ransom"; moreover it also provided the King of Persia with his first revenue from oil. The historical, philological and theological presuppositions of this story need careful scrutiny.

Jastrow, *A dictionary of the Targumim* ..., New York 1950; for the story of Nehemiah, see II Maccabees i:18-ii:15.

(M.E.J. Richardson)

2. In the mediaeval Byzantine and Arab-Islamic worlds.

This term is used in the Arabic sources on one hand as a generic, vague appellation for a substance which is basically petroleum (see 1. above), and on the other it is applied for the specially-prepared incendiary weapon frequently used on mediaeval warfare.

Naft, often accompanied or replaced by the term *nār* (= fire), corresponds to the Greek term *hygron pyr* or *mēdikon pyr* ("liquid or Persian fire"). The 14th century Egyptian author Ibn Manglī [*q.v.* in Suppl.] in his *Aḥkām* clearly identifies *naft*/*nār* with the Greek liquid fire.

The *naft*-carrying ships called *ḥarrāḳa* in the Arabic sources correspond to the Byzantine ships known as *pyrphora* or *kakabopyrphora* vessels. It is obvious, therefore, that no thorough study of either the use of *naft* by the Arabs or the *hygron pyr* of the Byzantines can be undertaken separately, and that only through a comparative study of both Greek and Arabic sources can we understand the function of this formidable weapon, whose limited direct effectiveness seems to have been enhanced by its strong psychological impact (a typical example of the uselessness of the monolithic approach to a study of *naft-hygron pyr* is the recent work by Th. Korres, *"Hygron pyr", ena oplo tēs Byzantinēs nautikēs taktikēs* Thessaloniki 1989, based solely on the Greek and Latin sources).

A study of the substance involves the following problems: origin and dating of this invention, its composition and its method of launching, the last two affected by a constant development of *naft*/*hygron pyr* over the centuries.

The Hellenistic origins of nafṭ/hygron pyr

Incendiary weapons have been widely used in warfare since ancient times. The Byzantine sources, nevertheless, report that a special incendiary weapon was invented by the Byzantines in the last quarter of the 7th century. Theophanes (9th century A.D.) explicitly states that a certain Kallinikos from Syria invented it and that it was successfully applied in the Arab siege of Constantinople (674-8) (*Chronicon*, ed. C. de Boor, 354, ll. 13-17). The Byzantine sources report that Greek fire was again successfully launched during another Arab siege of Constantinople in 717-18. In addition, the Arabic *Kitāb al-ʿUyūn*, which was written much later, probably in the 13th century A.D., but which contains material from earlier sources, also mentions explicitly that during this same siege, *naft* was used by the Arabs (for this siege, *ibid.*, 24-33).

Most probably, the so-called invention by Kallinikos was simply a perfection of an old weapon in advanced form. He must have brought to Constantinople the tradition of Hellenistic science, during which period a system of missile-shooters and incendiary weapons was used, along with a number of catapults in land and naval warfare (see G.E.R. Lloyd, *Greek science after Aristotle*, London 1973, 96-9; K.D. White, *Greek and Roman technology*, London 1984, 217 f.). The most revealing artistic evidence of an advanced incendiary weapon is a graffito in an Alexandrian tomb dated to the 1st century B.C., published by A. Schiff (*Alexandrinische Dipinti*, i, Leipzig 1905, pl. I) and, recently, by L. Casson (*Ships and seamanship in the Ancient World*, Princeton 1971, fig. 115). It depicts a vessel with a firebasket hanging from two poles projected from the prow; as has been correctly pointed out by W.W. Tarn (*Hellenistic military and naval developments*, Cambridge 1930, 145), when the enemy ships rammed prow-to-prow, the baskets would fall on the other ship's deck and set it on fire.

The Hellenistic and Roman periods were marked by the writing of treatises on warfare as well as the construction of numerous war machines, including those involving fire. Some of the most important authors of these periods are: Ktesibius of Alexandria (3rd century B.C.), Philo of Byzantium (ca. 200 B.C.), Marcus Vitruvius Pollio (ca. 25 B.C.), Hero of Alexandria (ca. 60 A.D.) and Dionysius of Alexandria (2nd century A.D.). The last one, Dionysius, invented a rapid-fire-repeating catapult, an automatic weapon called *polybolos* (J.G. Landels, *Engineering in the Ancient World*, London 1978, 183 ff.). These must have been the sources for a number of Arab manuals

of warfare (for these older treatises, see A.G. Drachman, *Ktesibios, Philon and Heron, a study in ancient pneumatics*, Copenhagen 1948; E.W. Marsden, *Greek and Roman artillery, technical treatises*, Oxford 1971).

In late Roman times, various incendiary mixtures which became the basis of later developments, i.e. sulphur, resin, asphalt and pitch swathed in oakum soaked in crude oil were used, (R.J. Forbes, *Studies in ancient technology*, i, Leiden 1955, 101), and in this light, we can infer that Kallinikos' chemical composition was not any outstanding innovation but simply a convenient synthesis of well-known materials placed on ships and used in a systematic way along with other missiles, at a time which is marked by a drastic change in naval warfare, i.e. the abandonment of the ram. Such composition would include the basic element, i.e. crude petroleum. No secret formula was involved, but a variety of formulae applied according to the nature of each warfare action, and Byzantine folklore about a divine secret kept zealously by special families is obviously sheer mythology (H.R.E. Davidson, *The secret weapon of Byzantium*, in *BZ*, lxvi [1973], 61-74).

The question which naturally arises is how the parallel development of *nafṭ* took place in the Arabo-Islamic world. Byzantine nautical and naval warfare practice was, as noted above, immediately adopted by the Arabs, but the written Greek tradition appears much later, well into the ʿAbbāsid period.

It was also during the late Hellenistic and Roman periods that stone-throwing catapults were mounted on ships and used for naval warfare. If we take into consideration that in the late Roman period various incendiary mixtures were invented or perfected, as for example that described by Vegetius (4th century A.D.), which was fixed to an arrow, i.e. a mixture of sulphur, resin, asphalt and pitch to which crude oil was added, we understand that the elements for the invention of Kallinikos already existed in the late Roman tradition and that he simply perfected the "Greek fire". (For various incendiary mixtures in Roman times, see Forbes, *loc. cit.*)

The Islamic period

Kallinikos' perfection of Greek fire based on the Alexandrian legacy came at the turning-point of some important changes in naval warfare in the Eastern Mediterranean. In late Roman times, speed and the use of ram became again important after an obvious neglect in Hellenistic times. Procopius, writing in the middle of the 6th century, describes the *dromōn* as a light warship. A century later, at the famous battle of Dhāt al-Ṣawārī, no ram was used (see Suppl. s.v., and Christides, *The naval engagement of Dhāt al-Ṣawārī A.H. 34/A.D. 655-656. A classical example of naval warfare incompetence*, in *Byzantina*, xiii [1985], 1331-45). When the perfected Greek fire was used by the Byzantines in the Arab siege of Constantinople in 670, the revolution in naval warfare was completed; ramming had been abandoned and replaced by an extensive use of stone-throwing machinery, to which the launching of fire was added.

The use of Greek fire in 670 was therefore part of the new important weaponry and its use was emphasised and somewhat exaggerated by the Greek sources and by a number of Arabic and Syriac sources—the *Kitāb al-ʿUnwān*, the *History of the Patriarchs of Alexandria* and the *Chronicle of Michael the Syrian*—which were closely interwoven with the Byzantine sources (for the complex interrelationship of the sources, see the pioneering work of L.I. Conrad, *Theophanes and the Arabic historical tradition: some indications of intercultural transmission*, in *Byzantinische Forschungen*, xxv [1990], 1-44).

The Byzantines used Greek fire successfully in the Arab siege of Constantinople of 715-17, but as the Arabic sources inform us, the Arab fleet was also equipped with *nafṭ*, and it was also about this time that Muhammad b. al-Ḳāsim [*q.v.*] used fire-throwing engines in his Indian expedition. (F. Gabrieli, *Muhammad ibn Qāsim ath-Thaqafī and the Arab conquest of Sind*, in *East and West*, xv [1964-5], 282, n. 1b).

From the small number of passages from the Arabic sources concerning the use of *nafṭ*, collected and translated by Mercier and Canard, by the middle of the 7th century the Muslims were using *nafṭ* and its use accelerated with the passage of time (see M. Canard, *Textes relatifs à l'emploi du feu grégeois chez les Arabes*, in *B. Et.Ar.*, vi [1946], 3-7).

Several Arabic treatises dealing with warfare include important information concerning *nafṭ*, sometimes accompanied by drawings (M. Reinaud, *De l'art militaire chez les Arabes au moyen âge*, in *JA* [Sept. 1848], 193-237; K. Huuri, *Zur Geschichte des mittelalterlichen Geschützwesens aus orientalischen Quellen*, Helsinki 1941; A.R. Zaky, *Military literature of the Arabs*, in *Cahiers d'Histoire Egyptienne*, ser. VII, fasc. 3 [1955], 149-60; N. Muḥammad ʿAbd al-ʿAzīz, *al-Khayl wa 'l-riyāḍa*, Cairo 1976). The most commonly used of these treatises is the work of Ḥasan al-Rammāḥ, ed. A. ʿAbādī, *al-Furūsiyya wa 'l-manāṣib al-ḥarbiyya*, Baghdād 1984. Valuable also is the work of the 13th century author Marḍī or Murḍā Ibn al-Ṭarsūsī, ed. and tr. Cl. Cahen (*Un traité d'armurerie composé pour Saladin*, in *BEO*, xii [1947-8], 102-63).

The most valuable of the *furūsiyya* works on Greek fire are those of Ibn Manglī, most of which are not published. In his *Aḥkām*, carelessly edited by M. ʿAbd al-Raḥīm, there are passages referring to the Greek fire translated from the *Naumachica*, written by Leo VI in the middle of the 10th century (Christides, *Naval warfare in the eastern Mediterranean (6th-14th centuries)*, in *Graeco-Arabica*, iii [1984], 137-148). Ibn Manglī equates the *hygron pyr* of the Byzantine sources with *al-nafṭ* and/or *nār*. He even used the Arab term *al-nār al-maṣnūʿa*, for the Greek *eskeuasmenon pyr* ("made-up fire").

Nafṭ/Greek fire was used by the ʿAbbāsid armies (see e.g. the *naffāṭūn*, *nafṭ*-throwers, and their *naffāṭāt*, equipment for hurling it, used by al-Afshīn against the Khurramī rebel Bābak in 222/837, al-Ṭabarī, iii, 1215), through the periods of the Būyids and Saldjūḳs (see Spuler, *Iran*, 493-4) to that of the Mongols (Chinese *nafṭ*-throwers in the army of Hülegü, see *Camb. hist. Iran*, v, 341). During the Crusading Wars, it was mainly used for land warfare [see ḤIṢĀR. iv, at vol. III, 475b-476a], and although sporadically used at sea as late as the 15th century, it was finally replaced by gunpowder [see BĀRŪD].

The composition of Greek fire

An examination of all sources—Arabic, Greek and Latin—reveals that there was no secret recipe zealously kept by any party, but undoubtedly there was a great variety of incendiary mixtures whose numbers grew steadily. One cannot therefore accept the statement in the otherwise useful work by Cheronis, "It may be rightly said that Constantinople was the butt of the attack from the Asiatic invaders, and that relying chiefly on Kallinikos' fire, they were able to resist for several centuries". (N.D. Cheronis, *Chemical warfare in the Middle ages: Kallinikos' prepared fire*, in *Journal of Chemical Education*, xiv [1937], 361).

In the Greek and Arabic sources, the typical incendiary ingredients of *nafṭ*/Greek fire included sulphur, pitch, quicklime and cypress resin, which thickened the mixture, and in the Arabic *furūsiyya* literature are

many detailed recipes supplementing the more general information found in the Byzantine sources. Of course, the problem of trustworthiness of these sources has been occasionally challenged, but as D. Ayalon has correctly pointed out, while they are not clear in their references to the later period when gunpowder was used, they are valid for the earlier period of simple, incendiary weapons (*Gunpowder and firearms in the Mamluk kingdom*, London 1956).

According to Ibn al-Nadīm's *Fihrist*, at the time of the caliph al-Manṣūr (754-75) a *Kitāb al-Naft* existed. A number of *furūsiyya* treatises bear the names of Alexander the Great or his teacher Aristotle, and these may be based on Greek originals.

Ibn al-Manglī, who has preserved much earlier material from an assortment of previous sources, and Murḍā Ibn al-Ṭarsūsī reveal the extensiveness of Arabic formulae for *naft*/Greek fire, including those for Greek fire "floating on the water" and many other types. In addition to the main elements, the ingredients included quicklime, cow and goat fat, eggshells, soda (*naṭrūn* [*q.v.*]), etc. Of great interest is a fragment of the Arabic ms. Istanbul, Ahmet III no. 3469 (15th century), in which there is a formula in which *bārūd* is mentioned (see appendix A of V. Christides, *The conquest of Crete by the Arabs (ca. 824). A turning point in the struggle between Byzantium and Islam*, Athens 1984): "You take 3½ *dirhams* (⅛ of an ounce) of *faḥm* (a sort of charcoal), 2¼ *dirhams* of sulphur and 5 *dirhams* of *naṭrūn* which should be refined and thin, and 10 *dirhams* of *bārūd*, and work so that you reach your aim". *Bārūd* in this context is not gunpowder, but salpetre used as a propellant. This is an obvious case of the intermediate state of the use of *bārūd* as a strong propellant, and because it was the most important element of gunpowder, its name finally meant the gunpowder itself; see further BĀRŪD.

Thus it is clear that from the time of Kallinikos in the 7th century until the Crusades there was a constant development of various formulae of *naft*/Greek fire. In the Byzantine sources it is usually referred to in connection with naval activities; in the Arab *furūsiyya* treatises, although there are references to its use in land warfare, it is usually mentioned in connection with *marākib* (ships). Again, it should be emphasised that it is superfluous to try to trace any special, secret formulae for *naft*/Greek fire (see e.g. H.W. Hime, *The origin of artillery*, London 1915, 33; E. Pászthory, *Über das "Griechische Feuer"*, in *Antike Welt*, xvii [1986], 28); instead, there were numerous formulae based on petroleum and additional ingredients. The various types of *naft*/Greek fire explain why the sources report that its launching was either accompanied by a loud sound and/or smoke or only by a flame (see some examples from the Arabic sources in Canard, *Textes relatifs à l'emploi du feu grégeois chez les Arabes*, 3-7).

The use of *naft*/Greek fire gradually fell into disuse, mainly because of the various ways of protection against it existing from ancient times, mainly the use of sand instead of throwing water, vinegar, hides and others. The Arabic sources, furthermore, inform us that the troops hurling *naft*, *al-naffāṭūn*, corresponding to the Greek *siphōnophoroi*, were protected by special garments known as *libās an-naffāṭīn* (see Christides, *Protective fire-proof equipment in the warships of Ancient and Middle Ages*, in *Tropis* iv, forthcoming. Such garments are illustrated in the Arabic ms. of Ibn al-Manglī's *Tadbīrāt al-sulṭāniyya*, Leningrad Public library, no. C-726).

The launching of naft/*Greek Fire*

This is a complex problem which needs further research by means of a thorough correlation between the literary evidence of Arabic and Greek sources with the numerous drawings in Arabic sources, most of them still in unpublished manuscripts. These drawings emphasise the use of pots, made mainly but not exclusively, of clay. Thus in an often-cited drawing of an Arabic manuscript, such fire bombs appear prominently on various places of the ship (see Pászthory, *Über das "Griechische Feuer"*, fig. 2). Such fire bombs, according to the literary Arabic sources, could be thrown from a basket attached to the main-mast (from the crow's nest) by hand. A great variety of machines for throwing fire pots appear in Arnbayghās's *al-ʿAnīḳ* reproduced in *Khizānat al-silāḥ*, ed. N.M. ʿAbd al-ʿAzīz, Cairo 1978. The Byzantine sources, and in particular Leo VI's *Naumachica*, report that the main fire-thrower is placed on the prow and some minor ones on the sides, while light fire-throwers were carried by hand.

The passage of Leo VI's *Naumachica*, 1,6, is translated into Arabic and preserved in Ibn Manglī's *Aḥkām* (ed. ʿAbd al-Raḥīm, 21). The parallel examination of Leo VI's text with the Arabic translation sheds some light on the position and function of this main fire-thrower (see Christides, *Naval warfare in the eastern Mediterranean (6th-14th centuries)*, in *Graeco-Arabica*, iii [1984], and *Navigation and naval warfare in the eastern Mediterranean, the Red Sea and the Indian Ocean (6th-14th centuries A.D.)*, to appear in *Nubica* [1993]).

From the literary and pictorial evidence it is obvious that both Arabs and Byzantines used various types of fire-throwing machinery based on tension or torsion or on the sudden releasing of heavy weights. Such machinery could be sometimes the same as that for stone-throwing, as is mentioned in the *Stratēgicon* of pseudo-Mauricius, in which the *petrobolos* (= stone throwing machinery) also launches *chouzia* (pots of earthware), full of fire, and moved by the power of *antibarēmatōn* (the release of heavy weights). While the function of the pot-throwing machinery can be easily understood, it is not easy to determine exactly the function of the machinery which launched directly *naft*/Greek fire (see the attempt by J. Haldon and M. Byrne in their edition of the above-mentioned work and their drawing).

The Arab fire-throwing machines, as well as those for stone-hurling, were further developed under Chinese influence which reached its peak during the Mongol period; during the 13th century, when the use of the magnetic compass passed to Europe [see MAGHNĀṬĪS. 2]. Chinese influence is definitely discernible in the construction of Arab-Islamic war machinery and fire bombs (see Christides, *The transmission of Chinese maritime technology by the Arabs to Europe*, in *The American Neptune*, 52/1 [1992], 38-45).

It should be note finally that Ibn Manglī mentions small vessels with great mobility equipped only with fire arrows which could sink large ships.

Partington, *A history of Greek fire and gunpowder*, Cambridge 1960, 186 ff.; Ibn Manglī, *al-Adilla al-rasmiyya fi 'l-taʿābī al-ḥarbiyya*, ed. Maḥmūd Sayyid Khaṭṭāb, Baghdād 1409/1988; N.I. Serikoff, *Leo VI Arabus?*, in *Macedonian Studies* (1991). (V. CHRISTIDES)

3. In the modern sense of oil: the Middle East and South East Asian oil industries.

I *Introduction*

The discovery and development of oil resources in Islamic countries was, as elsewhere, initially dependent on the natural distribution of deposits and their exploitation by commercial interests with the

necessary technical skills, capital availability and distribution facilities.

Early oil production was dominated by the United States and Russia at the end of the 19th century. As the 20th century emerged new oil fields were discovered in Europe, the East Indies, Burma and Iran, which became the precursor of the later immense importance of the Middle East area. Thus by the first decade of the 20th century oil discoveries were already occurring in regions of Islamic culture. The economic importance of oil and its accompanying technical advances and growing consumption has also been affected by contemporary political and nationalist influence.

Some countries began to limit the freedom of foreign private enterprise to operate within their borders by challenging the terms of the original concessions or even expropriating them and forming international companies as in Romania, South America and Mexico, particularly in the 1920s and 1930s. This process accelerated in the 1950s and 1960s as the established major oil companies faced greater competitive pressure and increasing demands from oil producing-countries with enhanced political prestige and rising economic expectations. Besides, demand for oil for industrial requirements grew as coal consumption fell. Thus with the formation of the Organisation of Petroleum Exporting Countries (OPEC) on 4 September 1960 in Ba<u>gh</u>dād the first phase of the oil era was drawing to a close. Members include (with date of joining); Iran, ʿIrāḳ, Kuwayt, Saʿūdī Arabia and Venezuela, September 1960; Ḳaṭar, January 1961; Indonesia and Libya, June 1962; United Arab Emirates, January 1968; Algeria, July 1969; Nigeria, July 1971; Ecuador, November 1973, and Gabon, 11 June 1975.

The second phase, although still influenced by commercial considerations, emphasised optimising revenue, asserting the sovereignty of national natural resources and exercising control over the pricing and production of petroleum products, and was essentially achieved by 1973. The first decade of OPEC's existence was one of aspiration, the second of positive consolidation and the third of adjustment to changing political and economic circumstances in the markets. Its response to problems has generally been one of action through consensus, but serious conflicting interests have inevitably arisen among the members, who by no means included all oil-exporting countries. Whilst there has been an organisation formed for Arab oil interests, OAPEC (Organisation of Arab Petroleum Countries) (January 1968), there has been no concerted Islamic approach, though individual countries have acted within their own concept of Islamic theory and practice. In general, considerations of real political and economic power rather than religious principles have predominated, though some countries have engaged in oil boycotts and embargoes in connection with Arab-Israeli hostility, or in conflict among themselves such as Iran and ʿIrāḳ. Oil revenues have had a deep effect on the life style of Islamic countries which have had such an experience.

II. *Individual Countries*

1. *South-East Asia.*

Indonesia [*q.v.*] declared itself an independent state in 1945, after which there began gradually the Dutch withdrawal from the islands formerly comprising the Dutch East Indies. Oil was struck near the north coast of Sumatra at Telega Tunggat in Langkat on 15 June 1885, but it was not till 28 February 1892 after a pipeline and a refinery were built that oil was processed for the first time by the Royal Dutch Company. On 8 January 1897 oil was discovered at Balik Papan in the Kutei Province of South-East Borneo.

Oil was discovered in southern Sumatra in the Palembang district on 24 January 1897, becoming the most prolific field up to 1939, when the whole region was the fifth largest producer in the world. The oil installations suffered great damage during the Second World War. However, in the 1960s the oil industry had become the most dynamic sector of the economy and had replaced rubber as the principal export. It has a low sulphur content and in the 1970s became the most important single supplier of the Japanese market. The management and financial position of the national oil company, Pertamin, was under suspicion in the mid-1970s, but it has since recovered its reputation.

2. *Middle East.*

(a) Iran. Muẓaffar al-Dīn <u>Sh</u>āh [*q.v.*] granted an oil concession in 1901 and oil was subsequently discovered after years of hard endeavour in difficult terrain on 26 May 1908 at Mas<u>dj</u>id-i Sulaymān.

In April 1909, the Anglo-Persian Oil Company was formed to exploit the Concession, and by 1913 a pipeline of some 130 miles had been completed and a refinery constructed at Ābādān which by 1950 was the largest in the world. The acquisition in 1914 by the British Government of a majority shareholding in the company caused added political complications to the inevitable concessional and commercial disagreements, particularly during Riḍā <u>Sh</u>āh's drive to modernise the country. The concession was cancelled in 1932, renewed in 1933 and nationalised in 1951 while Dr Muḥammad Muṣaddiḳ [*q.v.*] was Prime Minister. On behalf of the state company, the National Iranian Oil Company, an international consortium of companies drawn from the major oil companies and some American independent concerns virtually controlled the Iranian oil industry till the emergence of OPEC and the action taken by Muḥammad Riḍā <u>Sh</u>āh [*q.v.*] in the late 1960s and early 1970s. The province of <u>Kh</u>ūzistān in south-western Iran has remained the principal location for oil fields.

(b) ʿIrāḳ. This became the second area of oil importance in the Middle East when the discovery well drilled by the Iraq Petroleum Company (IPC), an international consortium constituted to develop the concession, came in at Baba Gurgur north of Kirkūk on 27 June 1927. Oil was first exported in 1934. It became a highly politicised issue as a result of the Arab-Israeli confrontation from 1949 onwards and as a result of the coup d'état of ʿAbd al-Karīm Ḳāsim [*q.v.*] on 14 July 1958. It was fitting that the first meeting of OPEC was held in Ba<u>gh</u>dād. Like Iran, ʿIrāḳ has been transformed by its oil revenues from an agricultural to an industrial society since the 1960s.

(c) Saʿūdī Arabia. In 1944 geological evidence confirmed that the location of the greatest oil reserves was centred in the Middle East. The strategic, political and economic consequences of this development have been immense, especially in Saʿūdī Arabia, whose austere and traditional Islamic way of life has had to face modernising influences, political problems and international exposure on an unprecedented scale. Tribal encampments have jostled with high-rise office blocks. In the search for alternative sources of oil outside the United States in the 1920s and 1930s, the Standard Oil Company of California obtained a concession from ʿAbd al-ʿAzīz Ibn Saʿūd on 29 March 1933 and was joined by the Texas Oil Company three years later. Early in 1938 oil was first struck near <u>Dh</u>ahrān (Ẓahrān [*q.v.*]).

American interest has remained very strong, and

even during the Second World War the American Government, through its Petroleum Reserves Corporation, proposed taking a shareholding in Saʿūdī Arabian oil and constructing a pipeline with a Mediterranean outlet. However, a refinery at Raʾs Tanūra and later the pipeline were constructed while the company, renamed the Arab-American Oil Company (ARAMCO), expanded to include the Standard Oil Company (New Jersey) and the Standard Oil Company (New York), thus exclusively American owned. It introduced into the Middle East at the end of 1950 the 50:50 division of profits which had already been conceded in Venezuela, completely changing the concessional pattern and greatly increasing the revenue-earning capacity of oil with its economic implications.

(d) Syria has recently began the production and processing of oil, mostly for its own consumption.

3. *The Persian Gulf*

Oil was discovered in Baḥrayn in May 1932, Kuwayt in April 1938, Ḳaṭar in December 1939, Abū Dhabī off-shore in September 1958 and on shore 1960. In ʿUmān, production began in August 1967 and in 1966 and in Dubayy September 1965.

4 *North Africa*

Oil was discovered first in Algeria under French auspices at Hassi Messaoud (Ḥisy Masʿūd) and on the fringe of the Sahara early in 1956, and provided substantial revenues for the new state after the Accords of Evian in March 1962 with France regarding independence. In Libya, oil exports began in 1961, and with the coup d'état of Colonel Gaddafi (Ḳadhdhāfī) against King Idrīs in 1969, the new régime adopted a radical stance in oil affairs. Tunisia has minor oil production.

5 *Elsewhere*

Before 1939 there was some oil production in Egypt, but it was boosted in 1974 by legislation pro-

NAFṬA (Nefṭa), a small town in the oasis of the same name in southwestern Tunisia, situated on the isthmus separating the depressions of the Shaṭṭ al-Djarīd and the Shaṭṭ al-Gharsa. It is 473 km/295 miles from Tunis, 321 km/200 miles from Ḳayrawān and 35 km/21 miles from the Algerian border. This geographical position, added to an abundance of water resources, accounts for the role played by this oasis since Antiquity. It has thus been able to retain its own originality, whilst at the same time being affected by the great historical movement of its hinterland.

The original site was that of Nepta or Aggarsel-Nepta, a post erected along the track linking it with Tusuros (Tozeur) and Aquae (al-Ḥamma) by a forward road of the Roman and Byzantine *limes*. The actual site must be at present envelopped by the sands and near the modern urban agglomeration. Various facts, however, demonstrate the continuous history of the place's occupation. The dam constructed on the Wed Nefṭa is made from blocks of Roman stone (Tissot), and there are other later constructions such as the town's wall (al-Yaʿḳūbī). However, the religious aspects of its history are more telling here, seen in the late persistence there of Khāridjite doctrines in the 4th/10th century (Ibn Ḥawḳal), of Shīʿīs in the next century (al-Bakrī) and of Christians until the 8th/14th century (Ibn Khaldūn). These various layers of religious life, the basis of Nafṭa's designation of "little Kūfa", should be considered side-by-side with the solidly-based populations inhabiting rich lands, favouring religious contemplation, but lands also affected by the political currents and counter-currents traversing this axial point of the eastern Maghrib.

Thus as a result of the Hilālian invasions [see hilāl, banū] and of the continual state of flux of its socio-demographic composition, Nafṭa had to come to terms with the nomads, being governed by a council of notables presided over by the influential family of the Banū Khalaf in the 8th/14th century. A certain equilibrium became established, in large part through the commercial exchanges which took place along the trans-Saharan commercial axis of which Nafṭa and

Tozeur were two flourishing and lively links, all the more so since the local agricultural production included a large range of sought-after crops and products, made possible by a carefully constructed irrigation system.

This, in general outline, was Nafṭa's general evolution, but it was accompanied by a certain decline more and more marked as the caravan traffic fell into disorganisation. Nevertheless, this was to some extent compensated by the rise of maraboutism, making Nafṭa one of the main centres of important dervish orders like the Raḥmāniyya, an order which was Algerian in origin and which provided asylum for certain figures in the resistance efforts of neighbouring countries in the 19th century, seen in the example of a Nacer ben Chora (Rey-Goldzeiguer, 513).

In recent times, the town's evolution has been dominated by the fact of continued emigration, seen in the decline of population between 1936 and 1975, from 13,500 to 12,500, with a low point of 11,500 in 1966. However, during the last decade, since 1980 and since the opening of an international airport at Tozeur and the oasis's modernisation, Nafṭa has been able to become integrated into the national economy by opening itself extensively to international mass tourism, even if the surplus working population cannot be entirely absorbed by these new activities. In 1984, the population had arisen to 15,000 people, which nevertheless showed a lower rate of growth than the national average.

NAFŪD (a.), a term used to refer to certain Arabian sand seas, and derived from *nafd*, pl. *anfād*, with the meaning of "a large sand dune". Nafūd is used to describe a number of Arabian sand tracts (e.g. Nafūd al-Sirr, Nafūd al-Thuwayrāt, Nafūd al-Mazhūr), but the term refers particularly to the Nafūd al-Kabīr (Great Nafūd) in northern Saudi Arabia. The Nafūd al-Kabīr is the lesser of the two great sand seas of the Arabian Peninsula, the second being the so-called Rubʿ al-Khālī [*q.v.*] in the south. The Nafūd encompasses some 72,000 km² and varies in its limits between 300 to 400 kms from east to west and, at its greatest limits, is about 250 kms from north to south. These Aeolian sands are a strong reddish colour, affected to some extent by the sandstone formations further west. The sands take on a variety of formations, including linear ridges, star dunes and compound crescentic dunes. The dunes reach as much as 100 m in height, with deep hollows (*faldj*) which, in certain cases, reach down to the bed-rock beneath the sands. Musil called these hollows *ḳaʿara*. Rainfall is very slight in the area; to the north an annual rainfall is recorded of 41 mm at Badana and of 35 mm at Rafḥāʾ. To the south, this rises to 102 mm at Ḥāʾil [*q.v.*]. However, rainfall vanishes in the sands, failing to produce pools. The Nafūd is fertile in winter and spring and travellers comment on the good grazing in the dunes, including *ḥamḍ* and *yerta*. According to the Shammar, the land ceases to be Nafūd where the plant *raẓa* finds the sand too shallow to put down roots. In the northern Nafūd there are wells at al-Shaḳīḳ, and in the south at the oasis of Djubba are wells and a small village. The location of the various Nafūd wells used to be essential to caravans crossing the desert between Djabal Adjāʾ and al-Djawf.

There is evidence of activity in the Palaeolithic and the Neolithic period in the sands of the Nafūd and at Djubba. Djubba is also especially rich in Thamūdic epigraphic material and rock drawings. These show animals that include bovids and human figures, and they have been termed the Djubba-style in the region as a whole. Ptolemy in the 2nd century A.D. does not mention the sands, but he seems to locate the Sarakenoi in the Nafūd, since he places them east of the Thamudenoi, and beyond the Scenitae who lived in the northern Ḥidjāz (Ptolemy, *Geography*, 138-9; Musil, *Northern Neǧd*, 311-12). Sprenger (*Die alte Geographie Arabiens*, 171, no. 275) and Euting (*Inner-Arabien*, i, 151) identify Ptolemy's Aina with the wells at Djubba. The Nafūd is generally known to the Arab geographers as the *Raml ʿĀlidj* (al-Hamdānī, i, 178, 205, 206, 222; al-Ṭabarī, i, 1-2, 214, ii, 2, 1212; Yāḳūt, iii, 417, 591), although other terms are also used. Ibn Ḥawḳal (ed. De Goeje, 30; cf. al-Iṣṭakhrī, ed. De Goeje, 24 and al-Idrīsī, fasc. ii, *Sectio sexta*) refer to the sands of al-Habīr lying near to the mountains Djabal Adjāʾ and Djabal Salmā, of the ancient Arab tribe of Ṭayyiʾ. Al-Hamdānī also speaks of the sands of al-Habīr and al-Dahnāʾ: al-Habīr seems synonymous with the *Raml ʿĀlidj*, i.e. the Nafūd, while al-Dahnāʾ [*q.v.*] is the narrow sand running from the eastern end of Nafūd to the Rubʿ al-Khālī in the south.

Part of the Nafūd is described as al-Dudjūdj (Yāḳūt, ii, 554-5, iii, 713, iv, 1024), and is apparently in the western part of the sands, extending from the prominent mountains known as ʿAlam al-Saʿd towards Taymāʾ. Another term used is al-Dāḥī, a sandy waste which Yāḳūt (iii, 460) places west of Djabal Salmā, although Ḥādjdjī Khalīfa places the wells at al-Shaḳīḳa in the northern Nafūd within al-Dāḥī (tr. Norberg, ii, 208, 209). The Nafūd was within the lands of the Banū Kalb, whose territories extended far to the north into Syria (al-Bakrī, ed. Wüstenfeld, i, 664). The *Ramlat ʿĀlidj* was also in the lands of the Banū Buḥtur of the Ṭayyiʾ who dominated Djabal Adjāʾ and Djabal Salmā to the south of the Nafūd. According to al-Sakūnī (Yāḳūt, iii, 59.), the Banū Buḥtur lived in the Nafūd in safety as no-one could reach them in the sands. In modern times, the northern desert has been largely occupied by the Ruwālāʾ, with the area to the south tending to be occupied by Shammarī tribes. A fort at al-Hayyāniyya on the eastern side of the Nafūd was built by Ibn Rashīd in 1853. The Nafūd had been included within Saʿūdī territory in the late 18th century, and it passed once more under Āl Saʿūd authority in 1921-2.

Recorded itineraries generally cross from the northern side of the Nafūd to the south. Musil argued that no ancient caravan routes passed from east to west. While the terrain of massive sand-dunes is difficult, it is really the scarcity of water that dictates travel in the Nafūd. The caravan route via the Djawf villages in the north to Ḥāʾil passes al-Shaḳīḳa and

Djubba, the only wells in the central area of the sands (Palgrave, i, 91-9; Blunt, i, 187-92; Euting, i, 141-56; Polk and Mares, 173-228). Another route from the north-west was followed by Nolde, while Gertrude Bell only skirted the south-western edge of the Nafūd, using the wells at Hayzān. The pilgrim road from al-ʿIrāḳ, the *Darb Zubayda* [*q.v.* in Suppl.], only touches the eastern side of the Nafūd, approaching it in the area of al-Thaʿlabiyya. Modern asphalt roads generally have avoided the deep sands of the Nafūd. However, in the course of the 1980s, a highway was started across the Nafūd from Ḥāʾil to al-Djawf.

(G.R.D. King)

AL-**NAFŪSA**, in Berber Infūsen, name of a Berber tribe. According to the common genealogical scheme (cf. Ibn Khaldūn, *Kitāb al-ʿIbar*, i, 107-17), the Nafūsa are one of the four branches of the large body of the Butr, whose name derives from their chief Mādghīs al-Abtar. At present, the dwelling place of the Nafūsa is south-west of Tripoli in Libya, on the plateau of the same name [see AL-NAFŪSA, DJABAL] which from the frontier between Tunisia and Tripolitania tends eastward, and, if taken in the largest sense, comprises the regions of Nālūt, Fassāṭo and Yefren. The inhabitants of this region are generally called Nafūsa, although, in a genealogical sense, this name can be applied to some groups only. Probably the name Djabal Nafūsa (in Berber *adrar n Infūsen*), which originally belonged to a part of the plateau, was extended to a large area between Wāzzen and Yefren on account of the fact, that of the tribes inhabiting it, the Nafūsa were of prominent importance. This use of the name in its widest sense is also to be found in the book by Ibrāhim b. Sulaymān al-Shammākhī, *Relation*, in which all the territories of Yefren, Fassāṭo and Nālūt are described.

The scarce data on the history of the Nafūsa which we possess, are to be found, for the largest part, in Arabic sources. In the Greek and Latin authors of pre-Islamic times there is no single sure allusion to them. The name occurring in Corippus' *Johannis* (second song, l. 146, *Quaeque nefanda colunt tristis montana Navusi*), does not refer, in all probability, to a place or a tribe of Tripolitania, but rather of the Aurès (Awrās), its plateau or its neighbourhood. The fact that Navus represents a form closely connected with Nafūsa proves only that the name was widely spread among the Berbers.

In Islamic times, the name is recorded for the first time in connection with the capture of the town of Tripoli by ʿAmr b. al-ʿĀṣ (22 or 23). According to Ibn ʿIdhārī (i, 2-3), during the siege the inhabitants called to their aid the Nafūsa, who came to their aid. At that time they were residing also in the vast plain of Djafāra, situated between the Djabal and the sea; one of their chief towns, if not their capital, was Ṣabra on the coast (Roman Sabratha, formerly Phoenician), west of Tripoli, which by Ibn Khaldūn (*ʿIbar*, i, 181, l. 8) is called "the city of the Nafūsa". This town was taken by surprise and plundered by a body of cavalry sent by ʿAmr. This raid was probably undertaken not only to continue the conquest farther westward, but also to punish the Nafūsa, whose territory ʿAmr had invaded in order to conquer it (cf. al-Bakrī, 9, 10), and which he had to abandon by order of the caliph.

According to some sources, the Nafūsa at that time were Christians; according to other reports, however, they were Jews. Our latest local information makes it probable that Christianity had spread widely among them, though the conversion of single groups to Judaism is not excluded. In fact, traces of Byzantine basilicas have been found on the plateau, e.g. at Temézda, Iṭarmīsen, etc., which are also mentioned in some sources and which must have been used by large numbers of the indigenous population.

When the Arabs had conquered North Africa, the Nafūsa of Ṣabra and of the coastal region retired, according to the common opinion, to the plateau, where they remained hostile towards the conquerors. A fresh study of the Tripolitan population, however, makes it clear that a part of them must have stayed in their old dwelling-places where they intermarried with other tribes and, in course of time, became arabicised. In fact, there are tribes in the Western Djafāra and in Tripoli, the town and its surroundings (the regions of al-Sāḥil, Tadjura, etc.), that, according to the local genealogy, derive from the Nafūsa. Apart from this ethnic tradition, there is the fact, recorded in several sources, that after the first case of intervention of the Nafūsa in the affairs of the town of Tripoli—which may have been partly due to a Christian opposition to the Muslim invasion—they wanted, under successive dominations, to make their presence felt and their influence preponderant in the northwestern region of Tripolitania, so that the outlines of the history of the

small, but strong and civilised Berber unit may be supposed to be the following. Having its centre in the plateau, it intended to make felt, as often as possible, its dominion in the coastal region and thus keep the control of the main way of communication between Egypt and Ifrīḳiya, which ran along the coast and which was followed by the various expeditions to the Maghrib. Even at present, such aspirations may be stirred in the minds of the most cultivated of these populations, to such an extent that some of them have reckoned with an eventual reoccupation of their old territories in Western Djafāra.

The period in which the Nafūsa, according to the sources available to us, were most vigorous and active and took a part in the events happening in North Africa, was that of the great Khāridjī [*q.v.*] revolts, which began in 122/739-40 and did not cease until the beginning of the 4th/10th century, i.e. before the era of the Fāṭimids. When the Wahbī [see AL-WAHBIYYA] doctrines began to spread among the North African populations in the 2nd/8th century, they embraced them and so joined the rebellious movement of the Berbers against the Arab conquerors, a movement which, prepared by several other causes, found also some support in the Khāridjī heterodoxy. The Nafūsa embraced the Ibāḍī [see AL-IBĀḌIYYA], i.e. the more moderate form of the Khāridjī doctrine, and remained ever faithful to it with heroic attachment. In alliance with other Berber tribes, either Ibāḍīs or other branches of the sect, they repeatedly made war upon the Arab governors of Ifrīḳiya.

In 140/757-8 they elected as their *imām*, probably with the intention of founding an Ibāḍī principality—an intention which manifested itself also at other times—an Arab called Abu 'l-Khaṭṭāb al-Maᶜāfirī [*q.v.*], one of the missionaries of Ibāḍism in North Africa. Under his command and in conjunction with other Berber groups, they occupied Tripoli, fought against the Ṣufrī [see AL-ṢUFRIYYA] Wafardjūma, who had sacked Ḳayrawān where they had settled, and against the armies sent by the ᶜAbbāsids to reconquer Ifrīḳiya. Finally, in 144/761-2, Abu 'l-Khaṭṭāb and a large number of his followers perished near Tauorgha (Tāwurghā) in a great battle against the general Muḥammad b. al-Ashᶜath al-Khuzāᶜī, the governor of Ifrīḳiya.

Another well-known *imām* of the Nafūsa was a Berber, Abū Ḥātim Yaᶜḳūb al-Malzūzī [*q.v.*], whose enterprises survive in oral tradition on the plateau, which speaks of his 375 encounters with the Arabs. He was killed in battle in 155/771-2.

When the Ibāḍī kingdom of the Rustamids [*q.v.*], which had Tāhert as its centre, had been founded, the Nafūsa did not elect an *imām* of their own any more but formed a part of this kingdom under a governor who depended upon it. Some of these governors, e.g. Abū ᶜUbayda ᶜAbd al-Ḥamīd al-Djanāwunī (of Igennāwen), and Abū Manṣūr Ilyās (of Tendemmīra), are often praised by the Berbers of the Djabal for their importance and ability in maintaining the interests of Ibāḍism, and also for their learning and piety.

The Nafūsa were a valuable support of the Rustamids, of whose principality they formed the eastern bulwark. Being near the territory of the Aghlabids [*q.v.*], they shared to some extent the vicissitudes of this state which had arisen in Ifrīḳiya in the beginning of the 3rd/9th century. The town of Tripoli was in the possession of those princes; western Djafāra, on the other hand, till near the Sea, and probably also part of eastern Djafāra, was in the power or under the influence of the Nafūsa. When Tripoli was beleaguered in 267/880-1 by the Ṭūlūnid prince al-ᶜAbbās [*q.v.* in Suppl.], who, having revolted against his father Aḥmad, sought to conquer Ifrīḳiya at his own risk, the Nafūsa were called to aid, and, appearing without delay, they defeated the army of the invaders (according to other sources, their help was invoked by the inhabitants of Lebda). This fact, which reminds one of the first siege of Tripoli by the Muslims, proves clearly the influence which the Nafūsa possessed in northwestern Tripolitania and it accounts also for the severe blow dealt to them in 283/896-7 by the Aghlabids, when Ibrāhīm II b. Aḥmad, who led an expedition from Tunis to Egypt, found his passage through the coastal region of Tripolitania barred by the Nafūsa. The bloody battle of Mānū, which was followed by acts of terrible cruelty inflicted upon hundreds of Nafūsa prisoners, and which is narrated in a more or less anecdotical form in the Sunnī as well as in the Ibāḍī sources, is ascribed, ultimately, to the desire of the caliph to punish the Nafūsa who were the principal support of the heretical state of Tāhert; or to the resentment of the Aghlabids at acts of enmity committed by the Berbers, as well as in the humiliation they had suffered when the expedition of the Ṭūlūnid al-ᶜAbbās, which was directed against them, had been averted by the Nafūsa, to whom this exploit became a point of glory.

In reality, however, taking into account the whole political situation as well as the historical antecedents, it is evident that that battle, which is still mentioned in the oral tradition of the Ibāḍīs as the most terrible disaster they ever suffered, was the inevitable encounter between the Aghlabid power and the supremacy of the Nafūsa exercised in the former's immediate vicinity and even in its own territory.

When the power of the Aghlabids as well as that of the Rustamids had been destroyed by the Fāṭimids [*q.v.*], the Nafūsa found themselves face to face with those new masters of Eastern Barbary. There exist reports of an instance of their strenuous opposition to Fāṭimid power, which endeavoured to subdue them in 310/922-3 and which defeated them in the following year.

There are, however, reports concerning the part taken by the Nafūsa, or at least by tribes from the plateau, in the great Khāridjī rebellion, which was led by Abū Yazīd [*q.v.*] and which ended with the victory of the Fāṭimids. Probably the Ibāḍī populations of the Djabal, although having given up the idea of forming one large autonomous state, endeavoured to avoid any dependence upon the various kingdoms and empires which successively held the supremacy in North Africa, while the latter, on the other hand, endeavoured, as far as possible, to obtain a footing also in the mountainous region which forms the strategic key to the plain stretching towards the coast.

When the Almohads [see AL-MUWAḤḤIDŪN] undertook the conquests of eastern Ifrīḳiya under ᶜAbd al-Muʾmin (554-5/1159-60), the Nafūsa were also subdued by his army. Their territory became the scene of violent struggles and massacres, of raids and partial conquests during the long period of the revolt of the Banū Ghāniya [*q.v.*] who attempted to restore the Almoravid empire and who, from 580/1184-5 onwards, for nearly half-a-century and with varying succes, fought chiefly in eastern Barbary. In these fights, Arabs of the tribe of Dabbāb (belonging to the Banū Sulaym), who had come to Tripolitania during the well-known invasion of the Banū Hilāl and Sulaym, took part. Some clans of the Dabbāb, especially the Maḥāmīd and the Djuwārī, settled in the coastal region west of Tripoli, where the Nafūsa had exercised their power before. Yet the great mass of the latter

must have retired to the plateau not at the time of the conquest but in consequence of the Arab invasion.

The Nafūsa remained in nearly the same attitude of defence of their independence, during the supremacy in Ifrīḳiya of the Ḥafṣids [*q.v.*], and, afterwards, of the Ottomans. While other populations in the neighbourhood gave up their Ibāḍism in order to embrace Sunnism, and consequently became arabicised, the Nafūsa stuck to their faith and to their Berber vernacular, withdrawing themselves to the rough crests of their mountains, and from time to time taking part in the acts of hostility and in the rebellions which the interior opposed to the efforts of the government of Tripoli to maintain its own authority and, chiefly, to levy taxes.

In the 19th century, the Ottomans, after having retaken in 1251/835-6 the direct administration of Tripoli, had to fight long and bitterly for the conquest of the plateau of the Nafūsa also. The struggle lasted, with varying success, till 1274/1857-8. In this period the *shaykh* Ghūma b. Khalīfa distinguished himself by courage and endurance; he is usually represented as the hero of Berber independence defended against the Turks. In reality, however, he was an Arab and the Arab tribe of the Maḥāmīd had the largest share in the wars, while the Berbers, according to all appearance, did not take part in them on a large scale. During the Italian occupation of Tripolitania, which began in 1911, the Nafūsa were at first hostile in accordance with their old aspiration to found an independent Ibāḍī kingdom which should extend up to the Sea and include the region of Sabratha. Defeated in 1913 by General Lequio near al-Aṣābaʿa, they offered their submission to the Italian authorities and subsequently became faithful subjects during the period of Italian rule.

NAFŪSA, DJABAL, a limestone escarpment running from the Libyan Mediterranean coast slightly to the west of the Tripolitanian town of al-Khums in a west-south-western direction to Nalut (*Kharīṭa al-Djamāhiriyya al-ʿArabiyya al-Lībiyya al-Shaʿbiyya al-Ishtirākiyya*, Beirut, n.d.). Thereafter the highlands break up as a set of lower tablelands lying on an axis oriented to the north-west, eventually merging into the Monts des Ksour. The Djabal is an important and complex geological feature of North Africa. The north-facing scarp rises steeply from the flatlands of the Djifāra and is composed mainly of Mesozoic rocks within the Upper Triassic to Upper Cretaceous range (A.Y. El-Zouki, *Stratigraphy and lithofacies of continental clastics, NW Libya*, in M.J. Salem and M.T. Busrewil [eds.], *The geology of Libya*, London 1980, 394-5). Altitudes vary from less than 500 m in the east (505 m near Tarhuna) and a maximum of 971 m above Gharyan to 725 m close to Kabow further west. Heights diminish gradually westwards towards Nalut (693 m) (*al-Aṭlas al-Waṭanī*, Tripoli 1977, 33-4). The Djabal was traditionally divided into four physical and tribal districts, the Djabal Nafūsa proper around Nalut, the Djabal Yafran running east from Zintan, the Djabal Gharyān in the centre and the Djabal Tarhuna-Msellata in the extreme east (Admiralty, *Handbook of Libya*, London 1920, 13). The western Djabal attracts a good rainfall. Gharyan in the centre receives a mean annual rainfall of 315 mm, though further west towards Nalut, the average rainfall drops to 150 mm or less (J.A. Allan, K.S. McLachlan and E.T. Penrose [eds.], *Libya: agriculture and the economic development of Libya*, London 1973, 28).

Human settlement of the Djabal Nafūsa has historically been associated with groups seeking refuge. The Berbers moved away from the invasions of the Arabs of the Banī Hilāl and Banī Sulaym [*q.vv.*] in later mediaeval Islamic times, while the Jews escaped from Tripoli during the incursion of the Spanish in the 16th century (H.E. Goldberg, *Cave dwellers and citrus growers: a Jewish community in Libya and Israel*, Cambridge 1969, 11). In the Gharyān, the main district of the Djabal at the time of the Italian occupation of Libya immediately preceding the First World War, there was a population of 29,850 persons, of which 14,985 were Berbers, 4,870 were of mixed Arab-Berber origin, 9,295 were Arabs, 400 were Culughli [see KUL-OGHLU] and 300 were Jews. At that time, many of the Arabs were nomadic or semi-nomadic while the Berbers and Jews were sedentary (E. de Agostini, *Le popolazioni della Tripolitania, notizie etniche e storiche*, Parte 1a, Tripoli 1917), living in troglodyte dwellings (Goldberg, *op. cit.*). In 1963 the Muḥāfaẓa of Gharyān contained 76,700 persons, of which 17 per cent was nomadic. (M. Alawar, *Urbanization in Libya*, in E. Joffe and McLachlan [eds.], *Social and economic development of Libya*, London 1982, 331-53). Estimates suggested a population of 204,300 persons in the district in 1988 (*Encyclopaedia Britannica Book of the Year 1990*, Chicago 1990, 659). Important demographic changes took place in 1948 following the flight of Jews. In the period after the exploitation of oil in 1961, population grew rapidly in the region at 4% annually (IBRD, *World development report*, Oxford 1989, 215), though many males lived and worked in large cities such as Tripoli while keeping their families in the villages of the Djabal.

The Djabal Nafūsa has a limited but thriving agriculture. Dryland farming on the top of the scarp is confined to tree crops, including figs, apricots, almonds and olives. Tobacco is grown in the Gharyān area and kitchen garden crops are widespread. Grain, principally wheat, is produced in great quantities at the foot of the scarp on lands traditionally owned by the people of the Djabal. Cultivation of the man-made terraces on the scarp face has generally been abandoned in recent decades. There has been little industrialisation in the Djabal, and the principal economic advances of recent years have been in improved roads, communications, housing and health facilities (M.M. Buru, *The Tripoli agglomeration land-use changes and land-use options*, in Buru, S.M. Ghanem and McLachlan [eds.], *Planning and development in modern Libya*, London 1985, 110-29.

(K.S. MCLACHLAN)

AL-**NAFŪSĪ**, ABŪ SAHL AL-FĀRISĪ, Ibāḍī scholar of the Rustamid family, who lived in Tāhert [*q.v.*] in the 3rd/8th century. Some say that he was one of those who by their learning and religious zeal helped to make that town famous. He was a complete master of Berber, and served as interpreter under the *imām* Aflaḥ b. ʿAbd al-Wahhāb (on whom see Sezgin, *GAS*, i, 586) in the first half of the 3rd/8th century or even till 258/871-2, and under Abū Ḥātim Yūsuf b. Muḥammad who, with a short interruption, was *imām* 281-94/894-907. This shows that the Rustamid princes of Tāhert spoke Arabic, as was to be expected from their Oriental origin, and needed interpreters in their dealings with the Berber-speaking peoples. When the Fāṭimids had destroyed the Ibāḍī power, Abū Sahl settled at Marsa 'l-Kharaz (La Calle, between Bône and the Tunisian frontier); or at Marsa 'l-Dadjdjādj (Port-aux-Poules) on the Algerian coast, between ʿAyn Taya and Cape Djinet (cf. e.g. al-Bakrī, ed. de Slane, Algiers 1911, 64-5, 82).

Al-Nafūsī is best known as the author of an extensive Berber *Dīwān*, containing religious and historical poems, both dealing probably with the doctrines and history of Ibāḍism. It has been lost, like so many other works of Berber Ibāḍīs; yet perhaps parts of it may be recovered by further search in the Mzāb, at Djarba and among the Nafūsa. At any rate, Abū Sahl has an important place in the literary history of the Berbers, especially the Ibāḍiyya, who composed books on theology and law, chronicles, poetry and biographies.

Such a literary movement is usually explained by the need which the Khāridjite heretics felt of making clear their doctrine, especially the points in which it differed from the Sunna, to the inhabitants of the interior of the central and eastern Maghrib, who did not know Arabic, and who must have been numerous about 1000 A.D. Yet another thing, which can be seen to-day, must not be forgotten, viz. the attachment of these peoples to their own tongue as a symbol of opposition to the Arabic-speaking world in general and Muslim orthodoxy in particular. At the end of the 19th and beginning of the 20th century, some Berber groups in the neighbourhood of Yefren in Tripolitania were led by Sanūsī propaganda to give up their old Ibāḍī faith and embrace orthodoxy. This change in its turn caused the Berber dialect to be less used, as if heresy were bound up with the national language, and the giving up of the heresy removed the last obstacle to complete arabisation. This assumption is confirmed by some religious poems (which deserve to be called literature) in the region of Fassāṭo, where the love of the national language is still strong. In them, the author says explicitly that he uses Berber to uphold and strengthen the Ibāḍī faith, which once flourished gloriously, but afterwards decreased, and is now well-nigh disappeared. In past times also, the Berber literature of the Ibāḍīs was partly a symbol of nonconformity and nationalism; so when Abū Sahl, who was rooted in Arabic civilisation by his origin, devoted himself to the study of Berber so as to become the best Berber scholar of his time and to compose in it his works, he must have felt in his deeply religious mind the connection between that language and the faith he professed.

(F. BÉGUINOT)

NAFY (A.), "negation", a technical term of Arabic grammar. The sole grammarian to define negation is al-Djabrānī (d. 668/1270): "It is the information pointing to the non-existence (*ʿadam*) of what is being talked about". It is the opposite of affirma-

tion (*īdjāb*), which the same grammarian defines as being "the information pointing to the existence (*wudjūd*) of what is being talked about" (Paris, B.N. ms. arabe 4067, fol. 148, l. 27). Concerning the links which exist between negation and affirmation, Ibn Yaʿīsh declares: "Know that negation depends on (*ʿalā ḥasab*) affirmation, since negation being the denial (*ikdhāb*) of affirmation, it is necessary that it should be in accord (*ʿalā wafḳ*) with its expression and that there should be no difference between them except that one is a negation and the other an affirmation" (*Sharḥ al-Mufaṣṣal*, viii, 107).

Following Sībawayh, the Arab grammarians enumerate six particles (*ḥurūf*) whose signification (*maʿnā*) is negation; three of these (*mā*, *lā*, *in*) can be used in a verbal or nominal phrase, and three of them (*lam*, *lammā*, *lan*) only in a verbal phrase.

In a verbal phrase, the six particles negate the action, at the same time placing it in a temporal framework: (1) *mā*, followed by a verb in the imperfect indicative, negates an action in the present (*ḥāl*); followed by a verb in the perfect aspect, it negates an action in a past still close (*muḳarrab*) to the present; and in combination with the conjunction *li-* followed by the subjunctive, *mā* also expresses the denial (*djuḥūd*) of the action. (2) *lā*, followed by a verb in the imperfect, negates an action in the future; followed by a verb in the imperfect apocopate, it negates an order, i.e. expresses a prohibition (*nahy*). Followed by a verb in the perfect, it may, under specific circumstances (e.g. *lam yaʾkul wa-lā shariba* "he did not eat or drink", where *lā* continues a previous negative), negate an action in the past, or it expresses an optative (*duʿāʾ*). (3) *lam*, followed by a verb in the unaccomplished apocopate, negates an action in the past. (4) *lammā*, followed by a verb in the unaccomplished apocopate, negates an action in the past nearest (*aḳrab*) to the present. (5) *lan*, followed by a verb in the imperfect subjunctive, negates an action in the future; being more strong and energetic (*ablagh*) than *lā*, it strengthens (*akkada*) negation in the future, just as the particles *sa-* and *sawfa* strengthen affirmation in the future. (6) *in*, like *mā*, followed by a verb in the imperfect indicative, negates an action in the present; followed by a verb in the perfect aspect, it negates an action in the past.

In a nominal phrase, the particle *mā* can mean the negation of the predicate in the present; from the viewpoint of rection, the norm (*ḳiyās*) is that is exercises no rection; but the Ḥidjāzīs assimilate it to the verb *laysa*, making it entail the vowel / *u* / in the noun in initial position (*mubtadaʾ*), and the vowel / *a* / or the preposition *bi-* and the vowel / *i* / in the predicate. But in opposition to this, the Banū Tamīm do not allow it any rection.

More rarely than *mā*, the particle *lā* can be employed like *laysa*, but only when the noun in initial position is indefinite (*nakira*); likewise the particle *in*, which, in combination with *illā*, expresses an exception (*istithnāʾ*), but without exercising any rection.

Finally, the particle *lā* is used before the noun in first place in order to deny it categorically. This is the negation in totality (*istighrāḳ*) of the class (*djins*), which certain grammarians also call "exemption" (*tabriʾa*); if the noun is indefinite, the particle entails the vowel / *a* / without *tanwīn* (or *-āti* in the fem. sound pl.); if the noun is definite, (*maʿrifa*), the particle exercises no rection.

NAFZA (Nefza), the name of a Berber tribe (ethnic: Nafzī) belonging to the group which the mediaeval genealogists and historians mention under the name of Butr [*q.v.*]. It had spread out over a large part of Barbary, between Ifrīḳiya [*q.v.*] and Fās, passing through the region of Constantine, Oran, Tlemcen and the Rīf. In contemporary Tunisia, to the east of the massif of Kroumirie [see khumayr], there extends the country of the Nafzas, a fertile region fringed with woodlands abounding in game. Near the Djabal al-Abyaḍ, at *ca* 150 km/96 miles to the west of Tunis by road and 140 km/90 miles by railway, a station on the Tunis-Ṭabarḳa [*q.v.*] line bears the name of Nafza.

In the manner of other Berber tribes, sections of whom had crossed the Straits of Gibraltar, the Nafza established themselves in particular in the valley of the Guadiana, upstream from Mérida [see mārida], where they had a stronghold known as Ḥiṣn Umm Djaʿfar. There was also a group at Játiva [see shāṭiba], but it was the first one which played the most important rôle on account of their connections with the Umayyads. It happened that ʿAbd al-Raḥmān I al-Dākhil [*q.v.*], whose mother was a Berber captive originally from this tribe, had spent some time before crossing into Spain in the principality of Nakūr [*q.v.*], on the Moroccan coast of the Rīf inhabited precisely by some of the Nafza, who henceforward continued to have privileged connections with Cordova.

The Berbers seem to have been proud of the numbers of *fuḳahāʾ* and *ḳāḍīs* belonging to this tribe who became famous in Spain.

NAFZĀWA, a tribe belonging to the group which the genealogists distinguished under the name of the Butr [*q.v.*] and which formed one of the two great Berber peoples, the other being the Barānis [*q.v.*]. They seem to have become fixed fairly early in Libya and to have spread over all the Maghrib, where the elements which are encountered there sporadically were largely sedentaries or sedentarised. Mediaeval authors mention Nafzāwa as far as Sidjilmāsa and even as far as Awdaghost [*q.vv.*], but this tribe is known above all today for having given its name to a region of Tunisia to the south-south-east of the Chott el Djerid [see al-djarīd]. The Nafzāwa (Nefzaoua in European usage) had their administrative centre, during the French protectorate, at the place Gbīlī (Kébili), the seat of an Office for Native Affairs, whose archives contain documents of a geographical, ethnological or economic nature; since Tunisia's achievement of independence, a second Delegation has been created at Douz.

The Nafzāwa, whose history is essentially the same as that of the Djerid/Ḳasṭīliya [*q.v.*], only played a secondary rôle, and authors cite them mainly because the geographical peculiarities of the region allowed it

to serve as a refuge for rebels or for authorities in difficulty. More than its history, it has been the terrain and its inhabitants which have interested Western travellers and researchers (see *Bibl.*). Economists and sociologists have been especially concerned with the way of life of the population, which has evolved considerably since the beginning of the century, notably, as the consequence of a movement of gradual sedentarisation of the semi-nomads stimulated by the increase in the drilling of artesian wells which favour both the growth of agriculture in the zone of lands suitable for agricultural working and also the extension of palm groves in the oases, the main one of these last being El Glia (al-Ḳulayʿa), to the south of which regions suitable for nomadism, still practised by the 10,000 Marāzīg, stretch as far as the Erg (ʿIrḳ [see ṢAḤRĀʾ] and Ghadāmes [*q.v.*]. Finally, one should not forget that a part of the Nafzāwa area is made up of salt marshes (*sabkha*, pl. *sibākh*), which justify the expressive title which P. Moreau gave to his monograph, *Des lacs de sel aux chaos de sables: le pays des Nefzaoua*, Tunis 1947.

The great richness of the region lies in its date groves [see NAKHL], which are treated with more and more care, since they provide the population with very appreciable resources and contribute moreover to the settlement of persons. In this regard, the statistics are eloquent: from *ca.* 160,000 palm trees in 1889, a figure of one million was approached in 1967. The mediaeval geographers and travellers take care to place an emphasis on the abundance of these trees growing in the oases around some centres of population which they cite. In this context, they remark that the tribe which, at some indeterminate date, gave its name to the region, had already given this name to a place situated at six days' march to the west (in reality, to the south-south-west of Ḳayrawān [*q.v.*], at three days' march from Gabès [see ḲĀBIS] and at two from Gafsa [see ḲAFSA]. According to their description, this population centre was surrounded by a stone and unfired brick wall pierced by six gates; it had a Great Mosque, baths and flourishing markets, and had groves of dates, olives and various other fruit trees, but, on the testimony of Leo Africanus, there were no cereals there. For al-Waṭwāṭ (d. 718/1318), Nafzāwa reminded one of Baṣra because of the irrigation canals which furrowed it, but this comparison seems, to say the least, exaggerated. Al-Bakrī situates at Nafzāwa a plentiful spring called Tawrgha (modern ʿAyn Tāwrgha), whose name, he realised, was Berber; in effect, it comes from the root *w.r.gh* which implies an idea of "yellow". Al-Tidjānī, who travelled through the region at the opening of the 8th/14th century, situates it at Bashrī (modern Bechri) and adds the information that, each year, a man was killed there. It is probable that Bashrī was the successor to Nafzāwa.

The Romans, who occupied the region, have left there buildings, ruinous since mediaeval times, and traces in the toponomy. Thus amongst the places in the region, the geographers cite especially Ṭurra (Lat. Turris Tamelleni, modern Telmine, near Kébili), which Yaḥyā Ibn Ghāniya [see GHĀNIYA, BANŪ] treated harshly in 602/1205 in order to punish the inhabitants there, who had betrayed him. The town was surrounded by a rampart and ringed by plantations similar to those of Nafzāwa. The *Kitāb al-Istibṣār* mentions a third place, whose name, read as أيتملين could be composed of the Berber word Ayt [*q.v.*] (son, in the pl. = Banū), followed by a name which is related to that of Turris Tamelleni, this latter element possibly to be compared with the radical *m.l.l.* (*imlal* "to be white"). The anonymous author of this work and, before him, al-Bakrī, whom he copies, were interested in the route from Nafzāwa to Ḳasṭīliya, i.e. Tozeur (Tawzar [*q.v.*]), in a north-westerly direction. The track, which went through salt marshes, was marked out by means of wooden stakes planted in a ground so shifting that "it resembled soap", and the authors who mention it do not fail to recount the accidents which had struck groups of travellers or soldiers lost there and made them disappear without trace. A system of markers such as this existed still in the first decades of the 20th century.

The Nafzāwa of Tunisia, who were Ibāḍīs [see IBĀḌIYYA], early absorbed members of other Berber-speaking tribes of the same ethnic group, in particular, the Lawāta and the Maghrāwa [*q.vv.*]; in Ibn Khaldūn's time (8th/14th century), the population still included not only Jews but also some Christians (some Afāriḳa). As a result of the infiltration and invasion of allogenous elements which ended up with the upper hand over them, the Nafzāwa came to feel themselves totally arabised, to the point even of attributing to themselves an Arab origin and to speaking only Arabic (on the speech of the Marāzīg, see G. Boris, *Documents linguistiques et ethnographiques sur un region du Sud-Tunisien* (*Nefzaoua*), Paris 1952, and *Lexique du parler arabe de Marazig*, Paris (1958).

(CH. PELLAT)

NAGAR, the name of many towns and cities in India (Skr. *nagara* "city"). Those of significance for Islam are as follows:

1. Nagar, familiar name locally for Aḥmadnagar [*q.v.*], being even used on signposts. C.R. Singhal, *Mint-towns of the Mughal emperors of India*, Bombay 1953, 7, describes a coin of typical Aḥmadnagar fabric where the mint-name is simply Nagar.

2. Nagar, a large town in Karnātaka, some 55 miles west of Shimōgā, once a capital of local *rādjās*, captured in 1176/1763 by Ḥaydar ʿAlī [*q.v.*], and so for a short time known as Ḥaydarnagar; Ḥaydar ʿAlī

established his principal arsenal and a mint there.

3. Nagar = Nagar Kōt, with its stronghold (Kōt) Kāngŕā, commanding the Kāngŕā valley in the western Pandjāb (now Himachal Pradesh), was an important centre of Hindū pilgrimage at the intersection of trade routes, which brought immense wealth to the temple of Devī there. This (or possibly another temple within the fort) was plundered in 399/1008 by Maḥmūd of Ghaznī (Badāʾūnī, *Muntakhab al-tawārīkh*, i, 12); it fell to Fīrūz Shāh the Tughluḳid in 762/1360, (Badāʾūnī, *ibid.*, i, 248-9) when the temple was again plundered. A rebellion in *ca.* 980/1572 (Badāʾūnī, *ibid.*, ii, 161-2; Badāʾūnī refers also to his own visit there in 998/1590) led to its being garrisoned by the Mughals, and Akbar's visit to it ten years later is recorded (*Akbar-nāma*, iii, 348). It fell to the Sikhs in 1775 until the district was ceded to the British in 1846. The town and fort were destroyed in the 1905 earthquake.

4. Nagarnagar, the original name of the fort on the Hari Parbat, outside Shrīnagar, Kashmīr, where Akbar later built his own fort. (J. Burton-Page)

NĀGAWR, modern spelling Nagaur, Nagor, a town and district in the division of Jodhpur in the Rajasthan state of the Indian Union, formerly within the princely state of Jodhpur in British India; the town lies in lat. 27° 12′ N. and long. 73° 48′ E. at 75 miles/120 km. to the northeast of Jodhpur [see djōdhpur], and in 1971 had a population of 36,433.

The walled town is said to have derived its name from its traditional founders, the Nāga Rādjputs. In the later 12th century it was controlled by the Čawhān (Čahamāna) ruler of Dihlī Pṛithvīrādja III, then by the Ghūrid Muʿizz al-Dīn Muḥammad [see ghūrids], although there are indications of an earlier Muslim presence before the Ghūrid conquest, under the old governments of Sind and Multān. It remained an important stronghold for the sultanate of Dihlī, controlling both Sind and southern Rādjāsthān until the decline of the Tughluḳ dynasty in the late 8th/14th century, when it fell into the hands of Muẓaffar Shāh I of Gudjarāt; he gave the state of Nāgawr to his brother Shams Khān Dandānī, and the Dandānī dynasty lasted for over a century until Muḥammad Khān Dandānī submitted to Sikandar Lodī in 915/1509-10. After the Lodī period it passed to Rādjā Maldev of Djōdhpur, who built the fort and incorporated much old Muslim building in its walls. It fell again to the Dihlī sultanate under Shēr Shāh, subsequently becoming part of the Mughal empire until its final fall; thereafter it reverted to the Mahārādjā of Djōdhpur. By the 8th/14th century it had become a centre of the Čishtī Ṣūfī order [see čishtiyya] and was already a renowned home of Muslim mysticism and scholarship, starting with Shaykh Ḥamīd al-Dīn Suwali Nāgawrī (d. 673/1274) (early genealogy in Shokoohy, *op. cit.* below, 75). In the 10th/16th century, it was the birthplace and early home of Shaykh Mubārak Nāgawrī (911-1001/1505-93), later influential, as was his younger son Abu 'l-Faḍl ʿAllāmī [*q.v.*], at Akbar's court as an exponent of a more liberal and eirenic view of the role of Islam in India than that held by the rigorist *ʿulamāʾ* who opposed Akbar's religious policies [see akbar and dīn-i ilāhī] (see Aziz Ahmad, *Studies in Islamic culture in the Indian environment*, Oxford 1964, 168-9; S.A.A. Rizvi, *Religious and intellectual history of the Muslims in Akbar's reign*, Delhi 1975, 76-103).

Muslims remain the second largest religious group of the town and district, amounting in 1961 to 18% of the Nāgawr District population.

Monuments. Inscriptions from many of the earlier buildings, including one from the time of Muḥammad b. Sām, and several of the Khaldjī and Dandānī periods, are set into the upper walls of the fort. The oldest standing monument, and the finest, is the Buland Darwāza, also known as Darwāza-yi Tārikīn, a gateway leading to the enclosure around the shrine of Shaykh Ḥamīd al-Dīn. An inscription refers to its construction in 733/1333, i.e. in the reign of Muḥammad b. Tughluḳ, but this must refer to a restoration, since the style and the surface decoration are more consonant with the buildings of Shams al-Dīn Iltutmish; a fine Ḳurʾānic inscription above the gateway is in a typical 7th/13th century chancery script. The Shamsī talāʾō, the Shamsī ʿīdgāh and the Shamsī masdjid, in earlier writers attributed to Shams al-Dīn Iltutmish, are in fact rather of Shams Khān Dandānī. The Shamsī masdjid, large and impressive, has a western prayer-hall in the beam-and-bracket style, with five domes (the central now fallen) and two tapering corner turrets resembling those of Lodī buildings, faced by a maḳṣūra-screen of five arches, similar in type to mosques of Gudjarāt. Other mosques of a similar period (Ek mīnār kī masdjid, Sūrī masdjid) are also trabeate, but the Akbarī masdjid of 972/1564-5 is entirely arcuate, in the early Mughal style. There are many small mosques of Mughal reigns up to Awrangzīb in the various *maḥallas* of Nāgawr city.

Bibliography: J. Tod, *Annals and antiquities of Rajasthan*, passim; *Imperial gazetteer of India*², xviii, 298-9; *Rajasthan District gazetteers, Nagaur*, Jaipur 1975. H.B.W. Garrick, *Report of a tour in the Punjab and Rajputana* = *ASI*, xxiii, 1887, 48-72; M.A. Chaghtai, *Nāgaur: a forgotten kingdom*, in *Bull. Deccan Coll. RI*, ii, 1941, 166-83; B.S. Mathur, *Side-lights on the mediaeval history of Nagaur*, in *Procs. Ind. Hist. Cong.*, xxvii, Mysore 1966, 139-44. Many inscriptions have been reported in *EIM* and *Ep. Ind. Ar and Pers. Suppl.*, all now superseded by Mehrdad Shokoohy in *Corpus Inscriptionum Iranicarum*, xlix (Rajasthan I), London 1986, 68-86, and plates 62a-80c, mostly of inscriptions but including some buildings.

NAGIR [see hunza and nagir].

NĀGPUR, the name of a city, district and division of the state of Maharashtra in the Indian Union, formerly in the Central Provinces of British India; the city lies on the Nāg river in lat. 21°10' N. and long. 79°12' E.

The history of this area, which roughly corresponds to Gondwāna, has been profoundly influenced by the long range of the Sātpura hills through which the Burhānpur-Asīrgaŕh gap provided the chief route from Hindustān to the Dakhan. When the Muslim invaders first came into contact with Gondwāna, it contained four independent Gond kingdoms: the northern kingdom of Garhā-Mandlā; two central kingdoms with their capitals at Dēogarh and Khērla respectively; and a southern state with its capital at Čānda. In the reign of Akbar the imperial forces overran the northern kingdom, forcing it to pay tribute, despite the heroic efforts of the Dowager Rānī Durgāvatī. After this, the political predominance of the Gond chiefs shifted to Dēogaŕh which in its turn also suffered from the aggressive schemes of the Mughal emperors. Early in the reign of Awrangzīb, a punitive force under Dilīr Khān entered both Čānda and Dēogaŕh, with the result that, in 1081/1670, the ruler of Dēogaŕh embraced Islam as the price of the restoration of his kingdom (*ʿĀlamgīr-nāma*, 1022-7). Both these states paid tribute to the emperor through

a Muslim agent stationed at Nāgpur in the Islamic period, for the *Pādshāh-nāma* of Lāhawrī describes its capture by Khān Dawrān in 1047/1637 (for a still earlier identification, see Hira Lal, 10).

The most famous ruler of Dēogarh was the converted Gond chief Bakht Buland, who visited the court of Awrangzīb (*Ma'āthir-i ʿālamgīrī*, 273). Because of his contumacious attitude he was replaced by another Muslim Gond named Dīndār (*ibid.*, 340). For some years after this, Bakht Buland remained in imperial service, until, escaping from imperial control, he once more raised the standard of revolt in Dēogaṙh (Khāfī Khān, *Muntakhab al-lubāb*, ii, 461). Although Dēogaṙh was recaptured for a time by Awrangzīb's forces, Bakht Buland remained in open rebellion and was never really subdued. Eventually, under this able ruler the Dēogaṙh state comprised the modern districts of Čhindwāra and Betūl, together with portions of Nāgpur, Seonī, Bhandāra and Bālāghāt. The last important Gond ruler was Čānd Sulṭān who died in 1152/1739. It was he who fixed the capital at Nāgpur, which he converted into a walled town.

Internal dissensions led to the intervention of Raghudjī Bhonsla, who was governing Berār [*q.v.*] on behalf of the Marāṭhā Pēshwā [see MARĀṬHĀS and PĒSHWĀ]. Eventually, in 1743, the Marāṭhā leader took over the administration of the country. By granting a nominal authority to the Gond Rādjā, Burhān Shāh, and his descendants, the Bhonslas possessed a useful pretext for disavowing, when expedient, the rights of the Pēshwā, but in practice reference was usually made to Pūna [*q.v.*] on important matters, such as the succession. Burhān Shāh's descendants continued to occupy the position of state pensioners, and the representative of the family resided at Nāgpur in British Indian times with the title of Rādjā or Sansthānik. Raghudjī's reign witnessed a great influx of Kunbīs and other Marāṭhās into Nāgpur. The treacherous attitude of his successor Djānodjī led to his defeat by the combined forces of the Niẓām of Ḥaydarābād [*q.v.*] and the Pēshwā, and to his acknowledgement of the latter's supremacy.

It was under Raghudjī II that the Nāgpur kingdom attained its greatest extent and included practically the whole of the later Central Provinces and Berār, together with Orissa and certain of the Čutiā Nāgpur states. Unfortunately for the solidarity of his kingdom, he joined forces with Sindhia against the British, and, in 1803, after the battles of Assaye and Argāon, was compelled to subscribe to the treaty of Dēogāon, by which he was deprived of a third of his dominions (Aitchison, i, 415-17). He was succeeded in 1816 by his son, Parsodjī, an imbecile, who was murdered in the following year by the notorious Āppā Ṣāḥib. On the outbreak of war between the British and the Pēshwā in 1817, Āppā Ṣāḥib attacked the British Residency but his troops were defeated in the brilliant action at Sītābaldī. This resulted in the deposition of Āppā Ṣāḥib, who was succeeded by Raghudjī III, on whose death, in 1853, without heirs, natural or adopted, this dependent principality was declared by the Viceroy Lord Dalhousie to have lapsed to the Paramount Power.

The British administered Nāgpur by means of a Commission until the formation of the Central Provinces in 1861. Then after independence in 1947, Nāgpur became the capital of Madhya Pradesh state and then after 1956 the district headquarters of Maharashtra state, alternating with Bombay as the seat of the state legislature. Modern Nāgpur city (population in 1971, 866,144) is a major industrial and commercial centre (especially for textiles and metalworking), situated as it is at the junction of road and rail routes connecting Bombay and Calcutta, Delhi and Madras. It has had a university since 1923 and possesses an institute for Islamic religious studies, the Djamʿiyyat-i ʿArabiyya. The Muslim community includes Bohorā and Khōdja Ismāʿīlīs as well as Sunnīs; the total Muslim population of the Nāgpur District in 1961 amounted to 134,861, almost all Urdu-speaking.

Chatterton, *Story of Gondwana*, 1916; *Nagpur district gazetteer*, Bombay 1966.

(C. Collin Davies*)

NAGYVÁRAD (Ottoman Turkish: *Warād*, *Wārād*, *Warāt*, etc., Romanian: Oradea, German: Großwardein), an important town originally in the Hungarian county of Bihar, part of Transylvania after the creation of this principality, centre of an Ottoman *wilāyet* [*q.v.*] between 1660 and 1692, and today a place of regional significance in Romania with a considerable Hungarian population.

As a fortified place since the 10th century and as seat of a bishop since the 11th century, Várad acquired early importance among Hungarian towns. Partly destroyed by the Mongols in 1241, it flourished again in the 14th and 15th centuries.

After the Battle of Mohács [*q.v.*] in 1526 and especially after the capturing of Buda [see BUDĪN] by the Turks in 1541, the strategic importance of Várad near the Ottoman-Transylvanian border came into the foreground. The fortress was repeatedly strengthened, among others by five huge new bastions, following Italian models, during the 16th century. The place was in Habsburg hands between 1551-7, then it belonged to Transylvania again. The fortification resisted a five-week long Turkish attack in 1598.

Under the 17th-century princes, a remodelling of the inner castle was realised, according to Italian examples again, with a pentagonal structure resulting in a solitary masterpiece of Central European architecture. A new Ottoman siege was feared in 1659, consequently the town itself was also strengthened. This attack, led by the *serdār* [see SARDĀR] Köse ʿAlī Pasha in July-August 1660 was successful in the end, due to two main factors, besides the overwhelming Turkish superiority in numbers: they were able to drain the fosse, and an explosion annihilated most of the defenders' war materials. The terms of surrender were quite mild: beside permission to leave freely, the transportation of the printinghouse, with semi-finished Bible texts, together with the archives of the local chapter was permitted.

After the prince of Transylvania, Ákos Barcsay, was forced to accept the loss of Várad and its dependencies to the Turks (cf. İ. Hakkı Uzunçarşılı, *Barcsay Akos'un Erdel kırallığına ait bazı orijinal vesikalar*, in *Tarih Dergisi*, iv [1952], 62-5) a *wilāyet* was created here. Its first *beglerbegi* [*q.v.*], a certain Sinān Pasha, possessed this place and Adana (!) simultanously (cf. Istanbul, Başbakanlık Arşivi, *Kâmil Kepeci Tasnifi*, 434, f. 7a). The yearly revenue of the *mīrmīrān* [*q.v.*] of Várad amounted to 948, 700 [*penz*] in 1665 (cf. Başbakanlık Arşivi, Tapu defteri, 795, p. 7). The ter-

ritory of the province contained extensive regions east of the Tisza river in the counties of Bihar, Doboka, Közép-Szolnok, Külso-Szolnok, Kraszna, Szabolcs and Szatmár; most of these names were also used as *nāḥiye* denominations by the Turks. Beside the *sandjāḳ* of Várad, a separate *liwā* was established around the castle of Szentjobb (Ottoman: *Senkōb*, Romanian: Sîniob); its *sandjāḳbegi*'s income was usually low: 115, 948 [*penz*] (cf. Tapu defteri, 795, p. 76).

The *tīmār defteri* of 1075/1665 enumerates 6 *khāṣṣ*es, 29 *zi ʿāmet*s and 235 *tīmār*s in the *liwā* of Várad, while 1 *khāṣṣ*, 2 *ziʿāmet*s and 46 *tīmār*s in the *liwā* of Szentjobb (*ibid.*, pp. 3-87). The *wilāyet* probably consisted of two *ḳaḍā*s [*q.v.*], for a *ḳāḍī* [*q.v.*] can be demonstrated in each of Várad and Szentjobb respectively.

The Grand Vizier Köprülü Meḥmed Pasha [*q.v.*] had a large *waḳf* [*q.v.*] here and in the neighbouring *sandjāḳ*s, a rare phenomenon in Ottoman Hungary (published by Imre Karácson, *Török-magyar oklevéltár, 1533-1789* ["A collection of Turkish Hungarian documents"], ed. Thallóczy Lajos, Krcsmárik János and Szekfű Gyula. Budapest 1914, 247-72).

Almost nothing is known about the population of the town itself, except for the sum which they had to pay to the *beglerbegi*, sc. 100,000 [*penz*] (Tapu defteri, 795, p. 7).

Várad was besieged in 1691 and taken on 5 June 1692 by Habsburg forces led by Donathus Heissler.

Várad vára* ("Varadinum. The castle of Várad"), in *Müvészettörténeti Füzetek/Cahiers d'histoire de l'art*, xiii/1-2, Budapest 1982. (G. Dávid)

NAHḌA (A.), a term derived from the Arabic root *n-h-ḍ* which signifies "to rise", "to stand up", with an active perspective, the connotation "to be fit", "to be ready for", which is to be found explicitly in the definition given by the *LA*: *al-nahḍa = al-ṭāḳa wa 'l-ḳuwwa* (*nahḍa* = power and force). The substantive *Nahḍa* is used to designate the rebirth of Arabic literature and thought under Western influence since the second half of the 19th century. It has often been translated by "Renaissance", a problematic translation since it refers implicitly to 16th century Europe and to the movement of return to the Greco-Roman past. In an attempt to avoid the "Euro-centrist" approach, an attitude for which Arabists are frequently criticised, a translation such as "Awakening", although less often used, would be closer to the sense of the root and therefore more satisfactory. It is moreover the title given to the famous statue by the sculptor Mukhtār, situated in the square in front of the Cairo railway station, *Nahḍat Miṣr* "The Awakening of Egypt".

In order to define with greater precision the concept conveyed by the term *Nahḍa*, according to the realities of the Arab world, it would be useful also to analyse the manifestations of this "movement".

The *Nahḍa*, unlike the Renaissance of the 16th century, is not a return to the "classical" heritage. It is not a neo-classicism seeking to revive the models supplied by the past. On the contrary, the past, until recently still a very potent force, was becoming academic and restrictive for the creative imagination. The great reformer Muḥammad ʿAbduh (1849-1905 [*q.v.*]), reacting against this all-too intrusive past, wrote: "Islam deflects us from an exclusive attachment to things inherited from our fathers, it brands as ignorant and narrow-minded those who blindly follow the sayings of the ancestors" (*Risālat al-Tawḥīd*, 1879, quoted by R. Brunschvig, in *Classicisme et déclin culturel de l'histoire de l'Islam*, 37).

Djurdjī Zaydān (1861-1914 [*q.v.*]), in his monumental "Literary History of Arabic Language" *Ta'rīkh adab al-lugha al-ʿarabiyya* (4 vols., Cairo 1914), is the most eminent of the pioneers to speak of *Nahḍa*. He associates this movement with the beneficial contribution of the West to the East, a contribution which he sees as beginning with Bonaparte's invasion (see Introduction to vol. iv).

Among Arabic scholars, Gibb promulgates the concept of *Nahḍa* in his article in *BSOS* (1928), where it is his opinion that the movement began not with Napoleon's Egyptian campaign but only in the second half of the 19th century. It is primarily the literary historians who employ the term. Blachère (in *Classicisme et déclin culturel*, 284) defines the "origins" of the *Nahḍa*: "By its origins, this movement could not be the continuation of literary doctrines tied to a past civilisation. Western influences, the introduction of unknown or barely known genres such as the theatre or the European-style novel, the adoption of poetic formulae approaching symbolism and even going beyond, all these were factors impelling poets, writers, novelists, essayists and critics into new paths where, after some resistance, the public was ultimately to follow them..."

Among historians and Islamic scholars, however, the term *Nahḍa* is seldom used. It does not feature in the indexes of works such as, for example, Albert Hourani's *Arabic thought in the Liberal age, 1878-1939*, Oxford 1962, nor in Montgomery Watt's *Islamic surveys. I. Islamic philosophy and theology*, Edinburgh 1962, where there is reference, at the end of the book, to "New Dawn", but the term *Nahḍa* is not used. It does not appear in *L'Islam au Proche Orient*, Paris 1960, by Jean-Paul Roux, who refers to "reform of Islam" and "modernism" but not to *Nahḍa*, nor in Nadav Safran's *Egypt in search of political community. An analysis of the intellectual and political evolution in Egypt 1804-1952*, Cambridge, Mass. 1961. Even younger orientalists such as Peter Gran (*Islamic roots of capitalism. Egypt 1760-1840*, Austin, Texas 1979), or Charles Wendell, (*The evolution of the Egyptian national image*, Berkeley and Los Angeles 1972), speak of "reformist" Islam, of *umma*, of nationalism and of *waṭan* ("homeland"), but without mentioning the word *Nahḍa*. G. von Grunebaum (*Modern Islam*, Berkeley and Los Angeles 1962) uses the term only once (285) and even then in a very marginal fashion, in a footnote.

The fact is that Islamic scholars are not confronted by the same situation as that which faces literary historians. The movement of reformism and openness, in the religious and political spheres, was the outcome of a previous upsurge of consciousness, the premises of which date back to the 18th century, with Wahhābism. The "reformists" therefore do not reject the principles of the past; on the contrary, they reinforce them. In the 16th, 17th and 18th centuries, the might of the Ottoman empire had suppressed the language and the cultural activities of the "Arab prov-

inces". After Bonaparte's conquest, Egypt regained under Muḥammad ʿAlī [*q.v.*] a *de facto* independence which permitted the diffusion of religious reformism, in association with literary openness, but distinct in its origins. Muḥammad ʿAbduh interpreted the religious law having regard for the needs of his society: he sought to "purge" Islam of the practices of sects which exploited popular credulity. He called for a reform of education and the reformulation of Islamic doctrine in the light of modern thought. Following his lead, Ḳāsim Amīn (1865-1908 [*q.v.*]) campaigned for the "Liberation of women" *Taḥrīr al-marʾa* (1899), and Aḥmad Luṭfī al-Sayyid (1872-1963 [*q.v.*]) for the constitutional solution of political problems, according to the spirit of the early centuries of Islam. Their "reformist" ideas gained many converts in the Arab world (Khayr al-Dīn, 1810-90, or Muḥammad Bayram, 1840-89, in Tunisia, [*q.vv.*]; the Alūsī family in Baghdād; Ṭāhir al-Djazāʾirī, 1851-1920, in Syria; etc.) where the aim was to reconcile traditional and modern areas of knowledge in a spirit of openness to the world, without destroying the values of Islam and Arab identity.

It is paradoxical that, in the wake of the reformists, the *ʿulamāʾ* themselves, as Gibb writes, "contributed to the spread of secularism, for in the Muslim world it was mainly by the influence of the Sufi orders that the tendency to worldliness among the educated classes was counter-acted" (Gibb, *Modern trends in Islam*, Chicago 1947, 51). But, as R. Brunschwig points out, "this (reformist) notion is less revolutionary than the use of such terms could suggest: it avoids any kind of iconoclasm, since it is definitively in the return to the example of the first Muslims or at least to the admirable principles of conduct attributed to them, that essential progress consists" (*Classicisme et déclin culturel*, 38).

This movement of rebirth and awakening, marked by faith in the future and by a deep confidence in the inevitable progress of societies, gave rise, in the mid-19th century, to two complementary manifestations. The one, endogenous, sought an internal revision of the Islamic phenomenon, and this is what is known as "reformism". The other, exogenous, was born out of East-West contact and is correctly defined as *Nahḍa*—a liberation and rejection of the shackles of the past, as well as an advance towards modernism as represented by foreign models.

More or less simultaneously, the *Nahḍa* was marked by various manifestations. For purposes of clarity, these will be examined successively, but in fact they are closely intermingled, in itself a characteristic feature of the movement.

(1) The *Nahḍa* restored with the West a dialogue in which one of the two participants, technically still less advanced than the other, recognised this situation and the need to rectify it. This was a dialogue of hope, with the confidence that technical, scientific and cultural progress would provide the means of emergence from darkness and ignorance. If the beginning of the movement may be dated in the 19th century, with the dispatch of students to educational establishments in Europe and other efforts at modernisation on the part of Muḥammad ʿAlī and later the Khedive Ismāʿīl, its end may be seen in the aftermath of the First World War, when foreign occupation, maintained in the majority of Arab countries, destroyed the hopes of liberty which had previously accompanied the dialogue, giving rise instead to feelings of frustration and rejection.

(2) The *Nahḍa* was nourished, from the outset, by translations of foreign works, technical and scientific at first, soon to be followed by dramatic and fictional pieces. The translations of drama and fiction were usually very free adaptations, tailored to accord with Arab usages; translators had no qualms about altering names, speeches and attitudes of the original characters and versifying the text, to the extent of making Hamlet sing in Shakespeare's play [see MASRAḤ. 1. In the Arab East]. The school of translation of Rifāʿa Rāfiʿ al-Ṭahṭāwī (1801-73 [*q.v.*]) had produced more than 2,000 scientific translations, paying meticulous attention to the need for accuracy. But the movement which ensued in the literary sphere developed liberties which al-Ṭahṭāwī himself used to advantage in his "translation" of Fénelon's *Télémaque*; similarly, Muḥammad ʿUthmān Djalāl [*q.v.*] felt free to use dialect in the adaptation of numerous French books (*Paul et Virginie*, the *Fables* of La Fontaine, the plays of Molière). Al-Manfalūṭī even adapted texts without any knowledge of the original language, working from translations dictated to him by a reader.

(3) The *Nahḍa* is also, in the history of modern Arab culture, the period marked by the appearance of those who have been dubbed "pioneers" (*ruwwād*), without the pejorative connotation applied at other times to innovators. In the realm of literary creation, they showed themselves particularly revolutionary in introducing genres hitherto unknown to the Arabs, such as the theatre, the short story, the novel, inspired by the large number of adaptations. They also overturned the norms of composition by no longer giving priority to mediaeval rhetoric; in this they were helped by the journalists of the nascent press, who accelerated the process of liberation of the language, impelled by the demands of the contemporary information to which newspapers were obliged to give precedence (cf. N. Tomiche, *Remarques sur la langue*, in *L'Égypte au XIX s.*).

For these "pioneers" there then arose the problem of the antithesis between *aṣāla* "authenticity" and *ḥadātha* "modernity". From 1819 onward and until the beginning of the 20th century, a number of writers, Syrians in the main, undertook a campaign of resistance to what was considered the excessive modernisation of the language and of literary genres. Philologists, encyclopaedists and essayists were at pains to restore "purity". The Bustānīs [*q.v.*; one of whom, Buṭrus al-Bustānī, 1819-82, edited the first Arabic encyclopedia, *Dāʾirat al-maʿārif*], the Yāzidjīs (including Nāṣīf al-Yāzidjī, author of *maḳāmāt*, of poems inspired by al-Mutanabbī, of treatises on grammar, rhetoric, etc.) demanded the cultivation of "elegant" language and literary forms, in other words, purged of Turkish, dialectal or western influences, but also adapted to contemporary civilisation.

This was an intermediate period, the time of the "almost-novel" *kitāb yakād yakūn ḳiṣṣa*, to borrow a felicitous expression of Mārūn ʿAbbūd (*Ruwwād*, 131). Compositions still retained the memory of works of the past, for the purist pioneers, or were designed as imitations of Sir Walter Scott, of Dumas Père et Fils and of moving melodramas, for the modernists. The First World War, with the *Zaynab* of Muḥammad Ḥusayn Haykal [*q.v.*], inspired by the daily life of his society and by personal experience, was to mark the end of this stage of imitation and a return to authenticity.

The "pre-*Zaynab*" period is thus characterised by the existence of two groups of works which represent, in the one case, the continuation of genres such as the *maḳāma* or the *riḥla* (account of a journey) and, in the other, a "renewal" animated by moralising or philosophical novels, by the genre of the historical or melodramatic novel.

In the first group, suitable examples are the *Takhlīṣ*

al-ibrīz fī talkhīṣ Bārīz by Rifāʿa Rāfiʿ al-Ṭahṭāwī, published in 1834, the *Kitāb al-Sāḳ ʿalā 'l-sāḳ fī mā huwa 'l-Fāryāḳ* by Fāris al-Shidyāḳ (1804-87 [*q.v.*]), published in Paris in 1855, and the *Ḥadīth ʿĪsā b. Hishām* by Muḥammad al-Muwayliḥī (1868-1930 [*q.v.*]), which appeared in serial form in *Miṣbāḥ al-Sharḳ* from 1898 onwards. These works present some common characteristics: they belong to the genre of the *riḥla* in simple (al-Ṭahṭāwī) or rhymed prose. These journeys conduct the reader abroad or to places in his own country, in Egypt (al-Muwayliḥī) with the object of showing him practices and customs both elsewhere and "at home" (as in the case of the resurrected Pasha in the *Ḥadīth ʿĪsā b. Hishām*, a witness from a bygone age). The characters of this human comedy are paraded in such a manner as to allow an implicit social critique, a caricature of the various established systems of education, law, finance, etc. But these "almost novels" lack consistency in plot, in structure of characters and in progression towards a "denouement". They are marred by an element which was to become increasingly important in literature, this being the description of the woman, depicted in all three works as demanding and imperious or sensual and lascivious, and seldom as agreeable and human.

The works of the second group are inspired by adaptations and translations. Numerous examples are supplied by prolific authors such as Salīm al-Bustānī (d. 1884) who produced historical serial-novels (*Zanūbiyyā* "Zenobia", appearing in *al-Djinān*, 1871, *al-Hiyām fī futūḥ al-Shām*, in *Djinān*, 1874) and melodramas (*Asmā*, in *Djinān*, 1873), or Djurdjī Zaydān (*Istibdād al-mamālīk*, in *al-Hilāl*, 1892). Faraḥ Anṭūn (1874-1922 [*q.v.*]) was particularly disposed towards philosophical novels; Djubrān Khalīl Djubrān (1883-1931 [*q.v.*]) was a novelist and poet, moralist and visionary (*al-Adjniḥa al-mutakassira*, New York 1912).

In this second group, in which it may be noted that the most representative examples are supplied by Christians, the novels are distinguished, "in the western manner", by a progression of the action towards a climax and a conclusion, in a framework, with characters and problems relevant to the society of the author. Under the influence of reformist ideas and European novels, the image of the woman is softened. She often appears as a victim of male society or as a person of wisdom, intelligence and goodwill.

The protagonists of these novels challenge the despotism of political or religious leaders, but they retain hope in the civilising potential of knowledge and rational thought.

The novel thus creates dualist worlds where the Good are in conflict with the Bad. It is then shackled by the manifestly moralising intention of the author, his vision of the grandeur of the Arab past, of the danger of over-servile imitations of "western-style" life, of pretence, of ignorance, of ambition, of snobbery, etc. (cf. N. Tomiche, *Naissance et avatars du roman arabe avant Zaynab*, in *Annales Islamologiques*, xvi [1980]).

(4) The press was to play an essential role; the *Nahḍa* is distinguished by the development of a vocabulary of nationalist sentiment. From the beginning of the 19th century, the revolt against Ottoman policies, against the political order, was a factor of renewal, in Egypt as in Syria, in ʿIrāḳ or Tunisia. Attachment to the "homeland", to the "nation", even beyond the Arab and Muslim past, dates back to the Pharaohs, the Phoenicians and the Hittites. This nationalism evolved in proportion to the increasing exploitation of the Arab lands by Europe, after the collapse of Turkey.

The new philosophical, ideological, political, social and economic ideas lacked a suitable vocabulary for their expression. It is in this respect that the press was to contribute significantly to the forging of a language capable of stating new ideas by the re-use of ancient words or by direct borrowings (*oyl, naft, zayt* for "oil", *waṭan* for "homeland", *duwalī*, instead of *dawlī*, becoming "international"), by the manufacture of words with affixes (*lā-nihāya* "infinite"). The press transformed the language still more profoundly with the introduction of a more clearly defined tense system (in addition to the existing concepts of perfect and imperfect aspects) by means of the intensive use of composite verbs. It made syntax more flexible through the further development of the relative clause and other grammatical forms borrowed from Arabic dialects or from foreign languages. This evolution proceeded gradually, in such a way as to circumvent the obstacle of the purists. Hypocritically, the press denounced its own "faults" in articles intitled: "Say... and do not say..." *Ḳul... wa-lā taḳul...* It continued to use flowery rhetorical figures of speech in the analysis of social and political problems, and even rhymed prose, so that the tradition and the innovation were simultaneously exposed. But the pastiche twisted the traditional formulas and clichés in such a way as to infuse them with new meaning.

Thus, progressively, the press became the principal forum of innovation. Being open to political and social essays and even to popular science, to information received from abroad as well as to serial fiction, short stories and theatrical articles, it contributed to the development of vocabularies suitable for these various manifestations of culture. It was all the more audacious in that it was edited, in most cases, by novelists, playwrights and adaptors impatient for change.

Besides the weekly official journal published from 1828 onwards under the title *al-Waḳāʾiʿ al-miṣriyya* and edited by al-Ṭahṭāwī from 1842, a non-governmental press, often created by Syro-Lebanese expatriates in Egypte, developed very polemical attitudes. *Wādī 'l-Nīl* (1866) entered into a vigorous debate with *al-Djawāʾib*, which had been edited in Istanbul by Aḥmad Fāris Shidyāḳ since 1860. The weekly *Nuzhat al-afkār* (1869), was directed by Ibrāhīm al-Muwayliḥī and ʿUthmān Djalāl, in other words by a writer-novelist and a much-respected translator.

It was most of all during the decade of the 1870s and thereafter that the organs of the press proliferated and became decisive in the liberating effort of the *Nahḍa*. The first important periodical, *al-Djinān*. edited by Buṭrus al-Bustānī, appeared from 1870 to 1886, at which date it was forced to cease publication under the censorship of ʿAbd al-Ḥamīd II, and published a considerable number of novels and short stories, many of them owed to Salīm and Saʿīd al-Bustānī. *Al-Muḳtaṭaf*, founded by Yaʿḳūb Ṣarrūf (1839-1912), playwright and novelist, and Fāris Nimr (1859-1951 [*q.v.*]) in Beirut in 1876, was transferred in 1884 to Cairo, where the two men founded, in 1889, the daily *al-Muḳaṭṭam*. *Al-Ahrām*, founded by Bishāra and Salīm Taḳlā, a periodical transferred from Beirut to Alexandria in 1875, became a daily newspaper in Cairo in 1882 and has continued to exist to the present day. With *Abū Naḍḍāra zarḳāʾ*, Yaʿḳūb Ṣanūʿ launched the genre of the satirical press. Adīb Isḥāḳ founded *Miṣr* (1877) and, with Salīm al-Naḳḳāsh, *al-Tidjāra* in 1878. *Al-Hilāl*, founded in Cairo in 1892 by Djurdjī Zaydān, continues to appear today. The whole of this press was nationalist, reformist and very "literary". It disseminated the utterances of the thinkers, writers and novelists who

were bringing into being new approaches to life and thought.

(5) This period also saw the emergence of a new kind of public, which gradually proved to be the sole patron of the writers, supplying them with paying readers of the organs of the press and of edited works. This public consisted then of a majority of men, but there was also a relatively high percentage of women, who had a particular liking for romantic literature. It was for their benefit that there was a proliferation of works characterised by eponymous heroines and serialised romances that further boosted the circulation of newspapers: *Dhāt al-khiḍr* (1884) by Saʿīd al-Bustānī; *Ẓabyat al-bān* (1890) by Aḥmad al-Ṣarrāf; *Ghādat djabal Anāṣiyā* (1897) by Aḥmad Saʿīd Baghdādī; *ʿAdhrāʾ al-Hind* (1897) by Aḥmad Shawḳī; *Ghādat al-Andalus* (1899) by ʿAbd al-Raḥmān Ismāʿīl; *al-Fatāt al-rīfiyya* (1905) by Maḥmūd Khayrat; *Fatāt Miṣr* (1905) by Yaʿḳūb Ṣarrūf; *Ḥawwāʾ al-djadīda* (1906) by Niḳūlā Ḥaddād; *ʿAdhrāʾ Dinshiwāy* (1906) by Maḥmūd Ṭāhir Ḥaḳḳī.

At the turn of the 20th century there also appeared female magazine editors and novelists: Hind Nawfal founded *al-Fatāt* (1892), Maryam Mazhar, *al-Ḥasnāʾ* (1896), Alexandra Afrīnūh, *Anīs al-djālis* (1898), Labība Hāshim, *Fatāt al-Sharḳ* (1906); to these names may be added those of short story writers, essayists and novelists such as Marie Anṭūn Ḥaddād, Malak Ḥifnī Nāṣif [*q.v.*] and ʿĀʾisha al-Taymūriyya.

This public could be formed at an early age, from school-days, although it must be remembered that only privileged children had access to schools. Mārūn ʿAbbūd relates (*Ruwwād*, 122) that in 1900, his teacher encouraged the pupils to read *al-Durar* by Adīb Isḥāḳ, *Kanz al-raghāʾib* by Aḥmad Fāris al-Shidyāḳ, *Ghābat al-haḳḳ* and *Mashhad al-aḥwāl* by Francis Marrāsh [*q.v.*]. Labība Hāshim's magazine *Fatāt al-Sharḳ*, which appeared from 1906 until the eve of the Second World War, with an interval during the years of the First World War, was disseminated in girls' schools by the national education authorities of Egypt, Lebanon, Syria and ʿIrāḳ.

But the *Nahḍa* bore within itself the seeds of its own dissolution. Aroused by foreign ideological movements, it evolved nationalist and anti-colonialist concepts which inspired a defiant attitude towards the Western powers. The pen and politics were then often seen as mutually complementary, as in the case of Maḥmūd Sāmī al-Bārūdī (1839-1904 [*q.v.*]), an eminent poet but also a nationalist minister, exiled to Ceylon for more than seventeen years (1882-1900), after ʿUrābī's insurrection and the occupation of Egypt by the British.

Beyond doubt, the *Nahḍa* had instigated a profound change in patterns of thinking. It had loosened the attachment of Arab societies to traditions reckoned inappropriate to modern civilisation and to the achievements of science and medicine. It had disseminated notions of liberty, of respect for the individual, of constitutional democracy. But the foreign source of this evolution and of these achievements remained painfully obvious, the more so as intellectuals, ideologues and political theorists proved themselves incapable of founding a coherent system, Arab or Muslim, of ideas conforming to modernity. Recourse to European concepts, in societies outraged by colonialist aggression, became increasingly intolerable. In the aftermath of the First World War, the *Nahḍa* lost one of its essential elements: it lost the hope (not so long before, still a certainty) of constructing a future combining the best features of the European present and of the Arab past. The victory of the western Allies was followed by the imposition of mandates [*q.v.*] and various colonialist arrangments. The West discovered then (and is continuing to discover) with amazement that peoples whose national dignity had been injured will turn to their cultural and religious heritage, however mediaeval and obscurantist this may be, and find there the words and the weapons to express its anger.

(N. TOMICHE)

NAHDJ AL-BALĀGHA ("The Way of Eloquence") is an anthology of dissertations, letters, testimonials and sententious opinions, traditionally attributed to ʿAlī b. Abī Ṭālib (d. 40/661 [*q.v.*]).

The authorship of this work has been an issue attended by constant and lively polemic, from the Middle Ages to the present.

Ibn Khallikān (d. 681/1283 [*q.v.*]) seems to have been the first to raise doubts concerning the *Nahdj*. "It is not known," he writes, "which of the two brothers, al-Raḍī (d. 406/1015 [*q.v.*]) or al-Murtaḍā (d. 436/1044 [*q.v.*]) put together this work. Some assume that the compiler would also be its author, but that he would have attributed it to ʿAli" (*Wafayāt*, Beirut 1968-78, iii, 313).

The majority of later writers, beginning with al-Dhahabī (d. 748/1348 [*q.v.*]; *Mīzān al-iʿtidāl*, Beirut 1963, iii, 124), continuing with Ḥadjdji Khalīfa (d. 1067/1657 [*q.v.*]; *Kashf al-ẓunūn*, Tehran 1947, ii, 1991), and concluding with Brockelmann (I, 405, S I, 704 f.), have in their turn revived these suspicions.

Misled by the surname *al-Murtaḍā* ("the one accepted by God"), which appears on the frontispiece of the ms. of the *Nahdj* in the B.N. (no. 2423, fol. 2b), de Slane concluded that the reference could be to al-Sharīf al-Murtaḍā. He also attributes the work to the latter (*Cat. des mss. arabes B.N.*, Paris 1895, 425; cf. Veccia Vaglieri, *Sul* Nahǧ al-balāġa *e sul suo compilatore al-Raḍī*, in *AIUON*, viii [1958], 13 f.)

However, al-Murtaḍā is a surname often used to designate ʿAlī, not only among the Shīʿīs but also among the Sunnīs (cf. Ibn Abi 'l-Ḥadīd, *ʿAlawiyyāt*, Beirut 1972, 137 and *Sharḥ Nahdj al-balāgha*, Cairo 1962-7, xi, 120; Ibn Arabī, *La Profession de foi*, tr. R. Deladrière, Paris 1985, 209.).

Furthermore, it is stated explicitly, at the end of the ms., that this is a collection of the sayings of ʿAlī (*kitāb*

Nahdj al-balāgha min kalām... ʿAlī b. Abī Ṭālib; B.N. fol. 351b). Also to be found here is a biographical notice devoted to al-Raḍī, in the role of compiler, followed by another relating to ʿAlī and his "marvels" (ms. B.N., fol. 1a).

The Muʿtazilī Ibn Abi 'l-Ḥadīd (d. 656/1258 [*q.v.*]) has no doubts as to the authenticity of the work. For him, in fact, it is a work of ʿAlī, compiled by al-Raḍī (*Sharḥ*, x, 128 f.). The Shīʿīs, ancient as well as modern, are unanimous in this regard. According to them, the work is of undoubted authenticity. Furthermore, all mss. of the *Nahdj*, in the East as in the West, attribute the book to ʿAlī and the compilation to al-Raḍī (for a list of the mss., see Brockelmann, I, 405, S I, 705).

It is undeniable—as has been shown by Laura Veccia Vaglieri (*op. cit.*, 1-24)—that a large portion of the *Nahdj* could indeed be attributed to ʿAlī, especially certain historical and panegyrical passages, although it is difficult to ascertain the authenticity of the more apocryphal sections. In fact, numerous authors, long before the time of al-Raḍī, had related the sermons of ʿAlī. The compiler himself specifies certain of his sources, in particular the *Djamal* of al-Wāḳidī (d. 207/823; *Nahdj*, iii, 149), the *Bayān* of al-Djāḥiẓ (d. 255/869; *op. cit.*, ii, 76) and the *Taʾrīkh* of al-Ṭabarī (d. 310/923; *op. cit.*, iii, 243). Other collections of homilies of ʿAlī, previous to the *Nahdj*, were also compiled, such as the *Khuṭab ʿAlī* by Ibn al-Kalbī (d. 204/819; Ibn al-Nadīm, *Fihrist*, 96; al-Ṭūsī, *Fihrist*, Nadjaf 1961, 37), the *Khuṭab ʿAlī wa-kutubuh ilā ʿummālih* by al-Madāʾinī (d. 255/840; Ibn al-Nadīm, *op. cit.*, 27; Yāḳūt, *Irshād*, Cairo 1928, v, 315), etc. (cf. Ḥusaynī, *Maṣādir Nahdj al-balāgha*, Nadjaf 1968, i, 48-92).

Moreover, it has been possible to identify a considerable number of passages, accompanied by complete *isnāds* dating back to the time of ʿAlī. These texts have been recounted by ancient scholars of repute such as al-Ṭabarī (d. 310/923), al-Masʿūdī, al-Djāḥiẓ and many others (cf. Djebli, *Encore à propos de l'authenticité du Nahdj al-balāgha*, in *SI*, lxxv (1992), 33-56.

As for the compilation of this book, it is most likely the work of al-Raḍī. In three of his works, the latter refers to the *Nahdj*: *Ḥaḳāʾiḳ al-taʾwīl* (Nadjaf, undated, v, 167), *al-Madjāzāt al-nabawiyya* (Cairo 1971, 59, 140, 171) and *Khaṣāʾiṣ al-aʾimma* (Nadjaf 1949, 87). On the other hand, the compiler evokes, in the *Nahdj*, these latter two writings (i, 254, and ii, 263, respectively).

Whatever the case may be, the *Nahdj al-balāgha* is one of the great masterpieces of Arabic literature. Through the centuries, it has gained considerable admiration.

As its title reliably indicates and in accordance with the aspiration of its compiler, this book asserts the "joys of the Arabic language" (*Nahdj*, i, 2). The powerful assonance of its prose, its sometimes studied rhetoric, its remarkable eloquence, its gripping images, its sober, unpolished and relatively obscure mode of expression, Bedouin wisdom and sensibility blended with Islamic delicacy and vision—all of these constitute the literary worth of the *Nahdj*. This is supplemented by further values, moral and social. In fact, this book has a tireless appeal, full of fervour and sincerity, on behalf of faith in God and in His Prophet, of piety, of integrity, of justice and of rising above the vanities of this world.

Since its first appearance, the *Nahdj* has been the object of a considerable corpus of commentaries, translations and studies, some 210 titles, according to Ḥ. al-ʿĀmilī in his *Shurūḥ Nahdj al-balāgha*, Beirut 1983. The *Nahdj al-balāgha* has been edited on numerous occasions with, in particular, the annotations of Muḥammad ʿAbduh, Beirut 1885, Cairo 1903, 1910, and of al-Marṣafī, 1925. Subḥī al-Ṣāliḥ has published it recently, with a glossary and a wide-ranging index (pp. 560-853), Beirut 1983.

Translations are numerous, particularly in Persian, such as the *Sharḥ Nahdj al-balāgha* of ʿA. Fayḍ al-Islām (bilingual ed., 2 vols., Tehran 1947; cf. Ḥusaynī, *op. cit.*, i, 315-66), in English, including that of ʿA. Razā, *Nahdj al-balāgha: selection from sermons, letters and sayings of ʿAli*, Tehran 1980, and in French, in a partial bilingual edition, *La Voie de l'éloquence*, by ʿA. Abu 'l-Nadjā and others, published Beirut 1986.

Among the commentaries, that of Ibn Abi 'l-Ḥadīd remains the most important. With its eight volumes, this monumental book is a truly encyclopaedic work, a literary as well as a scholarly achievement (for the other commentaries, see Brockelmann; Ḥusaynī, *op. cit.*, 247-314; Ḥ. al-ʿĀmilī, *op. cit.*, 35-106.)

(M. DJEBLI)

AL-**NAḤḤĀS**, MUṢṬAFĀ (1879-1965), Egyptian statesman. Of peasant background, he studied law at Cairo University after which he went into practice. For several years he sat as a judge but he was quickly drawn into politics, particularly during the growing anti-British agitation in Egypt in 1919. He became Saʿd Zaghlūl's [*q.v.*] first lieutenant in the newly formed Wafd party and went with him into his second term of exile in the Seychelles. He was elected member of Parliament in 1924 on his return and took over leadership of the Wafd when Zaghlūl died in 1927. From then on he was at the centre of Egyptian politics, often in office, fighting a relentless battle against the British presence. He also led a constant struggle for influence against King Fārūḳ [*q.v.* in Suppl.] and the other Egyptian politicians.

As leader of the Wafd he had certain advantages—he claimed that the Wafd was the Egyptian people—

and in free elections he usually gained a large majority. In 1936 he led the party to victory, formed a government and headed the all-party delegation which negotiated the Anglo-Egyptian treaty which gave the country nominal independence. In 1937 disputes between himself and Fārūḳ led to his dismissal and the Wafd was beaten in rigged elections in 1938. The previous year, Naḥḥās had been shot and wounded by the Royalist greenshirts, a fascist-type organisation.

During the Second World War, the British authorities became worried by the increasingly pro-Axis attitudes of the Egyptian government, when the British ambassador, Sir Miles Lampson, made his famous démarche in February 1942 forcing Fārūḳ to dismiss the government and appoint Naḥḥās prime minister. This by no means meant that Naḥḥās was pro-British, but he stood firm during the advance of Rommel towards Alexandria. The reputation of the Wafd was somewhat in decline, however, being seen as having been put in power by the British, accused of corruption and inefficiency and suffering from the autocratic methods of Naḥḥās and the baleful influence of his wife. As long as Lampson was there he was safe, but during his absence abroad Fārūḳ took the opportunity to dismiss Naḥḥās in October 1944.

He moved into opposition with a virulent anti-British campaign which Fārūḳ did nothing to hinder. In the elections of January 1950, the Wafd was once again returned to power and Naḥḥās immediately demanded the withdrawal of the British and the unification of Egypt and the Sudan. As he made no progress in negotiations, he unilaterally abrogated the 1936 Treaty and declared a state of emergency. A period of great tension with Britain ensued, culminating in the burning of Cairo on Black Saturday in January 1952. Naḥḥās proclaimed martial law and appointed himself military governor. The next day Fārūḳ yet again dismissed the Wafd.

Naḥḥās was in Europe when the Free Officers executed their coup in July 1952. He flew back in the belief that the Wafd was to be restored to power. It was too late. The time for cooperation between the ageing, rather discredited politician and the dynamic young officers was past. The Wafd was compelled to dismiss him from its leadership and his wife was tried on charges of corruption, was heavily fined and her property confiscated. Naḥḥās was deprived of his civil and political rights until 1960.

He took no further part in Egyptian political life. If the Wafd was the people, Naḥḥās as its leader was to a certain extent the embodiment of the leadership of the people. He was the natural leader of the majority, the majority which the Wafd considered its inherited right. He was a popular figure in Egypt, valued for his contributions to the struggle for independence, and his funeral in 1965 was the occasion for a large, sympathetic demonstration.

(D. HOPWOOD)

NAḤĪFĪ, SÜLEYMĀN, an Ottoman poet and translator who lived in Istanbul in the second half of the 11th/17th and first half of the 12th/18th centuries. After having learned the art of calligraphy from the distinguished penman Ḥāfiẓ ʿOthmān (d. 1111/1699-1700; cf. *Sidjill-i ʿOthmānī*, iii, 421-2), he became a junior clerk at a public office (sc. the *yeñi-čeri ḳalemi*). In 1109/1697 he went to Persia as secretary in the suite of the ambassador Meḥmed Pasha (cf. *SʿO*, iv, 210, and F.R. Unat, *Osmanlı sefirleri ve sefaretnameleri*, Ankara 1968, 11, 18, 241). After his return he became the head clerk (*dīwān efendisi*) of Dāmād ʿAlī Pasha [see ʿALĪ PASHA, DĀMĀD]. In 1131/1719 he went to Vienna in the suite of the ambassador Ibrāhīm Pasha (cf. *SʿO*, i, 120; Unat, *op. cit.*, 52-3), and upon his return was rewarded for his services with the appointment to head an office of revenue accountancy (sc. the *bash-muḳāṭaʿadjīlīk*). Finally, in Djumādā II 1138/beg. 4 February 1726, he was granted one of the highest positions in the Treasury (*defterdār-ī shiḳḳ-ī thānī*). He died in 1151/1739-9 (as the chronogram on his tombstone is reported to attest: *Bu Süleymān Naḥīfī rūḥīna el-Fātiḥa*) and was buried outside Ṭopḳapî in Istanbul.

Naḥīfī made a name for himself both as a translator and a poet. His Turkish *Dīwān* contains mainly *ghazels* in the so-called *ʿāshiḳāne* style which captivate through their affectionate tone. In addition to this *Dīwān*, he composed a series of *naʿts* on Muḥammad bearing the title *Ḥilyet el-enwār* as well as poems about the Prophet's birth (*mawlid*), the *hidjra* and the miraculous journey (*miʿrādj*). Also well-known is a *takhmīs* in Arabic, Persian and Turkish on the celebrated Arabic poem by al-Būṣīrī [*q.v.*] entitled *al-Kawākib al-durriyya fī madḥ khayr al-bariyya* (which came to bear the name *al-Burda*); this *takhmīs* was printed in Istanbul in 1297 under the title *Takhmīs-i Ḳaṣīde-yi Bürde*. Other *takhmīs* of his are on the Arabic *ḳaṣīda* called *Bānat Suʿād* by Kaʿb b. Zuhayr [*q.v.*] (which also came to be known by the name *al-Burda*) and on three Persian *naʿts* by Djāmī [*q.v.*]. The work on which his reputation is mainly based, however, is his masterly translation in verse form of the *Methnewī of* Djalāl al-Dīn Rūmī [*q.v.*]. This is a literal rendering in which he preserved the form and metre of the original. It was printed in 1268 in Būlāḳ and in 1962 in Istanbul.

(E.G. AMBROS)

AL-**NAHĪKĪ**, a *nisba* referring to a number of scholars of the Al Nahīk in al-Kūfa. The best known is ʿAbd Allāh b. Muḥammad, a member of the extremist Muḥammadiyya [*q.v.*] sect. ʿUbayd Allāh b. Sulaymān b. Wahb, who was al-Muʿtaḍid's vizier between 279/892 and 288/901, appointed him, in recognition of past services, to the influential post of *ʿāmil* (director of taxes) of the Bādūrayā [*q.v.*] district south-west of Baghdād. Two years later he was dismissed after being accused by the Banu 'l-Furāt of embezzlement (al-Tanūkhī, *Nishwār al-muḥāḍara*, viii, Damascus 1348/1930, 16-18; Hilāl al-Ṣābiʾ, *Taʾrīkh al-Wuzarāʾ*, ed. H.F. Amedroz, Beirut 1904, 76-7). Both he and another member of the Muḥammadiyya, al-Fayyāḍ b. ʿAlī b. Muḥammad b. al-Fayyāḍ (executed under al-Muʿtaḍid, *r.* 279-89/892-902), wrote works refuting the *K. al-Ṣirāṭ* of Isḥāḳ b. Muḥammad al-Nakhaʿī al-Aḥmar al-Kūfī (d. 286/899) of the ʿAlyāʾiyya (or ʿAyniyya) sect. Al-Fayyāḍ's work is entitled *al-Ḳisṭās*; the title of al-Nahīkī's work is not recorded (al-Masʿūdī, *Murūdj*, ed. Pellat, ii, 258, § 1135; Ibn Ḥazm, *al-Fiṣal fī 'l-*

milal wa 'l-ahwā' wa 'l-niḥal, ed. M.I. Nuṣayr and ʿA. ʿUmayra, Beirut 1405/1985, v, 47; for "al-B-h-n-kī" read "al-Nahīkī"). Neither text is extant.

Two other members of the family are : (1) Abu 'l-ʿAbbās ʿUbayd Allāh (or ʿAbd Allāh) b. Aḥmad b. Nahīk al-Nakhaʿī (*fl.* mid-3rd/9th century), who is credited with a *K. al-Nawādir* (al-Nadjāshī, *Ridjāl*, ed. al-Zandjānī, Ḳumm 1407, 232 no. 615; cf. al-Ṭūsī, *Fihrist*, Beirut 1403/1983, 133 no. 448; Ibn Shahrāshūb, *Maʿālim al-ʿulamā'*, Nadjaf 1380/1961, 75 no. 501) and who transmitted many uṣūl works to Ḥumayd b. Ziyād (d. 310/922-3) (al-Ṭūsī, *Ridjāl*, Nadjaf 1381/1961, 480; cf. Kohlberg, in *JSAI*, x [1987], 133-4). Al-Nahīkī is apparently to be distinguished from his namesake, the Imāmī Shīʿī scholar of Kūfa ʿAbd Allāh b. Muḥammad, whom al-Nadjāshī regards as trustworthy (*thiḳa*) (*Ridjāl*, 225 no. 605) and who appears in the *isnād* of some traditions in al-Kulaynī's *al-Kāfī*. (2) ʿAbd al-Raḥmān b. Aḥmad Daḥmān (or Duḥām), who was suspected of extremist tendencies (al-Ardabīlī, *Djāmiʿ al-ruwāt*, Ḳumm 1403, i, 446).

(E. Kohlberg)

NĀḤIYE (A. *nāḥiya* "district, vicinity"), an administrative term of the Ottoman empire. It is found as a general term for the subdivisions of a *wilāyet* or province as early as the 9th/15th century, but only later becomes a specific term for the rural subdivision of a *ḳaḍā'* [*q.v.*] or *ḳażā*; this latter term may be compared with the French *arrondissement* and is governed by a *ḳā'im-maḳām* [*q.v.*], while the *nāḥiye* is under a *mudīr*. This official, who used to be appointed by the *wālī*, the governor of the province, received his instructions from the *ḳā'im-maḳām*, to whom he was subordinate. The subdivisions of the *nāḥiye* are called *ḳarye*, i.e. village. Usage of the term has carried on into the Turkish Republic with the *nāḥiye* as a subdivision of the *ilçe* or district.

Bibliography: V. Cuinet, *La Turquie d'Asie*, Paris 1892-5, i, p. v; *İA*, art. *Nâhiye* (M. Tayyib Gökbilgin). (F. Babinger*)

NAḤL (A.), a singular noun with the value of a collective (sing. *naḥla*) designating domestic or social bees (apid family) (Pers. *naḥl*, Turk. *arı*, Kabyle *thizizwa*, Tamahaḳ *ehenkeker en turawet*, pl. *ihenkukar*) with the species *Apis mellifera/mellifica* in Europe and North Africa and *Apis fasciata* in Egypt and the Near East.

One cannot trace here the primordial economic role that, thanks to honey, bees have played in man's nutrition since prehistoric times. The sedentary populations of the mountainous and wooded zones of the Mediterranean rim, following the example of the Greeks, very soon domesticated the bee and organised bee-keeping (*niḥāla, tarbiyat al-naḥl*, Turk. *arıcılık*) quickly took its place among agricultural activities, successfully taking over from the hazardous collection of wild honey.

With Islam, the bee's beneficial nature for humanity was clearly described in sūra XVI of the Ḳur'ān entitled precisely *al-Naḥl* "the Bees" and in which it is stated (verses 68-9): "Your Lord has revealed to the bees: Establish your dwellings in the mountains, in the trees and in the places built by men, then eat all the fruits. Follow meekly in that way the paths of your Lord./From the bodies of the bees comes forth a drink of various hues which is a healing for men". The Prophet Muḥammad confirmed this divine protection on several occasions; according to one of his *ḥadīths*, "Every fly is destined for hellfire, except the bee". He said further, "Among the small creatures, there are four that should not be killed: the ant (*namla*), the bee (*naḥla*), the shrike (*ṣurad*) and the hoopoe (*hudhud*)". Finally, speaking of honey, he declared, "For you [Muslims] there are two remedies: the Ḳur'ān and honey". Besides, among the paradisial delicacies reserved for the elect are promised "Rivers of purified honey (*anhār min ʿasal muṣaffā*)", XLVII, 15). Several other maxims of the Prophet give the bee as a model to follow for every Muslim, as much in his private life as in the heart of the community; after the fashion of the industrious insect, all his acts will aspire to the good and the beautiful and reject the bad and the ugly. The physiological process of making honey (*al-ary*) in the body of the bee staying unexplained among the scholars of Antiquity, the Muslims saw in it a clear sign of divine intervention beyond human comprehension.

On the scientific level, it must be noted that the Arabic-speaking naturalists who spoke of the bees, such as al-Djāḥiẓ (3rd/9th century), al-Ḳazwīnī (7th/13th century) merely reproduced what had been said by Aristotle (*History of animals*, Fr. tr. J. Tricot, Paris 1957, i, 341-9, ii, 655-73) and then the poet Virgil (*Georgics*, Book iv) and Pliny the Elder (*Historia naturalis*, Book ix), and they add nothing new. Despite this, we find, in the 4th/10th century, an excellent synthesis of all that was known until then about bees in one of the *Epistles* of the Ikhwān al-Ṣafā' [*q.v.*] in which (*Rasā'il*, Beirut 1957, ii, 201 f.) the representative of the bee race makes a vibrant indictment of man who, in every age, has exploited for his own profit the hard work of his fellow bees. Later, it is the authors of treatises on agronomy who, in applied zoology, deal with bee-keeping and, more especially, the Hispano-Arab agronomists such as Ibn Baṣṣāl of Toledo (5th/11th century) and Ibn al-ʿAwwām of Seville (7th/13th century) [see filāḥa. ii. Muslim West]. Finally, some practical information was supplied by the "calendars" on times for different operations which are necessary in the practice of bee-keeping, such as the *Calendar of Cordova* (text and Fr. tr. Ch. Pellat, Leiden 1961) and the *Cinq calendriers égyptiens* (text and Fr. tr. Pellat, Cairo 1986).

The internal life of the hive (*khaliyya, ʿassāla, kiwāra, shūra, mishwāra, mushtār*, Maghrib *djabḥ, djabḥa*, Syria *manḥala*, Kabyle *thighrasin*, Turk. *arı kovanı*) was quite well observed after Aristotle, and the three social categories comprising a community of bees were already recognised. This community formed from a swarm (*dabr, thawl, ḥizḳ, khashram*, Maghrib *farḳ, sirb*) is grouped around the "chief" (*yaʿsūb, amīr, malik*, Kabyle *agellid*, Pers. *pādishāh*, Turk. *kıral*) who reigns

as sovereign and who, in fact, is the queen; but it was not until the 17th century that the two naturalists, the Dutchman Swammerdam (1635-85) and the Frenchman R. Ferchault de Réaumur (1683-1757) discovered that this monarch is a female and that she is the only one who lays the eggs in the cells of the honeycomb after having been fertilised outside by the males. Until then, no-one had discovered the exact origin of the seed (*bazr, bizr*) which gives birth to the larvae of the broodcomb (*raṣaʿ, dudjā, daysam*); it was most often attributed to the class of workers (*ʿassālāt, ʿāmilāt*) who constitute almost the whole population of the hive and who, alone, ensure its subsistence by producing the bee-glue (*ʿikbir, khatm, dundj*), wax (*shamʿ*, Pers. *mūm*, Turk. *balmumu*) and honey (*ʿasal* pl. *aʿsāl, ʿusūl, ʿusul, ʿuslān; miḥrān*; Turk. *bal*, Tamahak, *turawet*). The third category of bees, in the hive, is that of the drones (*yamkhūr*, pl. *yamākhīr*, Kabyle *agaïmru*, pl. *igwirma*, Turk. *eşek arısı*), males who are useful only for the fertilisation of a new young queen at the time of her exodus with her first swarm (*daysam, lūth, riḍʿ, ṭard*) to found a new hive; as soon as their unique function as sires is completed, they are inexorably rejected and suppressed by the workers.

Since the distant time when man had the idea of setting up hives for bees, relieving them of their concern to search for a precarious natural refuge, bee-keeping remained "fixist", that is to say, the honeycombs were welded to the wall of the dwelling. It was only in 1780 A.D. that the Swiss F. Huber imagined the "moving section" (*naḥīta*, pl. *nuḥut*), thus initiating the modern apiarist technique known as "mobilist". The primitive hive, generally cylindrical in shape, could at first be made out of bark of cork-oak (the French term *ruche* "hive" coming from the Low Latin *rusca* "stripped of bark") or clay applied to a framework of wood or wickerwork; it could also be a large earthenware jar with a lid, or a hut of plaited straw, or, finally, as in Persia, a large whitewashed calabash outside a protective plastered wall. Whatever the model of hive used, the harvesting of the honey (*shawr, shiyār, taʿsīl*), after fumigating (*awm, ayām, djalāʾ, djalwa*) the interior by burning dry grasses or dung to neutralise the occupants, could only be done by smashing the "cake" (*shahd, kurṣ, hiff*) to detach it from the walls; the honey spread on them was recovered with the aid of wooden scrapers (*mashwar, mishwār, miḥbaḍ, miḥdjān, minzaʿa*) of different kinds. The modern hive in storeys (*kafīr*, pl. *kufrān*) with its moving sections, has greatly facilitated this operation; likewise, the fluting (*damgh*) in sheets of the wax forming the bases of the honeycombs, invented in 1857 by J. Mehring, further adds to the simplicity of the handling and considerably reduces the flow of honey. The architecture of the wax comb has never ceased to arouse admiration; the geometry of the assemblage of alveoles or cells (*nukhrūb*, pl. *nakhārīb, thukba*, pl. *thukab*) in hexagonal section in which the eggs (*ʿamiyy*) of the broodcomb are enclosed and the young bees (*abkār*) develop, appears as a work of genius in the eyes of architects, for it does not leave the least interstice or space unoccupied, and the Arab authors see in this also divine inspiration.

In every land and at every time of the year, the beekeeper (*ʿāsil, ʿassāl, naḥḥāl, murabbī 'l-naḥl*, Maghrib *djabbāḥ*) has always had to struggle against the many parasites and enemies of the bees, both within the hive and outside it. On the inside, he has to eliminate the intruders attracted by the honey: ants, mice, field-mice, shrews and, in particular, the death's-head moth (*Acherontia atropos*; *ṣaml al-simsim, abu 'l-hawl al-asmar*). The parasites of the larvae are formidable, including the meloe (*Meloe variegatus*) and its carnivorous larva or triongulin (*muḥrika, milwad*) and the bee louse (*Braula coeca; dimmat al-naḥl*). The wax is also attacked by the wax moth (*Galleria grisella; ṣaml al-naḥl al-ṣaghīr, nāriyyat al-shamʿ al-ṣaghīra*) and the wax mite (*Galleria cerella; ṣaml al-naḥl al-kabīr, nāriyyat al-shamʿ al-kabīra*). However, the larvae of the clarion (*Clerus apiarius; būk al-naḥl*) were for a long time wrongly considered to be parasites of the hives. Early methods of combatting parasites amounted to fumigation with sulphur and sprinkling with salt. As for the exterior enemies of the bee, they are firstly certain wasps and, notably, the bee eater hornet (*Philantus apivorus; dabr al-naḥl, ilk al-naḥl*) which kills the bees to feed its larvae. The danger is even greater with certain insectivorous birds such as the bee eaters (*Merops apiaster* and *M. superciliosus, M. orientalis; warwār, khudḍār, khuḍayrāʾ*, Maghrib *yāmūn*), woodpeckers (*Picus viridis, P. syriacus; nakkār, karrāʿ, nākūba*, Maghrib *tabbīb, nakkāb, bū kabbūs*) who, with their sharp beaks, do not hesitate to perforate the hives; and, especially, the terribly rapacious honey buzzard (*Pernis apivorus; ḥawwām al-naḥl*, Maghrib *bghəl al-summān*) who, as its name indicates, feeds solely on bees and wasps. Against these winged predators nothing can be done except to surround the hives with protective trellises.

As honey is made from different gathered nectars and as some time passes between its production and its collection, it may appear in several colours and various consistencies. On its formation, it is very runny (*wadīs*) and smooth-flowing (*saʿābīb*), and this is the new honey (*ṭirm, ṭārim, ṭarim*); then it congeals and hardens (*ḥamīt, djals*). In the combs of a hive, it stays fluid (*dhawb, shuhd*), whereas wild honey (*ʿasal al-barr, ḍarab, ḍaraba*), exposed to the air, becomes thick and white by natural alteration (*iḍṭirāb*). In the lands of Islam, among the most-appreciated honeys were the one called *balla* taken from the flowers of the honey mimosa (*Acacia mellifera; sanṭ ʿasalī, ẓubba*, Yemen *samur*) and the one called *ʿaraba* plundered from the wild lavender (*Lavandula vera; khazam, khuzāma*). From Morocco to India, each region favourable for bee-keeping had its famous honey, traded locally and exported. The Moroccan Sous also produced the excellent *maṭānī* (see E. Fagnan, *Extraits*, 179) rivalling the honeys of Kabylia, Egypt and Persia. Besides, the geographer al-Idrīsī (6th/12th century [*q.v.*]) notes the commercial activity in honey and wax from Fās, Tahert, Algiers, Constantine, Djidjelli, Mostaganem and Bône. He also mentions the important apiarist work of the rural populations of the region of Barḳa and the mountains of Cyrenaica, whose honey used to go directly to the market in Alexandria. In Egypt, furthermore, Cairo used to receive, at the beginning of summer and by river, the honey of Ḳūṣ and Lower Egypt; the Egyptian beekeepers each year were able to carry out a removal of the hives, by boats, to areas where selected plants were the most abundant. The Egyptians used to consume large quantities of honey; it was, with dry raisins (*zabīb*), a principal element in the drink called *shamsī* of which they were very fond (al-Maḳrīzī-Bouriant, *Khiṭaṭ*, i, 125) as well as in another alcoholic drink, *bitʿ*, a mixture of honey and wine. In the 4th/10th century, at the court of the Fāṭimid caliph al-ʿAzīz bi'llāh (366-86/976-96), the annual consumption of honey was five *kinṭār*s (about 225 kg) (see Rodinson, *Cuisine*, 152). In the same period, the geographer Ibn al-Faḳīh al-Hamadhānī reports (tr. H. Massé, *Abrégé*, 82) that the Egyptians "gain glory from their mead (*sharāb al-ʿasal*) which is preferred in their land to the wine of Babylon on account of its sweetness, its perfume and its heady

power". Later (85-6), he adds: "The Egyptians say, It is in our country that there are the most slaves, honey in combs, sugar and candy and money... They also say, We have wax, honey and ostrich feathers". Within the Near East, ʿIrāḳ, Syria and Arabia equalled the Mediterranean countries in honey production, but, like that of Cairo, the scale of consumption of the large towns and capitals, Baghdād and Damascus, necessitated additional imports from Persia, with its famed honey from Iṣfahān, whether in combs with the wax, or virgin and pure (see Ch. Pellat, *Tabaṣṣur*, 160) or in an extracted dry form (*khushkandjubīn*). It is known, moreover, that in Persia, in the 7th/13th century, the tax on beekeepers was paid in kind, in the form of so many thousands of litres (see A. Mazaheri, *Vie quotidienne*, 250-1), which shows production at a very high level.

The role of wax as fuel for lamps was not inferior to that of honey for feeding the Muslim populations, and one only has to recall the etymology of the French *bougie*, a corruption of the name of the Algerian port of Bidjāya [*q.v.*] which, in the Middle Ages, was one of the principal centres in the Maghrib for commercial relations with the Christian countries; wax there constituted one of the main products for export from the end of the 7th/13th century, an age in which the wax candle replaced the smoky and nauseating tallow candle. In the 12th/18th century, the English archaeologist-traveller Thomas Shaw mentioned (*Voyages*, i, 112) with regard to "Boujeiah"/ Bidjāya/Bougie: "The Kabyles also bring there on every market day a large quantity of oil and wax, which is transported to Europe and the Levant". On Bona/Bône (now al-ʿAnnāba [*q.v.*]) he also remarks (119): "...there is sent out from Bona by sea a large quantity of corn, wool, leather and wax". Finally, he mentions (122), on this wax trade, the bank of the "Compagnie des Français en Afrique" established in La Calle and exporting to France and Italy. The need in Christendom for wax resulted especially from the high consumption of candles by chapels, churches and cathedrals, as much for lighting as for the rites and ceremonies of the cult. This wax market began, in the 13th/19th century, to experience some decline after the discovery, by Chevreul, in 1811, of stearic acid which, in the commercial form of stearin, replaced the bees' produce for candles and tapers. While passing through Judaea, Shaw noted there (*Voyages*, ii, 61) the abundance of wild honey which, he laments, was at that time no longer collected, the agricultural countryside being completely abandoned.

The extraction of the wax was carried out, as at present, according to the process of liquefaction with boiling water and pressing. But before obtaining the wax, it was necessary to purify (*taṣfiya*) the honey extracted from the combs by filtering (*tarshīḥ*) through cloths to rid it of its dross of debris (*djathth*), its scum (*khirshāʾ*) and dead bees (*maḥārīn*), so as to obtain a perfectly virgin honey (*mādhī*) which was preserved in water-skins of different capacities (*misʾab, badīʿ, ḥamīt, ḥumt*, Tamaḥaḳ *akerebreb*) to facilitate its transport. The prudent beekeeper only took a third of the honey from the hive, the rest being the nourishment necessary (*kuwwāra, ās, wathan*) for the occupants until the following season. The treatment of the harvested combs, firstly those empty of honey (*makhārib*), was clearly the same as that of olives for the extraction of oil. Pressing with a screw (*miʿṣara, miʿṣār*) worked by hand was the most widespread in the countryside and, notably, in Kabylia (see A. Hanoteau, *La Kabylie*, i, 535-7). The combs emptied of honey are packed tight in pressing bags (*talālīs*, Kabyle *tisnatin*) of horsehair or alfalfa, then put in boiling water and pressed; the liquefied wax ran into the pots serving as moulds to form, on becoming cold, loaves ready for sale. The whitening of the wax by grailing was not practised.

We are not able to enumerate all the pastries, side-dishes and sweets in which honey formed an essential ingredient, each land of Islam having its own specialities. It was the main sugary substance along with dates, for sugar cane (*ḳaṣab hindī, ḳaṣab al-sukkar*) was only cultivated in the delta regions of the Euphrates and Nile, and sugar from beet (*shamandar, shawandar, bandjar, ṣawṭala*, Maghrib *lift ṣūrī, lift ḥalū*) was not made until the beginning of the 13th/19th century. A very early Arab foodstuff was *talbīna*, a mixture of honey and flour or bran and which, according to a *ḥadīth* reported by ʿĀʾisha, was "a tranquilliser (*madjamma*) for the sick". It is certain that honey possesses many specific virtues, and ancient Greek and then Arab therapeutics recognised almost all of them. Al-Damīrī (*Ḥayāt*, ii, 348) cites some of them for us, the majority of which are recognised by modern medicine. In the words of the Ancients, honey, a hot and dry element, is diuretic and laxative; it is a powerful tonic, an effective antidote against poison and rabies and an excellent preserver of perishable goods, meats and fruits, when they are brushed with it. Mixed with musk, it is a beneficial eye-lotion to cure cataract and other eye infections and, made into a salve, it gets rid of nits and lice. Finally, massaging with wax or chewing it helps to relieve worries and anxieties. Nowadays, medical authorities recognise in honey its richness in dietetic elements, its beneficial action in cardiac equilibrium, its hepato-protective and sedative role, its antiseptic properties and its effectiveness in increasing the rate of haemoglobin of the blood. The same authorities conclude that the regular use of honey is a ticket to health and that it should be made part of the daily diet of sportsmen. We may thus conclude that the Ḳurʾānic statement "From the bodies of the bees comes forth a drink of various hues which is a healing for men" is amply confirmed.

In the literary field, bees and honey have not attracted much attention from Arab poets; they have not, on this theme, equalled the lyricism in Latin of a Virgil (*Georgics*, Book iv, 565 ff.) or a Columella (*De re rustica*). Before Islam, it is in the works of the two famous "vagabond" poets (*ṣuʿlūk*, pl. *ṣaʿālīk*), al-Shanfarā [*q.v.*] and Taʾabbaṭa Sharrᵃⁿ [*q.v.*], that we find mention of the gathering of wild honey. The former evokes, in his *Lāmiyyat al-ʿArab* (verse 30), a familiar scene of his wandering life spent close to nature, that of the gatherer of honey (*muʿassil*) from the wild swarm. The second poet did not hesitate to go to plunder the honey in a grotto of the territory of the Banū Hudhayl, his enemies; he narrowly missed becoming a victim, for the Hudhalīs, taking him by surprise, barred the entrance of the grotto to him, but he managed to escape from them through a crack in the rock in which he emptied his honey, letting himself slide on it with his waterskin. He boasted of this enterprise in ten verses (see *Madjānī ḥadītha*, i, 16). In the time of the Prophet Muḥammad, the Hudhalī poet Abū Dhuʾayb [*q.v.*] composed two fine poems on the subject of wild bees and the collection of their honey, a familiar occupation of the people of his tribe. Thereafter, we must wait until the 4th/10th century when the Andalusian Ibn Shuhayd (382-426/992-1035 [*q.v.*]) assigns five verses to the plunder-seeking bee (*Dīwān*, ed. Ch. Pellat, Beirut 1963, 141), while Kushādjim (d. after 350/962 [*q.v.*]) describes in six verses a candle given to him as a present (*Dīwān*,

Baghdād 1970, 235). The wax candles of the court of the Artuḳid prince of Mārdīn, al-Manṣūr Nadjm al-Dīn Ghāzī (693-712/1294-1312), excited the admiration of the poet Ṣafī al-Dīn al-Ḥillī (677-752/1277-1351 [*q.v.*]), who composed about thirty verses on them in which he uses fifteen images to define them (*Dīwān*, Beirut 1962, 273-6). In the 7th/13th century, we find, in rhymed prose, an apology for the bee and wax (*ishārat al-naḥl, ishārat al-shamʿ*) in the *Kashf al-asrār ʿan ḥikam al-ṭuyūr wa 'l-azhār* of ʿAbd al-Salām Ibn Ghānim al-Maḳdisī [*q.v.*] (see *Madjānī 'l-adab*, Beirut 1886, iv, 136-8). In current usage, the bee has only been made the subject of two proverbial metaphors; owing to its remarkable sense of direction, it has been said *ahdā min naḥla* "a better guide than a bee", and its untiring activity in going and coming has led it to be compared to the traveller exhausted by long journeys who returns *anḥal min naḥla* "thinner than a bee". Finally, the contradiction, in an individual, between his words and deeds has been stigmatised in this image: *kalām ka 'l-ʿasal wa-fiʿl ka 'l-asal* "language [sweet] as honey and action [violent] as the point of a pike".

In botany, bees and honey are evoked in ten Arab names of plants, some useful for the hive, some dangerous for its occupants. We find: (a) *al-thawl* "swarm" for the yellow wood sorrel (*Oxalis corniculata*); (b) *al-naḥlī* "pertaining to bees" for the moon trefoil (*Medicago arborea*) which is sown intentionally in the vicinity of hives; (c) *zahr al-ʿasal* for the honey flower (*Melianthus major*); (d) *turbat al-ʿasal* or *turāb al-ʿasal* "honey ground" for the mangosteen tree (*Garcinia mangostana*); (e) *ḥāfiẓ al-naḥl* "guardian of the bees" for the euphorbium gum thistle (*Euphorbia resinifera = E. officinarum*); (f) *ḳātil al-naḥl* "bee-killer" and *maḳābir al-naḥl* "cemeteries of the bees" for the water lily (*Nymphaea coerulea*) whose flower, on closing, imprisons the bees who plunder there; (g) the same name "bee-killer" is also given to the summer savory (*Satureia hortensis*); (h) *al-ʿasal* "honey" for the esel wood (*Cadaba farinosa*); (i) the same name "honey" is also given to the African salsola (*Suaeda monoica*); (j) *ʿasal al-naḥl* "honey of the bees" for the lemon balm (*Melissa officinalis*); and (k) in the Maghrib, *al-ʿassāliyya* "honey-bearer" is the name of the giant fennel (*Ferula communis*).

Derived from *ʿasal*, the adjective *ʿasalī* describes the yellow shade "honey colour"; similarly, the adjective *naḥlī* taken from *naḥl* designates a dark brown "bee colour". In mediaeval falconry, in Egypt, the name *saḳāwā naḥlī*, bee-coloured lanner falcon, was applied to two neighbouring Mediterranean species, Eleonora's falcon (*Falco eleonorae*) and the sooty falcon (*Falco concolor*), both having a very dark brown coat.

(F. VIRÉ)

NAHR (A.), pls. *anhār, anhur*, etc., running water, hence a perennial watercourse, river, stream of any size (thus opposed to a *wādī*, a watercourse filled only at certain times of the year or a *sayl*, periodic torrent).

1. In the Middle East. Al-Masʿūdi lays down that "all running water is a *nahr*, the place where water flows out is a spring (*ʿayn*); and the place where a great amount of water is found is a *baḥr*" (*Murūdj*, i, 281 = §304). In fact, the latter term [*q.v.*], or its equivalent borrowed from the Hebrew, *yamm*, was accordingly applied not only to the seas and oceans but also, uniquely, because of its outstanding size, to the Nile [see NĪL] (al-Masʿudī, *op. cit.*, ii, 360 = §1777). In addition to being applied to natural running waters (e.g. the Nahr al-Sind, Nahr Balkh, Nahr al-Urdunn, etc.), *nahr* could be used for artificially-contrived running watercourses, i.e. canals and navigations, this usage being especially frequent in low-lying, extensively-irrigated Mesopotamia (e.g. Nahr al-Ubulla, Nahr Ṣarāt, Nahr ʿĪsā, in the last instance named after the constructor of the canal, the ʿAbbāsid prince ʿĪsā b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās, uncle of the caliphs al-Saffāḥ and al-Manṣūr).

Nhr appears in all the Semitic languages, including Akkadian (*nāru*), Ugaritic and Epigraphic South Arabian (*ʾnhr* "irrigation channel", Beeston *et alii*, *Sabaic dictionary*, 94), with the exception of the Ethiopic ones. Fraenkel surmised that *nahr* first came into Arabic when the Bedouins of riverless Arabia came into contact with the peoples of Mesopotamia and their rivers and canals (*Aram. Fremdwörter*, 285).

It is, of course, a frequent term in the Ḳurʾān, running waters, streams and fountains being features of Paradise (see, e.g., II, 23/25, III, 13/15 *et passim*), no doubt forming a pleasing vision for the first Muslims, whose background was that of the parched Arabian peninsula, where the few running waters and springs were precious sources of rest and refreshment for men and their herds.

(C.E. BOSWORTH)

2. In Muslim India.

Canals were certainly known in India before Muslim times, but there was a great extension of their use in the early Dihlī sultanate, certainly under Ghiyāth al-Dīn Tughluḳ and his son Muḥammad b. Tughluḳ (some details in the anonymous *Sīrat-i Fīrūz Shāhī*, ms. Bankipore, 159-61). The canal systems were greatly expanded under Fīrūz Shāh of the Tughluḳ dynasty, the best known man-made example

being his west Djamnā canal (later re-excavated and re-aligned under Shāhdjahān); "man-made" is used here because former river-beds, cleared of silt, which might fill up during the annual rains, were in use as natural canals. The man-made canals were of two classes, "perennial" and "inundation", the former drawing off water from a river at about low-water level, sometimes with the help of a weir (although this may reduce the water-supply lower downstream); inundation canals take water from rivers at a level considerably higher than the normal low-water level, and consequently provide water only in the ice-melt and flood seasons, say from May to September.

The essential purpose of the canals was for irrigation (few are navigable to any great extent), the intention of which was to bring larger areas under cultivation and thereby engender more revenue to the state; private construction of canals was therefore encouraged, and jurists decreed that the constructor was entitled to *ḥaḳḳ-i shirb* as 10% of the gross produce; if the canal had been constructed by the state on the sultan's behalf, then the sultan's *ḥaḳḳ-i shirb* went into his own privy purse. Shams al-Sirādj ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind. ed., 129-30, gives details of these rulings, which have been ably interpreted by I.H. Qureshi, *The administration of the sultanate of Dehli*[4], Karachi 1958, Appx. G. The development of agriculture by irrigation and other means was regarded as so important by Muḥammad b. Tughluḳ that he brought it under a special ministry, the *dīwān-i amīr-i kūhī* (Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind. ed., *passim*, see Index.

Other important canals constructed in the days of Muslim rule were the east Djamnā canal of the early 12th/18th century, Fīrūz Shāh's Satladj canal, the Mughal inundation-canals taken from the upper Ravī, the Khānwā in the Indus delta, and many more. The original works are now hard to trace, since they have been incorporated in a vast extension of canal resources made in British times. A comprehensive account of these works is in *Imperial gazetteer of India*[2], iii, 326-54; see also O.H.K. Spate, *India and Pakistan: a general and regional geography*, London 1954, 204-8, 465-77. ʿAlī Mardān Khān's canal, which took water for the Red Fort at Dihlī, tapped the Djamnā some 100 km/60 miles upstream (see MĀʾ. 12).

(J. BURTON-PAGE)

AL-**NAHR** [see NUDJŪM].

NAHR AL-**ʿĀṢĪ** [see AL-ʿĀṢĪ].

NAHR AL-**MALIK** [see DIDJLA].

NAHR ABĪ FUṬRUS, the name used by the mediaeval Muslim writers for the modern river Yarkon which runs into the Mediterranean through Tel Aviv about 5 km. to the north of Jaffa. In the Bible it is called *Me Yarkon*, probably "the Green Waters" (Joshua, xix. 46). In the later Middle Ages and in modern times, the river assumes a new Arabic name, that of Nahr al-ʿAwdjāʾ, "the Crooked River". The Crusaders called it "La Grand Rivière" (G.A. Smith, *The historical geography of the Holy Land*[4], London 1897, 116 n. 6).

The name Abū Fuṭrus is the Arabic corruption of Antipatris, the fortress and town built in about 20 BC by Herod, in honour of his father Antipater, on the site of ancient Afeq (Josephus, *Wars*, Bk. 1, ch. xxi, 9; Acts, xxiii, 31). The site of Afeq-Antipatris—a hill near the springs which constitute the sources of the river—has been, through the ages, one of the most important strategic positions on the major route connecting Egypt with Syria. In modern times the river sources at Antipatris are called Raʾs al-ʿAyn or fountain head. The river forms the southern border of the Biblical plain of Sharon and northern border of Judaea. In the 12th century BC it was the northern border of Philistine settlement along the coastal plain of Palestine. Some of the Muslim writers refer to the river as the border between Djund Filasṭīn and Djund al-Urdunn (al-Yaʿḳūbī, *Taʾrīkh*, ii, 425-6, cf. idem, *Buldān*, 327), or as belonging to both the provinces of Filasṭīn and Urdunn (al-Masʿūdī, *Murūdj*, vi, 75-6 = §§ 2297-8). This reference is rather strange because the border between the provinces of Filasṭīn and Urdunn was the same as the Byzantine border between Palaestina Prima and Palaestina Secunda, namely along the Valley of Jezreel and Beth Shean (Baysān) (al-Iṣṭakhrī, 59).

The river being wide and deep, even in the summer could not be forded along the 30 km. of its running waters. In many places, especially near its sources, its vicinity was covered with swamps. The river, and the sand dunes to the north and south of it, decided the main course of the *Via Maris*, the major road between Egypt and Mesopotamia, which has remained the same since ancient times almost to the present day. Running along the Mediterranean coast after Gaza, the route turned inland in a north-easterly direction, and following the river-bed until Afeq-Antipatris, it turned northwards and eastwards towards Damascus (Smith, *op. cit.*, 116). The general direction of the route in the vicinity of the river from east to west explains the reference of the sources to the travellers and armies, moving along this route, as coming either from the east or from the west. Yāḳūt and Abu 'l-Fidāʾ note that many great battles were fought along the river banks and that the winner was always the army that came from the west.

The examples which are given by these sources are: the victory of the ʿAbbāsid army led by ʿAbd Allāh b. ʿAlī b. ʿAbd Allāh b. ʿAbbās over Marwān II (132/750); the success of the Ṭūlūnid Khumārawayh in his battle against the caliph al-Muʿtaḍid (271/884); the capturing of Aftakīn the Turk by the Fāṭimid al-ʿAzīz (367/977); and the killing of Abū Taghlib Ḥamdān by the Fāṭimid general al-Faḍl b. Ṣāliḥ (Yāḳūt, iv, 831).

Abu 'l-Fidāʾ adds that in his time, the early 8th/14th century, the citadel of Madjdalyābā to the east of the river sources was in ruins. The citadel was built over the ancient site of Migdal-Afeq 'Αφεχοῦ πύργος, (Josephus, *Wars*, II, xix, 1) the twin fortress of Antipatris, built directly on the sources of the river. In 1863 the French traveller V. Guérin visited the village of Madjdalyābā and noticed the remnants of a church and a Greek inscription commemorating it or some other *martyrion* in the area. The fortress of Madjdalyābā was used by the Crusaders and must have been destroyed with the rest of the coastal fortifications by Baybars or one of his immediate successors. Under the later Mamlūks or the early Ottomans, a village grew around the ruined castle, which was partly rebuilt. In modern times the village was called Madjdal Ṣādiḳ. In 1948, during the first Arab-Israeli war, the village was deserted and fell into ruins.

Nahr Abū Fuṭrus figures in the Islamic eschatological tradition. According to a tradition attributed to Kaʿb al-Aḥbār [*q.v.*], the Muslims will have to fight the Dadjdjāl [*q.v.*] near this river (*maʿkiluhum min al-dadjdjāl nahr abī fuṭrus*, Ibn ʿAsākir, *Tahdhīb al-Taʾrīkh al-kabīr*, Damascus 1329, i, 52).

The passages concerning the river in Yāḳūt and

Abu 'l-Fidā' (*Taḳwīm al-buldān*, ed. Reinaud, Paris 1840, 48) refer to some of the major events which happened in the vicinity of the river. In 132/750 it was the scene of the final attempt of the last Umayyad caliph, Marwān b. Muḥammad, to hold out against the ʿAbbāsid army under ʿAbd Allāh b. ʿAlī in Syria. Unable to secure the support of the Arab tribes in Palestine, Marwān was compelled to withdraw to Egypt, where he found his death. ʿAbd Allāh b. ʿAlī captured some 80 members of the Umayyad royal family and cruelly massacred them at Abū Fuṭrus, probably in the fortress of either Ra's al-ʿAyn (Antipatris) or Madjdalyābā (al-Ṭabarī, iii, 47-8, 51; al-Masʿūdī, Murūdj, *loc. cit.*; idem, Tanbīh, 329; al-Yaʿḳūbī, *Buldān*, 327; idem, *Ta'rīkh*, ii, 425-6; Ibn Khaldūn, *ʿIbar*, Būlāḳ, iii, 131).

Early in 271/884, al-Muwaffaḳ [*q.v.*], the brother of the ʿAbbāsid caliph al-Muʿtamid, tried to break the Ṭūlūnid power in Syria, soon after the death of Aḥmad b. Ṭūlūn and the succession of his son Khumārawayh [*q.vv.*]. The ʿAbbāsid army met the Egyptians near Abū Fuṭrus and initially won the day, causing Khumārawayh to flee to Egypt. However, an Egyptian ambush, left behind under the command of Saʿd al-Aʿsar, fell upon the unsuspecting army of al-Muwaffaḳ, winning a crushing victory for Khumārawayh and securing his rule over most of Syria. The Battle came to be known as the "Battle of the Water-Mills", *waḳʿat al-ṭawāḥīn*, probably after the water-mills on the river (Ibn al-Athīr, Beirut, 1982, vii, 414-15; al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ, i, 321; Ibn Taghrībirdī, *Nudjūm*, ed. Popper, iii, 50).

In 365/975 Aftakīn, the Turkish *mawlā* of the Buwayhid Muʿizz ad-Dawla, took over Damascus and tried to cross swords with the Fāṭimid caliph al-ʿAzīz Nizār, who had just assumed power after the death of his father al-Muʿizz. Aftakīn got the support of the Carmathians in Syria, and together they made an attempt to attack a few of the coastal cities of Lebanon and Palestine. Some of the Bedouin tribes of the area joined Aftakīn as well. In 367/977, al-ʿAzīz and his general Djawhar met Aftakīn near Abū Fuṭrus ("in the vicinity of Ramla"); they beat his armies and compelled the Carmathian leader to withdraw to al-Ḥasā. In spite of the victory, al-ʿAzīz was highly interested in the services of Aftakīn, who was taken to Egypt in great honour (Ibn al-Athīr, viii, 656-61; Ibn Khallikān, *Wafayāt*, ed. Iḥsān ʿAbbās, iv, 54 and index).

Another attempt at snatching Syria from the Fāṭimids was made by Abū Taghlib Faḍl Allāh b. Nāṣir ad-Dawla the Ḥamdānid, who represented the Mawṣilī branch of the dynasty. He made common cause with the ʿUḳaylids of Syria and moved into Palestine, where he was met at Abū Fuṭrus by the Egyptian army of al-ʿAzīz under his general al-Faḍl b. Ṣāliḥ. Abandoned before the battle by his ʿUḳaylid allies, he was defeated and fell into the hands of the Bedouin leader of the Banū Ṭayyi' in the vicinity of Ramla, Daghfal b. al-Mufarridj b. Djarrāḥ, who killed him and sent his head to Cairo (Ibn al-Athīr, viii, 699-700).

The next event connected directly with Abū Fuṭrus is a battle fought there between the Durūz leader Fakhr al-Dīn II [*q.v.*] and the Bedouin leader of northern Palestine Aḥmad b. Ṭurabāy. After returning from a five-years' exile in Europe in 1618, Fakhr al-Dīn II continued his policy of widening his rule over the *sandjaḳs* of Nābulus and ʿAdjlūn. The Bedouin family of Ṭurabāy led by Aḥmad created a coalition of Bedouins and peasants in order to check his move southwards from the Lebanese coast. In 1622, the two armies met on the Abū Fuṭrus river, now called al-ʿAwdjā', and Fakhr al-Dīn's army was defeated. The defeat put an end to his plans to capture northern Palestine and marks the beginning of the deterioration of his power (al-Khālidī, *Lubnān fī ʿahd al-Amīr Fakhr ad-Dīn al-Maʿnī*, Beirut 1936, 139 ff.).

During the operations in Palestine in the First World War, one of the major battles between the British army (mainly the 52nd Division under General Hill) and the Turks was fought on 20 and 21 December 1917, at the end of which the bridges over the river were captured to create a new British front, from which the attack on the Turks in Samaria and Galilee began.

NAHRWĀL, also NAHRWĀLĀ and NAHLWĀR, corruptions in the Muslim chronicles of the place-name Anhilwād, Skr. Anahilwāda, the chief Muslim town of Gudjarāt before the foundation of Aḥmadābād; it was also known as Anahilwāda-Paṭṭana, whence the name of the moden town as simply Pātan [*q.v.*].

AL-**NAHRAWĀLĪ** (NAHRAWĀNĪ), ḲUṬB AL-DĪN MUḤAMMAD b. ʿAlā' al-Dīn Aḥmad b. Muḥammad b. Ḳāḍī Khān Maḥmūd, al-Makkī, al-Ḥanafī, al-Ḳādirī, al-Kharḳānī, eminent 10th/16th-century Meccan *muftī*, *ḳāḍī*, teacher, *ḥadīth* scholar and chronicler of Mecca and early Ottoman Yemen. He was born in 917/1511-12 in Lahore, India, into a scholarly family, originally from Aden but long established at Nahrawāla (present-day Patan) in Gudjarāt [*q.v.*]. (Several accounts, including old ones, name him al-Nahrawānī.) His early education was obtained from his father, a *muftī* and *ḥadīth* scholar. The young Ḳuṭb al-Dīn was removed by his father to Mecca, where he studied under several scholars, including the Yemeni chronicler al-Daybaʿ (d. 944/1537), before journeying in 943/1536-7 to further his education in Egypt. There he encountered many outstanding teachers, among them some students of al-Suyūṭī (d. 911/1505 [*q.v.*]), and was introduced to the Ottoman governor, Khosrew Pasha Dīwāne [*q.v.*] and to al-Mutawakkil Muḥammad (d. 950/1543), formerly the last shadow ʿAbbāsid caliph.

The Mecca of Ḳuṭb al-Dīn lay within the Ottoman sultan's realm, a reality which he embraced and exploited. An early-acquired fluency in Turkish enabled him to cultivate acquaintanceships among the many Ottoman officials visiting or posted in the region. Also, his knowledge of Turkish and skill in Arabic formal composition (*inshā'*) brought him employment by the Sharīfs of Mecca in their dealings with the Ottomans. Ḳuṭb al-Dīn became the most sought-after guide for Mecca's Ottoman visitors, whose generous compensation he used for accumulating choice manuscripts. His favour among the empire's rulers earned him lucrative teaching positions and recognition as *muftī* of Mecca. In Djumādā I 975/November 1567 he was awarded the first Ḥanafī professorship in Sultan Süleymān's newly-completed college for the four orthodox rites, a handsomely rewarded appointment which, with the *muftī*-ship, he held for the rest of his life.

Ḳuṭb al-Dīn travelled twice to Istanbul and was

each time presented to Sultan Süleymān (r. 926-74/1520-66). In 943/1536-7 he accompanied the vizier of Bahādur Shāh [*q.v.*] of Gudjarāt on his mission to secure Ottoman military assistance for his master. His second trip, in 965/1557-8, was for the Sharīf of Mecca, who sought unsuccessfully to have a troublesome Ottoman official replaced. Travelling through Syria and Anatolia, he recorded the details of his journey for inclusion in his book *al-Fawāʾid al-saniyya fi 'l-riḥla al-Madaniyya wa 'l-Rūmiyya*. Among his experiences were an encounter, near Kütahya, with Prince Bāyezīd on the eve of hostilities with his brother, attendance in Istanbul at the funeral of the sultan's wife, Khürrem [*q.v.*] (Djumādā II/April 1558), and a meeting with the celebrated *shaykh al-Islām*, Abū 'l-Suʿūd Efendi [*q.v.*].

The probable date of Ḳuṭb al-Dīn's death in Mecca was 26 Rabīʿ II 990/20 May 1582. He was apparently survived by at least one son, Muḥammad, who composed a book (*Ibtihādj al-insān...*) for Ḥasan Pasha, the long-serving Ottoman governor of Yemen (988-1012/1580-1604). Best known among his relatives, however, was a nephew, ʿAbd al-Karīm b. Muḥibb al-Dīn (961-1014/1554-1606), who succeeded him as *muftī*. Although Ḳuṭb al-Dīn himself never visited Yemen, two brothers, a nephew, and a son served there as *ḳāḍīs*.

Ḳuṭb al-Dīn's several compositions deal chiefly with religion, literature or history, and are described by al-Djāsir and Brockelmann. Some, including those on Ḥanafī *ʿulamāʾ* (*Ṭabaḳāt al-Ḥanafiyya*) and *ḥadīth* (*al-Djāmiʿ li-kutub al-sunna al-sitta...*), were lost when fire destroyed his home and library in 959/1552. The *al-Iʿlām bi-aʿlām bayt/balad Allāh al-ḥarām*, a chronicle of Mecca completed in 985/1577, was translated into Turkish by the poet Bāḳī [*q.v.*] and published by Wüstenfeld. Containing several excursuses, including one on the Ottoman conquest of Cyprus (978-9/1570-71), it was abridged and extended by his nephew ʿAbd al-Karīm (*Iʿlām al-ʿulamāʾ al-aʿlām...*). His chronicle on Yemen, entitled *al-Futūḥāt al-ʿUthmāniyya li 'l-aḳṭār al-Yamaniyya* and later changed to *al-Barḳ al-Yamānī fi 'l-fatḥ al-ʿUthmānī*, he completed in 981/1573 and shortly recast. It was commissioned by the Ottoman vizier (and later five times grand vizier) Sinān Pasha (d. 1004/1596 [*q.v.*]), when Ḳuṭb al-Dīn accompanied him at Mecca in 978/1570-71 following the reconquest of Yemen. Sinān provided him with details of his eighteen-month campaign (976-8/1568-70) and (possibly later) an epic poem on the subject composed in Turkish (*Futūḥ-i Yaman*) by Muṣṭafā Rumūzī, an Ottoman official in Yemen; yet Ḳuṭb al-Dīn devoted half of his chronicle to Yemen's history from the beginning of the 10th/16th century. Two Turkish renderings of it were made, one before 998/1590, and it has been published by al-Djāsir.

Bibliography: Details of Ḳuṭb al-Dīn's life emerge in both *al-Barḳ* and *al-Iʿlām*, particularly in the latter, which was first published by F. Wüstenfeld, *Die Chroniken der Stadt Mekka*, i, Leipzig 1857; and a useful collection of information is found in the introduction to the published version of *al-Barḳ* by Ḥamad al-Djāsir, *Ghazawāt al-djarākisa wa 'l-atrāk fī djunūb al-djazīra*, al-Riyāḍ 1967. Other sources are Ibn al-Ḥanbalī, *Durr al-ḥabab*, Damascus 1973, ii, 439 ff. (who met Ḳuṭb al-Dīn in Aleppo); al-Ghazzī, *al-Kawākib al-sāʾira*, Beirut 1945-59, iii, 44-8 (whose father met Ḳuṭb al-Dīn in Mecca and Damascus): ʿAṭāʾī, *Dhayl al-shaḳāʾiḳ al-nuʿmāniyya*, Istanbul 1268/1852, 268 f.; Ḥādjdjī Khalīfa, i, 126, 239 f., ii, 1098, 1298, 1513, 1832; Ibn al-ʿImād, *Shadharāt al-dhahab*, Cairo 1351/1932-3, viii, 420 ff.; Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348/1929-30, ii, 57 f.; S. de Sacy, in *Notices et extraits*, iv (1788), 412-504 (a paraphrase of *al-Barḳ*), 538-91; Wüstenfeld, *Die Geschichtsschreiber der Araber*, Göttingen 1882, Abtheilung 3, pp. 81 ff.; ʿAbd al-Ḥayy b. (J.R. Blackburn)

AL-NAHRAWĀN, a town and canal system in the lower Diyālā (Tāmarrā) region east of the Tigris River in al-ʿIrāḳ. The lower part of the canal may have been originally the lower course of the Diyālā and irrigated the land east of Ctesiphon, where fan-like settlement patterns in the Parthian period already suggest the existence of branch canals. In the 6th century A.D., a major canal system was created by the Sāsānid ruler Khusraw Anūshirwān (531-79) who dug a long feeder canal, the Ḳātūl al-Kisrawī, from the east bank of the Tigris near the later Sāmarrāʾ that joined the Diyālā below Baʿḳūba. Some 30 km/20 miles downstream a branch canal was drawn from the right bank to the Tigris that eventually became the lower course of the modern Diyālā, while the main canal was directed to the southeast below the town of Djisr al-Nahrawān (mod. Sifwa), which became the Nahrawān canal proper. A huge Sāsānid weir (*shādhurwān*) was built at al-Ḳanṭara above Iskāf (or Uskāf, modern Semak), below which settlements fanned out along branch canals. The administrative district of Bāzidjān Khusraw was created along the Nahrawān canal system for the city of Veh Antiokh-i Khosraw founded by Anūshirwān at Ctesiphon/al-Madāʾin [*q.v.*] in 540. The NRVAN mint-mark attested for Hurmizd IV (579-90) may stand for al-Nahrawān, where there was a Sāsānid treasury in 16/637, and may have survived as the post-reform Islamic mint of al-Djisr.

Djisr al-Nahrawān (or simply al-Nahr) was the location of a battle between the caliph ʿAlī [*q.v.*] and the Khawāridj under ʿAbd Allāh b. Wahb [*q.v.*] on 9 Safar 38/17 July 658. Of 2,800 men left with ʿAbd Allāh after defections, eight fled during the battle, 400 were wounded, carried off the battlefield and pardoned by ʿAlī, and the rest were killed.

In early Islamic times, the weir at al-Ḳanṭara was rebuilt and the Nahrawān canal system reached its greatest development and density of settlement. In the 3rd/9th and 4th/10th centuries there were three tax districts of Upper, Middle, and Lower Nahrawān. Baʿḳūba was in the upper district. The town of Djisr al-Nahrawān was divided by the canal with markets, a *masdjid*, and *khān*s on both sides. Below it the canal passed the upper Shādhurwān, Djisr Būrān, ʿAbartā, Iskāf Banī Djunayd (divided into upper and lower Iskāf) and emptied into the Tigris at Mādharāyā below Djabbul.

This canal system was subject to retraction and restoration from the 4th/10th century onwards. In 326/937-8 Ibn Rāʾiḳ [*q.v.*] breached the Nahrawān and diverted it into the lower Diyālā in a vain attempt to impede Badjkam's march against Baghdād from Wāsiṭ. The taxes were ruined, people died of hunger, and sites in the middle and lower Nahrawān region were abandoned wholesale until Muʿizz al-Dawla [*q.v.*] closed the breaches fourteen years later and the survivors returned. In spite of efforts by the Saldjūḳ governor Bihrūz to restore the Nahrawān between 534/1139-40 and 536/1141-2, according to Yāḳūt the

irrigation system was ruined by fighting among the Saldjūḳs. Reduced water flow and silting led to the general abandonment of the countryside by the 7th/13th century when the canal system no longer functioned.

(M. MORONY)

NAḤW (A.), a word signifying "path, way" in the literal and "fashion, manner" in the figurative sense, which has become the technical term used to denote "grammar". The scholar al-Khʷārazmī declares that this art (*ṣināᶜa*) is called *grammatikē* in Greek (*Mafātīḥ al-ᶜulūm*, ed. G. van Vloten, 42), and the lexicographer al-Azharī observes that the Greeks describe *naḥw* as "the science of words and the study of this science" (quoted by Ibn Manẓūr in the *Lisān al-ᶜArab*).

The majority of sources agree in seeing Abu 'l-Aswad al-Duʾalī [*q.v.*] as the founder of Arabic grammar. It was at the request of the caliph ᶜAlī and of the governor of ᶜIrāḳ, Ziyād b. Abīh, that he undertook the composition of the first grammatical work, having heard Arabs and Persians making mistakes in reciting the Ḳurʾān or in expressing themselves (see the refutation in Pellat, *Milieu*, 130, n. 5). As to the reason for which this science was called *naḥw*, the sources differ; according to some, ᶜAlī submitted a portion of his own grammar to Abu 'l-Aswad, who asked his permission to do as (*naḥwa*) he had done; according to others, on completion of his book of grammar, Abu 'l-Aswad said to the people: "Follow (*unḥū*) this path (*naḥw*)" (Ibn al-Nadīm, *Fihrist*, ed. G. Flügel, 40; al-Zadjdjadjī, *al-Īḍāḥ*, ed. M. al-Mubārak, 89-90; al-Suyūṭī, *al-Iḳtirāḥ*, ed. Ḥaydarābād, 84-5).

1. *Definitions*

Numerous definitions of *naḥw* have been proposed by grammarians, of which four are particularly worthy of mention, being apparently the most representative: (a) "By grammar, I mean that the speaker who has learned it, follows the path (*naḥw*) of the language of the Arabs; it is a science which the Ancients have inferred (*istakhradja*) from meticulous examination (*istiḳrāʾ*) of the language of the Arabs, in such a way that beginners in this language will be made aware of the purpose (*gharaḍ*) to which it aspires" (Ibn al-Sarrādj, *al-Uṣūl*, ed. A. al-Fatlī, i, 35); (b) "The object, in grammar, is the distinction (*tabyīn*) between correctness (*ṣawāb*) and error (*khaṭāʾ*) of expression, according to the method (*madhhab*) of the Arabs, by means of analogy (*ḳiyās*)" (al-Rummānī, *al-Ḥudūd*, ed. M. Djawād, 38); (c) "The grammar of Arabic is the act of following the way (*samt*) of the language of the Arabs in its behaviour (*taṣarruf*), in flexional endings and other matters, such as the dual, the plural, diminution, the broken plural, annexation and relativeness, etc., so that one who is not a native speaker of the Arabic language may be the equal in clarity (*faṣāḥa*) of those who are, in speaking it (*naṭaḳa*)" (Ibn Djinnī, *Khaṣāʾiṣ*, ed. M. al-Nadjdjār, i, 34); and (d) "Grammar is the science of norms (*maḳāyīs*), inferred (*mustanbaṭa*) from the meticulous study of the language of the Arabs" (Ibn al-Anbārī, *Lumaᶜ al-adilla*, ed. ᶜA. ᶜĀmir, 44).

2. *Origins*

It was the Semitist A. Merx who was the first to claim that Arabic grammar has borrowed from Aristotelian logic the tripartite division of speech, the distinction of genres, the concepts of content (*ẓarf*) and of state (*ḥāl*), the notions of time and of agency (*Historia artis grammaticae apud Syros*, Leipzig 1889, 137-53). Subsequently, H. Fleisch also admitted that the first Arab grammarians could have borrowed Aristolelian concepts, observing however that the logic of grammarians is quite unrelated to that of philosophers (*Esquisse d'un historique de la grammaire arabe*, in *Arabica*, iv 1 [1957], 1-22). M.G. Carter, on the other hand, has dismissed the hypothesis of Greek influence and has showed the close links which exist between grammar and law (*fiḳh*), in the domains of method and terminology (*Les origines de la grammaire arabe*, in *REI*, xl [1972], 69-97). For his part, C. Versteegh has undertaken to illustrate the influence of Greek grammar and logic on Arabic grammatical thinking (*Greek elements in Arabic linguistic thinking*, Leiden 1977), whereas the author of the present article has shown that the terminology of Sībawayhi was totally different from the terminology used by the translators of the *Hermeneutics* and the *Poetics*, the two works in which Aristotle addresses grammatical ideas (G. Troupeau, *L'origine de la grammaire arabe à la lumière du Kitāb de Sībawayhi* [in Arabic], in *Journal of the Jordan Academy of Arabic*, i [1978], 125-38; idem, *La logique d'Ibn al-Muqaffaᶜ et les origines de la grammaire arabe*, in *Arabica*, xxviii [1981], 242-50). Finally, A. Elamrani-Jamal has criticised the "Greek hypothesis" in relation to the origins of Arabic grammar, and has examined the relationship between logic and grammar in the works of philosophers of the 4th/10th and 5th/11th centuries (*Logique aristotelicienne et grammaire arabe*, Paris 1983).

Without denying the influence which Aristotelian logic might have exercised on the grammarians of Baghdād from the 4th/10th century onward, it may be supposed that the grammar took shape, unaffected by any foreign influence, simultaneously with other Islamic sciences such as exegesis and law, which originated during the first half of the 2nd/8th century in the two great intellectual centres of southern ᶜIrāḳ, Baṣra and Kūfa.

3. *The schools*

According to Arab tradition, the grammarians of Baṣra and those of Kūfa allegedly formed two distinct

and rival "schools", each having its own grammatical system (*madhhab*); subsequently, following a meeting of grammarians representing these two "schools" in Baghdād, in the 3rd/9th century, a third "school" came into being, its representatives operating a synthesis of the two former, through blending (*khalaṭa*) their systems.

While this traditional point of view was adopted by G. Flügel (*Die grammatischen Schulen der Araber*, Leipzig 1862), it was rejected by G. Weil (*Die grammatischen Streitfragen der Basrer und Kufer*, Leiden 1913), who showed the artificial and belated nature of this division into three "schools". But it remains true that even if the systems of the grammarians of Baṣra and of Kūfa were fundamentally the same, they nevertheless presented certain divergencies which should not be ignored.

These divergencies were first manifested in the area of terminology, the Kūfans using a number of terms different to those of the Baṣrans, for example: *madjrī* (= *munṣarif*); *khafḍ* (= *djarr*); *ʿimād* (= *faṣl*); *maknī* (= *muḍmar*); *nasaḳ* (= *ʿaṭf*); *ṣifa* (= *ẓarf*); *ṣila* (= *ḥashw*). Differences also appeared in the context of general concepts, such as the nature of words, since, unlike the Baṣrans, the Kūfans considered that the noun of the agent (*ism al-fāʿil*) belongs not to the category of the noun but to that of the verb, and that it expresses present time (*fiʿl al-ḥāl*); similarly, they considered that it is the noun of the action (*maṣdar*) which is derived from the verb and not the converse.

But it is especially in the sphere of flexional endings that the differences between the two systems abounded, since it has been observed that in the *K. al-Inṣāf fī masāʾil al-khilāf* of Ibn al-Anbārī, 61 out of 122 questions (i.e. a half), dealt with problems of rection (*ʿamal*) and of the governor (*ʿāmil*).

4. *Development*

At the end of the 2nd/8th century all the grammatical material drawn from pre-Islamic poetry and from the Ḳurʾān was codified in two seminal works, of which only the first survives: the *Kitāb fi 'l-naḥw* of the Baṣran Sībawayhi (d. 177/793) and the *K. Ḥudūd al-naḥw* of the Kūfan al-Farrāʾ (d. 207/822).

In the 3rd/9th century, these two works were taught in Baghdād, which had become the centre of grammatical studies, the first by al-Mubarrad (d. 285/898) and the second by Thaʿlab (d. 291/904); by virtue of the clarity of his teaching and the conciseness of his *K. al-Muḳtaḍab*, in which he presented a simplified version of the *Kitāb* of Sībawayhi, al-Mubarrad imposed the Baṣran method in the ʿAbbāsid capital.

In the first half of the 4th/10th century, it was Ibn al-Sarrādj (d. 316/928), the youngest disciple of al-Mubarrad, who guaranteed the definitive establishment of the Baṣran method in Baghdād, introducing the divisions of logic in the *K. al-Uṣūl* and its abridged version the *K. al-Mūdjaz*; but some grammarians still followed the method of Kūfa, while others blended the two methods; al-Zadjdjādjī (d. 338/949), who was their pupil, composed, besides a manual, the *K. al-Djumal*, one of the first works on the causes of grammatical phenomena, the *K. al-Īḍāḥ fī ʿilal al-naḥw*.

The second half of the 4th/10th century was a veritable golden age of grammatical studies in Baghdād, where three grammarians of Muʿtazilī leanings were teaching: al-Sīrāfī (d. 368/979), renowned for his major commentary on the *Kitāb*; al-Fārisī (d. 377/987), author of the *K. al-Īḍāḥ wa 'l-takmila*, a treatise dedicated to the Būyid prince ʿAḍud al-Dawla; and al-Rummānī (d. 384/994), also the author of a commentary on the *Kitāb*, of whom it was said that he blended logic with grammar and who composed one of the first collections of grammatical definitions, the *K. al-Ḥudūd*. The greatest grammarian of this period was without doubt Ibn Djinnī (d. 392/1002), whose manual the *Kitāb al-Lumaʿ* and three other important works have survived: the *K. al-Munṣif*, on morphology, the *K. al-Khaṣāʾiṣ*, on methodology, and the *K. Sirr ṣināʿat al-iʿrāb* which, despite its title, does not deal with syntax but with phonetics. A contemporary of Ibn Djinnī, the Persian Ibn Fāris (d. 395/1004), deserves mention for his innovative treatise on philology intitled *al-Ṣāḥibī fī fiḳh al-lugha*, named after the vizier al-Ṣāḥib Ibn ʿAbbād to whom it is dedicated.

The 5th/11th century is marked by a dearth of grammatical production, after the proliferation of the preceding century; the only writer worthy of mention seems to be the Persian al-Djurdjānī (d. 471/1078), author of the *K. al-ʿAwāmil al-miʾa*, which was to be one of the first studies of Arabic syntax to become known in the West, since it was translated into Latin by Erpenius at Leiden in 1617.

The 6th/12th century saw a resumption of grammatical production, first with the Persian al-Zamakhsharī (d. 538/1144), author of a clear and concise study, the *K. al-Mufaṣṣal*, which was to be the subject of a copious commentary by a scholar of Aleppo, Ibn Yaʿīsh (d. 643/1245); then with another Persian, al-Muṭarrizī (d. 610/1213), author of a small manual, the *K. al-Miṣbāḥ*, which was subsequently to be the object of numerous commentaries; as to the ʿIrāḳī Ibn al-Anbārī (d. 577/1181), whose *K. al-Inṣāf* has already been mentioned, he was also the author of a manual in the form of questions and answers, the *K. Asrār al-ʿarabiyya*, and of a treatise on methodology, the *K. Lumaʿ al-adilla*.

In the 7th/13th century, the Egyptian Ibn al-Ḥādjib (d. 647/1249) abridged al-Zamakhsharī's treatise in two opuscules, the *K. al-Kāfiya*, on syntax, and the *K. al-Shāfiya*, on morphology, which were both to be the object of commentaries by the Persian al-Astarābādhī (d. 688/1289); for his part, the Syrian Ibn Mālik (d. 672/1273), condensed grammar in two works, one in prose, the *K. Tashīl al-fawāʾid*, and the other in verse, the *K. al-Alfiyya*, a poem of about a thousand verses, belonging to a genre inaugurated a short time previously by the Egyptian Ibn al-Muʿṭī (d. 628/1231); during the same period, in the West, the Andalusian Ibn ʿUṣfūr (d. 670/1271) presented the two branches of grammar in the *K. al-Muḳarrib fi 'l-naḥw* and the *K. al-Mumtiʿ fi 'l-ṣarf*.

Finally, in the 8th/14th century, the Egyptian Ibn Hishām (d. 761/1360) composed two short treatises with his own commentary, the *K. Shudhūr al-dhahab* and the *K. Ḳaṭr al-nadā*, as well as a considerably more thorough work, the *K. Mughnī 'l-labīb*, which was to become, and has remained until this day, the standard manual for the teaching of Arabic in the universities of the Arab countries.

5. *Divisions*

Following the lead of Sībawayhi in the *Kitāb*, the authors of grammatical works divide the matter of *naḥw* into a large number of chapters (*bāb*). In spite of their apparent disorder, these chapters may be grouped within two major divisions, according to a logical order which appears in a particularly neat fashion in works such as the *K. al-Uṣūl* of Ibn al-Sarrādj and the *K. al-Muḳarrib* of Ibn ʿUṣfūr.

The first division of *naḥw* is devoted to the study of the behaviour (*madjārī*) of the ending of words in articulation (*kalām*). It comprises nine sections in which the endings (*awākhir*) of the three types of Arabic word (nouns, verbs and particles) are

examined successively, according to their inflexion (*iʿrāb*) or their basic form (*bināʾ*):
(1) the ending of nouns inflected (*muʿrabāt*) in the governing function (*ʿawāmil*):
a. nouns raised (*marfūʿāt*) by the vowel /u/;
b. nouns rectified (*manṣūbāt*) by the vowel /a/;
c. nouns drawn out (*madjrūrāt*) by the vowel /i/.
(2) the ending of nouns assimilated (*mushabbaha*) to inflected nouns.
(3) the ending of nouns dependent (*tawābiʿ*) on other nouns for their inflexion.
(4) the ending of inflected nouns variable (*munṣarifa*) or invariable (*ghayr munṣarifa*) with the suffix *-nūn*.
(5) the ending of invariable nouns (*mabniyyāt*).
(6) the ending of inflected verbs in the governing function:
a. verbs raised (*marfūʿa*) by the vowel /u/;
b. verbs rectified (*manṣūba*) by the vowel /a/;
c. verbs with vowel cut off (*madjzūma*).
(7) the ending of invariable verbs.
(8) the ending of invariable particles.
(9) the ending of words modified by factors other than inflexion.

The second division of *naḥw* is concerned with study of the transformation (*taṣrīf*) of the forms (*abniya*) of words in themselves, in vocabulary (*lugha*). This division comprises two parts in which the following are described:
(1) morphological transformations which influence the form of words: diminutiveness (*taṣghīr, taḥḳīr*), brokenness (*taksīr*) for the plural, annexation (*iḍāfa, nasab*), derivation (*ishtiḳāḳ*) of verbs and nouns from the verbal noun (*maṣdar*);
(2) phonetic transformations which influence the phonemes of words: augmentation (*ziyāda*), substitution (*ibdāl*), suppression (*ḥadhf*), conversion (*taḥwīl*) and insertion (*idghām*).

It is this bipartite division, inherited from the *Kitāb* of Sībawayhi, which is to be found in all Arabic grammatical works, even though, within these two major divisions, the order of the constituent parts may vary slightly.

NĀʾIB (A.), literally "substitute, delegate" (*nomen agentis* from *n-w-b* "to take the place of another"), the term applied generally to any person appointed as deputy of another in an official position.

1. In pre-modern usage.

The term was used, more especially, in the Mamlūk and Dihlī Sultanates, to designate (*a*) the deputy or lieutenant of the sultan, and (*b*) the governors of the chief provinces. In the Mamlūk system the former, entitled *nāʾib al-salṭana al-muʿaẓẓama wa-kāfil al-mamālik al-sharīfa al-islāmiyya*, was the vice-sultan proper, who administered all the territories and affairs of the empire on behalf of the sultan. This was, however, only an occasional office, and its holder is to be distinguished from the *nāʾib al-ghayba*, the temporary governor of Cairo (or Egypt) during the absence of the sultan, or of Damascus during the absence of the *nāʾib al-salṭana*. The six *niyābas* of Syria which replaced the Ayyūbid *mamlakas*—Damascus, Ḥalab, Tripoli, Ḥamā, Ṣafad and al-Karak (their number was from time to time increased by the erection of Ghazza and other districts into separate provinces)—were each administered by a *nāʾib al-salṭana* (also entitled *kāfil al-mamlaka*), who was an "*amīr* of a thousand", the *nāʾib* of Damascus being superior to the others. At the end of the 8th/14th century, Egypt also was divided into three similar *niyābas*: Alexandria (from 767/1365-6), Upper Egypt (*al-wadjh al-barrī* or *al-ḳiblī*) and Lower Egypt (*al-wadjh al-baḥrī*). The plain title of *nāʾib* was held by the commandants of the citadels of Cairo, Damascus, Ḥalab, etc., who were not under the jurisdiction of their respective governors, and by various *amīrs* of lesser rank holding subordinate commands. (For an instance of more recent use, see SHĀMIL.)

In the Dihlī Sultanate, the *nāʾib* was the powerful minister who was the deputy of the king himself. The earliest reference to the office seems to be the appointment of Ikhtiyār al-Dīn Aytigīn as deputy on the accession of Sultan Muʿizz al-Dīn Bahrām Shāh in 637/1240 (Minhādj al-Dīn Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, ed. Bibl. Ind., 191). In fact, the support of the nobles was conditional upon the appointment of this person to the deputyship. Although this was a separate office from that of the *wazīr*, nevertheless under powerful *nāʾibs*, like Malik Kāfūr in the reign of ʿAlāʾ al-Dīn Khaldjī and Khusraw in the reign of Mubārak Shāh, its existence was not conducive to the growth of the powers of the *wazīr*.

In its most common acceptation, in Persian and in Turkish as well as later Arabic, *nāʾib* signified a judge-substitute, or delegate of the *ḳāḍī* in the administration of law. In modern Arabic political usage, it denotes a parliamentary deputy, so that *madjlis al-nuwwāb* means "chamber of deputies" [see MADJLIS and 2. below]. In modern legal usage, *al-nāʾib al-ʿumūmī* is the public prosecutor. *Nāʾib* is further found in military usage as a term, with *shāwīsh*, for the rank of sergeant.

The form *nawwāb* (possibly a frequentative or intensive adjectival form, not however used in Arabic, but more likely a *pluralis dignitatis* connected with *nuwwāb*, pl. of *nāʾib*) became much used in Indo-Muslim practice as the titles Nawwāb or Nawāb; for this, see NAWWĀB.

2. In modern politics.

Until the early 19th century, *nāʾib* had carried only the traditional meaning of official deputy, the lieutenant of a ruler, governor or judge. The term has retained this import, and is still used in this sense in Arabic, Turkish and Persian. Meanwhile, with the Middle Eastern exposure to Western political ideas, *nāʾib* —in Arabic usage only— has acquired the additional meaning of people's representatives in government.

Like so many modern Arabic political expressions, *nāʾib* gained its new sense first through the discussing of political phenomena abroad. Rifāʿa al-Ṭahṭāwī [*q.v.*] seems to have been the first to employ it with such meaning in the 1830s, applying it to members of the French *Chambre des Députés* (Rifāʿa Rāfiʿ al-Ṭahṭāwī, *Takhlīṣ al-ibrīz*, 3rd ed. Cairo 1958, 141; idem, *al-Kanz al-mukhtār*, Cairo 1834, 22, 57). Resorting to calque, he chose the word *nāʾib* to render the French *député*, which carried the double meaning of "appointed official" and "popular representative". Thereafter the term was occasionally used with this new denotation, but it gained broad currency only following the creation of the Egyptian *madjlis shūrā al-*

nuwwāb (Consultative Council of Deputies) by the Khedive Ismāʿīl in 1866. The membership of this institution, having been assembled through a combined procedure of appointment and election, clearly reflected a novel concept, and its designation as *nuwwāb* lent the term a similarly novel, if somewhat ambiguous implication. Lasting until 1882, the Khedive's Council was the only official body in the region whose members were so formally designated prior to World War I.

Assemblies of deputies have emerged in the Middle East under different régimes since the disintegration of the Ottoman empire, their membership formed through various mechanisms. The name *madjlis al-nuwwāb* has often been applied to such institutions, whether unicameral bodies or lower houses of bicameral ones. Thus were named institutions in monarchical Egypt (1923-52), Iraq (1924-58) and Libya (1951-69); mandatary, then independent Syria (1932-63); Sudan (1951-8); Lebanon (since 1926); Trans-Jordan, then Jordan (since 1946), and Morocco (since 1962). Members of similar bodies with other names—*madjlis al-shaʿb* ("people's assembly"), *madjlis al-umma* ("nation's assembly") etc.—have likewise been commonly known as *nuwwāb*. In their representative nature, political role and public standing these bodies have varied broadly in the Arab states, according to their respective political realities.

Bibliography: For the 19th century evolution of the term and concept of representation, see A. Ayalon, *Language and change in the Arab Middle East*, New York 1987, ch. V. For Ismāʿīl's *madjlis shūrā al-nuwwāb*, and the development of representative institutions in the 20th century, see MADJLIS, 4, and the Bibl. therein. (A. AYALON)

NĀʾILA [see ISĀF].

NĀʾILĪ, properly PĪRĪ-ZĀDE (after his father Pīrī Khalīfe Muṣṭafā Čelebi, a celebrated Ottoman poet of the 17th century, d. in 1077/1666-7. To distinguish him from the 19th century poet and Mewlewī adherent Ṣāliḥ Nāʾilī of Monastir (who died in 1293/1876 in Cairo) he has since been called Nāʾilī-yi Ḳadīm, "old Nāʾilī", the later poet being referred to as Nāʾilī-yi Djedīd, "new Nāʾilī".

Nāʾilī was born in Istanbul presumably about the beginning of the 17th century (as we are led to assume based on indications in his *Dīwān*). He enjoyed a good education, upon the completion of which he entered the government office of finances called *maʿden ḳalemi* as clerk. This was to be his life-long job, and he ultimately became *bash-khalīfe* there (thus following in his father's footsteps, a clerk and *khalīfe* in the same office). Unable to secure a more important post, he had to content himself with the life of a civil servant of restricted means until towards the end of his life he was sent into exile by the grand vizier Ḳöprülü-zāde Fāḍil Aḥmed Pasha for unknown reasons. Allusions in one of his *ḳaṣīdes* point to his having later been allowed to return to Istanbul. Nāʾilī died in 1077/1666-7; the location of his tomb cannot be ascertained.

Nāʾilī was a weak, delicate man of feeble constitution, inclining to hypersensitivity and pessimism. There are indications in his *Dīwān* that he belonged to the Khalwetī order. Nevertheless, he was not only one of the greatest Ottoman poets of the post-classical period but one of the most interesting and important poets in the entire history of Turkish literature. He was an innovator, but mainly in the field of style and language, being the pre-eminent follower of the *Sebk-i hindī* [see SABK-I HINDĪ] style in Ottoman poetry.

Nāʾilī's characteristics are a polished, elegant, individual style of great gracefulness, succinctness of expression and a language full of Persian words, constructions (often of considerable length, such as e.g.: *djihān-ī wāzhgūn-naʿl-i maḥabbet*, "the land of love with the horseshoes turned backwards"; horses used to be fitted with horseshoes turned backwards in order to confuse pursuers) and metaphors, many of which were new to Turkish usage. A good number of his verses contain so many foreign elements that they are unintelligible to a Turk who does not know Persian. An example from a *ghazel*:

Zūr-ī bāzū-yī nigāhuñ dest-bürd-i ʿishwedür
Čāk-rīz-i djeyb ü dāmān-ī taḥammüldür baña

"The force of your glance's arm is coquetry's victory;
It is the tearing into pieces from collar to hem of
(my) endurance to me."

Furthermore, Nāʾilī's language is so compact and free from all redundance that the meaning is often hard to decipher at first sight, and some of his verses become intelligible only when one has recourse to interpreting them in a Ṣūfī sense. However, the use of *taṣawwuf* ideas and allusions, at which Nāʾilī is a master, is only a matter of inspiration and style for him; he cannot be called a Ṣūfī poet. His poetic imagination was not as powerful as his mastery of language and style, but he influenced both his contemporaries and later poets down to the 19th century.

Nāʾilī's literary work consists only of a *Dīwān*, put together by the poet himself. It was printed in Būlāḳ in 1253/1837 (only about a third of his poems were printed, however). All of his work is included in the critical edition prepared by Haluk İpekten (Istanbul 1970) (for the preparation of this critical edition, all known 31 mss. of the *Dīwān* were studied). The complete *Dīwān* consists of two *münādjāts*, ten *naʿts*, 29 *medḥiyyes*, a *merthiye* written in the form of a *terdjīʿ-i bend* on the death of his brother who died young, four *müseddes*, one *terkīb-i bend*, one *takhmīs*, 390 *ghazels*, one *müstezād*, 18 *ḳiṭʿas*, eight *rubāʿīs*, five *beyts*, eleven *sharḳīs* and six *tārīkhs*.

Most of Nāʾilī's religious poetry is in the *ḳaṣīde* form. Of the ten *naʿts*, eight are in honour of the Prophet and one each in honour of ʿAlī and of Ḥusayn; 27 of the 29 *medḥiyyes* are also *ḳaṣīdes* (the other two being a *ḳiṭʿa* and a *naẓm*). Nāʾilī's *medḥiyyes* are dedicated to Murād IV and Meḥemmed IV [*q.vv.*] to the grand viziers Kemānkesh Ḳara Muṣṭafā Pasha, Sulṭān-zāde Meḥmed Pasha [see MEḤMED PASHA, SULṬĀN-ZĀDE], Ṣofu Meḥmed Pasha, Ṣāliḥ Pasha, Hezār-pāre Aḥmed Pasha, Ḳöprülü-zāde Fāḍil Aḥmed Pasha [see KÖPRÜLÜ], to the *shaykh al-islāms* Zekeriyyā-zāde Yaḥyā Efendi, Bahāyī Efendi [see BAHĀʾĪ MEḤMED EFENDI], Meḥmed Emīn Ṣunʿī-zāde Efendi, to various *defterdārs* and others.

Nāʾilī's most important work is, however, his collection of 390 *ghazels*. These *ghazels*, the majority of which are of only five verses, have been considered samples of *münakkaḥiyyet*, the art of expressing oneself in such a way that words and meaning are perfectly balanced. In some of them there is a lightness of tone that reminds one of Nedīm [*q.v.*], in others a pessimistic, and at times philosophising, vein calling to mind Nābī [*q.v.*]. Thus first and foremost, Nāʾilī is considered a poet of *ghazels*.

His *sharḳīs* have a special importance in that they are the first poems of this genre and in that he wrote them in a very simple language (with passages such as *bizümle yār söyleshmez*, "the beloved does not speak with us") that is totally different from the elaborate language of his other poems.

(E.G. Ambros)

NAʿĪM al-DĪN of Temesvár, Timişoara, Ott. Ṭīmīshwar, Ṭīmīshwarī al-Ḥādjdj Ibrāhīm (1107/1695-?), Ottoman author, with the penname (*takhalluṣ* [*q.v.*]) Naʿīm(ī).

Born in Ṭīmīshwar [*q.v.*] as an offspring of a typical borderer family, he left his native town after the Habsburg conquest of 1716 and spent his further life in the service of high dignitaries (Muḥsin-zāde ʿAbd Allāh Pasha, Ghāzī al-Ḥādjdj Ḥusayn Pasha, Nāʾilī ʿAbd Allāh Pasha) as *dīwān kātibi*. Works: (1) *Ḥadīḳatü ʾl-shühedāʾ*, finished in 1157/1744, but enlarged by an appendix (*dhayl*) of 1178/1764, is of a mixed character, containing a compilation of Ḳurʾānic verses and traditions concerning the topics of *djihād*, *ghazā*, *shahāda* [*q.vv.*], etc., illustrated by examples from the biographical literature on the Prophet and his Companions or from hagiographical sources, sometimes also from the local oral tradition of the Hungarian borderland; a survey of Ottoman history 1094-1157/1682-1744, based on Meḥmed Rāshid's [*q.v.*] chronicle, but enlarged by references to historical events, based on eyewitnesses or on his own experience; biographical data on his chiefs; autobiographical notices; popular songs (*türkü* [*q.v.*]) of folk-minstrels (*ʿāshiḳ* [*q.v.*]) like Gewherī [*q.v.*] (elegy on the death of one of the author's ancestors, Aḥmed Agha of Eger) and Derwīsh ʿAshiḳ Ḥasan (songs on the fall of Buda 1686 and Belgrade 1688 and the siege of Temeshwar 1688-90); poems of his own; etc. (2) *Pend-nāme*, finished in 1182/1768, a short didactic *mathnawī* [*q.v.*].

(M. Köhbach)

NAʿĪMĀ (1065-1128/1655-1716) Ottoman historian.

Muṣṭafā Naʿīm, known by the *makhlaṣ* Naʿīmā, was born in Aleppo, probably in 1065/1655, the son of a Janissary commander. As a young man he entered, *ca.* 1100/1688-9, the palace corps of *baltadjīlar* [*q.v.*] in Istanbul and received a thorough scribal education, developing particular interests in literature, history and astrology. He may also have attended classes at the Beyazīd mosque. Graduating from the *baltadjī* corps, he was apprenticed to the *kātibs* of the *dīwān-i hümāyūn*, and appointed secretary to Ḳalaylīḳoz Aḥmed Pasha, also a former *baltadjī*. He remained a member of the *dīwān-i hümāyūn kātibleri* for the remainder of his career, serving in various administrative posts.

Sometime around 1110/1698-9, Naʿīmā was commissioned by the Grand Vizier ʿAmūdja-zāde Ḥusayn [Köprülü] Pasha [*q.v.*] to complete the Ottoman history left in draft form by the *müderris* Shāriḥ al-Menārzāde Aḥmed Efendi (d. 1067/1657 (Naʿīmā, *Tāʾrīkh*, i, Istanbul 1281/1864, 10-11). His principal remuneration at this period was a daily wage of 120 *aḳče* drawn upon the Istanbul customs revenues; this was augmented in the usual way by ad hoc gifts from the Grand Vizier as sections of the history were presented to him. Naʿīmā's work on the history had probably ceased by the time of his appointment in mid-1116/late 1704 to the post of *Anadolu muḥāsebedjisi*, with the principal scribal rank of *khʷādjegān* [*q.v.*] (Djemāleddīn, *ʿOthmānlî taʾrīkh ve müwerrikhleri* (*Āyīne-yi ẓurefā*), Istanbul 1314/1896, 43).

Thereafter Naʿīmā's career fluctuated. In 1118-9/1706-7 he was exiled from Istanbul by the Grand Vizier Čorlulu ʿAlī Pasha [*q.v.*] (Aḥmed Refīḳ [Altınay], *Menfada Naʿîmâ Efendi*, in *TTEM*, v (1931), 52-5), probably because some of his astrological forecasts had offended certain powerful individuals. After his return he held simultaneously the posts of *teshrīfātdjī* and *ḳalyonlar defterdārî*, and in 1124/1712 was again promoted to be *Anadolu muḥāsebedjisi*. While still high in the favour of the Grand Vizier Dāmād ʿAlī Pasha [*q.v.*], he was appointed *defter emīni* [*q.v.*] (1125/1713) and shortly thereafter *bash muḥāsebedjisi*. However, rumours, spread maliciously, of his opposition to the same Grand Vizier's Morea campaign of 1714-15, resulted in temporary demotion to the post of *silāḥdār kātibi* (Ṣafar 1127/March 1715). Restored for a third term as *Anadolu muḥāsebedjisi* in mid-1127/June 1715, he was finally demoted later that year to the post of provincial *defter emīni* for the Morea, where he remained. Naʿīmā died at Patras in 1128/1716, and was buried there. (The fullest original sources for Naʿīmā's life are: Sālim, *Tedhkire*, Istanbul 1315/1897, 681-2; Shehrī-zāde Saʿīd, *Newpeydā*, Istanbul University Library ms. TY 3291, fols. 21a-22b, quoted in (Ṭayyār-zāde) ʿAṭā, *Taʾrīkh*, iii, Istanbul 1293/1876, 36-40; and the information given at various points by Naʿīmā in the *Taʾrīkh*, for which see L.V. Thomas (ed. N. Itzkowitz), *A study of Naima*, New York 1972, *passim*.).

Naʿīmā's reputation as a leading Ottoman historian rests upon his *Rawḍat al-Ḥusayn fī khulāṣat akhbār al-khāfiḳayn*, dedicated to ʿAmūdja-zāde Ḥusayn Pasha, terminated *ca.* 1704, and known generally as *Taʾrīkh-i Naʿīmā*. The work is a compilation in largely traditional, annalistic format, covering 1000-70/1591-1660, and including the by then customary obituaries of significant individuals. It contains almost all of Shāriḥ al-Menārzāde's chronicle and was strongly influenced by the *Fedhleke* of Kātib Čelebi [*q.v.*]. Both independently and also through these two principal sources, the *Taʾrīkh-i Naʿīmā* draws upon most of the major Ottoman histories of the late 16th and the 17th centuries, including those of Ḥasan Beg-zāde, ʿĀlī, Pečewī, Wedjīhī, and Ḳara Čelebizāde ʿAbd ül-ʿAzīz, as well as many other lesser-known writers and some oral informants. Naʿīmā's own comments and assessments appear regularly, particularly with regard to significant issues and where his sources conflict. A substantial introduction, setting out Naʿīmā's views on history and

government, bears similarities to the 17th-century reform memoranda, or *lāʾ iḥat* literature, but acknowledges particularly the influence of Kātib Čelebi's *Düstūr al-ʿamel*, and Ibn Khaldūn's theory of the rise and decline of states (Thomas, *A study of Naima*, 68-83; C. Fleischer, *Royal authority, dynastic cyclism, and "Ibn Khaldunism" in sixteenth-century Ottoman letters*, in *Journal of Asian and African Studies*, xvii/3-4 [1983], 199-203).

Naʿīmā's aim was to produce a reliable and accurate history, written in a graceful yet accessible prose style, which would be a source both of information and of instruction for Ottoman statesmen. A widely-read and highly-regarded history, the *Taʾrīkh-i Naʿīmā* was one of the first Ottoman printed works, being published in two volumes by İbrāhīm Müteferriḳa [*q.v.*] in 1147/1733 (the first volume of which was reprinted in Istanbul in 1259/1843). Second and third editions, each in six volumes, were published in Istanbul in 1280/1863-4 and 1281-3/1864-6 (on the mss., editions, and partial translations, see Babinger, 246; *İstanbul kütüphaneleri tarih-coğrafya yazmaları kataloğu*, ii, Istanbul 1945, 200-7; M. Münir Aktepe, *Naima Tarihi'nin yazma nüshaları hakkında*, in *TD*, i/1 [1949], 35-52).

Naʿīmā also collected material for a continuation of the history to 1110/1698-9, but his drafts appear not to have survived. A daybook of contemporary events apparently kept by him during at least the Grand Vizierate of ʿAmūdja-zāde Ḥusayn Pasha (1109-14/1697-1702), and perhaps for almost a decade beforehand, served as a source for the historian Rāshid (*Taʾrīkh-i Rāshid*, Istanbul 1282/1865, 449 ff.). Naʿīmā's only published writing on contemporary affairs is an account of the *Edirne waḳʿasi* and the deposition of Muṣṭafā II [*q.v.*] in 1115/1703, which was printed as an appendix to the *Taʾrīkh*.

Although Naʿīmā is traditionally regarded as the first Ottoman official historian, or *weḳāyiʿ-nüwīs* (later *waḳʿa-nüwīs* [*q.v.*]), he does not refer to himself specifically as such, and it is doubtful whether either the title or the post were formally instituted until Rāshid was appointed, in 1126/1714, to continue Naʿīmā's work (Thomas, *A study of Naima*, 36-42; Bekir Kütükoğlu, *İA*, art. *Vekayi-nüvis*).

Bibliography: For an extensive list of primary and secondary sources, see the bibl. to M. Cavid Baysun, *İA*, art. *Naima*, upon which the present article draws heavily. (Christine Woodhead)

NĀʾĪN, Nāyin, a small town (lat. 53° 05' E., long. 32° 52' N., altitude 1,408 m/4.620 feet) on the south-western edge of the Great Desert of central Persia and on the road connecting Yazd with Iṣfahān and Ḳum. The town seems to have a pre-Islamic history, but nothing is known of this. The mediaeval Islamic geographers place it in the *sardsīr* or cooler upland regions and describe it as administratively within Fārs (al-Iṣṭakhrī) but as dependent on either Yazd or Iṣfahān. According to Mustawfī, *Nuzha*, 69, tr. 77, its citadel (whose ruins are still visible) had walls of 4,000 paces in circumference. The geographers also mention silver mines in the adjacent mountains, and in Ṣafawid times a fine kaolin clay of the Nāʾīn region was used for making porcelain at Ḳāshān (see H.E. Wulff, *The traditional crafts of Persia*, Cambridge, Mass. 1966, 149); today, Nāʾīn is a notable centre for carpet-weaving.

Nāʾīn is notable for its ancient Friday mosque, dating back to the 4th/10th century (*ca.* 349/960), containing a fine early 8th/14th century *minbar*; see S. Flury, *La mosquée de Nāyin*, in *Syria*, xi (1930)m 43-58, and M.B. Smith, *The wood Minbar in the Masdjid-i Djāmiʿ, Nāīn*, in *Ars Islamica*, v (1938), 21-8, with an *Epigraphical notice* by P. Wittek at 33-5. The modern town of Nāʾīn is the chef-lieu of a *shahrastān* or district of the same name in the province of Iṣfahān; agriculture there was until recently by *ḳanāts*. The town had a population in *ca.* 1960 of 6,235.

NĀʾĪNĪ, Mīrzā Muḥammad Ḥusayn Gharawī (1277-1355/1860-1936), a prominent Shīʿī religious leader, an active supporter of the Persian constitutional revolution of 1324/1906, and a noted constitutionalist ideologue. He was born into a religiously distinguished family of Nāʾīn [*q.v.*] where his father, Ḥādjdjī Mīrzā ʿAbd al-Raḥīm, and his grandfather, Ḥādjdjī Mīrzā Muḥammad Saʿīd, both in turn held the title of *Shaykh al-Islām*. He received his primary education in Nāʾīn; and then, in 1294/1877, he moved to Iṣfahān, pursuing his studies in *uṣūl al-fiḳh* (fundamentals of Islamic law), Islamic philosophy and theology under the then noted teachers including Ḥādjdjī Shaykh Muḥammad Bāḳir Iṣfahānī (d. 1301/1883) and the latter's son, Shaykh Muḥammad Taḳī Iṣfahānī, known as Āḳā Nadjafī [*q.v.*] (for his life and activities, see Abdul-Hadi Hairi, art. *Aqā Najafī*, in *EIr*). Nāʾīnī migrated to ʿIrāḳ in 1303/1885, and after a short stay in Nadjaf he went to Sāmarrāʾ where the then greatest *mardjaʿ-i taḳlīd* [*q.v.*] of the Shīʿa, Mīrzā Muḥammad Ḥasan Shīrāzī (d. 1313/1895), was residing.

While there for eleven years, Nāʾīnī continued his Islamic studies under Shīrāzī and other *mudjtahids* such as Sayyid Ismāʿīl Ṣadr and Sayyid Muḥammad Fishārakī Iṣfahānī. Owing to the fact that Nāʾīnī was associated with Shīrāzī also as a secretary, it is possible that he was involved in the widespread campaign led by Shīrāzī against the tobacco concession of 1308/1890 signed by the then ruler of Persia, Nāṣir al-Dīn Shāh (see, *inter alia*, Ibrāhīm Taymūrī, *Ḳarārdād-i 1890 Régie*: *taḥrīm-i tanbākū awwalīn muḳāwamat-i manfī dar Īrān*, Tehran 1949). After Shīrāzī's death, Nāʾīnī moved to Karbalā and then, in 1316/1898, to Nadjaf where he became one of the special companions of Khurāsānī [*q.v.*] who, after Shīrāzī became a great *mardjaʿ-i taḳlīd* and the leading figure in the Persian constitutional revolution (Hairi, art. *Āḵūnd Mollā Moḥammad-Kāẓem Ḵorāsānī*, in *EIr*).

It was in association with Khurāsānī that Nāʾīnī began his constitutionalist activities, which included the writing of his celebrated book, *Tanbīh al-umma wa-tanzīh al-milla* ("The admonition and refinement of the people") (Nadjaf 1327/1909). In this, which proved to be very precise, systematic, coherent and fairly comprehensive, Nāʾīnī as a leading *Ithnā ʿasharī* Shīʿī *mudjtahid* argued that constitutionalism, despite its being a Western idea, was in harmony with Shīʿism. As a matter of fact, Nāʾīnī's argument in favour of constitutionalism, and particularly the Persian constitutional revolution, was a response directed against the position of the anti-constitutionalist groups led by a prominent Shīʿī *mudjtahid* of Tehran, Shaykh Faḍl Allāh Nūrī (1258-1327/1842-1909 [*q.v.*]).

Nūrī had declared that constitutionalism would destroy the Islamic beliefs and practices and would lead Islam to ruin, and called the Persian constitutional law "the book of errors" (*ḍalālat-nāma*). Meanwhile, in 1326/1908, the then despotic Ḳādjār ruler, Muḥammad ʿAlī Shāh (reigned 1325-7/1907-09 [*q.v.*]), bombarded parliament, punished the constitutionalists and abrogated the new constitutional

régime. It was in reference to these developments that Nūrī strongly supported the Shāh as "the just King" and "the King of Islam", and thus prayed to God for him: "Do corroborate our king and his army; eternalise his life; immortalise his kingship and rule". (Hairi, *Shaykh Faḍl ʿAllah Nūrī's refutation of the idea of constitutionalism*, in *MES*, xiii [1977], 327-39).

In refuting the position of the anti-constitutionalists in general and that of Nūrī in particular, Nā'īnī argued that in the absence of the Twelfth *Imām* whose rule, according to the Twelver Shīʿa, is just, ideal and perfect, the Persians may establish either a despotic or a constitutional form of government. Despotism imposes tyranny and oppression, and involves all types of evils and lawlessness, whereas constitutionalism brings law, benevolence, and justice. It goes, therefore, without saying that under the then circumstances one's obvious religious and national duty was to overthrow the despotic rule of the Ḳādjārs [*q.v.*] and to establish a constitutional form of government which may be at the same time not in contrast to Islam (Abdul-Hadi Hairi, *Shīʿism and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977).

To ensure harmony between Islam and the Persian constitution, Nā'īnī, of course, fully endorsed the second article of the supplementary fundamental law which ruled: "...there shall at all times exist [in Parliament] a committee composed of not less than five *mujtahids*...so that they may...reject and repudiate, wholly or in part, any such proposal which is at variance with the sacred law of Islam" (E.G. Browne, *The Persian revolution of 1905-1909*, Cambridge 1910, 372-3). Nā'īnī, however, dissociated himself from every constitutionalist activity because the Anglo-Russian meddling in Persia was overwhelming and the deviation of the Persian political system from constitutionalism was obvious, so that Nā'īnī is said to have collected copies of his book on constitutionalism and thrown them in the Tigris River (personal interview with Nā'īnī's son in 1970).

In 1339/1920, Nā'īnī and other Shīʿī *ʿulamā'* of ʿIrāḳ participated in the ʿIraḳī uprising of that time and opposed British mandatary rule in that country. This resulted in their exile to Ḳum, where Shaykh ʿAbd al-Karīm Ḥā'irī [*q.v.*] had just founded the circle for religious studies (*ḥawḍa-yi ʿilmīyya*). Soon, however, Nā'īnī and other banished *ʿulamā'* returned to ʿIrāḳ after signing statements in which they committed themselves not to interfere in ʿIrāḳī politics (ʿAlī al-Wardī, *Lamaḥāt idjtimaʿiyya fī ta'rīkh al-ʿIrāḳ al-ḥadīth*, Baghdād 1976, vi, 261-2). From then on, no open political activities by Nā'īnī in the form of opposition to the rulers either of Persia or of ʿIrāḳ are heard of. Rather, he had friendly relations with Riḍā Shāh and the ʿIrāḳī kings Fayṣal and Ghāzī (Hairi, *Shīʿism*, 149-9; Muḥammad Muḥsin Shaykh Āghā Buzurg, *Ṭabaḳāt aʿlām al-Shīʿa*, Nadjaf 1954, i, 595). Instead, he concentrated upon teaching *fiḳh* and *uṣūl al-fiḳh* for the rest of his life, through which he trained some of the subsequent Shīʿī *mardjaʿ-i taḳlīd* such as Ḥādjdjī Sayyid Abu 'l-Ḳāsim Khu'ī who until his death in 1992 lived in ʿIrāḳ.

Bibliography: The only book devoted entirely to Nā'īnī's political life and thought written in any Western language is Hairi's *Shīʿism*. (ABDUL-HADI HAIRI)

NAITIAS or Na'itas, originally Nawāts, meaning seamen, is a regional Indian term applied to Muslims of Arab and Persian descent who settled on the coast of Konkan (the coastal plain of Mahārāshtra state; hence they are also known as Konkanī Muslims) and in Kanara (region along the Malabar [*q.v.*] coast of the Arabian Sea in what is now western Karnātaka state; see K.B. Faridi, *Gazetteer of the Bombay Presidency, ix, pt. 2, Gujarat population, Musalmans and Parsis*, Bombay 1899, 14-15). They are the descendants of the earliest Muslim trading communities on the western coast of India. Flourishing maritime trade with India during the ʿAbbāsid caliphate provided Muslim merchants with new opportunities, and the Muslim population of Konkan and Kanara was augmented by adventurers and political refugees. The Arab historian al-Masʿūdī, who visited Ṣaymūr (the ancient port Chaul, south of Bombay) in 304/916-17, found 10,000 Muslims living there, many having migrated from Baṣra, Baghdād, Sīrāf, ʿUmān and other places; while others were descended from earlier Muslim settlers who had intermarried with the indigenous population (*Murūdj*, ii, 85-6 = § 515). The Muslim community enjoyed a measure of internal autonomy; they were allowed to build mosques and appointed a *ḳāḍī* to decide their disputes. Ibn Baṭṭūṭa, who visited the western coast in the middle of the 8th/14th century and met several religious leaders of the Naitias, has left a vivid description of them. He states that they were pious, devout, and followed the Shāfiʿī *madhhab*. They were engaged in maritime trade and were powerful at sea and were able to fight naval battles. In the city of Hinawr (also spelled Hannaur and Honavar, situated on the coast of Malabar), which was ruled by Sultan Djamāl al-Dīn Muḥammad, there were thirteen schools (*maktab*) for girls and twenty-three for boys (Ibn Baṭṭūṭa, iv, 66). Measured by the number of its schools, the Muslim community of Hinawr must have been very large.

In what is now the city of Bombay, the Naitias first settled on Māhīm [*q.v.*], the northernmost of the seven original islands, which was a military outpost of the sultans of Gudjarāt (1407-1534) and an important trading centre. In 1534, the islands of Bombay were taken over by the Portuguese, which led to a large migration of Naitias from the mainland of Konkan into Bombay, where they established a sizeable colony

(S. Edwardes, *Gazetteer of Bombay City and Island*, Bombay 1909, ii, 23-4, 34-5). As the city grew from a settlement of rock and swamp to the proud position of the commercial metropolis of India under the British, the Naitias became the most influential Muslims in the city and retained that powerful position until the 19th century, when other Muslim trading communities started migrating into Bombay. They speak a dialect of Marāthī [*q.v.*] called Konkani (spoken in coastal Mahārāshtra south of Bombay, in Goa and on the Mysore coast). Some members of the community have played an active role in politics of both Mahārāshtra and Karnātaka states and have served in the Congress Party ministries.

ʿAlāʾ al-Dīn b. Aḥmad Mahāʾimī (d. 835/1431-2), who is buried in Māhīm and who belonged to this community, is considered to have been the greatest exponent of Ibn al-ʿArabī in India. He also wrote several commentaries on Shihāb al-Dīn Suhrawardī's *ʿAwārif al-maʿārif*, and a commentary on the Ḳurʾān entitled *Tabṣīr al-raḥmān wa-taysīr al-mannān* (Dihlī 1286/1869-70; see *Maharashtra State Gazetteers. Language and literature*, Bombay 1971, 457; his name is given as ʿAlī al-Mahaymi).

Some of the information given is derived from personal interviews. (I. Poonawala)

NAḲĀ (A.), a term connected with *nuḳāwā*, a generic noun denoting alkaline plants utilised for washing linen and whitening cloths. These are plants which grow stems without any leaves; as soon as they dry up, they become white. They give linen a dazzling white colouring.

By analogy, the term denotes also a "rite of reconciliation" which was used in the Ḥidjāz and which was used for righting injuries. This was done in the following manner: The party causing the offence stops on the threshhold of the aggrieved party, holding a knife in each hand, and says: *al-naḳā naḳānā wa 'l-naḳā naḳiyyu 'l-ridjāl alladhī kamānā* "May (the rite of) *naḳā* whiten us! The *naḳā* is the whitest of men who will have covered us". After having pronounced this formula, the offender's face became white. The aggrieved person had then to appear at the door and cover the supplicant's hand with a *ṣimāda* (a cloth used for covering the head underneath the turban). Then he would kill a sheep and celebrate the reconciliation (cf. W. Robertson Smith, in *Jnal. of Philology*, xiv [1886], 126).

Bibliography: Given in the article.

(T. Fahd)

NAḲĀʾIḌ (A.) "contradicting poems, flytings", pl. of *naḳīḍa* (from the verb *naḳaḍa* "to destroy, undo, rebut, oppose"), synonymous with *munāḳaḍāt* (from the verbal form III *nāḳaḍa*): a form of poetic duelling in which tribal or personal insults are exchanged in poems, usually coming in pairs, employing the same metre and rhyme. It is thus part of invective poetry or *hidjāʾ* [*q.v.*]. Such duels were an established form in pre-Islamic times, and had their origin in the slanging-matches between members of different clans or tribes which took the place of, or formed the preliminaries for, a fracas or battle. Originally, the term may have referred to the "undoing" of the magical power of invective verse.

The genre reached its apogee in the Umayyad period with the *naḳāʾiḍ* of al-Akhṭal, Djarīr and al-Farazdaḳ [*q.vv.*], which were popular with rulers and common people, and remained so with philologists and critics on account of their highly entertaining content and their poetic and linguistic skill. Sometimes the poems are short and monothematic; but very often they are long poems in *ḳaṣīda* form, with a peculiar juxtaposition of different themes: amatory, vaunting and invective verse. They are rich in historical, political and social allusions, but on the whole their political significance is second to their role as entertainment. This they provide by means of funny descriptions, powerful imagery, grotesque exaggerations and gross obscenities; expressed in a variety of dictions ranging from the high-flown and stately to the simple near-colloquial. The "rebutting" implied by the term *naḳīḍa* does not consist in a point-by-point refutation of the opponent's poem. Rather than defending himself against slander and abuse, the replying poet attacks in his turn. Often a number of the rhyme words of the first poem re-appear in the second, but this is not done systematically. The most famous series of *naḳāʾiḍ* in Arabic literature, those of Djarīr and al-Farazdaḳ (both of the same tribe, Tamīm), were made in the course of some forty years. They show little development and revel in the reiterated description of shameful incidents and characteristics. This static character has been called "perhaps the gravest artistic fault" of the genre (Salma Jayyusi, in *Arabic literature to the end of the Umayyad period* (= *The Cambridge history of Arabic literature*, i), Cambridge 1983, 411).

Among the examples from subsequent periods one could mention *Naḳāʾiḍ Ibn al-Muʿtazz wa-Tamīm Ibn al-Muʿizz* (ed. Aḥmad Sayyid Muḥammad, 2nd ed. Cairo 1981). Sometimes the term *naḳīḍa* is used for what is more properly termed a *muʿāraḍa* [*q.v.*], sc. a poem with the same metre and rhyme as another, made by way of emulation or in order to surpass, without the invective element (see e.g., the first volume of the *Dīwān* of Abū Nuwās [*q.v.*], ed. E. Wagner, Wiesbaden 1958, 24-105). The old tribal poetic duelling survived, with little changes, into modern times: Saad Abdullah Sowayan, *Nabaṭi poetry: the oral poetry of Arabia* (Berkeley and Los Angeles 1985), 142-4, describes the *riddiyyih* in which two poets alternately improvise a few lines with the same metre and rhyme.

Pellat, see also Aḥmad al-Shāyib, *Taʾrīkh al-naḳāʾiḍ fi 'l-shiʿr al-ʿarabī*, Cairo 1946; Maḥmūd Ghinnāwī al-Zuhayrī, *Naḳāʾiḍ Djarīr wa 'l-Farazdaḳ: dirāsa adabiyya*, Baghdād 1954. For a list of ancient compilations and commentaries of *naḳāʾiḍ*, see Sezgin, *GAS*, ii, Leiden 1975, 62-3.

(G.J.H. van Gelder)

AL-**NAḲB** (in Bedouin pronunciation, Nagb), the Negev desert of southern Palestine, in what is now the State of Israel. It stretches from the coastal plains of Madjdal and the southern Hebron hills down to the Gulf of ʿAḳaba [*q.v.*]. The name Negev is originally Hebrew, meaning "the dry land", and is mentioned several times in Genesis (e.g. xii.9, xiii.1, xx.1, etc.) as the place where Abraham often encamped with his livestock and where he dug the well eventually called

Beʾers͟hevaʿ (Ar. Biʾr al-Sabʿ [*q.v.*]). The place-name Nagb is not found in Classical Arabic historical or geographical literature. After Israel adopted Negev as the modern designation for the southern desert of the country, the Bedouins resident there Arabicised Negev to Nagb, which, meaning "a mountain pass" (Classical *naḳb*), has popularly been thought to derive from the famous pass through which the former Mecca-bound Egyptian pilgrim caravan descended from the central Sinai heights to the head of the Gulf of ʿAḳaba.

During the Mamlūk and Ottoman periods, Gaza (G͟hazza [*q.v.*]) was the centre of administration, at the head of which was a *ḳāʾimaḳām* or sub-district governor. In 1901, the Ottomans built Beersheba, which has been the administrative centre of the Negev ever since.

The earliest recorded Bedouin tribe in this area was the Balī, who aided the Byzantine emperor Heraclius to fight the invading Muslim forces (al-Ṭabarī, i, 2347, 2392). The D̲j̲ud̲h̲ām, who aided ʿAmr b. al-ʿĀṣ to invade Egypt, may also have lived there (al-Ḳalḳas̲h̲andī, *Nihāya*, 193). The present-day D̲j̲ubārāt were there by the 14th century A.D. (al-Ḳalḳas̲h̲andī, *al-Bayān*, 169) and the Wuḥaydāt by the 16th century, when they expelled the ʿĀyid, that had dominated the southern sector for 300 years (al-D̲j̲azīrī, 461). Throughout the ages, the Negev was a refuge for Bedouin groups from north-west Arabia fleeing from vengeance or drought, who appended themselves to local tribes and confederations, some eventually growing and gaining tribal independence, such as the ʿUḳba tribe and the Ẓullām confederation.

The major contemporary Bedouin confederations in the Negev, the Tiyāhā and the Tarābīn, originally came there with the invading army of Bonaparte, in 1799, driving the dominant Wuḥaydāt confederation north. They were subsequently joined by the ʿAzāzna. Throughout the 19th century, these confederations fought each other over territory and, internally, over leadership, the al-ʿAṭāwna and the Huzayyil contending to head the Tiyāhā, and the al-Ṣūfī and Abū Sitta vying within the Tarābīn. These wars continued until 1890, when the final tribal borders were set.

During the Arab-Israeli War of 1948, most of the Bedouin population fled the Negev to neighbouring countries, only 13,000 out of 65,000 remaining; but by 1990, the Bedouin population was again put at 65,000, almost all of whom had become sedentary.

(C. BAILEY)

NAḲD (A.), the portion of the dowry handed over at the conclusion of a marriage, see MAHR. In modern Arabic, it has the sense of "money", see SIKKA.

NAḲḌ AL-MĪT̲H̲ĀḲ (A.), denotes the act of violating a religious covenant (*ʿahd* or *mīt̲h̲āḳ*), occasionally used in S̲h̲īʿism and, more commonly, Bahāʾism [*q.v.*], where the standard English term is "covenant-breaking". The terms *ʿahd* and *mīt̲h̲āḳ* are Ḳurʾānic (II, 27, 63, 83; III, 81; VIII, 56; XIII, 20, 25; XVI, 91, etc.), where they refer to God's general covenant with men or His prophets, or to specific covenants, such as that with the Banū Isrāʾīl [see MĪT̲H̲ĀḲ]. In S̲h̲īʿī tradition, the Prophet entered into a specific *mīt̲h̲āḳ* concerning the succession of ʿAlī. Each Imām in turn enters into a covenant concerning his successor, who must be appointed in his lifetime by means of an explicit declaration (*naṣṣ*). The imāmate itself is "a known covenant (*ʿahd*) on the part of God to named individuals" (al-Kulaynī, ii, 54:3). (For other uses, see al-Aḥsāʾī, ii, 15, 39-40, 41, 42).

In Bahāʾism, the terms are generally used of two covenants: that of God with men concerning His successive prophets and that of each prophet or *waṣī* concerning his successor. In the latter sense, loyalty to the covenant and, more specifically, the individual appointed by it (the *markaz al-mīt̲h̲āḳ*) constitutes a central motif in Bahāʾī doctrine.

The Bahāʾī covenant system closely resembles that of S̲h̲īʿism. Mīrzā Ḥusayn ʿAlī Bahāʾ Allāh appointed his eldest son ʿAbbās (ʿAbd al-Bahāʾ) as his *waṣī*; ʿAbbās in turn appointed a grandson, Shoghi Effendi, as the first of a succession of "Guardians" (*walī-yi amr Allāh*); Shoghi died childless, and authority passed six years later to an elected body, the *bayt al-ʿadl al-aʿẓam* (Universal House of Justice).

The punishment for challenging the authority of the central figure or body is wholesale excommunication. Numerous individuals and small groups have been expelled from the body of the movement, but no important sects have yet developed. In the absence of an explicit law of apostasy, the precise compass of *naḳḍ al-mīt̲h̲āḳ* has yet to be determined. In Western Bahāʾī writing, the S̲h̲īʿī origins of the covenant motif are routinely ignored and the system treated as though it is unique.

(D. MACEOIN)

AL-NAK̲H̲AʿĪ, IBRĀHĪM B. YAZĪD, AL-KŪFĪ, ABŪ ʿIMRĀN, a Successor (*Tābiʿī*), Kūfan traditionist and lawyer, who enjoyed a certain fame, b. *ca.* 50/670, d. *ca.* 96/717. His informants were above all ʿAbd Allāh b. Masʿūd [*q.v.*] but also Anas b. Mālik and ʿĀʾisha [*q.vv.*]. He seems to have been part of the latter's circle, and transmitted from her a fair number of items concerning in particular the behaviour of women and husband-and-wife relations, beginning with her own marriage with the Prophet. It is not without significance that a number of these items of information were critically examined by an Ibn Ḳutayba.

But it is above all as a jurisconsult that Ibrāhīm al-Nak̲h̲aʿī played a major rôle. He appears to have been one of the first great defenders of the use of *raʾy* [*q.v.*], personal judgment, whose use he nevertheless only envisaged when tied closely to tradition. His teaching seems to have strongly influenced, through the intermediacy of pupils like Ḥammād b. Abī Sulaymān, various front-rank jurists, above all Ḥanafī ones, but

also those belonging to other law schools, such as Abū Yūsuf, al-Shaybānī, al-Shāfiʿī and even Saḥnūn [*q.vv.*], who accord him quite a large place in their works.

(G. LECOMTE)

NAKHĀWILA [see AL-MADĪNA. 3].

NAKHČIWĀN, NAKHČUWĀN, the name of a town in Transcaucasia which is also the chief town of a region of the same name, until the early 19th century a largely independent khanate and in former Soviet Russian administrative geography part of the Azerbaijan SSR but an enclave within the Armenian Republic. Both town and region lie to the northwest of the great southern bend of the Araxes river, since 1834 here the frontier between Persia and Russian territory. The town of Nakhčiwān is situated in lat. 39° 12' N. and long. 45° 24' E. The region is mostly mountainous, with peaks rising up to 12,808 ft./3,904 m, except for the plains along the Araxes, and is in the seismically highly active zone which extends from northern Persia into eastern Turkey.

The town Ναξουάνα is mentioned in Ptolemy, v., ch. 12. The Armenians explain the name of Nakhčawan (Nakhčuan) by a popular etymology as *nakh-idjewan* "(Noah's) first stopping-place" (although the name is apparently compounded with *awan* "place") and locate the town in the province of Vaspurakan (cf. Yāḳūt, i, 122), or in that of Siunikh. According to Moses of Chorene, i, ch. 30, Nakhičewan was in the area peopled by Median prisoners (*mar*) in whom we should see the ancestors of the Kurds of this region (cf. al-Balādhurī, *Futūḥ*, 200: *nahr al-Akrād*). In the early Arab sources we find the form Nashawā, al-Balādhurī, 195, 200; Ibn Miskawayh, ii, 148; al-Samʿānī, 560: Nashāwā. In the Saldjūḳ and Mongol period, the predominant form is Naḳdjuwān (as early as Ibn Khurradādhbih, 122).

The town was conquered under ʿUthmān by Ḥabīb b. Maslama. It was rebuilt under Muʿāwiya by ʿAzīz b. Ḥātim. In 87/705 the Arabs hanged a large number of Armenian notables, and thereafter the town acquired a Muslim character. For a short time (about 900) the power was in the hands of the Bagratuni, but the town was reconquered by the Sādjids [*q.v.*] and belonged henceforth to the domain of their vassal, the *amīr* of Golthn (Ordūbād [*q.v.*]); cf. Markwart, *Südarmenien*, Vienna 1930, preface, 79, 93, 99-101, 115, text, 300, 362, 567. It figures in the wars of the Daylamī period (Ibn Miskawayh, ii, 148) and in the events of the Saldjūḳ period (cf. Ibn al-Athīr, under 514/1120).

Nakhčuwān is more particularly associated with the family of Īldegizid Atābegs of Ādharbāydjān (531-632/1136-1225 [*q.v.*]), cf. Mīrkhʷānd, *Rawḍat al-ṣafāʾ*, Lucknow 1894, 875-6), whose main centre it was, as is shown by the fine buildings: (*a*) the tomb (*mashhad*) of *al-raʾīs al-adjall Rukn al-Dīn Djamāl al-Islām muḳaddam al-mashāʾikh Yūsuf b. Kathīr* (?), dated 557/1162-3; (*b*) the tomb built by Shams al-Dīn Nuṣrat al-Islām Ildegiz for the *malika Djalāl al-Dunyā wa 'l-Dīn Muʾmina Khātūn* (probably his wife, former wife of the Saldjūḳ Ṭughrïl II, d. 568/1172-3, see Mustawfī, *Taʾrīkh-i Guzīda*, 472); on Ildegiz's stay at Nakhčiwān in 568, cf. Ibn al-Athīr, xi, 290; (*c*) the portico (now in ruins) built in 582/1186 by the Atābeg Abū Djaʿfar Muḥammad Pahlawān b. Ildegiz. Some localities depending upon Nakhčiwān (Erndjak, etc.) were given in fief to the Georgian prince Elikum Orbelian by his brother Ḳïzïl Arslan. When the Khʷārazmshāh Djalāl al-Din exercised power in Ādharbāydjān, Nakhčiwān belonged to al-Malika al-Djalāliyya, daughter of Muḥammad Pahlawān (al-Nasawī, ed. Houdas, 76, 266. 300). Under the Mongols the town was devastated, as is attested by Rubruck who visited it in 1253, ed. 1839, 384, cf. Howorth, *History of the Mongols*, iii, 82. The town suffered also from the wars between Turkey and Persia (under Murād IV); Ewliyā Čelebī, ii, 240, Tavernier (1664), ed. 1713, i, 53-5, and Chardin (1673), ed. 1711, i, 179, found it in ruins. Nakhčiwān was only rebuilt after 1828 when the khanates of Eriwān and Nakhičiwān were ceded to Russia. Under the Persians, Nakhičiwān (with the district of Āzā-Djirān = Ordubād) was directly under Ādjarbāydjān and not Eriwān. Kalb ʿAlī Khān of Nakhičiwān was blinded by Āḳā Muḥammad, founder of the Ḳadjār dynasty. The last chief of Nakhičiwān before the Russian occupation was Karīm Khān Kangarli. The *nāʾibs* appointed by the Russians were Iḥsān Khān and Shaykh ʿAlī Beg. The *maḥall*s of the khānate were: Nakhičiwān, Alindja-čay (Armenian Erndjak), Mawāzī-khātūn, Khok, Daralagez, and those of Āzā-Djīrān: Ordūbād, Akulis, Dasta, Bilāw and Činanāb. Among the dependencies of Nakhčiwān, Djulfa (since 1828) on the Russian-Persian frontier is very well known (Armenian Djuta) with the ruins of the old town and of an old bridge (*Ẓafar-nāma*, i, 399; *pul-i Ḍiyāʾ al-Mulk*) and the bridge on the Tabrīz-Djulfa railway (built in 1906).

In 1834, after the Russian occupation, the khanate (the town and 179 villages) numbered 30,323 inhabitants (besides 11,341 inhabitants of Ordūbād and its 52 villages) (Dubois). In 1896 the town numbered 7,433 inhabitants (4,512 Muslims and 2,376 Armenians) and the district (*uyezd*) 86,878. In 1913 the town had 8,946 and the district 121,365. After the Russian Revolution of 1917, the greater part of Nakhičiwān was in 1924 made into an autonomous republic dependent on the Azerbaijan SSR, with an area of 2,124 sq. miles/5,500 km^2. The town of Nakhčiwān, lying on the Yerevan-Baku railway and now an industrial centre of some significance, had in 1970 a population of 33,000, whilst the republic of the same name depends largely on irrigated agriculture and stock-raising, with some mining, and in 1970 had a population of 202,000, mostly Muslim and Azeri Turkish-speaking.

Nakhičiwān on the Don in the present-day Russian Federation is the settlement of Armenian colonists founded in 1780 on the Don and is at the present day a suburb of Rostov.

(V. Minorsky-[C.E. Bosworth])

NAKHL (a.), substantive of a collective nature (unit. *nakhla*, pl. *nakhīl*) denoting the date palm (*Phoenix dactylifera*) of the order *Palmae*, sub-order *Coryphineae*. In Persian it is *nakhl* or *khurma*, in Turkish *hurma aghadjī*, in Hebrew *tāmār* and in Tamahak, according to the sex, *azzayl/tazzayt*, *émellé/tamellalt*, *tadamant*.

This attractive tree with dioecious flowers is probably one of the first to be known and exploited by mankind in the hot and arid zones of Africa and the Orient. The important role which has always been played by the date palms and their fruits [see tamr] in the diet of sedentary and nomadic populations of these zones is attested, in Arabic, by the rich terminology devoted to them. Regarding the tree itself, each element of its structure is defined by one or several terms which, for the most part, have been retained in the local dialects.

After germination of the stone of the date (*nawāⁿ*; Tamahak, *akebbu*, pl. *ikebba*), there emerges from the sand a turion (*fasīla*, *sālī*, *wadiyya*; Tamahak, *alkem*) which can be transplanted. The young cultivated plants (*ashāʾ*) are arranged in rows to form and orchard (*ṣawr*, *ḥāʾish*). When the stem of each (*djidhʿ*) has its crown of young palms within reach of human hand, it is known as a *ḳāʿid* (Tam., *tegheleft*, *tesakent*) and, above the height of a man, it is called *raḳla*, then *ʿaydāna*. When, after five to six years, it has attained its final height, which can be between 15 and 20 m., it becomes the *bāsiḳa* or *ʿawāna* if it is a single isolated tree. The date palm planted beside water is called *kāriʿa* or *mukraʿa*. If it leans excessively and is in danger of being uprooted, it needs propping up and, when supported, it becomes *rudjabiyya*. In old age, the date palm loses its garland of palms and bears no more fruit; it becomes desiccated and is then *saḥūḳ* or *ṣunbūr*, suitable for felling. The overall mass of foliage (*khūṣ*) in a cluster consists of some fifty broad leaves serrated in pinnate fashion; the leaf or palm (green, *shaṭba*, dry *saʿaf*; Tam., *takarart*) has a firm central stem known as *djarīd* which, when stripped of the leaf, is used for various purposes. It is this *djarīd*, used in the manner of a javelin, which gave its name to the well known equestrian sport (see djerīd and L. Mercier, *La Chasse*, 204-12) which has been so popular in Abyssinia, the Near East and Turkey, from the period of the Mamlūks to the present day, rivalling the game of polo [see ṣawladjān] and the "bouzkachi" of the Afghans and Mongols. The inflorescence, in spike or spadix form (*talʿa*, *ḍabba*) is enveloped in a bract (*ḳināba*, *ḳunnāba*), the spathe (*kāfūr*, *kufurrā*, *kathar*) which opens with the blossoming of the flowers (*ḍaḥk*, *gharīḍ*, *ighrīḍ*; Tam., *aghatū*, *eherer*). Those of the male date palm (*fuḥḥāl* and pl. *dhukkāra*) produce pollen (*lāḳāḥ*) which, in natural conditions, is transported by the wind and honey-gathering insects and deposited in the calyx of the female flowers to fertilise them. Natural fertilisation (*talḳīḥ*, *djibāb*) is often imperfect, being too dependent on chance, and at a very early stage humans developed a procedure for artificial pollination (*tadhkār*, *taʾbīr*) of female date palms, climbing the tree and shaking a bundle of male flowers over the female flowers to ensure good fertilisation. This practice was followed by the Babylonians, according to Herodotus, and was later mentioned by Aristotle's pupil, Theophrastus, and by Pliny; it is still in use in commercial palmeries. The fertilised female date palm is called *maʾbūr* and at its first pollination it is described as *muhadjdjana*. Certain date palms can be precocious in producing (*bakūr*, *bakīr*, *mutahadjdjina*) while others bear fruit only in alternate years (*sanhāʾ*). It can also happen, according to the atmospheric conditions of the season, that the dates of a productive tree fall when they are still green; the tree is then described as *khaḍīra*.

The attention required by cultivated date palms amounts to no more than an annual pruning or thinning-out of the foliage (*ṣirām*, *djibāb*, *djidād*, *djirām*, *shimrākh*, *ḳiṭāʿ*) of male trees, when the palms become dry; all that is left of these are stumps cut short at the base (*kirnāfa*, *karab*). Shoots growing from the trunk are also removed and some are replanted to assure the continuity of the palmery.

The date palm is often cited in the Ḳurʾān (19 mentions) as an example of the beneficence of Divine Providence towards humanity; it is often associated here with the vine, the olive, the pomegranate and with cereals. Worth recalling is this touching legend evoking the miracle of the birth of Jesus Christ (sūra XIX, 24-26): the Virgin Mary retires alone beneath a palm-tree to give birth to her child and the latter having arrived, she laments, driven to despair by her desolation and loneliness; but the God-child, placed at the foot of the tree, is immediately able to speak and advises his mother to shake the tree; succulent dates fall from it in profusion, while a spring of fresh and limpid water emerges from the sand. Refreshed and nourished, the Virgin takes heart and, strengthened by divine support, she rejoins her kinsfolk with her child.

Besides dates, the date palm provides other useful products. In dietary terms, the pith of the young trunk or palmite (*kathar*, *djadhab*, *sidhāb*, *djummār*), white and of starchy consistency, resembles cheese and is a delicacy still much appreciated by gourmets. Similarly, when boiled, the outer bounds or "palm-cabbage" taste rather like artichoke. The sap rising in the trunk may be extracted, providing the drink known as "palm-wine" (*lāgmī*); it is obtained either by pollarding the tree and surrounding the cut section with a receptacle which fills rapidly, or by slashing the stem vertically, and collecting the secretions in a manner similar to the procedure used for the extraction of rubber. This very sweet and refreshing liquid has the disadvantage of fermenting quite quickly, becoming charged with alcohol which renders it intoxicating; as such, Muslims must abstain from consuming it. In the field of craftsmanship, the dried folioles of the palms are collected by the basket-maker (*khawwāṣ*) who weaves them into mats (*ṭalīl*, pl. *ṭilla*, *ṭulul*, *aṭilla*) and small baskets for dates (*dawkhala*, pl. *dawākhil*). The ligneous fibres (*khulb*, *latīf*) of the trunk are very durable and provide the material for stout cables and ropes much used by fishing fleets and coastal trading vessel; after carding, this fibre provides excellent packing material (*disār*) for the caulking of ships and the stuffing (*ḥashw*) of mattresses and cushions, especially those of pack-saddles and stools. Finally, for the carpenter (*nadjdjār*), the large trunks, well dried and squared, constitute the base material for building work in the form of girders, rafters and pillars.

For the desert populations, the palmeries (*ḥadāʾiḳ al-nakhl*) have always been centres of sedentarisation and

civilisation. In Biblical times the date palm was quite abundant in Palestine, and Phoenicia or "land of palms" owes to it its name, from the Greek φοινιξ. Theophrastus and Pliny agree in attesting the abundance of date palms in Judaea, and this is confirmed by other historians, Strabo, Pausanias, Tacitus and Aulius Gallus. These testimonies explain the representation of the date palm on the Roman and Hebrew coinage struck in this country, as a symbol of prosperity. It is thus that the city of Jericho was known as the "city of palms", and Strabo described its rich palmery with admiration. Similar evidence is to be found in accounts of pilgrimage to the Holy Land, in various periods, until the 17th century. The enclosed valley of the Jordan and the region of the Dead Sea also enjoyed this source of nourishment, as did the outskirts of Jerusalem, Samaria and Galilee. According to the remnants of Egyptian and Assyrian monumental decorations, it may be asserted that the date palm was to be found in abundance from the Nile to the Euphrates. Solomon had built the city of Tadmur (Palmyra) "city of palms" between Damascus and the Euphrates; it was destroyed by the Emperor Aurelian in 273 A.D. For their part, Muslim geographers and travellers of the Middle Ages have not neglected to mention in their accounts the great palmeries and oases [see WĀḤA] from the Maghrib to ʿIrāḳ and Persia. It is necessary only to follow Ibn Baṭṭūṭa who, in the 8th/14th century, travelled throughout the Muslim world, from Morocco to the Indies, to have, by means of his valuable *Riḥla*, a virtually exhaustive list of the great palmeries of the period, most of which still exist today. In particular, he notes the comparable excellence of the dates of Baṣra and those of Sidjilmasa and Iwalaten, in southern Morocco. At the present, the renown of the succulent *daglāt al-nūr* "fingers of light" of Algeria and Tunisia [see BISKRA; NAFṬA], exported to all parts of Europe, needs hardly to be stressed.

The coverage and shade provided by the palmery create conditions favourable to animal as well as vegetal life. Thus the date palm has its share of arboreal guests who use it both as a habitant and a source of food. Among these, the most common is the Palm Rat or Alexandria Rat (*Mus alexandrinus*) which, as a result of maritime trade, has spread as far as Italy. It builds its nest at the top of the tree and, when hunted, it blows itself up like a balloon and, consequently, can drop to the ground without suffering any harm [see FAʾR]. It is often confused with the Cabbage-Palm Rat (*tunba*; Tam., *akkolen*) which in fact is a small squirrel (*Euxerus erythropos*) living on dates; its flesh, when pounded, is administered in pellet form to camels as a remedy against fits. In the Indies, the Cabbage-Palm Squirrel (*Sciurus palmarum*; *sindjāb al-nakhl*, *djulhum*) and the Reddish Rat (*Mus rufescens*) are found in a date palm habitat. In addition to these small mammals, a considerable population of fruit-eating passerines and wild doves is to be found nesting in the clumps of palms.

In the domain of art [see FANN], with the prohibition by Islam of pictorial representation, the date palm lost the role of being the favourite decorative motif accorded to it in architecture by earlier civilisations, Chaldaeo-Assyrian as well as Egyptian. The same applies to the symbolic quality of the palm, representing victory and joy and carried by all participants in Jewish and Christian religious festivals; only Palm Sunday survives as a vestige of this culture. In Christianity, currently, the palm, associated with laurels, still represents a mark of high distinction given as a reward for exceptional services to society and it constitutes the crown of religious martyrs.

In modern botany, the Arabic system of classification applies the term *nakhl* to a score of other palmaceous trees which are to be found from Asia to America, through the simple transposition of their vernacular names. These species are, for the most part, cultivated as elements of arboreal decoration (gardens, parks, avenues etc.) and, in each case, *nakhl* is accompanied by a qualificative; thus, the Eleis or Oil palm (*Elaeis guineensis*) is defined as *nakhl al-duhn* and the Wax palm (*Ceroxylon*) is the *nakhl al-shamʿ*. These definitions are, understandably, not to found in the writings of the ancient Arab authors who, besides the date palm, were familiar only with the Coconut palm (*Cocos nucifera*), known as *nardjīl rānidj*, *shuʿṣūr*, and the Doum palm (*Hyphaene coccifera* or *thebaica*). On rare occasions, al-Masʿūdī used the expression *nakhl al-nardjīl* for the Coconut palm (*Murūdj*, §§ 269, 368, 872); the Doum palm is called *dūm*, *khidlāf*, *khazam*, *wakl*.

(F. VIRÉ)

NAKHLA, the name of two valleys on the way from Mecca to al-Ṭāʾif, distinguished as Shaʾmiyya (Syrian, northern) and Yamāniya (Yemenite, southern). The name is presumably due to an abundance of palms (*nakhl*) in the valleys. On a height in Syrian Nakhla there was an idol of al-ʿUzzā which was specially venerated by Ḳuraysh and Banū Kināna. Some regarded the circumambulation of al-ʿUzzā as an essential for the completion of the *ḥadjdj* to the Kaʿba. Three Samura trees were closely associated with the deity. After the conquest of Mecca, Muḥammad sent Khālid b. al-Walīd to cut down the trees and destroy the idol. At another point in Nakhla there was an idol of Suwāʿ. On his way back from al-Ṭāʾif shortly before the *Hidjra*, Muḥammad halted at Nakhla, and the incident recorded in the Ḳurʾān (LXXII, 1, 2; XLV, 29-32), when djinn became believers, is said to have occurred. Nakhla is best known as the goal of an expedition in 2 A.H. led by ʿAbd Allāh b. Djaḥsh. This was the first occasion on which a Muslim killed a pagan and the Muslims captured a Meccan caravan. The Muslims violated the sacred month of Radjab, but this was condoned by a revelation (II, 217). After the battle of Ḥunayn, Muḥammad passed through Nakhla al-Yamāniya, and a mosque was built there.

(W. MONTGOMERY WATT)

NAKHLĪ (see ḤĀFIẒ TANISH, in Suppl.].

NAKHSHAB, a town in the district of Bukhārā, also called Nasaf by the Arab geographers (cf. the similar evolution of Nashawā from Nakhčiwān). The town lay in the valley of the Kashka-Daryā, cf. Ibn Ḥawḳal, ²460, tr. Kramers and Wiet, 444: Kashk-rūdh, which runs southwards parallel to the Zarafshān (river of Samarḳand) and runs towards the Amū-Daryā [*q.v.*] but before joining it disappears in the sands. Nakhshab lay on the road joining Bukhārā to Balkh four days' journey from the former and eight from the latter (cf. al-Muḳaddasī, 344). In the time of al-Iṣṭakhrī (325) the town consisted only of a suburb (*rabaḍ*) and a ruined citadel (*kuhandiz*). The river ran through the centre of the town (Ibn Ḥawḳal, ²502, tr. 481).

The Mongols from the time of Čingiz-Khān (1220) used the region of Nakhshab for their summer encampments. The Čaghatayids Kebek (1318-26) and Ḳazan (killed in 1347) had palaces built there, as a result of which the whole district was called Ḳarshī ("palace" in Mongolian) [*q.v.*]. Ḳarshī is often mentioned in the time of Tīmūr (*Ẓafar-nāma* i, 111, 244, 259, etc.), but it was eclipsed by Kish [*q.v.*] or Shahr-i Sabz, the birthplace of Tīmūr, 3 days' journey above Ḳarshī. The citadel of Ḳarshī was of considerable strength and valiantly resisted Shaybānī Khān (cf. *Shaybānī-nāma*, ed. Melioransky, 29) and ʿAbd Allāh Khān of Bukhārā (in 965/1558). From the 18th century onwards, Ḳarshī began to rise at the expense of Kish, and before 1920 was the second town of the khānate of Bukhārā with a population of 60-70,000.

The problem of identifying the ruins in the district of Ḳarshī was studied on the spot by L.A. Zimin, who formulated his conclusions as follows: 1. The ruins of the ancient Nakhshab are around the hill of Shulluktepe (cf. Mahdī Khān, *Taʾrīkh-i Nādiri*, on the events of 1149/1736-7) which marks the site of the old citadel, already in ruins in the 10th century. 2. As a result of the erection of the Mongol palaces somewhere to the south of the river, the town begins to shift southwards, and at the end of the 14th century, when Tīmūr built a citadel there, it must have occupied in part the site of the modern Ḳarshī. 3. The remains of this citadel (which Shaybānī Khān and ʿAbd Allāh Khān besieged in vain) should be sought near the ruins of Ḳalʿa-yi Zahāk-i Mārān (about 2 miles southwest of Ḳarshī).

Zimin, *Nakhshab, Nasaf, Ḳarshī*, in *ʿIḳd al-djumān* (Festschrift for V. Barthold), Tashkent 1927, 197-214. On a pseudo-local history, see R.N. Frye, *City chronicles of Central Asia and Khurasan: a history of Nasaf?*, in *60. doğum yılı münasebetiyle Fuad Köprülü armağanı*, Istanbul 1953, 165-8. (V. MINORSKY)

NAKHSHABĪ, SHAYKH ḌIYĀʾ AL-DĪN (d. 751/1350), a famous Persian author (not to be confused with the famous Ṣūfī Shaykh Abū Turāb Nakhshabī, d. 245/860). Very little is known of his career.

His *nisba* suggests that he came from Nakhshab [*q.v.*], but he went to India where he became a *murīd* of Shaykh Farīd, a descendant of the celebrated Shaykh Ḥamīd al-Dīn Nāgūrī. The *Akhbār al-akhyār* of ʿAbd al-Ḥaḳḳ Dihlawī (Dihlī 1309/1891-2, 104-7) says that he died in Badāʾūn after a long and contemplative life and that his tomb is there. Nakhshabī was a prolific writer who used his knowledge of Indian languages to translate Indian books into Persian. His best known work is the *Ṭūṭī-nāma* ("Book of the Parrot"), very popular in India and Central Asia, based on the Sanskrit *Çukasaptatī* (partly translated into Greek by D. Galanos, Athens 1851). In the preface to this book, Nakhshabī tells us that one of his patrons showed him an old Persian translation of this work and persuaded him to do it again as the language of the old translation was too simple and artless. Nakhshabī set to work and made a book of 52 chapters (called "nights") replacing some stories which did not seem to him sufficiently interesting by better ones.

The book, completed in 730/1330, is in the usual form of a framework with inset stories and is characterised by unusually fine language and bold metaphors and similes. Nakhshabī's language however seems to have been too difficult and precious for later generations, as by command of the Emperor Akbar, Abu 'l-Faḍl b. Mubārak rewrote the book in a simplified version (Rieu, 753b). This version, however, was completely supplanted by Muḥammad Ḳādirī (11th/17th century) who reduced it to 35 chapters. Ḳādirī's version became the foundation of a large number of translations into Hindī (Āwārī and Ghawwāṣī), Bengalī (Caṇḍicaraṇa Munshī), Turkish (Ṣarī ʿAbd Allāh Efendi, printed Būlāḳ, 1254/1838-9 and Constantinople 1256/1840-1) and Ḳazan Tatar. There is also a metrical version in Persian by Ḥamīd Lāhūrī (Bland, in *JRAS*, ix, 163). The same theme is taken by a number of popular versions which were disseminated in Persia in cheap lithographs under the title *Čil* (*čihil*) *ṭūṭī* ("40 parrots"). The text of one of these was published by V. Zhukovski (St. Petersburg 1901). Nakhshabī's work was known in Europe as early as 1792, when M. Gerrans published a free English translation of 12 nights. Ḳādirī's version was translated into German by C.I.L. Iken (Stuttgart 1822); this edition contains an essay on Nakhshabī and specimens of his *Ṭūṭī-nāma* by Kosegarten. The Turkish version was translated into German by L. Rosen (Leipzig 1858). So far, no complete translation of the original work of Nakhshabī has been published, although there is a French translation in ms. in Munich. E. Berthels has translated the book into Russian, but this version is also still in manuscript. The eighth night was published in original text and German translation by H. Brockhaus (Leipzig 1843, and in *Blätter für literarische Unterhaltung*, 1843, nos. 242, 243, pp. 969 ff.). Nakhshabī's other works never attained anything like the popularity of the *Ṭūṭī-nāma* but have almost all come down to us. Among them are: *Gulrīz* "Scattered roses", a tale dealing with the loves of Maʿṣūm-shāh and Nūshāba (printed by Agha Muḥammad Ḳāzim Shirāzī and K.F. Azoe, Calcutta 1912, in Bibl. Ind.); *Djuzʾiyyāt u kulliyyāt* ("Particulars and generals") also called *Čil nāmūs* (Rieu, 740a), an allegory which deals with the descriptions of the various parts of the human body considered as the noblest work of God and as proof of His greatness; *Ladjdjat al-nisāʾ*, a Persian version of the *Koka-sāstra*, an Indian work on different temperaments and sexual intercourse; *Silk al-sulūk*, a collection of sayings of celebrated mystics (lith. Dihlī 1895), and *Naṣāʾiḥ u mawāʿiẓ*, a brief treatise of a Ṣūfī nature (Rieu, 738a). His treatise *ʿAshara mubashshara* is only known from its mention in the *Akhbār al-akhyār* (see above). All the prose works of Nakhshabī are embellished with *ḳiṭʿas* scattered through them, which show that he was also an excellent poet.

Stewart, *A descriptive catalogue of the Orient Library of the late Tippoo Sultān of Mysore*, Cambridge 1819, 85a; *Ladjdjat al-nisāʾ*, in Mehren, *Codices persici*, etc. *Bibliothecae regiae Hafniensis*, Copenhagen 1857, 15, no. xxxvi.

(E. BERTHELS)

NAḲĪB (A.), pl. *nuḳabāʾ*, "chief, leader", of a tribe or other group, a term used in various senses at different times of Islamic history. For its sense as head of the community of ʿAlid descendants, see NAḲĪB AL-ASHRĀF.

1. In early Islamic history. One of the term's usages in early Islamic history is in connection with the preparatory stages of the ʿAbbāsid Revolution of 129-32/746-50. The term *naḳīb* had already established itself in the story of the Prophet Muḥammad's career, when the Medinans negotiating with him about the *hidjra* from Mecca to Medina were asked to appoint 12 *nuḳabāʾ* as representatives, although they do not appear to have filled any functions and it has been suggested that these representatives were introduced into the *Sīra* as parallels to Moses' helpers and Jesus's twelve Apostles (see W.M. Watt, *Muhammad at Mecca*, Oxford 1953, 145, 147-8).

The figure twelve apparently thus became normative, for the historians (e.g. al-Ṭabarī, ii, 1358) speak of the ʿAbbāsids, then living at al-Ḥumayma [*q.v.*] in southern Jordan, in 100/718-19 nominating 12 *nuḳabāʾ* to further their interests in <u>Kh</u>urāsān. This is dubious, but it does seem that the idea surfaced 30 years later when Abū Muslim [*q.v.*] was organising revolutionary propaganda in the Marw oasis. The *A<u>kh</u>bār al-dawla al-ʿabbāsiyya* (3rd/9th century) enumerates 12 *nuḳabāʾ* or representatives, 7 genuine Arabs and 5 *mawālī*, and including figures who later were prominent in the wars of the Revolution or in early ʿAbbāsid history, such as Ḳaḥṭaba b. <u>Sh</u>abīb [*q.v.*], Ṭalḥa b. Ruzayḳ and Sulaymān b. Ka<u>th</u>īr (ed. ʿA.ʿA. al-Dūrī and ʿA.<u>Dj</u>. al-Muṭṭalibī, Beirut 1971, 216). Outside this nucleus, the sources mention a further 18 regional *nuḳabāʾ*, equal in status to the Marw ones, and a wider body of up to 70 persons who operated also in other towns of <u>Kh</u>urāsān (see M. Sharon, *Black banners from the East. The establishment of the ʿAbbāsid state—incubation of a revolt*, Jerusalem 1983, 189, 192 ff.).

(C.E. BOSWORTH)

2. In India. This was an official in the Dihlī sultanate courts of lower rank than the *ḥādjib* (chamberlain), probably best translated "usher". Ibn Baṭṭūṭa, iii, 221 ff., tr. Gibb, iii, 660 ff., describes the role of the *naḳībs* in court ceremonial; at the public audience there might be a hundred of them, under the orders of the *naḳīb al-nuḳabāʾ*, who cry *bismillāh* at the sultan's entry; at public meals the *naḳīb al-nuḳabāʾ* delivers a formal eulogy of the sultan before the meal commences, and the *naḳibs* escort the food from the kitchens. On the sultan's formal procession from his palace for the *ʿīd* ceremonies, some three hundred *naḳībs* would walk in front of the sultan, each wearing a high conical golden hat, a golden girdle, and carrying a gold-handled whip. The *naḳībs* were used to proclaim orders to the assemblies on these occasions. They had also a military role: the *Ādāb al-ḥarb* of Fa<u>kh</u>r-i Mudabbir [*q.v.* in Suppl.], describing a review of the army by the *ʿāriḍ-i mamālik*, shows the *naḳībs* standing with the *ʿāriḍ* at the scrutiny of each soldier and his mount, and the *naḳībs* had charts for assigning to each soldier his correct place in the battle-order, and would shout orders to the troops as required. They had similar duties in the organisation of the royal hunt.

(J. BURTON-PAGE)

NAḲĪB AL-A<u>SH</u>RĀF (A.), "the marshal of the nobility (i.e., the descendants of Muḥammad's family, *ahl al-bayt* [*q.v.*])". *Naḳīb* is derived from the root *n-ḳ-b*, meaning "to bore, to pierce", then also "to investigate, to verify, to examine". Thus *naḳīb* is the person who verifies something with regard to its correctness; following from this, *naḳīb* is an expert (*ʿarīf*) in his business, acting as trustee (*amīn*) and protector (*kafīl*) (cf. *LA*, s.v. *n-ḳ-b*).

Although the term *a<u>sh</u>rāf* (one of the plurals of *<u>sh</u>arīf* [*q.v.*]) originates from pre-Islamic times when, among the Arab tribes, it meant those free men who could claim an eminent position (*<u>sh</u>araf*) because of their pure descent (*nasab*) from illustrious ancestors that gave superiority by either birth or acquired merit (*ḥasab*) to its possessors [see ḤASAB WA-NASAB], *naḳīb al-a<u>sh</u>rāf* is an Islamic creation. The historical development of the *naḳīb* and his office (*niḳāba*) has so far not found appropriate attention by scholars. There is no work exclusively focusing on *naḳīb al-a<u>sh</u>rāf* throughout the different regions and periods in Islamic history.

1. In the central Islamic lands.

The institution was most certainly established by the ʿAbbāsids, who were concerned with the justification of their caliphate by linking their claim to legitimate rule with the concept of *<u>sh</u>araf*, embodied since the rise of Islam in the offspring of Muḥammad's family. According to one *ḥadī<u>th</u>*, his family included both the descendants of ʿAlī (and his brothers) and of al-ʿAbbās; a tradition on which the ʿAbbāsids based their contention of membership in Muḥammad's family and thereby also in the group of *a<u>sh</u>rāf*. Ever since then, the *a<u>sh</u>rāf* have been broadly divided into two branches, the Ṭālibids (after ʿAlī's father Abū Ṭālib) or ʿAlids [*q.v.*] and the ʿAbbāsids [*q.v.*] (for more details, see <u>SH</u>ARĪF). It is very doubtful that the office of *naḳīb al- a<u>sh</u>rāf* already existed under the Umayyads, as was assumed by one scholar (A. von Kremer, *Culturgeschichte des Orients unter den Chalifen*, Vienna 1875, repr. Aalen 1966, i, 449, n. 1). However, the date of appearance of the office is quite unknown. References to *naḳībs* are not earlier than from the 3rd/9th century. Yet, for the following centuries the office of *naḳīb* is reported time and again. It evolved into an institution with considerable influence, both socially and politico-religiously (H. Halm, *Die Schia*, Darmstadt 1988, 64-5; Angelika Hartmann, *an-Nāṣir li-Dīn Allāh (1180-1225)*, Berlin-New York 1975, 153-4 and *passim*). Quite often, the office became hereditary in one family; for example, in Nī<u>sh</u>āpūr during the 5th/11th century (R.W. Bulliet, *The Patricians of Nishapur*, Cambridge, Mass. 1972, 234-40).

Since some time towards the end of the 3rd/9th century, all larger towns had their *naḳībs* who were supervised by a chief *naḳīb* (*naḳīb al-nuḳabāʾ*). In principle, each *naḳīb*, himself from among the *a<u>sh</u>rāf*, was appointed by the government's representatives. Until

the 4th/10th century, all members of the *ashrāf*, both ʿAbbāsid and Ṭālibid-ʿAlid, were probably headed by one *nakīb*. By the end of that century, each branch had its own *nakīb*. This can be explained by the gradual decline of the ʿAbbāsids' influence on the one hand, and the rise and spread of the different forms of Shīʿism (politically represented, for example, through Būyid rule, through the Fāṭimid caliphate, etc.), to which the Ṭālibids (or ʿAlids) adhered, on the other (A. Mez, *Die Renaissance des Islams*, Heidelberg 1922, repr. Hildesheim 1968, 145; H.L. Bodman, Jr., *Political factions in Aleppo, 1760-1826*, Chapel Hill, N.C. 1963, 85-6).

Whatever the origin, development and organisation of the office, the functions of the *nakīb* are better known, at least as far as they are stated in the law books by al-Māwardī and Abū Yaʿlā b. al-Farrāʾ (5th/11th century). According to them, the duties of the *nakīb* comprised genealogical, material and moral matters, the latter partly overlapping with the realm of the judge (*kāḍī* [*q.v.*]). The *nakīb* had to keep a register of nobility, to enter births and deaths in it and to exclude false claimants from intrusion into the corps of *ashrāf*. He had also to prevent the women of noble blood (*sharīfas*) from marrying men not their equals in nobility. The *nakīb* was enjoined to urge the financial claims of the *ashrāf*, in particular, on the state treasury concerning their pensions. Further to this, he had to watch over the proper administration of endowments (*awkāf*) established for the *ashrāf*. With regard to morality, the *nakīb* was liable to control the behaviour of the *ashrāf*, to restrain them from excess and to admonish them to avoid anything detrimental to their prestige.

Following the jurists, there were two types of the post of *nakīb*, the special position (*al-nikāba al-khāṣṣa*) and the general one (*al-nikāba al-ʿāmma*). Perhaps this division was only theoretical, but it pointed to the different quality of functions attributed to the *nakīb*. Within the general *nikāba* fell considerable judicial powers, including the execution of Kurʾānic punishments (*ḥudūd*, pl. of *ḥadd* [*q.v.*]) and the judgement of litigations between *ashrāf* (al-Māwardī, *K. al-Aḥkām al-sulṭāniyya*, ed. M. Enger, Bonn 1883, ed. Cairo 1960, ch. 8; French tr. E. Fagnan, Algiers 1915, 199-207; Abū Yaʿlā b. al-Farrāʾ, *K. al-Aḥkām al-sulṭāniyya*, Cairo 1938, ch. 5 [both texts correspond with each other]; see also E. Tyan, *Histoire de l'organisation judiciaire en pays d'Islam*, 2nd ed., Leiden 1960, 554-8). The close relation between the (general) *nakīb* and the judge became also apparent in terms of organisation: comparable to the chief judge there was a chief *nakīb* (cf. L. Massignon, *Cadis et naqibs bagdadiens*, in *WZKM*, li [1948], 106-15).

For the post-ʿAbbāsid periods, the history of the *nikāba* is even worse investigated, with the exception of 18th century Aleppo and of Egypt under Ottoman rule and after. In Aleppo, the *ashrāf* and the *nakībs* constituted a vital political force vis-à-vis the Ottoman provincial government and the troops of the Janissaries (H.L. Bodman, Jr., *op. cit.* 86 ff., 103 ff.). In Egypt, the *nakīb al-ashrāf* rose from a relatively low position at the end of Mamlūk and the beginning of Ottoman rule to become an influential functionary in the 18th and early 19th centuries. Yet, from the time of Muḥammad ʿAlī [*q.v.*] onwards, the *nakīb* was curtailed again, only to become further reduced to a mere honorific in the present century (M. Winter, *The Ashrāf and Niqābat al-Ashrāf in Egypt in Ottoman and modern times*, in *Asian and African Studies*, xix [1985], 17-41; for the Ottoman period, see also H.A.R. Gibb and H. Bowen, *Islamic society and the West*, i/2, London 1957, 93-4, 100 ff., and esp. for Damascus, see Linda Schatkowski Schilcher, *Families in politics. Damascene factions and estates of the 18th and 19th centuries*, Stuttgart 1985, 124 ff., 194 ff.).

NAKĪḌA [see NAKĀʾIḌ].

NAKĪR [see MUNKAR WA-NAKĪR].

NAKĪR [see MUNKAR].

NAKKĀRA-KHĀNA, NAKĀRA-KHĀNA (P.), kind of military band. The origins of the *nakkāra-khāna*, so-called after the *nakkāra* or kettle-drum, which was one of the instruments of the military band belonging to rulers and military leaders, are obscure. There are references to it from an early period when it appears to have been synonymous with the *ṭabl-khāna* [*q.v.*]. Originally, its purpose was probably military and it retained this function in the Persian army until modern times. It also had ceremonial functions and these tended in the course of time to overshadow its military aspect. It was part of the ceremonial of the caliph and in the early centuries reserved for him alone. It was composed of various instruments, kettle-drums, horns, trumpets and reed pipes, and played five times a day at the times of prayer at the caliph's residence [see NAWBA], hence the expression *nakkāra-i saḥarī* (or *nakkāra-i ṣubḥ*), the *nakkāra* played at the time of the dawn prayers, which is frequently found in later Persian texts. The *nakkāra-khāna* also played on special occasions such as when news was received of a military victory or at other times of public rejoicing, hence the expression *nakkāra-yi shādmānī* and *nakkāra-yi shādiyānī* (*shādiyāna*), also met with in Persian texts. In 967/1559-60 Shāh Ṭahmāsp ordered the *nakkāra-yi shādiyānī* to be played for three days when Georgia was granted to ʿĪsā Khān, who had been converted to Islam (Kāḍī Aḥmad Kumī, *Khulāṣat al-tawārīkh*, ed. Iḥsān Ishrāķī, Tehran AHS 1359/1980-1, i, 412). Sometimes the *nakkāra* might be suspended as a sign of mourning [see ṬABL-KHĀNA].

When the caliphate began to fragment, governors and semi-independent rulers were granted, or arrogated to themselves, the right to the *nawba* and had their own *nakkāra-khānas*. In 368/978-9 the caliph al-Ṭāʾiʿ gave the Būyid ʿAḍud al-Dawla the right to three *nawbas*, to be played at the time of the morning, midday and evening prayers. The Ghaznawid historian Abu 'l-Faḍl Bayhaķī does not apparently mention the *nakkāra-khāna*, though musicians were

associated with the royal court and played on special occasions such as receptions for envoys and friendly rulers (cf. Spuler, *Iran*, 270). The Saldjūḳ sultans marked their sovereignty by exercising the privilege of the *nawba* and granted this also to subordinate rulers and governors, as had the caliphs. Both the caliph and the sultan might, and sometimes did, refuse the *nawba* to those who demanded it [see ṬABL-KHĀNA]. The right to play drums was occasionally granted to officials of the bureaucracy, who, so far as they had private armies, presumably also had military bands. in 427/1035-6 the Ghaznawid Masʿūd b. Maḥmūd gave various honours to his chamberlain (*ḥādjib*) Sūbāshī when he appointed him *ḥādjib-i buzurg*, or chief minister, including the right to drums (*ṭabl wa duhul*) (Abu 'l-Faḍl Bayhaḳī, *Tārīkh-i Masʿūdī*, ed. ʿAlī Akbar Fayyāḍ, Mashhad AHS 1350/1971, 427). In a draft document for the appointment of a *wazīr* in the *Dastūr al-kātib* by Muḥammad b. Hindūshāh Nakhdjiwānī (8th/14th century) the recipient is granted various insignia, including the right to drums (*ṭabl*), a standard (*ʿalam*) and the *naḳḳāra* (ed. A.A. Alizade, ii, Moscow 1976, 76).

The Īlkhāns and their followers, like preceding rulers, had military bands. Ibn Baṭṭūṭa, describing the ceremonial observed by the military forces of Abū Saʿīd (d. 756/1355), states that each of his *amīrs* had trumpets, drums and standards. When Abū Saʿīd mounted, drums, trumpets and pipes were sounded for his departure. His chief wife and the other princesses (*khawātīn*) and the *wazīr* all had their own drums which were beaten at the appropriate time (*The travels of Ibn Baṭṭūṭa A.D. 1325-1354*, tr. H.A.R. Gibb, ii, Cambridge 1962, 342-4). The playing of military music whenever the ruler set out was probably normal practice. Muʿīn al-Dīn Zamčī Isfizārī states that "it had always been the custom that when Shāhrukh Sulṭān [d. 850/1447] went anywhere on horseback *naḳḳāračīs* would go before him beating kettle-drums" (*Rawḍat al-djannāt fī awṣāf Madīnat Harāt*, ed. S.M. Kāẓim Imām, Tehran AHS 1339/1960-1, ii, 85). Isfizārī also mentions that when a number of *amīrs* came to Yādgār Muḥammad in Rādkān in 895/1489-9 the kettle-drums of joy (*naḳḳāra-yi shādiyāna*) were beaten and on the following day the *khuṭba* was read in his name (*ibid.*, 350). Faḍl Allāh b. Rūzbihān, describing the celebration of the *ʿīd al-fiṭr* in Bukhārā in 910/1504-5, states that the *naḳḳāračīs* played drums, pipes and other instruments to announce the arrival of the Özbeg sultan, Muḥammad Shaybānī Khān, and that drums, pipes and standards preceded him as he rode from the *muṣallā* to the Čahār Bāgh (*Mihmān-nāma-yi Bukhārā*, ed. M. Sotoodeh, Tehran AHS 1341/1962, 192-3, 196).

Under the Mamlūks, Ottomans, Great Mughals of India and the Ṣafawids the *naḳḳāra-khāna* continued to be one of the insignia of rule [see ṬABL-KHĀNA]. In the capitals and major cities it was played from an elevated place over the entrance of royal residences or over the city gates. In Cairo under the Mamlūks in the 8th/14th and 9th/15th centuries it was played over the Bāb Zuwayla, the southern Fāṭimid gate of the city. In Iṣfahān under the Ṣafawids and later it was played from a balcony above the Ḳayṣariyya, the entrance to the bazaar on the north side of the Great Maydān. In provincial towns which had had independent or semi-independent dynasties, tradition believed the site of the *naḳḳāra-khāna* to have been in the citadel (*arg*) or in some high tower. Ḳāḍī Aḥmad Ḳumī mentions a high tower in Yazd known as the *naḳḳāra-khāna* (*Khulāṣat al-tawārīkh*, i, 85). A.V. Williams Jackson states that some ruins on a high ridge about two miles distant from Hamadān were called the *naḳḳāra-khāna* (*Persia past and present*, New York 1906, 173).

Each provincial leader who aspired to independence or semi-independence probably had a *naḳḳāra-khāna* in his residence. Capture of this by enemies signalled defeat. When Shāh ʿAbbās marched on Ḳazwīn in 995/1587 to assert his sovereignty, the opposing army having scattered, the employees of the *naḳḳāra-khāna* took their instruments into the city and sounded them in the name of Shāh ʿAbbās (Iskandar Beg, *Tārīkh-i ʿālamārā-yi ʿabbāsī*, Tehran AHS 1334/1956, i, 370). Provincial rulers under the Ṣafawids received, as they had in former times, or arrogated to themselves, the right to the *naḳḳāra*. When the ruler of Diyār Bakr came with his followers to Ismāʿīl in 910/1504-5, he had with him his standards and *naḳḳāra* (Ḳāḍī Aḥmad Ḳumī, *op. cit.*, i, 90). Humāyūn, the Great Mughal, when he took refuge with Ṭahmāsp in Ḳazwīn, was given various gifts, including drums, standards and the equipment for a *naḳḳāra-khāna*. Ṭahmāsp also gave a standard and a *naḳḳāra* to Bayrām Khān, one of Humāyūn's followers (Iskandar Beg, *op. cit.*, i, 99). It would appear that different contingents of the Ṣafawid army each had, as in the Īlkhānid army, a military band. When Ṭahmāsp reviewed the army in 936/1529-30, he ordered all the *naḳḳāra-khānas* which were at the royal camp to play and to lead the various contingents in the review (Ḳāḍī Aḥmad Ḳumī, *op. cit.*, i, 198). Shortly after the accession of Shāh Ṣafī in 1038/1629 there was an abortive rebellion in Gīlān, headed by Kālindjār Sulṭān, whose followers gave him the *laḳab* ʿĀdil Shāh and played the *naḳḳāra* in his name. (ʿAbd al-Fattāḥ Fūminī Gīlānī, *Tārīkh-i Gīlān*, ed. M. Sotoodeh, Tehran AHS 1349/1970, 262 ff.).

Chardin, describing the coronation of Shāh Ṣafī II (Sulaymān) in 1077/1668 states that the *naḳḳāra* was played from two balconies on the top of the Ḳayṣariyya in Iṣfahān. It sounded, he wrote, "more like the noise of war than musick" and lasted twenty days and nights without intermission (*The coronation of Solyman III*, 51, published with *Travels of Sr. John Chardin into Persia and ye East Indies*, London 1686). Thévenot, who was in Iṣfahān in 1664-5 states that the *naḳḳāra* was played at sunset and midnight from balconies or galleries over the gate of the bazaar at the north side of the *maydān* (*Travels of M. de Thevenot into the Levant*, London 1687, ii, 79). Tavernier, who visited Persia several times between 1632 and 1668, states that the *naḳḳāra-khāna* played at midnight, sunrise and sunset for a quarter of an hour in all towns where the ruler resided and in those which had *khāns* as governors. It was played from an elevated place in the town so that the noise could be heard throughout the town. It was also played on festivals and when a new governor was appointed (*Voyages en Perse*, repr. Geneva 1970, 287-8). Both Tavernier and Du Mans allege that the *naḳḳāračīs* would send one or two or more of their number, according to the status of the persons involved, to play at the door of a house where the birth of a boy had taken place and did not cease to play until they received their due (*Estat de la Perse en 1660*, Paris 1890, 123). Kaempfer, who was in Persia in the reign of Shāh Sulaymān, states that the *naḳḳāra* was played daily at sunset and two hours before sunrise. It was also played when the new moon appeared, on religious holidays and at royal banquets. There were in all some forty drummers, pipers and other musicians (*Am Hofe des persischen Grosskönigs: 1684-1685*, German tr. W. Hinz, Tübingen-Basel 1977, 157).

Although the *nakkāra-khāna* was still one of the essential insignia of rule, it was by the 10th/16th century increasingly associated with less formal aspects of court life and with singers and dancers. This is indicated by a diploma for the *nakkāračī* Ustād Muḥammad contained in the *Sharaf-nāma* of ʿAbd Allāh Marwārīd, *muḥtasib* and later *ṣadr* at the court of Ḥusayn Baykara (d. 922/1516), who became keeper of the great seal in 1501 (text in facsimile with introduction, commentary and bibliography by H. Roemer, Wiesbaden 1952). The document states that Ustād Muḥammad was to hold office as the head of the *nakkāra-khāna* jointly with a certain ʿImād al-Dīn Maḥmūd, who was the leader (*mukaddam*) of the headmen (*kalāntarān*) of the *nawbatiyān* of the court. The pipers, trumpeters and other musicians were to consider him their headman (*kalāntar*). Various groups or corporations were also placed under him, including storytellers (*kawwālān*), bathkeepers (*ḥammāmiyān*), barbers (*dallālān*) and others (Doc. no. 15 and see Roemer's commentary, 174-5).

According to the *Tadhkirat al-mulūk*, the *nakkāra-khāna* seems to have been united with the *mashʿal-khāna*, the palace lighting department. The accessories of the band were kept in that department (facs., text ed. V. Minorsky, London 1943, ff. 51b-52a). The *Dastūr al-mulūk* of Mīrzā Rafīʿā states that in Ramaḍān the chief astrologer (*munadjdjim-bāshī*) and other astrologers would go to the *nakkāra-khāna* on those nights when the shah declared that the *nakkāra-yi saḥar* should be sounded and at their indication the *nakkāra-khāna* would play (*Dastūr al-mulūk-i Mīrzā Rafīʿā*, ed. Muḥammad Takī Dānishpazhūh, Tehran University, *Rev. de la faculté des lettres et des sciences humaines*, xvi/3 [1968], 310). There was also at the Ṣafawid court a master of musicians (*čalidjī bāshī*). He was in charge of musicians and dancing-girls attached to the court and was under the *mashʿaldār-bāshī* (Du Mans, *op. cit.*, 24, Kaemper, *op. cit.*, 87). Under Shāh Ṭahmāsp the role of the *ahl-i ṭarab* was played down. He dismissed a number of them, retaining only a certain Ustād Ḥusayn Shustarī and Ustād Asad, who was the *surnāʾī* of the royal *nakkāra-khāna*. Towards the end of his life, he also turned out some more musicians from the royal court, imprisoned Ustād Ḥusayn several times and finally made him swear that he would only play the *surnā* in the royal *nakkāra-khāna* (and not in musical assemblies) (*Tārīkh-i ʿālamārā-yi ʿabbāsī*, i, 190). However, the restrictions on the *nakkāra-khāna* and its associated musicians were temporary. The *Dastūr al-mulūk* states that the *čalidjī-bāshī* was head of the *ahl-i ṭarab*. It was his duty to ensure that a number of musicians were always at the royal court whether the Shah was in residence at the capital or on an expedition (xvi/5 [1969], 559). Although special groups of singers and dancers were attached to the court, there were many other groups of entertainers who were attached only loosely, if at all, but who, on special occasions, joined in celebrations. This was also the case in the 19th century. Muḥammad Ibrāhīm Taḥwīldār, writing in 1877, includes among the various classes of the population of Iṣfahān the *ahl-i ṭarab* and the employees of the *nakkāra-khāna* (*Djughrāfiyā-yi Iṣfahān*, ed. M. Sotoodeh, Iṣfahān AHS 1342/1962-3, 126). The latter presumably received payment from the governor.

In the 19th century the *nakkāra-khāna* continued to have a ceremonial role. It was one of the royal offices (*buyūtāt-i salṭanatī*) (ʿAbd Allāh Mustawfī, *Sharḥ-i zindagānī-i man*, Tehran AHS 1324/1945-6, i, 39, 562). According to E. Aubin, the *iḥtishām-i khalwat* nominated the head of the *nakkāra-khāna* in the provincial towns. In Tehran the *nakkāra-khāna* consisted of about one hundred musicians and a dozen or so dancers. Their annual cost to the state was 6,000 *tūmāns*. The head of the *nakkāra-khāna* in Tehran, Kāsim Khān Bāshī, whose father had held the office before him, also presided over the corporation of dancers and musicians (*La Perse d'aujourd'hui*, Paris 1908, 230-1).

After the grant of the constitution there was an attempt to stop the *nakkāra-khāna* on the grounds that it was old-fashioned or obsolete and the wages of the *nakkāračīs* were withheld. However, they were undeterred and continued their daily celebrations without pay, until some months later the payment of their wages was resumed (Mustawfī, *op. cit.* i, 563). When Riḍā Shāh seized power, he took possession of the *nakkāra-khāna* to mark his sovereignty and removed it from the gate of the citadel to the Maydān-i Mashk, where it remained (*ibid.*, 563-4). The custom of playing the *nakkāra-khāna* survived in Tehran, Kazwīn and Yazd until the late 1930s. In Mashhad there had formerly been two *nakkāra-khānas*, one of which played in the name of the contemporary ruler and the other, attached to the shrine of the Imām Riḍā, played in the Imām's name. The *nakkāra-khāna* of the shrine was abolished in AHS 1315/1936-7. In Tehran in 1937 the *nakkāra-khāna* still played daily at sunset in the balcony of the gateway at the south end of the Maydān-i Mashk and at *saḥar* in Ramaḍān. At some time after the grant of the constitution the *nakkāra-khāna*, which then numbered some one hundred persons, broke away from the *ahl-i ṭarab*. It had a strong hereditary tendency and a corporate organisation. It appointed its own *kadkhudā*, to whom a small contribution was paid in return for which he settled disputes between the members of the corporation. Gradually the *nakkāra-khāna* dwindled in numbers. By AHS 1314/1935-6 it had only fourteen members. In the following year its numbers decreased to nine owing to the death of five persons. The government, wishing, no doubt, to bring what they regarded as an old-fashioned custom to an end, refused to allow them to increase their number. At that time each member of the *nakkāra-khāna* had to hold a government licence. Each received a small wage and two suits of clothes annually from the *iḥtishām-i khalwat*, who was no longer a member of the court but now belonged the Ministry of the Interior. The *nakkāra-khāna* in Kazwīn consisted of only two persons in 1937 and came under the municipality. Formerly its members had received a small wage from the governor. The members of the *nakkāra-khāna* of the shrine of the Imām Riḍā in Mashhad, prior to its dissolution, were paid a nominal wage in cash and kind by the shrine.

NAḲḲĀSH [see GHIYĀTH AL-DĪN].

AL-**NAḲḲĀSH**, MĀRŪN B. ILYĀS (b. Sidon, 9 February 1817, d. Ṭarsūs, 1 June 1855), pioneer of modern playwriting in Arabic. A Maronite, al-Naḳḳāsh belonged to that Christian group which had already begun to display cosmopolitan tendencies, particularly in Beirut, where he resided from 1825 onwards, eventually assuming several positions in municipal administration. He knew Arabic, Turkish, Italian and French well. As a merchant, he travelled frequently, e.g. in 1846 he visited Egypt and then Italy, where he attended theatre and opera performances. His own theatrical activity, which extended over less than a decade, resulted in the writing and production of three high-quality, full-length plays. In late 1847, al-Naḳḳāsh introduced the première of his first play with a long speech in *sadj*ᶜ about Oriental backwardness, followed by his own views about the role of theatre and opera in reforming this situation; according to him, these new genres ostensibly provide entertainment but bear reform as well: "Human failings are revealed in these plays, so let the wary draw their lesson... while enjoying them... Plays are truly a terrestrial paradise."

To a certain extent, al-Naḳḳāsh applied these criteria to his own plays. Of these, *al-Bakhīl* ("The miser") was performed at his own home in Beirut in late 1847; likewise, *Abu 'l-Ḥasan al-mughaffal aw riwāyat Hārūn al-Rashīd* ("Abu 'l-Ḥasan the artless, or, the tale of Hārūn al-Rashīd") in late 1849 and subsequently; and *al-Salīṭ al-ḥasūd* ("The envious wicked one") at a public building in Beirut in 1851 and subsequently, after a *firmān* had permitted him to inaugurate his own theatre-hall. The text was enlivened by music, both vocal and instrumental; men (mostly from al-Naḳḳāsh's own family), dressed as women, played the female roles. The audience, too, was almost exclusively male, as attested by David Urquhart (see *Bibl.*, below). Thus he established patterns for theatrical performances, including stage terminology, which remained in force throughout most of the 19th century.

The five-act *al-Bakhīl* was inspired by Molière's *L'avare*, although the plot and humour were adapted to Beirut and the names of the *dramatis personae* Arabicised—up to the inevitable concluding moral: "Let every miser learn his lesson!" Most of this comedy was written in literary Arabic, in verse and *sadj*ᶜ, except for the vernacular which better suited the roles of several characters. These features, too, served as models for many playwrights in Arabic. In the three-act *Abu 'l-Ḥasan al-mughaffal*, perhaps the first original full-length play in Arabic, al-Naḳḳāsh was inspired by one of the tales in *Alf layla wa-layla* which recounts the story of a caliph-for-a-day. He developed the plot more intricately, in *sadj*ᶜ and prose, presenting the naïve character as a full-fledged one (see H. Ben Halima, in *Arabica*, xi [1964], 73-9). Finally, the three-act *al-Salīṭ al-ḥasūd* described the deeds and sentiments of an excessively jealous suitor whose beloved had been promised to someone else by her father. The play, in prose and verse, displays some inspiration from Molière (chiefly from *Le Misanthrope* and *Le bourgeois gentilhomme*), but the plot, locale and characters again maintain a Syrian-Lebanese flavour. Al-Naḳḳāsh's methods and style have since certainly been imitated and possibly surpassed, yet he remains renowned for having introduced new patterns into the Arabic theatre.

Bibliography: Mārūn al-Naḳḳāsh's three plays and some verses of his were first printed as *Arzat Lubnān*, Beirut 1869, 496 pp., with an introduction by his brother, Niḳūlā b. Ilyās Naḳḳāsh (*sic*). They were reprinted almost a century later as *Mārūn al-Naḳḳāsh: ikhtiyār wa-taḳdīm Muḥammad Yūsuf Nadjm*, Beirut 1961, which comprises all of al-Naḳḳāsh's three plays and an analysis by Nadjm. NAKKĀSH ḤASAN (PASHA), Ottoman painter (d. 1031/1622?).

Raised and educated in the Topkapî Sarayî, he is one of the few court painters whose names have been successfully attributed to specific manuscripts in 16th and early 17th century Ottoman ateliers. At the same time, his official political career is well documented. The first record of his career appears in a document from 989/1581, where he is identified as assigned to the *ketkhudā* of the Treasurer, ʿOthmān Agha, in the Topkapî Sarayî. He appears in palace payment records as Naḳḳāsh Ḥasan in 996/1588, 998/1590 and 1003/1594. By at least 1006/1597, Naḳḳāsh Ḥasan is listed as *agha* and again in 1012/1603 he is cited in gift and payment records as *ikindji ḳapîdjî bashî* Naḳḳāsh Ḥasan Agha and again as *Yeni Čeriler Aghasî* Naḳḳāsh Ḥasan Agha (Meriç, 56-7). He is said to have been made a *pasha* (Uzunçarşılı, 569, and Tanındı, *Siyer-i Nebi*, 42). His death is recorded as 1031/1622 (Uzunçarşılı, 569). This record indicates that he was a product of the *dewshirme* [*q.v.*], since an education as a palace page was a common route to such positions (see C.G. Fisher and A. Fisher for more detailed descriptions of palace promotion). If so, this is one of the few clues that at least some pages were trained and/or worked as painters [see NAKKĀSH-KHĀNA]. Tanındı, *Siyer-i Nebi*, 42, reports that in 1014/1605 Naḳḳāsh Ḥasan was ordered to "make the Bursa Palace ready" for a visit by Sultan Aḥmed I. He also drew the plan for a *tughra* for Aḥmed I, now housed in Topkapı Sarayı Müzesi, GY 1394.

The fourteen years that separate the first two dates in his recorded career are those in which specific references and several attributions are made to paintings done by him for royal manuscripts. As early as 990/1582, he is associated with the *Sūr-nāme* (TSK H. 1344). He is also connected with three *Shāh-nāmes* (TSK A. 3592, R. 1300, and Türk ve Islam Eserleri Müzesi 1965). Tanındı notes the reference made to him as the painter by the calligrapher Talʿīḳ-zāde in the colophon of the *Egri fetḥnāmesi*, otherwise known as the *Shāh-nāme* of Meḥemmed III (TSK H. 1609). Finally, his name is associated with the team who produced the monumental six-volume *Siyer-i Nebī* of Murād III (TSK H. 1221, H. 1222 and H. 1223; New York Public Library, Spencer Collection 157, and Chester Beatty Library 419) and the *ʿAdjāʾib al-makhlūḳāt* (TSK A. 3632). As his political career advanced, he seems to have closed his active career as a painter.

NAKKĀSH-KHĀNA (A. and P.), the name of the Ottoman royal painting atelier.

The *naḳḳāsh-khāna* has been a source of curiosity for many Ottoman scholars. Although the word *naḳḳāsh* may be translated in several ways, including "an artist who embellishes surfaces", "illuminator of manuscripts", "an embroiderer", "wall decorator" (Redhouse, 863), *naḳḳāsh-khāna* in the 16th-18th centuries seems to refer to the palace scriptorium (Rogers and Ward, 120-4).

The 16th century and later documents portray an organisation of craftsmen under state supervision of the *Ahl-i ḥiref*. Similar sub-organisations also existed in the provinces for provincial governors. The *Ahl-i ḥiref* contained workers from a variety of professions, only one of which was the *Djemāʿat-î naḳḳāshān*, which loosely covered artisans creating designs of a variety of decorative schemes. Quarterly payroll registers for the *Ahl-i ḥiref* were prepared and several survive (Atil, 30; Meriç, 1953). Registers listing holiday (*bayram*) gifts from master craftsmen to the Ottoman court survive from the 16th and 17th centuries (Meriç, 1963).

Where the *naḳḳāshān* plied their craft is unknown. Until recently, scholars assumed that painters assigned to royal manuscripts worked within the precincts of Ṭopḳapî Sarāyî or in its provincial equivalents. Filiz Çağman suggest that this was so at least throughout the 16th century (Çağman). Now it seems likely that, at least from the 17th century, these may have served as gathering spots for commissioned works produced in various parts of the Ottoman empire (Atil, 32). There is no evidence for the placement of a large painting atelier in the palace itself. In his extensive analysis of the palace organisation, Uzunçarşılı noted that such cultural activities as poetry, calligraphy, and music went on in the palace, but fails to mention any painting ateliers. Bobovi made no mention of such an atelier in his detailed description of the Ṭopḳapî Sarāyî, although this former palace page provides much detail on virtually all rooms identified in the first three palace courtyards. Because of his exacting detail, the existence of the ateliers within the walls of the palace proper is doubtful (Fisher and Fisher, 1987, 118-20). Gülrü Necipoğlu notes that to the left of the first courtyard were extensive artisan shops which seem to have been used by artists involved in the extensive palace repairs (Necipoğlu, 251-3). Finally, Ewliyā Čelebi describes the plethora of guilds and workshops outside the palace walls that are used both by the palace officials and by the bourgeoisie of the town (*Seyāḥat-nāme*, i, 607-12).

The disbursement of the workshops has led several scholars to investigate or document the connections of painting ateliers with outlying Ṣūfī *tekyes* (Fisher, diss., 93-7) where manuscripts were commissioned by Murād III and later transported to Ṭopkapî Sarāyî, or with provincial centres such as Baghdād, where manuscripts were made for such patrons as Ṣoḳollu Meḥmed Pasha (Milstein, 1984, 130-1, and Milstein, 1990) that may have supplemented the city guild ateliers.

NAKL (A.), transport.

1. In the central Islamic lands and North Africa.

See for this ʿARABA; BARĪD; DJĀMŪS in Suppl.; FARAS; FĪL; IBIL; KĀRWĀN; KHĀN; MAWĀKIB; MILĀḤA; SAFĪNA; TIDJĀRA.

2. In India.

Travel on foot is obviously such an everyday occurrence between village and village that it receives scant mention in the texts; pilgrimages might be made on foot entirely, for pietistic reasons, such as Akbar's to the tomb of Muʿīn al-Dīn Čishtī from Āgrā to Adjmēr, but generally foot-journeys are the accompaniment to a baggage-train. Ibn Baṭṭūṭa, on his journey into India, writes of selling the horses which drew the wagons, replacing them by camels; and his journey cannot have been without comfort, for "everybody eats and sleeps in his waggon while it is actually on the move, and I had in my waggon three slavegirls" (*Riḥla*, iii, 1, tr. Gibb, iii, 539).

Transport depending on foot includes the various litters, *ḍōlī*, *miyāna* and *palkī*. The *ḍōlī* is a simple rectangular frame or bedstead, usually suspended by the four corners from a bamboo pole and carried by two or four men; when used by women there are usually curtains hanging from the bamboo. They were much used for the transport of sick persons, and in war to carry casualties off the battlefield. A form where the frame is supported on two poles is used as the bier (*djanāza*) to transport a corpse to the burial-ground, and an upright chair may similarly by carried by four men to carry someone up a steep hillside. Simpler than the *ḍōlī* is the *ḍandī*, essentially a hammock slung from a pole (the word *andor/andora* in old Portuguese descriptions of the same vehicle seems to be the Hindi *hinḍōlā/hanḍōlā* "swing"). Ibn Baṭṭūṭa (iii, 386-7, tr. Gibb, iii, 740) refers to *ḍōlī*-bearers plying for hire outside the gates of royal and other houses, and to the possibility of longer journeys being carried out by relays of *ḍōlī*-bearers. The *palkī* "palanquin", is an enclosed variety of litter, its central pole having an upward curve to afford more head-room for the passenger. In its common form it was in use for considerable journeys, relays of palanquin-bearers being provided at *ḍāk*-stations [see BARĪD]; Colonel Yule, one of the authors of *Hobson-Jobson*, underwent "hardly less than 8,000 or 9,000 miles of travelling in going considerable distances" by such vehicles (*Hobson-Jobson*, 659b). A more elaborate form, with its carriage and pole covered with plates of silver, was in use in royal processions [see MAWĀKIB. 5. In Muslim India], and specimens of such are to be seen in Indian museums. A smaller form of *palkī*, called simply *miyāna* "middle-sized", was provided with side-curtains rather than the box enclosure. Runners of the postal service (*ḍāk*) carried not only the post but could also be used for the rapid transport of luscious fruit from Khurāsān, or to carry water from the Ganges near Hardwār to the sultan at Dawlatābād (Ibn Baṭṭūṭa, ii, 3-4).

The Indian armies and hunting camps were regularly supplied by the *bandjārās*, dealers rather than mere commissariat carriers, who travelled all over the country with large droves of laden cattle, who could of course move over rough country where carts were impracticable. All kinds of animal were used for pack transport: horses, donkeys, mules, camels, cows, elephants, and even sheep. Donkeys regularly carried laundry for *dhōbīs*, earthenware goods for potters, and were slung with panniers of earth or gravel for the gangs of road-builders; pack-horses and mules carried equipment for the armies in the field (many illustrations in Mughal painting, e.g. in the *Akbar-nāma*), and were regularly used for transporting goods on hill paths. Merchandise from the north-west was brought to northern and even eastern India by the camel *ḳāfila*, the northern two-humped camel being substituted by the one-humped at *sarāʾīs* in Peshāwar or Lahore. Cattle being driven over long distances were often required to carry panniers of goods (as by the *bandjāras* referred to above), and even sheep being driven into India from Tibet or Nepal might carry panniers of rock-salt or borax. Elephants, besides their use as carriers of heavy pieces of artillery, were continually employed to transport logs in forests or timber-yards. For the use of animals in the Indian armies, see ḤARB, vi.

Riding animals were especially common and in use by all classes. Enormous numbers of horses were required by the army, for the cavalry was its backbone; horses were imported from the Arabian peninsula and from the north-west, besides being bred in the royal *pāygāhs*, under the care of an *ākhūr-bek* (see I.H. Qureshi, *The administration of the Sultanate of Dehli*, Karachi 1958, 70-1, with refs. especially to Ḍiyāʾ al-Dīn Baranī and Shams al-Sirādj ʿAfīf). Besides the regular cavalry, foot-soldiers were accompanied by led horses. The importance of horses in the court was signalised by the royal saddle-cover being recognised as one of the insignia of royalty [see GHĀSHIYA]. For the use of horses in processions, see MAWĀKIB. Special riding-camels were also known, employed especially in campaigns in the west in semi-desert territories. Elephants were also used in the armies for the transport of soldiers: Barbosa (*The book of Duarte Barbosa*, tr. and ed. M.L. Dames, London 1918, i, 118) writes that "they build wooden castles on the elephants' backs which will hold three or four men with bows, arrows, arquebuses and other weapons..."; the elephants were armoured with steel plates, examples of elephant armour being not uncommon in Indian museums. See also FĪL. Working and processional elephants carried men on a litter on the animals back, either a long platform from which the passengers' legs hang over each side, or a more elaborate boxed-in structure with flat cushions which afforded more protection during tiger and lion hunts, as exemplified in Mughal painting; both these types are known as *hawda*. The seat on processional elephants has the *hawda* covered by a canopy, often jewelled, and is known as *ʿamārī*.

The commonest Indian mode of transport of goods has always been the two-wheeled cart drawn by a pair of bullocks, whose design varies subtly between one region and the next but in any region is remarkably conservative (R.E. Mortimer Wheeler, *Civilisations of the Indus valley and beyond*, London 1966, shows on pp. 46-7 illustrations of a terracotta model of a cart, 1500-1000 B.C., and its modern Sind counterpart, with little change); long convoys of bullock-carts, often moving at night, were a familiar features of Indian roads before the coming of motor transport. The bullock-cart provided with a domed canopy is the *ratha*, used

particularly by women on journeys—whose escorts may walk on foot beside them, cf. Kipling's description of the Sahiba's pilgrimage in *Kim*. The *ratha* may also be used in formal processions [see MAWĀKIB. 5]. Flat wheeled carts may also be drawn by horses, bullocks, buffaloes, camels and even by elephants (Fīrūz Shāh's banners were so heavy that they had to be carried on elephant-carts). For light transport, especially within towns, small horse carriages (*ekkā*, *tangā*) were in general use (Tavernier's *Travels* describes such carriages, although he does not use either word); they might also be used for longer journeys, when the horses could be changed in relays on the *dāk*-system. More elaborate carriages after European models were introduced at the end of the Mughal period, and in provincial courts such as Lucknow. Mention should also be made of the hand-cart, commonly used to transport goods in towns.

There was also the possibility of transport by water on the great rivers; the canals [see NAHR. 2. India] were for irrigation purposes, and were not navigable. The common river-boat was the *badjrā* (see *Hobson-Jobson*, s.v. Budgerow), a sort of barge without a keel, propelled by poles or by oars, on the deck of which cabins might be mounted. For the *ahawrā* which Ibn Baṭṭūṭa (iii, 109 ff., tr. Gibb, iii, 600-2) describes in the river-procession of the governor of Lahārī in Sind, see the account in MAWĀKIB, 5, above. Fanny Parks, *Wanderings of a pilgrim in search of the picturesque*, London 1850, describes a royal pleasure-boat on the river Gōmatī at Lucknow as being "made in the shape of a fish". A sort of raft was used by Fīrūz Shāh to transport one of Ashoka's pillars to Dihlī from the Mīrath district, see J.A. Page, *A memoir on Kotla Firoz Shah, Delhi* (= *Memoir ASI*, lii), Dihlī 1937, with illustrated extract from the anonymous *Sīrat-i Fīrūz Shāhī*. There were also, of course, smaller craft without number on the rivers. Sea transport across the Arabian Sea, especially for the pilgrim traffic to the Ḥidjāz, was by the vessels known as *ghurāb* [see SAFĪNA] and "carrack" (?Ar. *ḳarrāḳa*; see *Hobson-Jobson* s.v.).

Bibliography: Given in the article, but see also S. Digby, *War-horse and elephant in the Delhi Sultanate*, Oxford 1971, which, although concerned primarily with military aspects, is useful in general, especially regarding the supply of transport animals.

(J. BURTON-PAGE)

NAḲSH [see KITĀBĀT].

NAḲSHBAND, KHWĀDJA BAHĀʾ AL-DĪN, Muḥammad b. Muḥammad (718-91/1318-89), eponym of the Naḳshbandiyya [*q.v.*], a still active Ṣūfī order that has been second in the extent of its diffusion only to the Ḳādiriyya [*q.v.*] (with which it has often been intertwined, especially in India and Kurdistān). The epithet Naḳshband is sometimes understood in connection with the craft of embroidering, and Bahāʾ al-Dīn is said, in fact, to have assisted his father in weaving the embroidered Bukhāran cloaks known as *kimkhā* (Abu 'l-Ḥasan Muḥammad Bāḳir b. Muḥammad ʿAlī, *Maḳāmāt-i Shāh-i Naḳshband*, 8). More commonly, however, it is taken to refer to the fixing, in the purified tablet of the heart, of the imprint of the divine name *Allāh* by means of silent and permanent *dhikr*. To the people of Bukhārā, whose patron saint he became, Bahāʾ al-Dīn was known posthumously as *khwādja-yi balāʾ-gardān* ("the averter of disaster"), with reference to protective powers bestowed on him during his novitiate. Elesewhere, especially in Turkey, he is popularly called *Shāh-i Naḳshband*.

Descent from the Imām Djaʿfar al-Ṣādiḳ has been attributed to Bahāʾ al-Dīn Naḳshband, but although the Imām does always appear in his initiatic *silsila*, contemporary and near-contemporary sources make no mention of *sayyid* ancestry. They stress rather the position of Bahāʾ al-Dīn as the seventh in a series of Central Asian masters (*khwādjagān*) of Ṣūfism which was inaugurated by Abū Yūsuf Hamadānī (d. 534/1140 in Marw). Soon after his birth in Muḥarram 718/March 1318 in the Bukhāran hamlet of Ḳaṣr-i Hinduwān (later renamed Ḳaṣr-i ʿĀrifān, out of deference to him), Bahāʾ al-Dīn was adopted as the spiritual son (*farzand*) of Khwādja Muḥammad Sammāsī, the fifth descendant of Hamadānī. Sammāsī immediately assigned the infant's future spiritual training to his own principal *murīd*, Khwādja Amīr Kulāl. Kulāl counts as Bahāʾ al-Dīn's immediate predecessor in the *silsila*, for it was he who transmitted to him the essentials of the Path: the link of companionship (*nisbat-i ṣuḥbat*), instruction in the customs of the Path (*taʿlīm-i ādāb-i ṭarīḳat*), and the inculcation of *dhikr* (*talḳīn-i dhikr*) (ʿAbd al-Raḥmān Djāmī, *Nafaḥāt al-uns*, 381).

Nonetheless, as befitted the founder of a new order, Bahāʾ al-Dīn kept the company of a wide variety of spiritual instructors. Early during his association with Amīr Kulāl, he had a vision in which he saw his six predecessors in the *silsila*, beginning with Khwādja ʿAbd al-Khāliḳ Ghidjuwānī (d. 617/1220), a successor of Hamadānī. This vision amounted to a second initiation, for Ghidjduwānī enjoined on Bahāʾ al-Dīn—among other things—the exclusive practice of silent *dhikr*, as opposed to the vocal *dhikr* in which Amīr Kulāl and his circle customarily engaged. Once back in the world of external reality, Bahāʾ al-Dīn began to comply with this command, but Amīr Kulāl continued to hold him in high esteem. He ultimately pronounced his preceptorial duties to be at an end and freed Bahāʾ al-Dīn to seek out other *shaykhs*, "both Turk and Tādjīk".

The ethnic and linguistic differentiation between Turk and Tādjīk was reflected, in 8th/14th century Transoxianan Ṣūfism, in a dichotomy between the Yasawī order (founded by Khwādja Aḥmad Yasawī (d. 562/1167 [*q.v.*], another disciple of Hamadānī), which flourished among Turkic speakers, and the Persian-speaking *khwādjagān* and their adherents. Since the Naḳshbandiyya was destined to spread to almost every region of the Turkish world in the space of a few generations, it was appropriate that Bahāʾ al-Dīn should spend part of his apprenticeship with the Yasawī masters who were known to their contemporaries as the "Turkish *shaykhs*" (*mashāyikh-i turk*).

First, however, Bahāʾ al-Dīn spent seven months in the company of another Tādjīk *shaykh*, Mawlānā ʿĀrif Dīkgarānī, perfecting under his guidance the practice of the silent *dhikr*. He next spent two or three months with Ḳutham Shaykh, a Yasawī master resident in Nakhshab, before joining the following of a second Yasawī *shaykh*, Khalīl Atā, for a full twelve years.

The chronological problems posed by the sources (works of hagiography, the Tīmūrid chronicles, and the *Riḥla* of Ibn Baṭṭūṭa) are impossible to resolve, but it seems certain that Khalīl Atā is identical with Ḳadān/Ghazān Khān, a singularly ferocious individual who ruled over the Čaghatayid khanate for roughly a decade. It is tempting to see in Bahāʾ al-Dīn's association with Khalīl Atā the origin of the penchant of several later Naḳshbandīs for establishing ascendancy over rulers, but such an interpretation is excluded by a careful reading of the sources.

After the overthrow of Khalīl Atā, Bahāʾ al-Dīn retired to his birthplace to begin training his own disciples, most of whom came from Bukhārā and its environs. He left the region himself only three times,

twice to perform the *hadjdj* and once to visit Herat. There he met with the ruler, Muʿizz al-Dīn Ḥusayn, and explained to him the principles of his path.

He died on 3 Rabīʿ I 791/2 March 1389, and was buried at Ḳaṣr-i ʿĀrifān. Surrounded by a continually expanding complex of buildings, the tomb became a place of pilgrimage for Muslims from all over Asia as well as the site, for Bukhārans, of spring festivities known as *ʿīd-i gul-i surkh* ("red rose festival"; see O.A. Sukhareva, *Bukhara v XIX veke*, Moscow 1966, 38).

Bahāʾ al-Dīn's principal successors were Khwādja ʿAlāʾ al-Dīn ʿAṭṭār (d. 802/1393), whom he had honoured with marriage to his daughter; Khwādja Muḥammad Pārsā (d. 822/1419), a prolific author who counts as founder of the learned traditions of the Naḳshbandī order; and Mawlānā Yaʿḳūb Čarkhī (d. 851/1447), who originated in the region of Ghaznī. ʿAṭṭār was the leading figure among these three, but it was Čarkhī who proved the most important for the continuation of the Naḳshbandī line; he was the preceptor of Khwādja ʿUbayd Allāh Aḥrār (d. 896/1490 [*q.v.* in *Suppl.*]), under whose auspices the Naḳshbandiyya both established its supremacy in Central Asia and began its expansion in the wider Muslim world.

Bahāʾ al-Dīn left behind no writings (with the possible exception of the litany named after him, *Awrād-i Bahāʾiyya*), and he even discouraged his disciples from recording his sayings. The precise outlines of his teachings are, then, hard to discern, not because of the profusion of hagiographic legend that enshrouds so many Ṣūfīs, but because of the exiguous and sometimes elliptic nature of the sources. It is particularly difficult to establish why he should have become an eponymous figure, the central link in the *silsila* of which he is a part, instead of, for example, Ghidjduwānī. The eight principles of spiritual conduct (*kalimāt-i ḳudsiyya*) first enunciated by Ghidjduwānī have, after all, been reiterated in Naḳshbandī handbooks down to the present; precisely the fact that Bahāʾ al-Dīn added three further principles to the eight would seem to reinforce the primacy of Ghidjduwānī. These three were: *wuḳūf-i zamānī* ("temporal awareness"), the constant examination of one's spiritual state during *dhikr*; *wuḳūf-i ʿadadī* ("numerical awareness"), the enumeration of the times *dhikr* is performed in order to discourage the intrusion of distracting thoughts; and *wuḳūf-i ḳalbī* ("awareness of the heart"), the direction of attention to the physical heart in order to make it participate in the work of *dhikr*.

All three principles relate, then, to *dhikr*; combined with the fact that Bahāʾ al-Dīn set himself apart from the other disciples of Amīr Kulāl through insistence on silent *dhikr*, this suggests that the question of *dhikr* was crucial for the early coalescence of the Naḳshbandī order.

Other features of early Naḳshbandī practice were also linked to the concern for sobriety and anonymity implied by the choice of silent *dhikr*. Among them are the repudiation of music and dance (*samāʿ*); the deprecation of charismatic feats (*karāmāt*); the avoidance of retreats in favour of the keeping of pious company (*ṣuḥbat*); and the shunning of distinctive forms of dress. All these features are highly reminiscent of the Malāmatī movement of Nīshāpūr, and it may be suggested that Bahāʾ al-Dīn Naḳshband was the heir to the traditions of the Malāmatiyya [*q.v.*] although not in a formal, initiatic sense.

Other recurrent features of the Naḳshbandī path, such as fidelity to the *sharīʿa* in the political and social spheres as well as in devotional life, and a marked hostility to Shīʿī Islam, were established in later periods; they cannot be traced directly to Bahāʾ al-Dīn. Similarly, the mildly critical attitude to Ibn ʿArabī adopted by some Naḳshbandīs of the Mudjaddidī line cannot be attributed retroactively to Bahāʾ al-Dīn and his circle. Although there is no trace of acquaintance with the concepts of Ibn ʿArabī in the dicta of Bahāʾ al-Dīn, both ʿAṭṭār and Pārsā were enthusiastic exponents of his work.

NAḲSHBANDIYYA, an important mystical *ṭariḳa* [*q.v.*] or order.

1. In Persia

It is a paradox of Naḳshbandī history that although this Ṣūfī order first arose among Persian-speakers and virtually all its classical texts are written in the Persian language, its impact on Persia has been relatively slight. This statement requires qualification only for the period of the genesis of the Naḳshbandiyya when, it might be argued, Transoxania and the eastern reaches of Khurāsān still counted as parts of the Persian world.

The rise of the Naḳshbandiyya to supremacy in Transoxiana appears to have begun already in the time of Khwādja Bahāʾ al-Dīn Naḳshband [*q.v.*] himself, although the nascent order did not yet exercise political influence and in the Kubrawiyya [*q.v.*] it faced a still formidable competitor. Khwādja Muḥammad Pārsā (d. 822/1419), sole adherent of Bahāʾ al-Dīn among the *ʿulamāʾ* of Bukhārā, had to endure the hostility of his colleagues for a number of reasons, not least being his enthusiasm for the works and concepts of Ibn ʿArabī [*q.v.*]. However, it was also in connection with Pārsā that the Tīmūrids established their links with the Naḳshbandī order, when Mīrzā Shāhrukh secured the return of Pārsā to Bukhārā after a period of banishment. Those links, important for

the ascendancy of the order, were consolidated in the time of Khwādja ʿUbayd Allāh Aḥrār (d. 896/1490 [*q.v.* in Suppl.], who several times intervened decisively in the political sphere (according both to the chronicles and to the hagiographic sources) and through his numerous disciples made the Naḳshbandiyya supreme in most regions of Transoxiana.

The influence of the Naḳshbandiyya spread during the same period southward to Harāt, partly through the influence of Aḥrār and partly through that of Saʿd al-Dīn Kāshgharī (d. 860/1456), a third-generation descendant of Khwādja Bahāʾ al-Dīn Naḳshband. Together with the Zaynī order, with which it came to enjoy fraternal relations in Istanbul as well as Harāt, the Naḳshbandiyya dominated the religious and cultural life of late Tīmūrid Harāt. The principal initiate of Kashgharī was the great poet and mystic ʿAbd al-Raḥmān Djāmī (d. 898/1492 [*q.v.*]), whose rich and varied opus contains a treatise devoted to the Naḳshbandiyya (*Sar-rishta-yi ṭarīḳ-i khwādjagān*, ed. ʿAbd al-Ḥayy Ḥabībī, Kābul 1343 sh./1964), as well as many references to the order and its personalities scattered throughout his works. The closeness of Djāmī to his Naḳshbandī preceptor may be measured by the fact that the two men lie buried in a single enclosure in the Khiyābān district of Harāt. Averse by temperament to the formal training of *murīds*, Djāmī nonetheless initiated at least two persons into his line of the Naḳshbandī order: ʿAbd al-Ghafūr Lārī (d. 912/1507) and one of his own sons, Ḍiyāʾ al-Dīn Yūsuf (d. 919/1513). He also brought about the adherence to the order of the well-known littérateur and statesman Mīr ʿAlī Shīr Nawāʾī [*q.v.*], and inclined Sultan Ḥusayn Mīrzā Bāyḳarā [*q.v.*] to look favourably upon it.

The presence of the Naḳshbandiyya in Transoxiana and Harāt has proved permanent. By contrast, the implantation of the Naḳshbandiyya in north-western Persia that took place in the late 9th/15th century was relatively shortlived. The Naḳshbandiyya was brought to Ḳazwīn by a *murīd* of Aḥrār, Shaykh ʿAlī Kurdī. Originally from ʿAmādiyya, he spent a number of years serving Aḥrār as tutor to his children before settling in Ḳazwīn. He was put to death by the Ṣafawids in 925/1519. At least one of his six *khalīfas* suffered the same fate, while several others fled before the Ṣafawid onslaught. However, Naḳshbandī influence remained strong in Ḳazwīn for several decades and may have been one of the reasons for the relatively long resistance put up by the people of the city against the imposition of Shīʿism. Tabrīz, the first Ṣafawid capital, was also a centre of Naḳshbandī activity, stemming from the presence there of Ṣunʿ Allāh Kūzakunānī (d. 929/1523), a disciple of ʿAlāʾ al-Dīn Maktabdār (d. 892/1486), one of the *khalīfas* of Saʿd al-Dīn Kāshgharī in Harāt. He enjoyed some influence at the Aḳ Ḳoyunlu court and evidently managed to survive the Ṣafawid conquest. His son, known as Abū Saʿīd-i Thānī, was imprisoned and tortured by the Ṣafawids, but was able to escape and ultimately to migrate to Istanbul, where he found favour with Sultan Süleymān. Another successor of Kūzakunānī, ʿAlī-djān Bādāmyārī, established himself in the village of Bādāmyār near Tabrīz, where his initiatic line continued for two more generations.

There are also traces of the Naḳshbandiyya in Sāwa and Hamadān in the immediate pre-Ṣafawid and early Ṣafawid period. In general, however, the rise of the Ṣafawid state sounded the knell for the Naḳshbandī order in northern and western Persia, for with their strong loyalty to Sunnism the Naḳshbandīs became a special target of persecution. Mīrzā Makhdūm Sharīfī, a Sunnī scholar who took refuge with the Ottomans, writes that whenever anyone was seen engaging in *dhikr* or *murāḳaba*, it would be said, "This is a Naḳshbandī; he must be killed" (*al-Nawāḳiḍ li-bunyān al-rawāfiḍ*, ms. British Museum Or. 7991, fol. 96a). The Naḳshbandiyya probably survived for a time in Urūmiyya and possibly in other Kurdish-inhabited areas of Persia. Otherwise, the order was so thoroughly extirpated that Mullā Muḥammad Bāḳir Madjlisī (d. 1110/1699 [*q.v.*]) felt safe in declaring, towards the end of the Ṣafawid period, that the names of the Naḳshbandī masters listed by Djāmī in *Nafaḥāt al-uns* were unknown to all but "the ignorant Uzbeks" (*ūzbakān-i nādān*; quoted in Rasūl Djaʿfarīyān, *Rūyārūʾī-yi faḳīhān va ṣūfīyān dar ʿaṣr-i Ṣafawiyyān*, in *Kayhān-i Andīshah*, xxiii [Ādhar-Day 1369/November-December 1990], 123).

When in the 13th/19th century Naḳshbandīs again became visible in Persia, it was exclusively in the Sunnī-inhabited regions on the fringes of the country. Haratī resistance to Persian attempts at establishing control over the city were led by a certain Ṣufī Islām, a Naḳshbandī dervish from Bukhārā; although he died in battle in 1222/1807, the branch of the order he founded at Karrukh outside Harāt continued to exercize an influence across the frontier among the Ḥanafīs of Persian Khurāsān. Six years after the death of Ṣūfī Islām, Khwādja Yūsuf Kāshgharī, a Naḳshbandī *shaykh* from Eastern Turkistan, led an unsuccessful uprising of the Yomut and Göklan Turkumāns against Ḳādjār rule. A similar Naḳshbandī-led Turkumān revolt was quashed in Astarābād in 1257/1841. It was also in the first half of the century that Khwādja Muḥammad Yūsuf Djāmī established a still active centre of the Mudjaddidī branch of the order at Turbat-i Djām near the Afghān border.

Infinitely more important than all these developments in the east was the rise of the Khālidī branch of the Naḳshbandī order, established by Mawlānā Khālid Baghdādī (d. 1243/1827), a Kurd from Shahrāzūr. The Khālidiyya supplanted almost entirely all other branches of the Naḳshbandiyya in the Middle East, and in Kurdistān it wrested supremacy from the Ḳādiriyya to become the chief order of the region. Although the principal Kurdish *khalīfas* of Mawlānā Khālid all resided in Ottoman territory, their influence was considerable among the Kurds of Persia, not least during the great Kurdish uprising of 1880 which, led by Shaykh ʿUbayd Allāh of Shamdīnān, engulfed much of Ādharbāydjān as well as most of Kurdistān. In addition, the Khālīdiyya expanded from Kurdistān to Ṭālish [*q.v.*], the Shāfiʿī enclave on the shores of the Caspian: Shaykh ʿUthman Sirādj al-Dīn of Tawēla—a *khalīfa* of Mawlānā Khālid—initiated into the order a certain Mullā ʿAbd al-Ḥaḳḳ Ḳizildjī from the village of ʿAnbarān in central Ṭālish and instructed him to spread the order in his homeland, which he did with great success. Most Shāfiʿīs in Ṭālish retain to this day an allegiance to the Khālidī Naḳshbandī order.

In 1958, after the overthrow of the ʿIrāḳī monarchy, a namesake of ʿUthmān Sirādj al-Dīn quit Biyāra to establish himself at the village of Durū on the Persian side of the frontier. With the active encouragement of the Pahlawī court, he sought to bring under his sway all three areas of Naḳshbandī presence in Persia—Kurdistān, Ṭālish and Turkumān Ṣaḥrā. In this he had some success, but his activities were brought to an end by the Islamic Revolution of 1978-9. Shaykh ʿUthmān organised an army to combat the revolutionary government, but it was soon defeated

and he withdrew to ʿIrāḳ. Despite this removal of Shaykh ʿUthmān, the Naḳshbandī order remains strong among the Kurds of Persia (particularly in the region of Mahābād [*q.v.*] and in Ṭālish (especially Hashtpar and its surroundings). By contrast, it is now moribund among the Turkumāns.

2. In Turkey

The first implantation of the Naḳshbandiyya among the western Turks took place in the 9th/15th century, less than a hundred years after the death of its eponym. This was an important part of the general expansion of the Naḳshbandiyya outside its Transoxianan homeland, for the order was well placed to gain the loyalty of the Ottoman Turks with its emphatically Sunnī identity and insistence on sober respect for the *sharīʿa*.

The first Ottoman Naḳshbandī was Mollā ʿAbd Allāh Ilāhī of Simav, who travelled to Samarḳand where he became a disciple of Khwādja ʿUbayd Allāh [*q.v.* in Suppl.]. After his training was complete, he returned to his birthplace for a number of years before reluctantly accepting an invitation to settle in Istanbul. There, at the Zeyrek mosque, he established the first Naḳshbandī centre in Turkey and found himself surrounded by a large number of devotees. Preferring, however, a life of seclusion and scholarship, he left Istanbul for Vardar Yeñičesi in Thrace, where he died in 895/1490. Ilāhī's principal successor was Amīr Aḥmad Bukhārī (d. 922/1516), who had accompanied him back from Samarḳand. Under Bukhārī's auspices, three Naḳshbandī hospices were established in Istanbul and the order attracted numerous scholars and littérateurs, the most famous of whom was the poet Maḥmūd Lāmiʿī Čelebi (d. 933/1532 [*q.v.*]) of Bursa. Although the hospices founded by Bukhārī continued functioning into the early 20th century, the initiatic line he inaugurated appears to have died out in the space of a few generations.

Considerably younger than Ilāhī, but like him a *murīd* of Aḥrār, was Bābā Ḥaydar Samarḳandī (d. 957/1550), for whom Sultan Sülaymān Ḳānūnī founded a *tekke* at Eyyüb. This served as a hostel for Naḳshbandīs coming from Central Asia until it was destroyed by fire in 1912.

Naḳshbandīs continued to migrate from Central Asia to Istanbul and other points in Turkey for several centuries, as is indicated by the names of certain *tekkes* such as Bukhārā, Kāshghar and Özbekler. Among them were men of distinction such as Khazīnī, a dervish of triple Naḳshbandī, Yasawī and Kubrawī affiliation, who arrived from Bukhārā during the reign of Sultan Murād III, and ʿAbd Allāh Nidāʾī, an 11th/17th century migrant from Kāshghar who established a *tekke* near Eyyüb.

In general, however, the history of the order in Turkey came to reflect the developments it underwent in India, which was its principal intellectual centre from the time of Shaykh Aḥmad Sirhindī the *Mudjaddid* (d. 1034/1624) [*q.v.*, and see 3. below]. The Mudjaddidī branch of the order established by Sirhindī was first transmitted to Turkey by Shaykh Muḥammad Murād Bukhārī (d. 1141/1729), a *murīd* of Khwādja Muḥammad Murād Maʿṣūm, Sirhindī's son and principal successor. Muḥammad Murād spent about five years in the Ottoman capital towards the end of the 11th/17th century, during which time he gained numerous *ʿulamāʾ*, including the *Shaykh al-Islām* Feyḍ Allāh Efendi, as his followers. The next thirty years were spent primarily in Damascus, but he returned to Istanbul in 1141/1729, dying shortly thereafter. The *tekke* that was established next to the tomb of Muḥammad Murād Bukhārī in the Nishāndjī Pasha district became a fountainhead for the Mudjaddidiyya, not only in Istanbul but also in Anatolia and the Balkans.

A second transmission of the Mudjaddidiya to Turkey came by way of Mecca, which remained until the late 19th century an important centre for the diffusion of the Naḳshbandiyya among pilgrims coming from Turkey as well as many other regions. The representative of Khwādja Muḥammad Maʿṣūm in the Holy City was Shaykh Aḥmad Djūryānī Yakdast, who initiated into the Mudjaddiyya Shaykh Muḥammad Amīn of Tokat (d. 1158/1745). When Muḥammad Amīn returned to Istanbul in 1129/1717, he took up residence at one of the hospices founded by Amīr Aḥmad Bukhārī and began initiating members of the Ottoman bureaucracy. Particularly noteworthy among the *murīds* of Shaykh Muḥammad Amīn was the polymath Sulaymān Saʿd al-Dīn Mustaḳīm-zāde (d. 1202/1787 [*q.v.*]), who translated the letters of both Sirhindī and Khwādja Muḥammad Maʿṣūm into Ottoman Turkish. The letters of Sirhindī have remained popular reading material among Turkish Naḳshbandīs down to the present, although it is now more commonly an Arabic translation that is used.

Several of the early Turkish Mudjaddidīs also had Mewlewī affiliations, among them being Pertew Pasha and Ḥālet Efendi [*q.vv.*], both of whom exerted considerable political influence during the reign of Sultan Maḥmūd II.

An entirely new era in the history of the Naḳshbandiyya in Turkey begins with the rise of the Khālidī branch in the first quarter of the 19th century. Before the emergence of the Khālidiyya, the Naḳshbandīs were certainly prominent and respected, both in Istanbul and elsewhere, but they never came close to enjoying the near-monopoly on Ṣūfī activity that they exercised in Central Asia. The Khālidīs, however, made the Naḳshbandiyya the paramount order in Turkey, a position it has retained even after the official dissolution of the orders.

Mawlānā Khālid Baghdādī (d. 1242/1827) was a Kurd from Shahrāzur who obtained initiation into the Naḳshbandiyya in Dihlī at the hands of Ghulām ʿAlī Dihlawī (d. 1240/1824), a *shaykh* of the Mudjaddidī line. Although Mawlānā Khālid was hostile to the local *amīrs* in Kurdistān and acted there as an advocate of Ottoman power, the first appearance of the Khālidiyya in the Ottoman capital was greeted with suspicion. Mawlānā Khālid's first representative there, Muḥammad Ṣāliḥ, made matters worse by

attempting to exclude non-initiates from public mosques during the performance of Khālidī rituals. The next representative, ʿAbd al-Wahhāb al-Sūsī, was, however, able to make inroads among the Ottoman élite. Like other key figures in the history of the order in Turkey, he recruited numerous *ʿulamāʾ*, bureaucrats and men of letters; mention may be made of Mekkī-zāde Muṣṭafā ʿĀṣim, several times *Shaykh al-Islām*; Gürdjü Nedjīb Pasha and Mūsā Ṣafwetī Pasha; and Kečedji-zāde ʿIzzet Mollā, *ḳāḍī* of Istanbul. It was suggested to Sultan Maḥmūd II by Ḥālet Efendi, the Mudjaddidī-Mewlewī, that this swift expansion of the Khālidiyya posed a danger to the state, and in 1828 all prominent Khālidīs were in fact banned from the city. This period of disfavour was temporary, for in 1833 Mekkī-zade was reappointed *Shaykh al-Islām*.

Much of the impetus behind the early propagation of the Khālidiyya in the Ottoman lands had been political; it was the wish of Mawlānā Khālid to reinforce the allegiance of the Ottoman state to the *sharīʿa* and thus to make of it a viable focus for Muslim strength and unity. This aim gradually slipped beyond reach, and even in the period of Sultan ʿAbd al-Ḥamīd II, the *shaykhs* of other orders were more intimately associated with the sovereign than were the Nakshbandīs.

Nonetheless, the Khālidī branch of the Nakshbandiyya possessed a wide popular appeal; it struck root throughout Anatolia, and even in Konya, the hallowed ground of the Mewlewī order, the Khālidīs were supreme. By the close of the 19th century, they had more *tekkes* in Istanbul than any other order.

Among the *shaykhs* of the second half of the century, Shaykh Ḍiyāʾ al-Dīn Gümüshkhānewī (d. 1894) may be singled out for mention both because of the size and nature of his following and because of the prolongation of his initiatic line down to the present. His *tekke* in the Čaghaloghlu district of Istanbul was probably the most frequented of all Ṣūfī meeting places in the city, being visited not only by members of the Ottoman élite but also by many Muslims from abroad. In addition, Gümüshkhānewī wrote extensively, in both Arabic and Turkish, and by compiling a collection of *ḥadīth*, *Rāmūz al-aḥādīth*, he inaugurated a tradition of *ḥadīth* study still continued by his initiatic descendants in present-day Turkey.

Gümüshkhānewī further distinguished himself by fighting, together with his followers, in the Russo-Turkish War of 1877. This example of military engagement was followed by several other Nakshbandī *shaykhs* who fought on various fronts during the First World War and the Turkish War of Independence. Nonetheless, the Nakshbandīs found themselves denied all legitimacy under the dispensation brought in by the Turkish Republic when all the Ṣūfī orders were proscribed in September 1925. The immediate pretext for the ban was furnished by the uprising led in the same year by Shaykh Saʿīd of Palu, a Khālidī *shaykh* of eastern Anatolia. However, the rebellion was more an expression of Kurdish grievances and aspirations then it was of fidelity to the traditional political ideals of the Khālidiyya. Frequently cited as another exemplar of militant Nakshbandī opposition to the Turkish Republic is Shaykh Muḥammad Asʿad (Mehmed Esad, d. 1931). Originally from Irbīl, a physical as well as spiritual descendant of Mawlānā Khālid, he took up residence at the Kelāmī *tekke* in Istanbul in 1888 before being banished to his native city by Sultan ʿAbd al-Ḥamīd. He returned in 1908 to take his place among the leading *shaykhs* of the Ottoman capital. In 1931, he was arrested on charges of complicity with those responsible for the notorious Menemen incident. Although the evidence of his involvement was exceedingly slight, his son was executed and he himself died in prison hospital.

Initiatic descendants of Mehmed Esad as well as other Khālidī *shaykhs* continue to be active in Turkey; among those who have died in recent times we may mention Sami Ramazanoğlu (d. 1984) and Mehmed Zahid Kotku (d. 1980). Arrests of Nakshbandīs and other forms of harrassment have remained common, but the subversive potential and aspirations often ascribed to the Nakshbandīs in contemporary Turkey are, at best, grossly exaggerated. It can even be said that certain Nakshbandīs have integrated themselves into the political structure of Turkey by their involvement in ventures such as the National Salvation Party (Milli Selamet Partisi) and its successor, the Prosperity Party (Refah Partisi). The present-day significance of the Nakshbandīs in Turkey is to be sought not so much in their political activity as in the support they provide for traditional religiosity, a support greatly weakened by the debilitating trends of more than half a century.

Bibliography: Turkish Nakshbandīs have produced a copious literature which it is not feasible to list here. The following are the principal secondary sources: Butrus Abu-Manneh, *The Naqshbandiyya-Mujaddidiyya in the Ottoman lands in the early 19th century*, in *WI*, N.S. xxii (1982), 1-36; Hamid Algar, *Der Nakşibendi-Orden in der republikanischen Türkei*, in *Jahrbuch zur Geschichte und Gesellschaft des Vorderen und Mittleren Orients 1984*, ed. 3. In India

Introduced into India by Khwādja Bāḳī Bi'llāh (972-1012/1564-1603) during the closing years of the 10th/16th century, the Nakshbandiyya order became an influential factor in Indo-Muslim life and for about

two centuries it was the principal spiritual order in India. Though some saints of the *silsila* had visited India during the time of Bābur (*Bābur-nāma*, tr. Beveridge, ii, 631) and Humāyūn (Shaṭṭārī, *Gulzār-i abrār*, ms.), the credit of establishing the first Naḳshbandī *khānḳāh* in India goes to Khwādja Bāḳī Bi'llah who came to Dihlī from Kabul and, in his own words, "planted the *silsila* in India". The Khwādja died at the age of only forty, but he made deep impact on the lives of the people by his unassuming ways and deep humanitarian spirit. He attracted both religious and political figures to his fold. A believer in pantheism, he gave expression to his cosmic emotions in spirited verses (*ʿIrfāniyyāt-i Bāḳī*, Dihlī 1970). Among his disciples, two persons were pre-eminent: (i) Shaykh Aḥmad Sirhindī (d. 1624 [*q.v.*]), generally known as *Mudjaddid-i alf-i thānī* ("Reformer of the second millennium"), who expanded the order so successfully that, according to Djahāngīr, his disciples reached every town and city of India (*Tūzuk*, ed. Sir Syed, 272-3). (ii) Shaykh ʿAbd al-Ḥaḳḳ of Dihlī (d. 1642), who came to be known as *muḥaddith* on account of his contribution to the popularisation of *Ḥadīth* studies in India. Shaykh Aḥmad gave to the Naḳshbandī *silsila* a distinct ideology, a motive power and an effective organisation. He broke away from the earlier mystic tradition in India by rejecting pantheism (*waḥdat al-wudjūd*) and propounded his theory of *waḥdat al-shuhūd* (unity of the phenomenal world). He raised his voice against the innovations (*bidʿāt*) introduced by the Ṣūfīs, the Emperor Akbar [see DĪN-I ILĀHI] and the *ʿulamā'-i sūʾ* (the worldly *ʿulamāʾ*). He opposed Akbar's experiments to work out a synthesis of Hindu and Muslim religious attitudes, and declared "Muslims should follow their religion, and non-Muslims their ways, as the Ḳurʾān enjoins 'for you yours and for me my religion'" (*Maktūbāt*). As Ibn ʿArabī's approach had sustained these religious trends, Shaykh Aḥmad criticised his views trenchantly. He did not believe in keeping away from the state and the ruler. He struggled hard to bring about a change in the outlook of the ruling classes and carried on a brisk correspondence with Mughal nobles like ʿAbd al-Raḥīm Khān-i Khānān [*q.v.*] Mīrzā ʿAzīz Kōkā [*q.v.*], Farīd Bukhārī and others, and won them over to his point of view. When Djahāngīr ascended the throne, Farīd Bukhārī obtained a promise from him that he would not do anything against the *sharīʿa* (*Akbar and the Jesuits*, 204; *Jahangir and the Jesuits*, 3). However, in 1619, acting on the mischievous reports of his opponents (Dārā Shukōh, *Safīnat al-awliyāʾ*, 197-8), Djahāngīr imprisoned him in the Gwāliyār fortress. He was set free after a year but remained with the Emperor for some time. He spoke in the court on themes like prophethood, the Day of Judgement and the instability of reason. Shaykh Aḥmad's work was zealously carried forward by his sons and descendants. Awrangzīb came under the influence of Naḳshbandī saints and showed deep respect to Khwādja Maʿṣūm (whose collections of letters contain several letters addressed to him) and Khwādja Sayf al-Dīn, Khwādja Muḥammad Naḳshband and others. In the ideological shift of the Mughal state as typified in the differing approaches of Akbar and Awrangzīb, the Naḳshbandī saints played an important role.

The Naḳshbandī mystic ideology differed from other mystic *silsilas* in several respects: (a) It developed a dynamic, active and assertive outlook as opposed to the quiet, unobtrusive and cosmic approach of the Čishtīs. Even their litanies and practices were coloured by this approach. (b) It closed the channels of ideological contact with other religions by rejecting Ibn ʿArabī's thinking. Bernier found the country in the grip of a bitter controversy between the supporters and the opponents of the pantheistic approach. The *Maʿāridj al-walāyāt* gives the text of a *fatwā* issued against Sirhindī's views. (c) Its belief in the need for providing guidance to the state created a new situation which bridged the gulf between the Ṣūfīs and the state on one side but gave birth to new problems on the other. (d) While other *silsilas* had propagated their teachings through *malfūẓāt* [*q.v.* in Suppl.] (utterances of *shaykhs*), the Naḳshbandī saints communicated their views through *maktūbāt* (letters). The Naḳshbandī mystical thought may, therefore, be studied in the compilations of letters left by Shaykh Aḥmad, Khwādja Maʿṣūm, Khwādja Naḳshband, Shāh Ghulām ʿAlī and others. (e) While the earlier saints had propounded the idea of *walāyāt* (spiritual territories assigned by the mystic master), the Naḳshbandīs propounded the concept of *Ḳayyūmiyyat* (a type of spiritual axis on whom the world depended for its functioning). This concept, instead of strengthening the *silsila*, honeycombed its structure and diffused its activities. The *Rawḍat al-ḳayyūma* reveals the anarchy of thought caused by this concept.

In the 12th/19th century two Naḳshbandī saints made significant contributions to the *silsila* by restating some of its basic ideological postures. Shāh Walī Allāh (d. 1762 [*q.v.*]) sought to bring about a reconciliation between the conflicting approaches of Ibn ʿArabī and Shaykh Aḥmad and declared that difference between their approaches was one of simile and metaphor. Mīrzā Maẓhar Djān-i Djānān (d. 1782 [see MAẒHAR]) adopted a broad and catholic attitude towards Hinduism and accepted the Vedas as a revealed book. Shāh Walī Allāh played an important role in revitalising the religious sciences, particularly *Ḥadīth*, and by translating the Ḳurʾān into Persian, particularly for soldiers, artisans, etc., as he himself says in the Preface to *Fatḥ al-Raḥmān*. He developed a new *ʿIlm-i kalām* (scholasticism) which aimed at a fresh interpretation of Islamic teachings in the light of the new problems of the age (see M. Iḳbāl, *The reconstruction of religious thought in Islam*). He played a significant role in the political developments of the period. His political letters addressed to Aḥmad Shāh Abdālī, Muḥammad Shāh, Niẓām al-Mulk and others reveal a clear understanding of the contemporary political situation (*Shāh Walī Allāh kay siyāsī maktūbāt*, ed. Nizami, ²Delhi 1969).

Ḳāḍī Thanāʾ Allāh Pānīpatī (d. 1810), a disciple of Mīrzā Maẓhar, made significant contribution to religious literature. His book on *fiḳh*, *Mā lā budd min* (ʿAlawi Press, Shāhpur 1270 A.H.) and his exegetical study of the Ḳurʾān (*Tafsīr-i Maẓharī*, Nadwat al-Muṣannifīn, Dihlī 1962-70) came to be widely appreciated. His treatise *Irshād al-ṭālibīn* (Mudjtabāʾī Press, Dihlī 1915) contains an exposition of Naḳshbandī mystic principles. Other spiritual descendants of Mīrzā Djān-i-Djānān, like Shāh Ghulām ʿAlī, Shāh Abū Saʿīd (author of *Hidāyat al-ṭālibīn*, Mudjtabāʾī Press, Dihlī n.d.), and Shāh Aḥmad Saʿīd (author of *al-Fawāʾid al-ḍābiṭa fī ithbāt al-rābiṭa*, Meerut 1331 A.H.), played an important part in propagating the Naḳshbandī ideology. The descendants of Shāh Ghulām ʿAlī resented British occupation of the country and supported anti-British attitudes and activities.

Of the mystic orders that have flourished in India, the Naḳshbandī-Mudjaddidī *silsila* alone attracted the attention of the people of Afghānistān, Turkey and Syria. The *khānḳāh* of Shāh Ghulām ʿAlī (d. 1824) had, according to Sir Syed, thousands of visitors from

different Asian and African countries (*Āthār al-ṣanādīd*, Karachi 1966, 209). His disciple Khālid Kurdī established the order in Damascus and made it a significant factor in the life of the people. (A. Hourani, *Shaikh Khalid and the Naqshbandi order*, in *Islamic philosophy and the classical tradition*, Columbia, S.C. 1972).

Khwādja Mīr Nāṣir (d. 1758), though associated with the Mudjaddidi-Naḳshbandī *silsila*, founded a new order called *Ṭarīḳa-yi-Muḥammadi*. His son Khwādja Mīr Dard (d. 1776) wrote *ʿIlm al-Kitāb* (Anṣārī Press, Dihlī 1308 A.H.), a work characterised by deep insight in mystical thought, and gave a new orientation to the Naḳshbandiyya discipline. Sayyid Aḥmad Shahīd of Rāē Barēlī (d. 1831 [see AḤMAD BRĒLWĪ]) also originally belonged to the Mudjaddidī order, but set up a new method, the *Ṭarīḳa-yi Nubuwwat*, broadly within the framework of the Naḳshbandiyya. An important aspect of the Naḳshbandiyya order was its virility of thought and capacity to differ from its elders. Shaykh Aḥmad Sirhindī differed from his mentor on the question of pantheism; Mīrzā Maẓhar Djān-i Djānān disagreed with his elders on their approach to Hinduism, and Shāh Ghulām ʿAli differed from him on this point. Sayyid Aḥmad Shahīd disagreed with Shāh ʿAbd al-ʿAzīz (d. 1823) on the concept of *taṣawwur-i shaykh* (visualising the spiritual mentor in spiritual practices).

Thus the main characteristic of the Naḳshbandiyya *silsila* in India has been its rejection of innovations (*bidʿāt*) and its involvement in political struggles.

(K.A. NIZAMI)

NAḲSHE (Gr. NAXOS/AXIA), Turkish name of the largest Aegean Cycladic island (1981 pop.: 14,037), east of Para [*q.v.*] and north-west of Amorgos, celebrated since Antiquity and the Middle Ages for its products (wine, olive oil, dairy ones: cf. Vakalopoulos, ii², 492-3; iv, 473-4); in mid-12th century, al-Idrīsī refers to its extensive cattle raising (*Opus geographicum*, 642: Naḳsiyya). Its chief port and capital, Naxos or "Chora", on the western coastal ancient and mediaeval settlements, became a centre of commerce in the Latin and Turkish periods (early 13th-early 19th centuries), while several Byzantine, post-Byzantine and Frankish monuments, chiefly churches and fortifications, survive. In Byzantine years (cf. Elis. Malamut, *Les îles de l'Empire Byzantine, 8e-12e s.*, Paris 1988, 216 ff. and s.v.; further refs. in A. Savvides, *Notes on Naxos and Paros—Antiparos in Byzantine times* [in Gk.], in *Pariana*, xliii [1991], 227-37), with its capital at the southern castle of "Apalȳres", Naḳshe suffered from Arab raids, mostly from the Cretan amīrate [see IḲRĪṬISH], since it lay in a crucial spot of the major south-eastern Mediterranean trade routes (Constantinople-Aegean-Crete-Syria-Egypt); the raid of 904 carried off Naxiot captives to Crete, while Naḳshe paid tribute to the *amīr* (see V. Christides, *Conquest of Crete*, Athens 1984, 6, 128, 131, 165-6, 167), though by 910 it was in Byzantine hands (Malamut, 62, 82). Clear traces of Muslim influences on Naxiot frescoes are recorded in that period (Christides, 128 ff.) and, apart from the surviving Byzantine coinage (Malamut, 210, n. 10), of particular importance is a rare Saldjūḳ coin, probably of Kay Khusraw I [*q.v.*], discovered on Naḳshe (mid-1950s) and associated with Christian refugees from Antalya and Alanya [*q.vv.*], who settled on the island (early 13th century) in view of the Saldjūḳ advance in south-western Anatolia (refs. in Savvides, in *Byzantinos Domos*, iii [1989], 159-60).

Turcoman raids, mostly associated with the Aydîn Oghullarî [*q.v.*], commenced in the early 1300s, almost a century after the foundation of the Latin Archipelago Duchy with Naḳshe as capital (1207-1566). In 1304 and 1309-10 the Sanudo Duke assisted the Genoese to capture Chios [see SAKÎZ] and the

Hospitallers to seize Rhodes [see RODOS], driving the Turcomans off those islands; yet raids on Naḳshe are recorded in 1324 and 1326, which were intensified after 1340, since the Duke had participated in the planned 1343 crusade against Aydîn; in 1341 ʿÖmur Beg abducted 6,000 Naxiots and obtained tribute (refs. in M-L, ii, 352-3, 357, n. 1, 358-9; Melas [see PARA], 9-10; Frazee, 90-1), but the *amīr*'s menace ceased following the 1343 sack of Izmīr [*q.v.* in Suppl.]. The Crispo dynasty faced new raids (late 14th century onwards) and Buondelmonti *ca.* 1420 sadly records the island's depopulation to the effect that there were no husbands for Naxiot women (ed. Legrand, ch. xvii, 56, 58; M-L, ii, 371; Melas, 18-19; Vakalopoulos, i^2, 130). The first Ottoman raid under the *ḳapudan pasha* Čalî Bey occurred in 1416 [see PARA], but Venetian control over the Duchy was recognised by Meḥemmed I, Murād II and Meḥemmed II [*q.vv.*] in the treaties of 1419, 1426, 1446, 1451 and 1454 in return for a tribute (M-L, ii, 377-8, 383, 388; D. Pitcher, *Hist. geogr. of the Ottoman Empire*, Leiden 1972, 67, 84). In the Turco-Venetian war of 1463-79, extensive raids hit the island (particularly in 1477) and, according to some western sources, Naḳshe and Para were Turkish in 1479 (cf, Setton, ii, 237, n. 43), though the 1479 pact rather ratified the previous *status quo*; soon, however, Bāyezīd II [*q.v.*] protested to the Venetian Senate that the Duke harboured western pirates (the Genoese Spinola had briefly captured it in 1431) (M-L, ii, 378, 389 ff., 394; Pitcher, 85). In the 1499-1503 war there was another raid on Naḳshe, which is mentioned in the 1503 pact (refs. in M-L, ii, 399; Krantonelle, 91), yet in 1517, despite a recent treaty renewal, the Crispo Duke was abducted by Turkish corsairs and later launched desperate appeals to Venice (1521, 1523, 1532), while in 1532 money and gifts convinced the pirate Kurtoghlu not to sack the island (M-L, ii, 402, 405; Krantonelle, 62, 69-70, 79, 102, 111, 121, 399). In the extensive raids of Khayr al-Dīn Pasha [*q.v.*] in the Cyclades (1537-8) the Duke was spared, through Naḳshe was looted for 3 days (Ḥādjdjī Khalīfa, Eng. tr. Mitchell, 58; *Byzant. Kleinchroniken*, ed. Schreiner, i, nos. 56/17, 70/52; ii, 575-6; İ.H. Uzunçarşılı, *Osmanlı tarihi*^{5}, ii, 1988, 375, 459), though some Greek sources record that upon its capitulation (11 Nov. 1537) the island agreed to pay *kharādj* and was thus spared the fate of Para [*q.v.*] (*Ecthesis Chronica*, 80; Chronicle of 1603, ed. Amantos, *Hellenika*, i, 1928, 49; idem, *Relations between Greeks and Turks* [in Gk.], i, 167). Khayr al-Dīn actually collected his tribute (1538), while the Turco-Venetian treaty of 1540 established Ottoman suzerainty over the Duchy (M-L, ii, 412 ff.). Although the last Crispo secured a favourable *ʿahd-nāme* (29 Aug. 1565) from Süleymān II [*q.v.*], the definitive annexation occurred in 1566, when Piyāle Pasha [*q.v.*] seized Keos and Andros (M-L, ii, 420, n. 2, 424; Vakalopoulos, iii, 219-20, 280 ff.; D. Polemis, *Hist. of Andros* [in Gk.], 1981, 70). Selīm II [*q.v.*] then ceded the Duchy to his favourite, the Jewish adventurer "Duke" Joseph Nasi, who ruled through an administrator until 1579 (C. Roth, *The house of Nasi, Duke of Naxos*, Philadelphia 1948; M-L, ii, 422 ff.; Vakalopoulos, ii^2, 43, 347; iii, 233 ff., 238 ff., 274 ff.; Slot, *Archipelagus*, 88 ff.), a period that witnessed the devastating raid of Uludj Beg in 1572 on Naḳshe and Para (Vakalopoulos, iii, 259, 274).

A new era for the Cyclades commenced with the *ʿahd-nāmes* of 1580 and 1646 [see PARA]; Naḳshe became the seat of the first *sandjaḳ beg*, "*Soleiman bei de ducat di Naxia, signor di Andro*" (1579-80 or 82) (cf. Vakalopoulos, iii, 286-7; Slot, 98 ff.); from now onwards the Sultanate leased the island to Turkish *sandjaḳ begs* or to Greek-Italian notables (as "dukes"), like Constantine Cantacuzenus (1582), John Choniates, "Duke of Axia, Paros and Andros and voivode of all the Aegean" (1598), Otural Bey, whose taxing exertions resulted in his dismissal by the Porte (1606), and Gasparo Gratiani (1617-18), an ambassador of the Ottomans to Vienna (cf. Vakalopoulos, iii, 287 ff.). On the other hand, from the 1640s, several Jesuits and Capuchin friars, driven away from Istanbul by Murād IV, arrived on the island, where a period of thriving Catholic monasticism began [see PARA]. In mid-1651 or 1652 the Venetians defeated between Para and Naḳshe an Ottoman fleet bringing supplies to the besiegers of Crete during the Turco-Venetian war of 1645-69 (details in PARA), yet Ottoman rule in Naḳshe had in fact been loose since the 1646 *ʿahd-name*, regulating local government through a *voivode* and 6 annual local notables; a series of raids by French pirates between 1675-8 resulted in the abduction of many Christian and Muslim settlers from Naḳshe, wherefrom additional refugees began to emigrate to Smyrna, as recorded early in the 17th century by Coronelli [see PARA].

The Passarowitz Treaty (1718 [see PASAROFČA]) ended the Latin presence in the Cyclades, with the Venetians forced out of Tenos (Slot, 250 ff.); it was in 1770, during the Turco-Russian war of 1668-74, that the Russians seized the island, with Para and Antiparos, until expelled by the Ottomans in 1774. In the 1821 Greek War for Liberation, the Naxiots, contrary to the Parians, did not participate fervently, probably on account of the influence of the local Latin element, yet Naḳshe, which suffered heavily from Cretan and Kassian pirates (1823-4, 1825-7), received many refugees from Chios, Psara and other islands. Finally, several Naxiots distinguished themselves elsewhere in Greek uprisings until the incorporation of their island to the Kingdom of Greece in 1830 (see Vakalopoulos, iv, 717, 736, 895; vi, 112, 118, 513, 516, 940, 954, n. 211; vii, 383, 392, 805, 811 ff.).

NAKŪR (Nukūr) was the name of a town in northern Morocco (Rīf) situated approximately 140 km./90 miles (by road) to the west of Melilla [*q.v.*], in a plain which extends between two small coastal rivers, joining at a place called Agdal [on this term, see ĀGDĀL], then separating before flowing into the Mediterranean, the Nakūr and the Ghays/Ghīs; a *ribāt* [*q.v.*] had been constructed on an elevation. The town itself was built some 10 km/7 miles from the Mediterranean coast among inlets which sheltered a number of small harbours. The best known, al-Mazimma, was situated at the rear of a bay protected by several islands; the Spaniards gave it the name of Alhucemas [see *EI*[1], s.v.] the French, that of Albouzeme/Albouzemes and modern Moroccans call it al-Ḥusayma [*q.v.* in Suppl.]; this locality has become a popular seaside resort, having in the past been devasted three times, as noted by Leo Africanus (tr. Épaulard, 277-8).

Nakūr was surrounded by a wall of coarse brick and possessed a large mosque, of which the roof was supported by pillars of thuya (abundant in the region, as was cedar), prosperous markets, gardens and orchards of pears and pomegranates.

The history of the town is inseparable from the somewhat turbulent history of a principality of which it was the capital and which was governed for several centuries by the descendants of a companion of the conqueror ʿUḳba b. Nāfiʿ (d. 63/683 [*q.v.*]) called Ṣāliḥ b. Manṣūr al-Ḥimyarī—although this South Arabian origin for him is disputed by al-Yaʿḳūbī (*K. al-Buldān*, 357, tr. Wiet, 222), who associates him rather with the Berber tribe of the Nafza [*q.v.*]. According to tradition, this ancestor of the Ṣāliḥids established himself at Tamsāmān, on the coast, and succeeded in converting the population of the region which belonged to the Berber groups of the Ghumāra and the Ṣanhādja [*q.vv.*]; but these new converts were not slow to apostasise and to expel Ṣāliḥ from the principality which he had founded in 90/709, under the caliphate of al-Walīd b. ʿAbd al-Malik (88-98/705-15 [*q.v.*]), taking as their leader a certain Dāwūd al-Rundī (who probably was not a native of Ronda). Ṣāliḥ was nevertheless reinstated and, on his death, the date of which is unknown, his son al-Muʿtaṣim succeeded him. Later, following a series of various somewhat confused vicissitudes, his grandson Saʿīd b. Idrīs b. Ṣāliḥ founded in 143/761 the town of Nakūr to serve as capital of the small state. He was obliged to face numerous rebellions, but retained his throne until his death in 188/804. He left some ten sons, of whom the one who seems to have been the eldest, Ṣāliḥ, succeeded him. At an unknown date, one of his brothers, named Idrīs, rebelled against him, but he was captured and executed. In 244/858, Nakūr suffered a violent attack on the part of the "Northmen" [see MADJŪS, at V, 1119a] who sacked the town and took prisoner the women of the Ṣāliḥid family; the latter were ransomed by the *amīr* of Cordova Muḥammad I (238-73/852-86 [see UMAYYADS OF SPAIN]); al-Andalus in fact maintained cordial relations with Nakūr since the time that ʿAbd al-Raḥmān I b. Muʿāwiya b. Hishām, known as al-Dākhil [*q.v.*], fleeing from the ʿAbbāsids, had spent some time in the principality before embarking for Spain in 138/755. The chronology is far from certain, and it is possible that a link is missing from the genealogy of Abu 'l-Muṭarrif ʿAbd al-Raḥmān who, described as a brother of the founder of Nakūr, became famous in Spain; he was a devout man, a *faḳīh* who had made the Pilgrimage to Mecca four times. Having landed at Malaga with a small army to oppose ʿUmar b. Ḥafṣūn (d. 306/918 [*q.v.*]), he fell into an ambush, but succeeded in escaping and was able to continue his *djihād* under the orders of the Umayyad general Aḥmad b. Abī ʿAbda, in whose company he perished on 14 Rabīʿ I/4 September 917.

Al-Yaʿḳūbī (d. 284/897 [*q.v.*]) describes the principality of Ṣāliḥ b. Saʿīd al-Ḥimyarī in some detail; according to him "it extends over a distance of ten days' march, amid numerous constructions, fortresses, villages, staging-posts, cultivated land, herds of cattle, pastures". There does not seem to be any exaggeration here, except perhaps in relation to the dimensions of the territories of Ṣāliḥ.

The latter must have died in 250/864, after a very long reign, and he was succeeded by his son Saʿīd, who was obliged to confront a mutiny on the part of the Slavs (Ṣaḳāliba [*q.v.*]); the latter, Slavonic slaves purchased in order to constitute a kind of praetorian guard, demanded their freedom and civil rights. Their movement was suppressed, and they were forced to take refuge in their cantonment, the Ḳaryat al-Ṣaḳāliba, while awaiting their punishment. Some cousins of Ṣāliḥ, who had been involved in the rebellion, were condemned to death, thus provoking one of the conspiracies which are a feature of the history of the Ṣāliḥids.

Although a sister of Ṣāliḥ, Umm al-Saʿd, had married, in Nakūr, a descendant of Fāṭima, related in fact to the Idrīsids who were under threat from Ḳayrawān, a certain Aḥmad b. Idrīs b. Muḥammad b. Sulaymān b. ʿAbd Allāh b. Al-Ḥasan (b. al-Ḥasan) b. ʿAlī b. Abī Ṭālib, Saʿīd rejected an invitation from the Mahdī ʿUbayd Allāh (285-323/898-934 [*q.v.*]) to recognise his authority. The Fāṭimid Imām reacted vigorously to this defiance and ordered his vassal Maṣāla b. Ḥab(b)ūs to invade the territory of the Ṣāliḥids. A member of the family, a certain Ḥamad b. ʿAyyāsh, having betrayed Saʿīd, Nakūr fell into the hands of the invader on 3 Muḥarram 305/26 June 917; the town was sacked, the women and children taken captive; the head of Saʿīd, who had died fighting after a spirited resistance, was sent to Ḳayrawān with those of many of his relatives, and the Fāṭimids mounted them on pikes and displayed them on the walls of Raḳḳāda. Those members of the family who succeeded in escaping took refuge at Malaga and Pechina; ʿAbd al-Raḥmān III invited them to settle at Cordova, but they preferred to remain on the coast, closer to their homeland, to which they hoped to return. Having spent some time travelling through the territory of the principality, Maṣāla left in Nakūr a governor named Dalūl, supported by a small garrison of Fāṭimid troops (*mashāriḳa* [*q.v.*]), who ultimately abandoned their leader. It was then that the three sons of Saʿīd—Idrīs, al-Muʿtaṣim and Ṣāliḥ—who had found refuge in Spain, separately took to see to return to Nakūr. The first to arrive, Ṣāliḥ, landed near Tamsāmān and was greeted with enthusiasm by the Berbers of the region, who gave him the title al-Yatīm and marched with him against

Nakūr; they captured Dalūl and his supporters and hanged them. ʿAbd al-Raḥmān III, informed of this success, congratulated Ṣāliḥ and promulgated throughout Spain the news of the recovery of the principality and of its capital, which in fact seem henceforward to have been placed under the sovereignty of the Umayyads who, as mentioned previously, had a long-standing relationship with the Ṣāliḥids.

However, in 308/920-1, Maṣāla recaptured Nakūr, which he held for a short time. Ṣāliḥ died and was succeeded by his grandson, al-Muʾayyad b. ʿAbd al-Badīʿ b. Ṣāliḥ, who was attacked in 316/928 by a vassal of the Fāṭimids, the lieutenant and successor of Maṣāla, Mūsā b. Abi ʾl-ʿĀfiya (d. 327/938 [*q.v.*]), then governor of a province of which the capital was Guercif [see GARSĪF], and Nakūr was razed the following year. Abū Ayyūb Ismāʿīl b. ʿAbd al-Malik b. ʿAbd al-Raḥmān b. Saʿīd b. Idrīs b. Ṣāliḥ, a grandson of the hero of the *djihād* against Ibn Hafṣūn, regained power and rebuilt the town. Since the Fāṭimids had no intention of allowing the Umayyads to retain a bridgehead on the coast of the Maghrib, al-Ḳāʾim (322-34/934-46 [*q.v.*]) entrusted to a Slav named Ṣandal the task of recapturing Nakūr; after an exchange of letters and envoys—some of whom were executed by Ismāʿīl—the Fāṭimid officer arrived to lay siege to the capital in Shawwāl 323/September 935 and captured it after eight days of fierce fighting. Ismāʿīl and almost all of his supporters lost their lives, and the women and children were taken away in captivity. Once more, the inhabitants of the town, who had been expelled from it, succeeded in returning, executed the governor appointed by Ṣandal and sent his head to ʿAbd al-Raḥmān III (324/936). After the defection of Mūsā b. Abı ʾl-ʿĀfiya, who went over to the Umayyads in 320/932, the loss of Nakūr was strongly resented by the Fāṭimids. The citizens had taken as their leader a member of the ruling family, Mūsā, known as Ibn Rūmī, but he was expelled by one of his kinsmen, ʿAbd al-Samīʿ, and went into exile at Pechina with his supporters. In 336/948-9, another Ṣāliḥid was to be called to power, Djurthum (?) b. Aḥmad, who reigned until Dhu l-Ḳaʿda 360/September-October 971. It was during his reign or that of his predecessor that Ibn Ḥawkal visited the region; he says (*Ṣūrat al-arḍ*, tr. Kramers-Wiet, 75) that Nakūr had lost some of its importance, but retained reasonable proportions, and he speaks of its port, al-Mazimma. Two centuries later, al-Idrīsī [*q.v.*] locates 20 miles from the town of Bādis (*Opus geographicum*, v, Naples-Rome 1975, 533) the port of Dū Dhukūr, "an ancient town, today (548/1154) in ruins, called Nakūr in the history books", which is rather surprising.

After 360/971, information regarding the town becomes rather obscure. It seems that the last Idrīsid *amīr* [see IDRĪSIDS], al-Ḥasan b. al-Ḳāsim Gannūn (343-63/954-74 and 375/985), established himself at Nakūr, before yielding to the Umayyads in 362/973. The town must subsequently have passed into the hands of the Zīrids [*q.v.*], since historians relate that in 388/998, al-Manṣūr Ibn Abī ʿĀmir (d. 392/1002 [*q.v.*]), in the course of his campaign against Zīrī b. ʿAṭiyya (see H.R. Iris, *Zirides*, index), sent his general, the Slav Wāḍiḥ, to Morocco, and the latter occupied a number of towns including Nakūr (*Mafākhir al-Barbar*, 29). It is probable that the descendants of the last Ṣāliḥid to be cited by name were able to recover their throne and to retain it until 410/1019-20, at which date they were obliged to go into exile in Malaga. They returned, however, to Mazimma, whence they were expelled by Yaʿlā b. al-Futūḥ al-Azdādjī of Orania. The descendants of the latter were still in residence there at the time when al-Bakrī was writing his *Description* (460/1068). In 477/1084, the Almoravid Yūsuf b. Tashfīn (453-500/1061-1107 [*q.v.*]) captured and definitively destroyed Nakūr, the site of which is today only of archaeological interest (see A. Makinasi, *Reconomientos arqueológicos en el Rif*, in *Tamuda*, vii/1-2 [1959], 156-8).

Information is lacking regarding the social, economic and intellectual life of the town, but it may be supposed that it was not greatly distinguished fromt the rest of Morocco. It is known only that a few *dirhams* were struck there between 372 and 397/902-1007 (see G.C. Miles, *The coinage of the Umayyads of Spain*, New York 1950, 52-3) and that close commercial relations had been established with Spain, and in particular with Malaga, which was the nearest port. From a cultural point of view, Berber was certainly the language of the people, but Arabic was not unknown, and it may be supposed that poets frequented the court; proof of this is constituted by a fragment attributed, in 305/917, to a certain Aḥmad b. al-Marwazī, whose patronym could also (if this reading is correct) be an indication of the prestige enjoyed by the little principality of Nakūr.

The general historians of the Maghrib, and especially, of Morocco, generally mention Nakūr.

(Ch. Pellat)

NĀḲŪS (A.), pl. *nawāḳīs*, a kind of rattle once used and in some places still used by Eastern Christians to summon the community to divine service. It is a board pierced with holes which is beaten with a rod. The name, which comes from the Syriac *nāḳōshā*, is not infrequently found with the verbs *ḍaraba* or *ṣakka* in the old Arabic poets, especially when early morning is to be indicated, e.g. ʿAntara, app.; Labīd, 19, 6; *ZDMG*, xxxiii, 215; Mutalammis, ed. Vollers, 178, v. 6; al-Aʿshā, in Nöldeke's *Delectus*, 26; *Kitāb al-Aghānī*, xix, 92. According to tradition, Muḥammad hesitated between this instrument and the Jewish trumpet before deciding on the call to prayer by the *muʾadhdhins* [see ADHĀN].

(Fr. Buhl)

NALDRUG, a small town in the former ʿUthmānābād district of Ḥaydarābād State, situated in 17°49′N., 76°29′E., now in Mahārāshṭra; its fort, standing above the ravine of the Bōrī river, is one of the best fortified strongholds in the Deccan. The name also appears as Naldurg, perhaps the better form (*durg* = Skr. *durga* "fort").

It does not figure in the Deccan campaign of Muḥammad b. Tughluk, and so probably came into Bahmanī possession after the imperial forces had withdrawn, in the late 8th/14th century; its stone fortifications, which appear to be of Bahmanī work although elaborated later under the ʿĀdil Shāhīs of Bīdjāpur, may have replaced an earlier Hindū (? Čālukya) mud fort. Thereafter, Naldrug incurs frequent mention in the dynastic squabbles of the Deccan, lying as it does on the border of the ʿĀdil Shāhī and Niẓām Shāhī territories of Bīdjāpur and Aḥmadnagar respectively, having later even attracted the attention of the Ḳuṭb Shāhīs of Golkonḍā. Thus Muḥammad Khān, the brother of ʿAlāʾ al-Dīn Aḥmad II Bahmanī, in rebellion in 840/1436, is reported to have occupied Naldrug as well as Mudgal, Rāyčūr, and Shōlāpur; after the fragmentation of the old Bahmanī kingdom, when Naldrug became a bone of contention between the rival sultanates, there was a war between Ḳāsim Barīd and Yūsuf ʿĀdil Khān in 897/1492, when Ḳāsim was humiliated; in 914/1508 Aḥmad Niẓām Shāh unsuccessfully demanded Naldrug from Yūsuf as his price for neutrality against the rival claims of Maḥmūd Shāh Bahmanī and ʿAlī Barīd. In 938/1531 Amīr Barīd had entered into an alliance with Burhān Niẓām Shāh against Ismāʿīl ʿĀdil Shāh and marched on Naldrug, but was defeated by Ismāʿīl; Vidjayanagara entered the contest when in 970/1562-3 the lands of Ḥusayn Niẓām Shāh of Aḥmadnagar were invaded by Rām Rādj of Vidjayanagara, now allied to ʿAlī ʿĀdil Shāh of Bīdjāpur; but Rām Rādj withdrew after his camp was flooded in the rains, whereupon ʿAlī ʿĀdil Shāh withdrew to Naldrug and carried out some rebuilding, including a dam across the river Bōrī, to improve the water supply to the garrison. In 989/1581, after the death of ʿAlī ʿĀdil Shāh, Murtaḍā Niẓām Shāh attempted to recover Shōlāpur and Naldrug, now with the help of Ibrāhīm Ḳuṭb Shāh of Golkonda; but the allied forces, on seeing Naldrug's great strength, moved rather to Bīdjāpur itself; the siege of Naldrug, however, was prolonged under the next Ḳuṭb Shāhī sultan, Muḥammad Ḳulī Ḳuṭb Shāh, the following year.

In 1003/1595 Ibrāhīm ʿĀdil Shāh of Bīdjāpur invaded the Niẓām Shāhī kingdom; in an ensuing battle at Naldrug Ibrāhīm Niẓām Shāh was killed. But there was now a greater danger on the horizon, and the ʿĀdil Shāhī and Ḳuṭb Shāhī forces were allied at Naldrug against the Mughals. During the Mughals' Deccan campaign the Niẓām Shāhī sultanate was in 1046/1636 invaded by Shāhdjahān's general Shāʾista Khān, who after his success turned his attention to the ʿĀdil Shāhī kingdom, conquered Naldrug and occupied the region between Shōlāpur and Bīdar, although the Mughal success was then short-lived; in 1087/1676 the Mughal general Bahādur Khān failed in a further siege against Naldrug, although Naldrug fell to the Mughals the following year; this was of course an important possession for the Mughals in view of the growth of the hostile Marāṭhā [*q.v.*] power. There seems to be no record of when Naldrug finally came into the possession of the Marāṭhās.

The fort is an imposing building, but now disfigured with mean squatters' buildings. An interesting addition to its fortifications is a multi-lobed circular bastion on the south wall, similar to but smaller than the one at Golkonḍā fort. The water-palace and other palace buildings, and the mosque, have not been adequately described or published, but an inscription in the water-palace (Pānī maḥall) refers to the erection of a dam in 1022/1613 (*EIM* [1917-18], 3). There are illustrations of the Pānī maḥall and the multi-lobed bastion in *ARAD Hyd.*, 1327F./1917-18, Pl. III. A survey of Naldrug, with further descriptive work, is badly needed. Besides those within the fort, there are several mosque buildings in the vicinity of Naldrug, which appear to be of the late ʿĀdil Shāhī style and period.

Bibliography: The above is mostly extracted from Muḥammad Ḳāsim "Firishta", *Gulshan-i Ibrāhīmī*, *passim*, and Sayyid ʿAlī Ṭabāṭabā, *Burhān-i maʾāthir*, *passim*; for the ʿĀdil Shāhī period only, Mīrzā Ibrāhīm Zubayrī, *Basātīn-i salāṭīn*, and Hāshim Beg Astarābādī, *Futūḥāt-i ʿĀdil Shāhī*, which also covers the Mughal period in the Deccan (portions of the latter tr. S.K. Basu, in *JBOHS* [1938]); G. Yazdani, *Inscriptions of the Bijapur kings ... from Naldrug*, in *EIM* (1917-18), 1-3

(J. Burton-Page)

NĀMA (P.). a Persian word, derived as an adjective from the common Iranian root *nāman-*, "name". Already in Middle Persian the form *nāmag* can be

found also as a substantive referring to an inscription, a letter or a book. In the orthography of Pahlavī, the word could be written either phonemically, as *n'mk'*, or by means of any of two heterographs: SHM-k', which was based on the Semitic word for "name", and MGLT', i.e. the Aramaic *m^e gill^e ta*, "scroll" (cf. L. Koehler and W. Baumgartner, *Lexicon in Veteris Testamenti libros*, Leiden 1953, 1091). It occurs also in compounds, especially in the titles of books. Some of these denote certain genres of writings, e.g. *kār-nāmag* ("book of deeds"), *pand-nāmag* or *andarz-nāmag* ("book of admonition"); others specify the subject-matter of a particular text, such as *Khudāy-nāmag* ("The Book of Kings"), or contain the name of the main protagonist of a story, like the title of the eschatological *Ardā Wirāz-nāmag* ("The Book of Arda Wiraz").

These usages of the word lived on in Islamic times when *nāma* became in many ways the equivalent of the Arabic *kitāb* [*q.v.*], especially in the titles of books. The straightforward Persian titles often contrast with the much more extensive and flowery style of titles in Arabic. Sometimes the former came into use as an alternative title to an Arabic one, as in the case of Niẓām al-Mulk's *Siyāsat-nāma* which is also known as *Siyar al-mulūk*; the title *Saʿdī-nāma* occurs next to the more poetic Persian title *Būstān*.

As an independent word *nāma* continued to have the generic meaning of a letter, frequently occurring in the *Shāh-nāma* of Firdawsī. A specific connotation is that of a royal edict or diploma, as in the expressions *nāma-yi khāḳānī* or *nāma-yi humāyūnī*. In the sense of a register it is used in the religious notion of the *nāma-yi aʿmāl*, the book recording good and bad deeds which will be brought forward at the Day of Judgement.

In the traditional lexicography of Persian, a number of other meanings are given which need not be discussed here. In present-day Persian, *nāma* continues to be a very productive morpheme. It helped to form neologisms (e.g. *asās-nāma* "statute", *shinās-nāma* "identity card", *guwāhī-nāma* "certificate"), but also to give contemporary meanings to words already existing in the classical language (e.g. *dānish-nāma* "encyclopaedia", *rūz-nāma* "journal, daily newspaper", *lughat-nāma* "dictionary").

NAMĀRA, the name of several places in the Near East.

According to the *LA*, the root *n-m-r* has, amongst its meanings, that of sweet, drinkable, abundant water, suitable for beasts and for irrigating crops. This explains why a certain number of settlements, provided with a *ḥawḍ* [*q.v.*] and which have developed around a source of water, a well or a natural reservoir of water (*birka*), are called Namāra, Nāmir, Namr or Nimrā. R. Dussaud and F. Macler noted that during Antiquity, there were in Syria a good number of sites bearing this name. The best known are four places localised in the Ḳibliyya, the southern fringe of the province of Dimashḳ [*q.v.*] or Damascus, forming part of the vast rural region (*rustāḳ*) of the Ḥawrān [*q.v.*]. The relief of the Djabal al-Durūz [*q.v.*] is characterised by numerous volcanic cones which are also landmarks visible a long distance away.

Links between the villages are by roads or by tracks marked out by low walls of stones in order to prevent people from losing their way in the zones of lava flows, and in order to facilitate the passage of camels, which find difficulty in picking their way through terrain scattered with lava blocks of varying size. Since Roman times there have been roads with paving or stone surfacing, important parts of which were used during the centuries before the appearance of the motor car.

1. The Namāra in southern Syria which is situated, like Khirbat al-Bayḍāʾ [*q.v.*], Ḳalʿat al-ʿAlka and Djabal Says [*q.v.* in Suppl.] on the fringe of Roman Arabia (*Provincia Arabia*) in the *ḥarra* [*q.v.*] of al-Ṣafā, a strenuous day's march to the east of the oasis of Taymāʾ [*q.v.*] and of Tarba. According to N. Pigulevskaya, Namāra is a little distance from the ancient route transformed by Diocletian into the *Strata romana diocletiana*.

Namāra is situated at the extreme edge of the steppe, in an oasis of the Wādī 'l-Shām, a wide and long valley which begins in the region of Mushannaf to the northeast of the Djabal al-Durūz and crosses a plain covered with blackish stones coming from the lava flows of volcanoes long since extinct, before losing itself in the fertile Ruḥba depression. The basalt region of the Ḥawrān benefits in winter and spring from abundant rains, which bring floods into the valley, this latter being dry the rest of the year, and filling man-made reservoirs (*aḥwāḍ*, sing. *ḥawḍ*) which, since early Antiquity, have helped to conserve the water. Namāra, whose *ḥawḍ* had, according to al-Iṣṭakhrī, one of the best supplies of water in the region, lasting practically for the whole year through, was probably, like the post of Djabal Says, one of the stages on the road followed by the caravans starting from Tadmur [*q.v.*] or Palmyra and heading for Boṣrā [*q.v.*] or for Filasṭīn [*q.v.*]. The alluvial soils which soaked up water allowed the cultivation of high-yielding cereal crops without irrigation, and these excited the greed of nearby nomads.

Built on a height in the middle of the valley at the Wādī 'l-Sawṭ confluent, the post of Namāra protected the road coming from the northeast and leading to Boṣrā, whilst Ḳaṣr Burḳuʿ [*q.v.* in Suppl.] guarded the east and Ḳaṣr Azraḳ controlled access from the south. Namāra's function was to protect the security of caravans and the flocks of pastoral nomads in the Ruḥba. Its strategic role is marked by a small Roman fort and a rectangular Romano-Byzantine guard tower built on the model of those which guarded the main routes converging on Syria. In Antiquity, this type of tower assured the rapid transmission of information by neans of signals visible from other posts. Namāra's importance is further confirmed by the title of *Nemārāh ha-Sulṭān* which appears in Safaitic texts, as noted by G. Ryckmans.

From the 2nd century A.D., the Romans took control of the Bathaniyya [*q.v.*], whose Arabo-Nabataean population became their tributaries before becoming liable to the *kharādj* of the incoming Muslims. Its defence was the responsibility of the Third Cyrenaican Legion stationed at Boṣrā, whose garrison included units of camel riders (*dromedarii*) recruited locally, thereby explaining the presence of Nabataean soldiers at Namāra, attested by numerous Safaitic graffiti rudely traced by them on neighbouring pieces of rock. Although Namāra was abandoned by the Romans at the beginning of the 4th century, as the presence near the site of the tomb of Imruʾ al-Ḳays [*q.v.*] indicates, the military system established there by them was not changed and actually benefited in the following century by the incorporation of Arab nomads into the army.

After the victory of Adjnādayn [*q.v.*] over the Byzantines in the summer of 13/634, the Muslims occupied the Ḥawrān region. Two years later, after the success of the commander Khālid b. al-Walīd [*q.v.*] at the battle of the Yarmūk, Namāra was integrated within the *djund* [*q.v.*] of Dimashk from the time of the Umayyads' advent to power.

The inscription of Imru' al-Ḳays [*q.v.*]

Around 1 km to the southeast of the fortified post of Namāra, Dussaud discovered in 1899 the famous "Nabataeo-Arab" inscription in the name of "Maru 'l-Ḳays bar ʿAmru... king of all the Arabs" and dated 7 Kaslūl 223 of the Boṣrā era (= 7 December 328). The power of Imru' al-Ḳays, son of the founder of the Lakhmid dynasty, stretched from southern Syria to the northern part of the Arabian peninsula. Dussaud thought that this inscription came from the period of ancient Arabic, since it was "written in Nabataean characters but in practically pure Arabic". C. Rabin, for his part, thought that a western dialect was involved. In fact, M. Sartre points out that we have an Arabic text transcribed in the Nabataean alphabet; he further believes that the dead man buried on 7 December 328 must have himself assumed the title of "king of all the Arabs", which would thus confirm the departure of the Romans since the beginning of the 4th century A.D. This inscription, of which Pigulevskaya has given a translation slightly different from that of the *RCEA*, attests, she says, to the fact "that the Ghassānids and Lakhmids [*q.vv.*] did not enjoy a stable position as allies of Iran and of the Empire".

2. Namāra (Waddington, nos. 2172-85), now called today Nimrā, in one of the six rural districts (*rustāḳ*) of the Ḥawrān in the middle of a region covered with lava flows to the east of the Djabal Durūz. This Druze village is situated to the east of Ṭafḥa and Shahba (the ancient Philippopolis), to the south of Shakka, to the west of the oasis of Taymā' and to the northwest of Mushannaf. The large number of prehistoric sites in this region bears witness to a very old occupation of sites favoured by the basalt nature of the soil which, thanks to 300 mm of rain annually, gives a good cereal yields.

The actual village, with a population in 1945 of 824, is built like an eagle's nest at *ca.* 1,400 m.

altitude, at the top of a tell which dominates the high valley of the Wādī Nimrā which, from this spot onwards, assumes the name of the Wādī Liwā and which forms, downstream, the eastern limit of the Ladjā' [*q.v.*], the ancient Traconitides. A Roman road made use of this valley, marked out by Ṭafḥa, Shahba, Umm al-Zaytūn, Khalkhala and Burāḳ, from where the Roman road continues northwards to Damascus, whilst the flow of the wādī eventually forms, further to the east, the Baḥriyyat Burāḳ, a fine natural reservoir of water, situated to the south of Shukrāniyya. A track came from the north via Shaḳḳa to Namāra, from where another one led towards Taymā', Tarba and Mushannaf, where it took a southwards direction to join Ṣalkhad by means of Sala (ancient Salamamistra), whilst there branched off towards the east a track which eventually joined Namāra (1) via the Wādī al-Shām, where the terrain covered with lava chips made painful going, during the dry season, for the camels of caravans and mounted troops.

At the crossing point of the Wādi Liwā there developed a lower quarter of Namāra; at the foot of the lava streams there are still remains of a fortified tower from the Roman period, which had the function of protecting this obligatory crossing place.

A short distance downstream, on the right bank of the wādī, traces of a church have been found: an unornamented building, like the greater part of the Christian buildings of the Ḥawrān of the early period. This church is reminiscent of the basilica of Ṭafḥa a little further away to the west. Moreover, below the fording place, there is on the left bank a large, ruinous building called Dayr al-Shahīb which, a long time ago, was transformed by the local inhabitants into a rudimentary defence point. In this region, the local ways of communication, providing links between the villages and in greater part dating from Antiquity, have lasted up to our own time. There are some tracks possible for vehicles, in particular, between Namāra and al-Ḳrayya.

3. Modern Nāmir (Namr, Nimr) al-Hawā'

This lies at an altitude of 580 m. to the south of Izraʿ, southeast of Shaykh Maskīn, north of Khirbat al-Ghazāla, northwest of Ḥarak and northeast of Adhriʿāt [*q.v.*].

Like Namāra (1), Nāmir is situated in a region where the nature of the soil and the amount of rainfall have furnished, since Antiquity, an appreciable agricultural richness and have provided its *ḥawḍ* with a respectable amount of water. In Hellenistic times, this place was called Εὔτιμη. In 4th century A.D., Eusebius of Caesarea called it κώμη μεγίστη ἐντῇ βαταναίᾳ in his *Onomasticon* (138, 114). At the opening of the 5th century, St. Jerome cites it as an important settlement (*vicus grandis*). It was at that time a centre for the Nabataean nomads with their large tents to gather together. In mediaeval times, under the Mamlūks [*q.v.*], Nāmir was included administratively in the *wilāya* of Adhriʿāt (the chief town of the Bathaniyya). In 1925, at the time of the rebellion in the Djabal al-Durūz, Nāmir al-Hawā' found itself on the no. 3 road which linked the Djabal with the port of Ṣaydā via Izraʿ. At the present time, this place is situated 3 km/2 miles to the west of the Syrian Darb al-Ḥadjdj and the Damascus-Ḥidjāz railway.

Bibliography: Waddington, no. 2476; J. Mordtmann, *Arch. epigr. Mitt.*, 1884, 180 n. 1; Clermont-Ganneau, *RAO*, i, Paris 1888, 4; G. Schumacher, in *ZDPV* xii (1886), 291, xii (1897), 221; von Oppenheim, *Von Mittelmeer*, ii, 1889-1900, 56; Dussaud and Macler, *Voyage archéologique au Safa*, 139 ff.; Eusebius, *op. cit.*, 138, 11; idem, *Régions désertiques*, 48; Dussaud, *Topographie historique*, 341, 360; Guide Bleu, *Syrie-Palestine*, 348; G. Hölscher, art. Ναμαρίων, in *PW*, xvi/2, col. 1611; E. Wirth, *Syrien*, Darmstadt 1971, 412, maps figs. 52 and 53.

4. The name Namāra (Namr, Nam(a)ra, Nimré) appears on an ancient military boundary marking the frontier between the territory of Djāsim (Gasimea) and its own one. Namr is situated in the large, undulating plain of the Nuḳra, the veritable granary of Syria. It is probably the ancient city of the land of Canaan. Cited in the Bible under the name of Nimré (Numbers, xxxii, 3, and Samuel, v, vi) or of Beth Nimreh (Numbers, xxxii, 34,36), it appears there as a strong urban centre, with grazing grounds for sheep, surrounded by meadows suitable for herds. Over the centuries, it experienced various fortunes; in the 13th century B.C., notably, it suffered a violent conflagration and was reconstructed in 1230 B.C. by one of Jacob's grandsons.

Namr lies to the south of ʿAḳrabā [*q.v.*], the ancient residence of the Ghassānid princes and at the foot of the Djabal al-Ḥāra (1,127 m in altitude) which dominates the plain of the village of al-Ḥāra (Εὔτιμη) which is on the southern side, at the foot of this height, to the east of the Nahr ʿAllān, an affluent of the Yarmūk, to the north of Nawā and to the west of the Ladjā'. According to Dussaud, Namr, which was a place of some importance in a region dominated by

the Monophysites, subjects of the Ghassānids, would be a more fitting place to be qualified as κώμη μεγίστη ἐντῇ βατανaίᾳ than Namāra (2), situated to the north-west of Mushannaf. The confusion seems to arise from an indication given by Eusebius of Caesarea which Waddington (no. 2176), Thomsen and Nöldeke followed.

Al-Masʿūdī places Namr some miles to the north of Djābiya [*q.v.*] and Nawā in the district of the Djawlān [*q.v.*]. The troops of Nūr al-Dīn [*q.v.*], setting off to campaign in Egypt, encamped on several occasions in this proximity, notably in 563/1168 and 565/1170.

NAMĀZ [see ṢALĀT].

NAMĀZGĀH (P.), "place of prayer", in India an alternative name for *ʿīdgāh*, the open structure built usually to the west of a town, consisting solely of what in a mosque would be the western wall, with *miḥrāb*(s) and *minbar* and, essentially, within a spacious enclosure which should be capable of accommodating the entire adult male Muslim population; the wall-structure may stand at the western end of a large paved area (*ṣaḥn*), but there is usually no *ḥawḍ* for ablutions. The structure is used only for the celebration of the two *ʿīd* festivals (*ʿīd al-aḍḥā* and *ʿīd al-fiṭr* [*q.vv.*]), and no special sanctity attaches to it; this may account for the destruction of many old *ʿīdgāhs*.

The *namāzgāh*/*ʿīdgāh* in Muslim settlements in India is often a substantial building of some artistic merit, e.g. the Bahmanī *ʿīdgāh* at Bīdjāpur [*q.v.*]; the splendid *ʿīdgāh* at Čandērī (not described *s.v.*) in Mālwā with its *miḥrāb* wall, canopied *minbar* in typical Mālwā (e.g. Māndū, Čandērī) style, and tapering end buttresses with domes; the early Tughluḳid Kharērā *ʿīdgāh*, near Sirī in old Dihlī (from the *minbar* of which Tīmūr possibly held his open-air court; an earlier *ʿīdgāh* to the west of Ḳilʿa Rāy Pithorā has also been suggested, further from Tīmūr's battlefield. The *Malfūẓāt-i Tīmūrī*, tr. in Elliot and Dowson, iii, 443, does not state the location precisely); the very early (possibly of the time of Iltutmish, with Khaldjī and Tughluḳid additions) *ʿīdgāh* of Badāʾūn, with octagonal end buttresses, domed, the central *miḥrāb* under a half-dome faced with a tall arched opening almost double the height of the main wall; there is a tall canopied *minbar* and, most unusually, an arched opening beside the *minbar* leading to the rear of the structure (K.V. Soundara Rajan, *Islam builds in India*, Delhi 1983, 68-9 with plan and elevation, and Pl. 29); the vast *ʿīdgāh* at Dihlī (presumably of Fīrūzābād, situated north-west of the Ḳadam Sharīf, see DIHLĪ, map on p. 258), probably of Tughluḳid times but with later additions, stands within a well-fortified enclosure. At Gulbargā, the growth of the town is expressed by the presence of *three ʿīdgāhs* to the west of the town (J. Burton-Page *et alii*, *Gulbarga: a memoir*, in preparation). There are many more fine *ʿīdgāhs* all over the country, but unfortunately few have been published.

The word *namāzgāh* is also used for those small areas seen in sparsely-populated regions in Balučistān and the North-West Frontier region, sometimes simply a square or rectangle demarcated by whitewashed stones, with a larger stone at the western end to designate the *ḳibla*, and where there is no pretence of an enclosure.

Bibliography: Given in the article. See also MUṢALLĀ.

(J. Burton-Page)

NĀMIḲ KEMĀL [see KEMĀL MEḤMED NĀMIḲ].

NAMIR and **NIMR** (A.) (fem. *namira*, pl. *anmār, numūr, numur, numr, nimār, nimāra, anmur*; Maghrib *nmer*, pl. *nmūra*), masculine noun designating the panther (*Panthera pardus*) better known, in Africa, by the name of "leopard" (from *leo-pardus*; Old French leupart, liepart, lyépart; Old English leparde, lebarde, libbard). In Berber, it is called *kinas, agarzam*, in Morocco, *aghilas* in Kabylia, and *damesa, anaba, washil* in Tamahaḳ. In Turkish it is known by the name of *pars* and in Persian as *palang*.

This large feline, the most ferocious of the family, along with the lion and tiger, is ubiquitous in hot climates and frequents the scrub, thick forests and high wooded uplands; it appears in numerous geographical varieties in Africa as well as Asia, and one also finds, in the Islamic lands, the varieties *P.p. panthera* in the Maghrib, *P.p. leopardus* in West Africa, *P.p. reichenowi* in Cameroon, *P.p. chui* in Uganda, *P.p. shortridgei* in Central Africa, *P.p. melanotica* in South Africa, *P.p. adersi* in Zanzibar, *P.p. antinorii* in Eritrea, *P.p. nimr* in Abyssinia and Arabia, *P.p. jarvisi* in Sinai and Palestine, *P.p. minor* in Syria, *P.p. tulliana* in Asia Minor, *P.p. dathel* in Central Persia, *P.p. saxicolor* in North Persia and *P.p. sindica* in Baluchistan, not to mention those of India and Asia.

Besides the generic name *namir*, al-Damīrī gathered (ii, 364-5) some ten names (*kunya*) given to the panther, with *abū* for the male and *umm* for the female. The lexicographers added (Ibn Sīduh, *Mukhaṣṣaṣ*, viii, 65) some archaic words such as *abrad, arḳaṭ, ʿusbur, ḍardjaʿ, muʿīl, kalad*; the word *ghaylas* (Dozy, *Suppl.*, s.v.) was borrowed from Berber and *ḳablān baṣtā* from Turkish *kaplān* "tiger". In the Maghrib, *tultī* (= *thulthī*) designated the panther as well as the tiger (*babr*). The female of the panther was also called *fazāra, khutaʿa* and *khaythama*. The nouns *khathʿam, sindaʾa* and *sabantā* are polyvalents for the panther, lion and wolf (*dhiʾb*).

The Arab naturalists and encyclopaedists of the Middle Ages merely repeated with regard to the panther the sayings of the Greek and Latin authors, including Aristotle and Pliny the Elder, as they did for the cheetah (*fahd* [*q.v.*]); i.e., they reiterate the fables of which these two carnivores, among others, were made the subject in Antiquity, as a result of ignorance and imagination. Among the most improbable of these inventions was the origin of the giraffe (*zarāfa*), a product of mating the female panther and the camel, hence its name written in Persian as *ushtur-gāw-palang* "camel-cow-panther". Further, it was asserted that the young of the panther had, at their birth, a viper coiled round the neck. Al-Djāḥiẓ (3rd/9th century), who reports these beliefs (*Ḥayawān*, iv, 222, vi, 34, 128, vii, 128, 241) does not fail to refute them and categorise them as absurdities, but al-Ḳazwīnī (7th/13th century) (*ʿAdjāʾib*, ii, 249) and al-Damīrī (8th/14th century) (ii, 364-5) and others after them still echo these stories . On the other hand, al-Djāḥiẓ, no doubt through an error of the Arab translator of Aristotle (*History of animals*, Fr. tr. J. Tricot, Paris 1957, ii, 600), substituted (*Ḥayawān*, iv, 228) the cheetah for the panther in the name leopard's bane, panther strangler (*Doronicum pardalianches*) and made it into *khāniḳ al-fuhūd* "cheetah strangler" instead of *khāniḳ al-namir* "panther strangler", which is the meaning of παρδαλιαγχές, for the Greeks did not know

the cheetah. From Aristotle is also borrowed the statement that the panther gives off an agreeable odour to other wild animals and that it knows how to use it to attract its prey. Ibn al-Faḳīh al-Hamad̲h̲ānī (3rd/9th century) himself suggests that the cheetah may be the result of crossing the lioness and the male panther (*Abrégé*, 107). The polygraph poet Kus̲h̲ād̲j̲im (4th/10th century), in his treatise on hunting (*Maṣāyid*, 211-12) states that there are two breeds of panthers, one of a large build with a short tail, the other of a small build with a long tail; this theory was repeated word-for-word by al-Ḳalḳas̲h̲andī (8th/14th century) in his *Ṣubḥ al-aʿs̲h̲ā fī ṣināʿat al-ins̲h̲āʾ* (Cairo 1913 ii, 37). However, wiping the slate clean of all these erroneous interpretations, a single author, in the 6th/12th century, the famous knight Usāma b. Munḳid̲h̲ (d. 584/188 [*q.v.*]), who was personally as fully familiar with the cheetah, which he owned, as with the panther that he encountered on several occasions, was able to make a clear distinction between these two carnivores (*Iʿtibār*, 110-11) and to outline the anatomical differences which make the two species quite distinct: the structure of the skull, elongated in the panther, short and rounded in the cheetah; eyes very different in shape and colour; dissimilar coat, flecked with plain black spots in the cheetah; eyes circling a black spot in the panther.

In the case of the panther, we cannot speak of hunting methods as with large game, but of processes of capture and destruction, when it was able to strike terror into the population and cause serious depredations among the flocks. The authors are unanimous in recognising that, unlike the lion who, once satiated, runs off and is very little on the offensive, the panther is in all circumstances extremely aggressive and particularly dangerous due to his jumps of prodigious length and his aptitude for climbing large trees in order to crouch in them and lie in wait for his victims. To get rid of this undesirable visitor, several stratagems were in use. Firstly, there was the camouflaged pit (*ruḳba, zubya, ṭinʾ*) with live bait, a goat or sheep, tied up near to it; but the innate distrust of the beast often thwarted this trick. Kus̲h̲ād̲j̲im notes that the panther is fond of alcoholic drinks and that the hunters, making it drunk, thus had it at their mercy. The most widespread of the processes of destruction was a direct attack on it with the boar-spear and side arms; a good precaution, adds the author, was to coat oneself with hyena fat, which was believed to possess a talismanic virtue. In his huge encyclopaedia on hunting (*al-D̲j̲amhara fī ʿulūm al-bayzara*, mss. Escurial, Ar. 903, and Ayasofya, 3813) composed around 638/1240, the Bag̲h̲dādī ʿĪsā al-Asadī gives details as to the manner of tackling the panther, and the Mamlūk Ibn Manglī, in his abridgement of al-Asadī of 773/1371 (*Uns al-malā*, Fr. tr. F. Viré, *De la chasse*, Paris 1984, 83-4) reproduces the text in full. One learns also that he who wanted to measure himself against the animal had to wear a very thick felt jacket (*lubbād*), with a protective hood pierced with two holes so as to see, and to put on leggings of the same material going from his feet to the top of this thighs. The sleeves of the jacket had to come right down to the fingers. Thus clothed, the man would defend himself with three daggers, one at each hip and one against his chest, then with a strong, very hard, wooden cudgel at each end of which was fixed a metal ring, and a solid leather strap linked these two rings. Once the panther was spotted, the man would go right up to it and, before it leapt, he would turn his back to it, leaning slightly forward to receive the animal on his shoulders. As soon as it set out to bite savagely into the felt, the hunter would skilfully throw his wooden cudgel backwards, over his head and that of his attacker such that it would fall across the latter's back! Scarcely was the stick in place before the man would push with both arms suddenly and violently forwards on the leather strap; under traction, the cudgel, becoming a vice, crushed the vertebral column of the beast, neutralising it instantaneously. If the cudgel did not fall down well across the panther's back, it became useless, and the man could only lie down, face to the ground and use the dagger to stab the belly and flanks of the beast who clung to his back. Indeed, such a method required, apart from muscular power, a rare courage and composure. The author does not say if there were many bold men to risk themselves in this dangerous exercise. Less hazardous was the method of encircling the beast with archers letting fly at it volleys of arrows. A popular belief held that in order to put a panther to flight it was sufficient to show it a human skull. Here we meet again the fictions of Antiquity, such as the idea, among the Greeks, that the panther, intoxicated by absorbing leopard's bane or "panther strangler", sought a remedy for it by swallowing human excrement; so the hunters hung some up for it in a container very high in a tree and the beast strove to jump in vain to seize its antidote which, with the effect of the poison, quickly led it to total exhaustion, if we are to believe Aristotle. The geographer al-Idrīsī (6th/12th century), speaking of the towns of Malindi and Mombasa on the coast of Kenya (*Opus*, i, 59-60), mentions that the natives (*al-Zand̲j̲*) hunt the panther, which is very abundant in this country, with red-haired mastiffs and that, as a precaution, they get the sorcerer who is called *maḳanḳā* who has the power to bewitch the ferocious beasts, a procedure which, they claim, removes much of the danger.

In the whole of Africa, the main concern of panther hunters was to obtain intact skins of the animal of a kind that would be saleable; also, the best method of capture was and still is the trap-box snare (*rud̲j̲ba, bud̲j̲d̲j̲a, ag̲h̲wiya, mig̲h̲wāʾ, mug̲h̲awwāʾ*), built of solid masonry with an entrance concealed by a heavy flat stone which acts like a portcullis; this, running between wooden boards, was kept raised by a latch tied with rope to the live bait (often a dog) attached to the inside of the box. The panther, in leaping on the bait which struggled, pulled up the latch, and the suspended stone fell down immediately between its grooves, enclosing the beast in the box. In Gaboon, the inhabitants construct, with strong, high stakes in a palisade, a narrow zigzagging corridor (*wad̲j̲ra*) leading to a cul-de-sac where the live bait is tied up. As soon as the panther is caught in this type of corral, the entrance of it is shut with a portcullis fence worked by a draw-string, and the beast remains at the mercy of the hunters, for the narrowness of the passage prevents it from jumping and turning round. In the same region, the panther is also caught with a trap working with a horizontal snare which closes up the animal's paw (see E. Mérite, *Les pièges*, Paris 1942, 74 f.). In Kabylia, in the last century, when the remains of an animal devoured by a panther were found, they were removed and replaced by a large piece of meat crossed with strings tied to the triggers of guns levelled at the bait. When the beast returned to its prey, it was literally shot to bits and fell down struck.

The panther or leopard is of so refractory a nature that it is one of the hardest animals to tame, indeed, impossible in the case of many specimens captured in their wild state; also, the question of its supposed

training to hunt gazelles belongs in the field of invention and is due to the constant confusion made, in the travel accounts of Westerners in the Middle Ages, between the panther and the cheetah. Thus it is Marco Polo who reports (*La description du monde*, Paris 1955, 29) that the Great Khān has "lions, leopards and wolves trained to catch animals" and that they are transported in chariots to the hunting grounds. There is never, in the Arab authors, any echo of this training, and we can only recall the anecdote taken from the "Book of flying birds" (*Kitāb al-Djawāriḥ*) of Ghiṭrīf b. Ḳudāma (2nd/8th century) and taken up by al-Masʿūdī (*Murūdj*, ii, 37-8 = § 475); it throws into relief the intractableness of the panther and the sullen hostility of the two monarchs of the time, that of Byzantium and that of Persia. Thus a certain "Caesar" sent to a Chosroes an eagle supposed to be trained to fly at wild asses, wolves and foxes. But the eagle, as soon as it arrived at the Persian prince's court, set out to seize the latter's son and killed him. In order not to be left behind, Chosroes sent to Caesar a ferocious panther, presenting it to him as being a cheetah perfectly trained to hunt gazelles and deer; the result was that the beast, on coming out of the cage, leapt on a son of Caesar and tore him to pieces. The two rulers were thus even with each other, victims of each one's crafty policy.

As he does for each animal cited, al-Damīrī does not fail to list the specific virtues of some anatomical elements of the panther. Its head attracts, wherever it is buried, a crowd of rats and mice. Its gall, which is a mortal poison never to be swallowed, can be used as an eye-lotion and cures cataract and increases sharpness of sight. Eating five *dirhams* of panther meat immunises against snake venom. The melted fat of the feline made into a pomade heals every wound, new or old; the smell of this fat puts all panthers to flight. Burning panthers' hair drives off scorpions, and stock made from its penis soaked in spirits stops urinary incontinence and all bladder ailments. For the sufferer from haemorrhoids, it is beneficial to sit constantly on a panther skin. Always, the panther skin was regarded by jurists as impure (*nadjis*) both before and after tanning, and so could not be used as a prayer carpet; moreover, a prophetic *ḥadīth* states that the angels do not frequent gatherings in which there is a panther skin. Another *ḥadīth* goes further in proscribing sitting on any skin of a carnivore. Ibn Manglī adds (*op. cit.*) that one should abstain from sitting on a panther skin, as this can incite one to the vice of passive sodomy (*ubna*). By contrast, according to him, panther meat, although illicit for consumption a priori, is salutary in the case of hemiplegia, and its blood, made into a lotion, makes freckles disappear. There results from the preceding prohibitions that for Muslims, the panther skin could not serve as a saddle cloth for mounts (*ṣuffa, mīthara, bidād*), any more than any material dyed purple.

Among all the Arab poets, hardly anyone other than Kushādjim wrote verses on the panther; he devoted to it an *urdjūza mashṭūra* of eighteen hemistichs (*Maṣāyid*, 211; *Dīwān*, 97-8) praising the beauty of its spotted coat in unusual and rare words.

It is evidently for its splendid coat that the panther excited the covetousness of man and his eagerness to produce it, in order above all to make clothing from it, as is the case among certain African peoples; among them, Ibn al-Faḳīh al-Hamadhānī cites the people of Ghāna, and al-Masʿūdī (*Murūdj*, iii, 2 = § 845) the people of the Zandj (Somalia, Eritrea and Kenya). Very quickly, the skins of the leopard and the African panther, became, with ivory, objects of trade and export to the lands of Europe and Central Asia. Al-Masʿūdī mentions furthermore the important import into the Near East and Turkey of leopard skins for the saddlery of cavalry. Al-Idrīsī notes (*Opus*, iii, 311) the tanneries treating these skins in Barḳa [*q.v.*], a port from which they were exported; they reached there from East Africa (the land of Sofāla) by transit caravan through the Libyan oasis of Awdjila [*q.v.*]. In the Maghrib, Ḳayrawān and Gafsa were, for tanning, two reputed centres, which is confirmed, in the 10th/16th century, by Leo Africanus (ed. Schefer, iii, 80, 163-9); all these leopard skins went to the Turks of Central Asia, Byzantium and as far as the peoples of the Danube and southern Russia (see M. Lombard, *La chasse et les produits de la chasse*, 578). For the Near East, Aden was the centre of trade in the skin of the leopard called *barbarī* (sc. of Berbera), from its place of origin; via the Arabo-Persian Gulf, the skins reached Baghdād and Cairo, where they were given a final dressing. Pseudo-Djāḥiẓ provides interesting comments on the choice of these skins from Berbera (*Tabaṣṣur*, tr. Pellat, 158) in these words: "(12) The best skins of panthers (*numūr*) are those of Berbera (*barbarī*), with spots on the flanks (*muwashshaḥ*), the clear parts being very spotless, the black parts very dark, with long spots recalling the plumage of a starling (?) (*sābānī*). The most sought-after skins are those which contain in the middle of the back a small, very evident, black point. If the black spots are joined by a light black streak (*shaẓiyya*), it is even more beautiful. A skin containing red with shiny (*yaḳak*) white and very dark black is more beautiful and more expensive. The panther skins of Berbera are small and one of them is hardly sufficient to cover a saddle; the maximum price of a skin is 50 *dīnārs*. The skins of the Maghrib and India are wider and larger, but they do not fetch a high price and are not of superior quality. The most beautiful skins are those with designs." It is also known that skins came from India and, even, live animals, as the author later confirms: "(14) Imports from India are: tigers (*babr*), panthers (*nimr*), elephants, panther skins...", and "(15) Imports from Barbary and the borders of Maghrib include panthers." These animals were certainly destined for the menageries of some great rulers. In the 4th/10th century, the caliph al-Muḳtadir (295-320/908-32) was particularly interested in wild animals, creating, near his "Palace of the Pleiades" (*Dār al-Thurayyā*), a zoological and hunting park (*ḥayr al-wuḥūsh*), of which the menagerie numbered a hundred animals; it was thus a reminiscence of the famous parks of the emperors of Persia. Al-Maḳrīzī (9th/15th century) informs us (*Khiṭaṭ*, ii, 587) that the live captured panther served, in Nubia, as tribute (*baḳṭ* [*q.v.*]) in kind; also, after the suppression of the revolt of the Nubian king Dāwūd by the sultan Baybars al-Bunduḳdārī [*q.v.*] in 674/1276, the annual tribute was three elephants, three giraffes, five female panthers, a hundred redhaired camels and four hundred cattle. As for modern times, the inconsiderate tapping practised for one or two centuries of the natural stock of panthers in order to satisfy tastes for luxury (saddlery, military uniforms, decoration of living rooms, feminine fashion) and the curiosity of the public (amusement parks, menageries, circuses) has led to a limiting and severe control of captures, indeed, to a total protection of the species in the East as well as in the states of the Maghrib and in the great natural reserves of Africa and Asia.

The name of the panther is connected with the noun *numra*, pl. *numar* "small spot", synonym of *nukta*, on account of its hide, which is dotted with spots

and, after the external appearance of the animal, *namir* was applied to a "dappled" cloud, just as the derived adjective *anmar* describes the dappled grey coat of the horse; *namira* also designates the black and white variegated cloak, as well as the black ink of the writing contrasting with the white of the page. Apart from analogies with the typical coat of the panther, its irascible and vicious character is at the origin of the following metaphor *fulān labisa li-fulān djild al-namir* "So-and-so wore the panther's skin in regard to so-and-so", to define a break in relations between two individuals who have become hostile to one another, hence the meaning of the verbs *namira, nammara, tanammara*, synonyms of *ghaḍiba* "to be irritated, angry".

Among the nomads are to be found the tribes of Namir, Numayr, Numāra and Anmār, the latter being a section of the Khuzāᶜa; all these tribal groups derive their names from patronyms such as Nimr, Namir, Nimrān, Numāra, quite current in the pre-Islamic period.

Toponomy also supplies mentions of places where the panther was once present. Thus in Palestine, in the land of Moab, are to be found Tell Nimrin and the *wādī* of the same name, a tributary of the left bank of the Jordan, 15 km/10 miles to the north of the Dead Sea. This valley sheltered, in Antiquity, panthers and cheetahs, which justifies the name Bethnemra (*Bayt al-namira*) or Nemra for a locality of the place mentioned in the Biblical texts and now disappeared. Similarly, to the south of the Dead Sea and on its eastern bank, in the land of Kerak, runs the Nemeira Wādī (*Wādī Numayra*), whose marshy and bushy approaches provided a haunt for wild beasts.

In botany, the name of the panther is associated with several plants. As mentioned above, *khāniḳ al-namir* "panther strangler" and *ḳātil al-namir* "panther-killer" designate the Panther strangler, Leopard's bane (*Doronicum pardalianches*, compositae); the same two names are also given to two ranunculuses, the Wolf's bane (*Aconitum lycoctonum*) and the Monk's hood (*Aconitum napellus*). The roots of these three plants were once used in the making of poisoned bait to kill harmful carnivores. These two names are found applied to the Black chameleon (*Cardopatium corymbosum*, compositae). The expressions *shadjarat al-namir* (in the Yemen) "panther tree" and *ḥaniyyat al-namir* "panther arch" describe the African asparagus (*Asparagus africanus*, liliaceae). Finally, the Ochna (*Ochna inermis* and *O. parvifolia*, ochnaceae), shrubs of tropical countries, are called *ᶜuyūn al-namir* "panther eyes" because of their flowers.

In the field of art, the motif of the panther seems to have been slightly eclipsed by those of the lion and cheetah; confusion between panther and cheetah reigned, most often, in the mind of the artists. In miniatures, carpetwork and ceramics, one recognises, however, the panther in the representations of the wild Persian-style parks and in the scenes of hunting such as was practised by the Sāsānid rulers. Some very realistic animal "designs" of the Tīmūrid-Persian school (9th/15th century) show us the animal in its jungle. In embossing techniques, these same hunting scenes, more or less stylised, are found with the engravings decorating caskets and pyxidia in ivory, ewers in rock crystal and glass, containers and other utensils of copper and bronze, sometimes encrusted with precious metals. We will only draw attention to a plate (Benaki Museum of Athens) of Egyptian Fāṭimid provenance (end of the 5th/11th century). The motif which decorates it is presented as being "the man with the panther" (D. and J. Sourdel, *Civilisation*, 380, fig. 143); of a purely Hellenistic, indeed Christian, inspiration; we see here a "sage", one knee on the ground, speaking to a spotted animal, a panther or cheetah, docilely seated and attentive to the man's speech. It is possibly a reminiscence of the Prophet Daniel in the lion's den or of a Christian delivered to the ferocious beasts of the Roman circus. Finally, Mamlūk heraldry was familiar with the panther as an emblem in the armorial bearings of the sultan Baybars I, which are found engraved on bronze panels from the door of his *madrasa* (664/1266) in Cairo and now kept in the Victoria and Albert Museum.

(F. VIRÉ)

AL-NAMIR (NAMR) B. **TAWLAB** AL-ᶜ**UKLĪ**, Abū Rabīᶜa, a *mukhaḍram* [*q.v.*] Arabic poet, who probably died before 23/644 at an extremely advanced age (al-Sidjistānī, *Muᶜammarīn*, 70, makes him live 200 years, and cites six verses in which he speaks of his great age; other authors refer equally to his senility). The generosity of which he seems to have given proof on various occasions makes one think that he was rich and powerful within his tribe, which he represented in heading a delegation to the Prophet at Medina. The oldest sources (Ibn Sallām, *Ṭabaḳāt*, 137, in the first place) reproduce a letter which Muḥammad is supposed to have addressed to him and which contained the *amān* given to the Banū Zuhayr b. Uḳaysh on condition that they respected the requirements of Islam. However, the circumstances in which this document is brought forward at the Mirbad [*q.v.*] of Baṣra by a Bedouin with dishevelled locks who is said to be no other than al-Namir, make it very suspect, all the more so given the fact that if this last person's grandfather was in fact called Uḳaysh, there does not exist any clan called Zuhayr b. Uḳaysh. The mention of the Mirbad is nevertheless an authentic detail, since the

poet settled at Baṣra, where he seems to have spent the last years of his life.

Al-Namir (according to Abū Ḥātim al-Sidjistānī, *apud* al-Mubarrad, *Kāmil*, 185, and Ibn Durayd, *Ishtiḳāḳ*, 193, one should read al-Namr) was not a very prolific poet, but his *dīwān*, transmitted by his grandson Ḥammād b. Rabīʿa b. al-Namir, was nevertheless made the subject of several recensions by al-Aṣmaʿī, Ibn al-Aʿrābī and al-Sukkarī (in al-Nadīm, *Fihrist*, ed. Flügel, 158 = ed. Cairo, 224) and of a commentary by Ibn Ḥabīb (al-Baghdādī, *Khizāna*, Cairo 1299, i, 155), not to mention the fact that it was known as far as al-Andalus (Ibn Khayr, *Fahrasa*, 397). Some fragments of his work, cited in a certain number of biographical and literary texts, were brought together by F. Krenkow, *Three poems by an-Namir ibn Taulab al-ʿUklī*, in *RO*, xvii (1951-2), 122-37, with an Eng. tr.; subsequently, an attempt to reconstitute them has been made by N. Ḥammūdī al-Ḳaysī, *Shiʿr al-Namir b. Tawlab*, Baghdād 1968.

Ibn Sallām places him in the eighth class of the pre-Islamic poets and considers him to be *faṣīḥ*. His wisdom, emphasised by Abū ʿAmr Ibn al-Aʿlā who calls him al-Kayyis, inspired him with lines from which posterity drew various proverbs and proverbial sayings. One part of his work is devoted to his wife who, held captive among the Asad, had been offered to him by his brother al-Ḥārith b. Tawlab; since she hated him, she finally took refuge with her own family, and he felt from this a sorrow which the news of her death renewed afresh within him; she was called Djamra (var. ʿAmra and even Ḥamza) bint Nawfal al-Asadiyya. He also mourned the death of his brother, but his position within his tribe freed him from the necessity of composing panegyrics and satires.

NAML (A.), substantive of a collective nature (unitary noun *namla*, pl. *nimāl*, *namul*, *numul*) denoting ants (Persian *namal*, *mūr*, Turkish *karınca*, Tamaḥaḳ *anellugh*, pl, *inellughen*, Hebrew *nemālah*, pl. *namālim*. These hymenopters living in organised societies comprise more than 1,600 species worldwide, and are divided into two groups: "formicines" (genera *formica*, *camponotus*, *lasius*) which do not possess an aggressive sting, and "myrimicines" (genera *myrmica*, *tetramorium*, *aphenogaster*) which are thus equipped. These classifications being of interest only to specialist entomologists, the majority of laymen, in the Arab and Berber world as elsewhere, differentiate between the numerous species of ant only according to the external criteria of size, colour and behaviour. For the city-dweller as for the nomad, there are only large or small ants (*dharr*, *dabāⁿ*) or, in addition, those which sting or bite and the harmless ones, although certain of the latter are capable of spitting a corrosive liquid, formic acid (*ḥamḍ al-naml*), causing severe burns. Similarly, attention is often paid only to the colour, with black ants on the one hand and yellow-red ants on the other. Arabophone naturalists of the Middle Ages such as al-Ḳazwīnī [*q.v.*], al-Djāḥiẓ and al-Damīrī, reproducing the statements of Aristotle, Pliny the Elder and Aelianus, added nothing to these forms of distinction. Their only contribution was to supply the nicknames (*kunya*) given to ants in local dialects including, for the male, *abū mashghūl* and, for the female, *umm tawba* and *umm māzin*.

Since early Antiquity, ants have been an object of admiration on account of their prescience, the feverish activity with which they provide for their sustenance and the perfect organisation of their societies. The Bible refers to them as an example (Proverbs, vi. 6-8, xxx. 24-5). With the arrival of Islam, Muslims were obliged to consider them a privileged "race" (*umma*), since the Ḳurʾān, in the sūra *al-Naml* (XXVII, 18), recalls the legend attributed to Solomon who, arriving with his army in the "Valley of the Ants" (*Wādī 'l-naml*) in Syria, is supposed to have heard the sentinel of the local population calling to his companions to return with all possible speed to the ant-hill (*ḳaryat al-naml*, *djurthūma*, *manmala*) to avoid being trampled underfoot by the soldiers. Solomon smiled, seeing here a direct message from the Most High who had granted him the supernatural gift of understanding the language of animal and, in particular, that of the birds. In corroboration of this divine protection enjoyed by ants, a *ḥadīth* of the Prophet Muḥammad prohibits the killing of the following four animal species: the ant, the bee [see NAḤL], the hoopoe (*hudhud*) and the shrike (*ṣurad*). However the exegetes of the four judicial schools of Islamic orthodoxy permit the destruction of small ants (*dharr*) when they intrude upon the human domain and attack foodstuffs, causing significant damage in homes, shops and gardens or when they display aggression with stings and bites; the only means of repression formally prohibited is the use of fire. Al-Damīrī suggests a number of conjuratory talismanic formulas for inducing ants to abandon the places that they have invaded (*manmūl*, *arḍ namila*); these formulas are similar to those used for repelling grasshoppers [see DJARĀD]. The same author also describes certain practical and effective measures for being rid of unwelcome ants; these include smothering the ant-hill with cow-dung or depositing there the excrement of a cat. If extermination is the object, it is sufficient to place on the site a piece of calamite or "Lover's stone" (*ḥadjar al-maghnāṭīs*) or to sprinkle it with ground carraway (*karāwiyā*) or cumin (*kammūn*) or to spray with rue-water (*sadhāb*) or tar-water (*ḳiṭrān*) or to grind sulphur (*kibrīt*) in the vicinity. Finally, ants will not approach an object on which the stained linen of a menstruating woman has been placed.

According to Ḳurʾānic law, the consumption of ants is absolutely forbidden, as is the consumption of the cocoons or false "eggs" (*bayḍ*, *maʾzin*, *māzin*, *ḥawrāʾ*, *ḥawriyya*, *ʿadhrāʾ*) and of the foodstuffs (*zibāl*, *zubāl*) which the workers transport with their mandibles and their feet.

The "specific qualities" (*khawāṣṣ*) attributed to ants tend to be negative. Thus the cocoons, if ground to a powder and applied to the skin, prevent any growth of hair. In order to disperse and put to flight a group of persons, it is enough to throw at them a few of these cocoons; a concoction of these taken in the dose of a single *dirham* entails severe intestinal disorders. Finally, an ointment composed of seven large ants soaked for a day and a night in a solution of calomel (*duhn al-ziʾbaḳ*) and smeared on the sexual organs is reckoned to be a powerful aphrodisiac. In oneiro-

mancy, to see ants arriving in one's house with their stocks of provisions is an omen of prosperity, while seeing them leave presages misfortune. An invalid who dreams of ants covering his body is sure to die.

The feverish activity and small size of ants have given rise in Arabic to a number of adages in the form of analogies; examples include *aḥraṣ min al-naml* "more greedy than the ants", *aḍʿaf wa-akthar wa-akwā min al-naml*, "more feeble, more prolific and more vigorous than the ants", *arwā min al-naml* "more prescient than the ants", *alṭaf min dharra* "more slender than a small ant, *ashamm min dharra* "having more flair than a small ant", *aḍbaṭ min namla* "more tenacious than an ant".

The Arab philologists of the Middle Ages have recorded, in reference to ants, certain local nomenclatures; thus for example *djathla* denotes both the Reaper ant or Robber ant (*Formica sanguinea*) and the Amazon ant (*Formica rufescens*). The Fierce ant (*Formica animosa*) is called *kaʿaṣ* and *kaʿsāʾ*; winged males and females are distinguished from wingless workers with the terms *rimma, mūk, duʿāba, duʿbūb, shayṣabān, tathradj*. Considering only the colour, there is the range of black ants with *fāzir, habashiyya* for *Formica nigra, F. fusca, F. Fuliginosa* and *ʿudjrūf, djuʿrūf* for the *F. Camponotus*. In the range of the yellow-fawn and the brown-red, *namla fārisiyya* is idenfified with the light *Formica flava* (or *Lasius flavus*) and *djaʿbī, sumsuma, simsima, ʿukfān*, qualify the dark *Formica rufa, F. pratensis, F. truncicola, F. sanguinea*. In Tamāhak, the Tuaregs distinguish only between the large ant with *aheberhebar*, pl. *iheberhebāren*, and the small with *kaidedekkūm*, pl. *kaidedekkūmen*.

Among mammals, the order of edentates (*athram*, pl. *thurm, adrad*, pl. *durd*) feeds almost exclusively on ants and termites (*araḍ, suraf*); these animals are described as *ākilāt al-naml* "ant-eaters" (myrmecophageous in entomological terms) and may also be called *dubb al-naml* from the English term Ant-bear. The most common of these edentates identified in Arabic are: (a) *umm ḳirfa* for the Scaly Ant-eater (*Manis tetradactyla*) of western Africa; (b) *nāmila* for the Great Ant-eater (*Myrmecophaga jubata*) of South America; (c) *khinzīr al-arḍ, abū aẓlāf, dawbal* and *abū dhakan* for the Aardvark or Earth-pig (*Orycteropus afer*). Found in Australia and New Guinea is the *kunfudh al-naml*, Porcupine ant-eater, also called *nadnāḍ* "long-tongue", terms applied to the three species of *Echidna*.

Finally, ants encounter some formidable enemies among birds, with the Woodpecker family and in particular with the Wryneck (*Jynx torquilla*) which is called *lawwāʾ, abū luwway, mulawway* according to Arabic dialects and which is not much larger than a sparrow.

NAMRŪD, also Namrūdh, Nimrūd, the Nimrod of the Bible, is associated in Muslim legend, as in Haggada, with the story of the childhood of Abraham. The Ḳurʾān, it is true, does not mention him but probably, as in many other cases, only from dislike of mentioning names. That the legend of Namrūd was known is evident from the following verses. "Do you not see how he disputed with Ibrāhīm about the Lord who had granted him dominion? When Ibrāhīm said: It is my Lord who gives life and death, the other replied: I give life and I slay. When Ibrāhīm said: God makes the sun rise in the east; do you make it rise in the west; then the liar was humbled" (II, 260/258). The Ḳurʾān exegists are probably right when they see Namrūd here disputing with Ibrāhīm and also when they refer to Namrūd the verse: "What did Ibrāhīm's people answer? They only said: Kill him, burn him; but God saved him from fire" (XXIX, 23/24). The legend is already richly developed in al-Ṭabarī, but it is at the beginning of the romance of ʿAntar in the Abraham midrāsh that we find its most luxurious development.

Al-Ṭabarī already numbers Namrūd among the three or (with Nebuchadnezzar) four kings who, like Sulaymān b. Dāwūd and Dhu 'l-Ḳarnayn, ruled the whole world. His astrologers told him that a child would be born who would overthrow his kingdom and destroy his idols. Ibrāhīm thus becomes one of those heroes of legend who are persecuted from the moment of birth by a tyrant, to whom they are destined to prove fatal, like Moses, Gilgamish, Semiramis, Sargon, Karṇa (in the *Mahābhārata*), Trakhan (King of Gilgit), Cyrus, Perseus, Telephus, Aegisthus, Oedipus, Romulus and Remus, Jesus (see Frazer, *Folklore in the Old Testament*, ii, 437-55). Ūsha, the wife of Āzar of Tārikh (Terakh), is able to deceive Namrūd and his searchers. Ibrāhīm is born in concealment; maturing rapidly, he engages in a religious disputation with Namrūd; Namrūd cannot be God, for God gives life and death. Namrūd replies that he can do this also, for he can execute or pardon a man condemned to death. Namrūd has Ibrāhīm thrown into the fire; it becomes a cool health-resort. An angel keeps Ibrāhīm cool, at which Namrūd marvels, like Nebuchadnezzar at the preservation of the three young men in the fiery furnace (Daniel iii, 24-5). Namrūd resolves to attack the God of Ibrāhīm in his heaven. He feeds four young eagles on meat and wine till they are of a great size, ties them to the four corners of a chest, fastens a spear at each corner with a piece of meat on the point and sits in the chest; the eagles, trying to reach the meat, fly higher and higher. The mountains appear like ant heaps and later the whole world looks like a ship in the water. It is in vain, however, for he falls to earth. Next, he builds a tower in order to reach the god of Ibrāhīm, then the tongues are confused; in place of one Syriac tongue, 73 arose. God's angels admonish Namrūd. But he equips his armies against God. God sends an army of gnats against him, who eat the flesh and drink the blood of Namrūd's men. A gnat enters Namrūd's brain through his nose. For 400 years he had exercised his tyrannical rule, and for 400 years he was tortured by the gnat until he died.

Muslim legend derives the name Namrūd from *tamarrada*, sc. he who rebelled (against God). But there is another derivation, viz. from *namira* "leopardess or female panther" in that version of the Namrūd legend in which Namrūd is suckled by this animal. This ver-

sion resembles the Romulus and Remus story (Jean de l'Ours) and culminates in the Oedipus story for Namrūd, brought up unknown, kills his father and marries his mother. Al-Kisāʾī has preserved this version and it is given at greater length in the introduction to the romance of ʿAntar.

Namrūd's father Kanaʿān b. Kū*sh* has a dream which troubles him; it is interpreted to mean that his son will kill him. The child is born, a snake enters his nose, which is an ominous sign. Kanaʿān wants to kill the child, but his mother Sul*kh*aʾ entrusts him secretly to a herdsman; the latter's flocks scatter at the sight of the black flat-nosed infant. The shepherd's wife throws the child into the water; the waves wash him to the bank where he is suckled by a female panther. Already dangerous when quite a boy, as a young man he becomes a robber leader, attacks Kanaʿān with his band, kills him (without knowing that he is killing his father), marries his own mother and becomes king of the country and later lord of the world. Āzar (already in the Ḳurʾān the father of Ibrāhīm) builds him a marvellous palace flowing with milk, oil and honey, with mechanical singing birds —in the mediæval epic, the wonderful feature of the Chrysotriclinium in Byzantium. The lore of astrology, the inheritance of Idrīs and Hermes, he acquires by force from the pupils of Idrīs. Iblīs teaches him magic. He was himself worshipped as a god. Then dreams, voices and omens frighten him. In spite of all Namrūd's cruel orders, Ibrāhīm is born, brought up and soon shatters the belief in Namrūd. Namrūd throws those who believe in God to the wild animals, but they do not touch them. He denies them food; the sand of the desert becomes corn for them; on every grain of it is written "gift of God". Namrūd throws Ibrāhīm into the fire but he is unharmed. Namrūd builds up a pile of fuel, the flames of which burn the birds for miles round— it is impossible to approach it. Iblīs then designs a ballista which hurls Ibrāhīm on to the flaming pile. Ibrāhīm spends the finest time of his life there under blooming trees and amid rippling brooks. Namrūd then decides to attack the God of Ibrāhīm in heaven. Starved eagles fly up with his litter, until he hears a voice saying that the first heaven is 500 years in width, it is 500 years between heaven and heaven, then comes infinity. Namrūd shoots an arrow against God; the arrow comes back stained with blood. Namrūd suddenly becomes grey and old and falls to the ground. But he prides himself on having slain God. Then a gnat puts an end to his life.

The history of the Namrūd legend. Very little can have been taken from the Bible. Ḳurʾān expositors and collectors of legends call Namrūd *d̲jabbār* (tyrant) no doubt after the *gibbor* applied to Namrūd in the Bible (Gen. x. 6); Geiger also sees in *d̲jabbār ʿanīd* (xi, 62) an allusion to Namrūd. Al-Ṭabarī (i, 217) also describes Namrūd as a *mutad̲jabbir*. Muslim legend and Haggada (*Targ. S̲heni* on Esther I, i; Midr. Hagadol, ed. Schechter, 180-1; Gaster, *Exempla of the Rabbis*, N. I) make Namrūd ruler of the world. From Haggada comes the association of Namrūd with the Tower of Babel and, in particular, with the childhood of Abraham, and with the latter's rescue from the fire (*Gen. Rabba*, xlix, l.). The death of Namrūd caused by the gnat is also based on Haggada, which makes Titus, the destroyer of the Temple, die in this way. Nebuchadnezzar comes to a similar end (see Grünbaum, *Neue Beiträge*, 97-9). The flight to heaven, especially, in the romance of ʿAntar, with the intervals of 500 years, recalls the ascent of Nebuchadnezzar in the Talmud (*Chagiga*, p. 13a). But the flight has far more resemblance to that of S̲hāh Kay-Kāwūs as described by Firdawsī (ed. Mohl, ii, 31-4). The Namrūd legend borrows from many directions. Al-Ṭabarī (i, 253) mentions that Namrūd had been identified as the Persian Ḍaḥḥāk [see ZAHĀK], but he refutes this idea (i, 323, 324). Bible, Haggada and Persian epic were further developed, the marvels increased, an early history was invented, Namrūd made an Oedipus, and in the *Sīrat ʿAntar* he becomes the hero of a romance. The Muslim Namrūd legend then found its way into the late Jewish legend of Abraham. Bernard Chapira (see below) has published one such in Hebrew and Arabic. He is certainly wrong in taking seriously the authorship of Kaʿb al-Aḥbār; this is one fiction out of many thousands. But the mutual influence of Haggada and Muslim legend is indisputable. The later *Midrās̲h*, as M. Grünbaum has clearly shown, *Pirḳē R. Elieser, Tanna de bē Eliyahu, Midrās̲h Haggādōl, Sēfer haiyās̲hār, S̲hēbeṭ Mūsār* of R. Eliyah Hakkohen from Smyrna, is influenced in the section of Abraham and Nimrod by Muslim literature.

(B. HELLER)

NĀMŪS (A.) is a word of many meanings.

1. As a religious and philosophical term. In St. John's Gospel, xv. 26, the coming of the paraclete is announced. In the preceding verse a passage from the Psalms referring to the haters is quoted and ἐν τῷ νόμῳ αὐτῶν given as source. The verses in the Gospel from xv. 23 on were already known to Ibn Isḥāḳ in an Arabic version which came from a Syriac one, as the reproduction of "paraclete" by *al-manaḥmānā* shows. In the same source the word νόμος was left untranslated, for we find it in Ibn His̲h̲ām (150) in the form of *nāmūs*. Biographical tradition makes Waraḳa b. Nawfal expressly assert the identification of Muḥammad with the paraclete promised by Jesus mentioned in the passage from the Gospel. The oldest forms of the tradition giving this episode represent a combination of the Gospel passage with sūra LXI, 6. In later developments of the tradition, the idea of a paraclete gradually falls into the background till it was finally interpreted as the name of an individual and even received an epithet. Thus we read in Ibn His̲h̲ām, 153, that Waraḳa replied as follows to his cousin who asked him about Muḥammad's first vision: "If thou hast reported the truth to me then truly the greatest *nāmūs* has come to him, who used to come to Mūsā, and then he (Muḥammad) is the prophet of this *umma*, etc." In al-Ṭabarī the "greatest *nāmūs*" is in a gloss expressly said to be D̲jibrīl.

As the personal interpretation is not sufficiently explained by meanings, known to be really old, of the

true Arabic word *nāmūs* (root *n-m-s*), which exists alongside of the Greek loanword, and meanings like "the trusted one, confidant of a secret" seem rather to come from the Greek loanword already known in its reference to Djibrīl (against Dozy, *Supplément*, s.v.), it was natural to look for a specific use of the word νόμος which admitted of a personal interpretation and could at the same time have been known to the Arabs. Nyberg was reminded by the *nāmūs* doctrine of the Ikhwān al-Ṣafāʾ (see below) of the pseudo-Clementine writings; and Tor Andrae derived the *nāmūs* of the Waraḳa tradition from the νόμος αἰώνιος of the pseudo-Clementines, which according to the book Κήρυγμα Πέτρου was revealed to Adam, and afterwards again appeared to all prophets worthy of such an honour, lastly, to Moses and to Jesus. However startling the agreement of the conception of νόμος αἰώνιος with the later forms of the Waraḳa tradition, the question still remains open, by what way a personal conception of νόμος could have entered Islam. Baumstark quoted a passage from the liturgy of St. James of Jerusalem, ἐκάλεσας αὐτὸν διὰ νόμου, ἐπαιδαγώγησας διὰ τῶν προφητῶν, and observes that the liturgy was the authoritative one in the Bedouin camps and must have existed in an Arabic translation. It is really quite natural to understand νόμος personally here. No explanation of our Waraḳa tradition can on the other hand be obtained from Mandaean writings, as Lidzbarski has already pointed out in his translation of the *Ginzā*, 247-8.

That there is a true Arabic word *nāmūs* has already been mentioned. The dictionaries give such varied meanings for it that we can only consider as old and original those that are confirmed by quotations. This holds for the meanings "hiding place, hunter's hut, monk's cell" probably also for "buzzing insect, midge" as *nomen agentis* from *n-m-s* to "buzz" (for this sense, see section 2. below). On the other hand, not only the meaning "cunning" and its derivatives must be secondary, but also the already-mentioned meanings referred to persons, the latter especially because the word, so far as we know, is used also in the later literature predominantly in the material sense and the person connected with the idea is called *ṣāḥib al-nāmūs*, etc. (counter-example: Dozy, s.v.). Just as the material meanings predominate generally, so also does the meaning of the Greek loanword predominate, apart of course from the old poetry, from which the meaning "midge" and particularly the word *nāmūsiyya* "mosquito net" have survived into the modern vernacular. Below we shall therefore deal only with the development of meaning of the Greek loanword.

The favourite meaning is divine law, with or without the addition of *ilāhī*. This law is revealed through the prophets, and only men of prophetic spirit can be *wāḍiʿ al-nawāmīs* in this sense. The double character, political and religious, of the Muslim constitution naturally very much favoured this conception. Thus, for example, al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, Cairo 1903, 280, gives as the first among the *ʿulūm sharʿiyya*, *ʿilm al-nawāmīs al-mutaʿallaḳ bi 'l-nubuwwa*. Ibn Sīna expressly observes in his encyclopædia *Aḳsām al-ʿulūm al-ʿaḳliyya* (in *Madjmūʿat al-rasāʾil*, Cairo 1328, 230-1) in treating of politics that the pertinent works of Plato and Aristotle understand by νόμος not "cunning" and "deceit", corresponding to the usage of the vernacular, but *sunna*, revelation, etc., for the laws of the community are dependent on prophecy and the divine law; similarly Sprenger, *Dict. of technical terms*, i, 40. Abu 'l-Ḥayyān al-Tawḥīdī devotes the fourth of his *Muḳābasāt* to the *nāmūs ilāhī* (ed. Cairo 1929).

Here we may mention Miskawayh's definition which is also of literary interest. In connection with his discussion of the function of the *dīnār* as a measure of the equivalence (*ʿadāla*) of service and reward (*Tahdhīb al-akhlāḳ*, *maḳāla* iv, Cairo, Khayriyya, 1322, 38; Fr. tr. M. Arkoun, *Traité d'éthique*, Damascus 1969, 181-2), he quotes an alleged saying of Aristotle according to which the *dīnār* is a just *nāmūs*. *Nāmūs*, he adds, in striking contrast to Ibn Sīna, means in Greek, *siyāsa* and *tadbīr*; Aristotle says in the *Eth. Nic.*. that the greatest *nāmūs* proceeds from God, the second is the judge, the third the *dīnār*; the first, as a condition for just settlement between the claims of men, is the example which the two others follow. The well-known filiation of the Muslim books on Hellenistic ethics has resulted in this explanation finding a place in later derivatives from Miskawayh, e.g. in Naṣīr al-Dīn al-Ṭūsī, *Akhlāḳ-i Nāṣirī*, i, 2, 7 (Tabrīz 1320, 152), also Ḳinālīzāde ʿAlī b. ʿAmr Allāh al-Ḥinnāʾī, *Akhlāḳ-i ʿalāʾī* (1248, i, 78), and each more fully than the preceding. As a result of these expositions, al-Ṭūsī in the economic part of his book (ii, 2, 254), calls gold briefly the smallest *nāmūs* (tr. in Plessner, *Der* οἰκονομικός *des Neupythagoreers "Bryson"*, 1928, 63); and Ḳinālīzāde also follows him (ii, 7).

The *nāmūs* doctrine of the Ikhwān al-Ṣafāʾ can only be briefly outlined here. In part i, 56 (Bombay ed.), the *nāmūs* is defined as a spiritual kingdom (*mamlaka rūḥāniyya*) which is upheld by eight kinds of men. God appears as the *wāḍiʿ al-nāmūs*. *Ṣāḥib al-nāmūs* is from the context Muḥammad, in so far as one can identify from the context any individuals in the pages of the Ikhwān al-Ṣafāʾ. A few pages later, Muḥammad is described as the *wāḍiʿ al-nāmūs*. In part iv, 57, the angels appear as teachers of the *aṣḥāb al-nawāmīs*. Any one who does not guide his life according to the commands and prohibitions of the latter has no share in divine *nāmūs* (iv, 147). This spiritual kingdom is the element of the Ikhwān al-Ṣafāʾ; they slept in the cave of their father Ādam [*q.v.*] for a long period until the fore-ordained time (*mīʿād*) came under the rule of the Lord of the greatest *nāmūs* (Muḥammad?), and they perceived their spiritual state (*madīna*) which was raised in the air and from which Adam and his wife had been banished (iv, 107). If the Ikhwān al-Ṣafāʾ by common effort and uniform self-instruction succeed in building a perfect spiritual state (*fāḍila*, cf. al-Fārābī), this state will belong to the kingdom of the Lord or the greatest *nāmūs*, who has dominion over souls and bodies (iv, 211). The *nāmūs* thus even becomes a kind of divine being, where there is a discussion of the "philosophic service of God", which represents the higher stage in comparison with that of the Muslim teaching regarding obligations and duties. This philosophic service of God had been, they say, practised by the ancient Greeks on the first, middle, and last day of the month. The night of the first day was divided into three parts. The first was spent in worship of *nāmūs*, the second in meditation on the *malakūt*, the third in humble prostration before the Creator, confession of sins and repetition of prayers by Plato, Idrīs and Aristotle until the break of day (iv, 273 ff.). Nevertheless, the *nāmūs* here has not exactly taken the place of God. But in several passages of the encyclopædia he is represented as giving names. Thus he calls the spirits of the planets angels (ii, 97; cf. iv, 244); he does the same with the natural forces (ii, 102) and (iii, 10) with the nature of origin and decay. Above the spheres (*dawāʾir*) of the three kingdoms of nature and of man is the sphere of the divine *nāmūs*, whose members deal with the affairs of the *nawāmīs* and the divine revelations and which corresponds to the "sur-

rounding" (ninth) sphere of the astronomers (iv, 251). As the *nāmūs* and the ability to become creative in him involves a special organisation of man, he has found an allegoric place in the physiology and psychology of the Ikhwān al-Ṣafā'; here indeed the conception changes from page to page. Thus in the first part of the work (second half, 48), five kinds of soul are described, two above and two below that of man. The former two are the soul of the angels and the divine (*ḳudsiyya*) soul, one of which is the stage of the soul of wisdom, the second that of *nāmūs* prophethood. On the very next page the one is the intellectual soul of wisdom and the other the *nāmūs*-like angel soul. On p. 54, we find the following gradation: nature, soul, intellect, *nāmūs*. Nature receives through the soul free will, through the intellect the power of thought and through the *nāmūs* commands and prohibitions. The parts of the soul are as follows: vegetable, animal, logical (human), intellectual (wise), *nāmūsiyya*, angelic, which latter serves the *nāmūs*. Here again there is the tendency to personification. It is in keeping with this when in iv, 119 (cf. also iv, 146), the story of Socrates in prison (in agreement with the Greek tradition and mentioning the *Phaedo*), it is related that Socrates will not escape from prison for fear of the *nāmūs*; he justifies his attitude with the words "He who does not respect the *nāmūs* is slain by it". When, immediately afterwards, the *nāmūs* is identified with the *sharīʿa*, it is difficult to say whether this is serious or only done out of caution. It is nevertheless remarkable that the sixth essay of the fourth part which treats of the nature of divine *nāmūs*, of the qualifications for prophethood and the qualities of a prophet, does not contain the word *nāmūs* at all, but instead of it always has *sharīʿa*. The Ikhwān have spiritual powers of their own; these form a series of four stages, the third of which is the *ḳuwwa nāmūsiyya*; man attains it at 40 and it is the special characteristic of kings and rulers. Possessors of this power are called the distinguished and noble (*fuḍalā'*, *kirām*) brethren. Above it is only the *ḳuwwa malakiyya* (iv, 134-5).

The origin of the meaning "cunning" cannot be given with certainty; it possibly comes from the Arabic meaning "place of concealment". That it was particularly common in the spoken language is evident from the quotation given above from Ibn Sīna. In any case, this meaning has undergone a remarkable amalgamation with the Greek "law" in the literature of magic, for the word is there used for magical formulae, particularly those which are based on illusions of the senses. The pupil of al-Anṭākī [*q.v.*] in his *Dhayl* on the latter's *Tadhkira*, s.v. *sīmiyā'* (iii, Cairo 1924, 56), gives the *namāwīs* as the first section of the science known by this name. But the meaning of the word is not limited to this kind of magic formulae.

Through translations from the Arabic, the word entered the Hebrew literature of the Middle Ages with the meaning "law, religious law (of other peoples), morality, propriety"; in the latter meaning it has survived in the modern Hebrew vernacular. It is interesting to note that in the modern dialect of Mecca, a similar change of meaning is found; according to Snouck Hurgronje, *Mekkanische Sprichwörter*, no. 10, *nāmūs* means the "spotless, honourable name", which one has among men; its opposite is *ʿār*, "shame".

The word *nāmūs* also occurs as the title of a book; cf. Ivanow, *Catalogue*, i, 335-6.

2. In zoology. Here, *nāmūs* is a masculine noun used in the collective sense (unity, *nāmūsa*) denoting the totality of dipterous, nematoceratous insects or mosquitoes and embracing the family of Culicidae, which includes Gnats (*Culex pipiens*), Anopheles (*Anopheles maculipennis, A. pharaonensis*), Stegomiae (*Stegomia fasciata*), Aedes (*Aedes cantans, A. aegypti*) and Phlebotomi (*Phlebotomus papatasi*). In all these species, only the females bite humans and animals to feed on their blood.

The root *n-m-s* evokes either the notion of being hidden, of concealing oneself, since mosquitoes emerge only at night and spend the day immobile in dark and damp places, or the notion of the colour grey, the adjective *anmas* being a synonym of *armad* and *akdar*. Besides the sense of mosquitoes, *nāmūs* is the "hide" or the ditch in which the hunter squats to watch for game; it has the same sense as *ḳarmūṣ, zarb, zarība, ḳutra*. In fact, with reference to mosquitoes, *nāmūs* (less often *nāmis*) is a term exclusive to Egypt and to the Maghrib; it seems to have been unknown in the Near East and it has gradually superseded *baʿūḍ* which, with *barghash* and *khamūsh*, was the only term known in the time of the Prophet Muḥammad to denote harmful insects. Thus it is said in the Ḳur'ān (II, 24/26): "Allāh does not disdain to give a parable about a gnat (*baʿūḍa*) or that which is greater." In ʿIrāḳ, mosquitoes are called *baḳḳ*, a collective term which in the Maghrib denotes bed-bugs (*Cimex lectularius*), while in Syria Culicidae and Phlebotomi are known as *djirdjis* or *ḳirḳis*.

The life of the mosquito is linked to an aquatic environment, and its larva (*duʿmūṣ*, pl. *daʿāmīṣ*) can develop only in stagnant water; thus the places infested with mosquitoes (*mabʿaḍāt*) in the lands of Islam are the marshy zones of the deltas of the Nile and of the Tigris-Euphrates, the *baṭā'iḥ*, the domain of the buffalo (*djāmūs* [*q.v.* in Suppl.]). This creature protects itself from the attacks of the mosquito by keeping itself immersed or by covering itself in mud, as is also the practice of elephants, bovines and the wild boars of Africa and Asia. Al-Damīrī relates (*Ḥayāt*, i, 127 f., ii, 339) that in ancient times the tyrants of Mesopotamia used to leave to the mosquitoes the task of executing, with their bites, those whom they had condemned to death, leaving them, with hands and feet tied, in the marshes. Describing this region of the *Baṭīḥa* [*q.v.*], al-Djāḥiẓ recounts (*Ḥayawān*, v, 399-400) the quick death of a sailor who, following an argument, was thrown into the marsh by

his drunken ship-mates and suffered the same fate. He also mentions that, according to legend, the city of Antioch possessed a talisman against the scourge of the mosquitoes infesting the valley of the Orontes.

The permanent danger presented by mosquitoes and in particular the Anopheles is the transmission of paludism or malaria with its telluric fevers [see MĀLARYĀ], by injection of the coccidium *Laverania malariae*, a parasite of the red blood-corpuscles which affects the liver, the spleen and the blood, identified by the bacteriologist A. Laveran (1845-1922). Paludism, with its endemic nature in marshy regions, was defined in Islam as "three-day fever" (*ḥummā 'l-g̲h̲ibb*) or "four-day fever" (*ḥummā 'l-ribʿ, ḳild*) according to the cycle of its recurrence; in a more general fashion it was known by the names *ḥummā ʿad̲j̲amiyya, ḥumma 'l-murūd̲j̲, buradāʾ, burūda, bardiyya, sak̲h̲ūna, sak̲h̲āna*. Individual means of protection against mosquitoes were restricted for a very long time to the use, at night, of a mosquito-net (*killa, nāmūsiyya*), fine muslin isolating the bed of the sleeper. One remains sceptical as to the efficacy of the remedy prescribed by al-Ḳazwīnī (*ʿAd̲j̲āʾib*, in the margin of *Ḥayat*, i, 303) to subdue the four-day fever, which consists of making three pills of wax, wrapping a mosquito in each and swallowing them on the day that the fever is due to return. The discovery in 1820 of quinine (*rūḥ al-kīna*), extracted from the bark of the quinquina (*Cinchona*) brought an enormous advantage in the treatment of paludism [see MĀLĀRYĀ]. As for preventive measures against the mosquitoes, the only effective method is to destroy their larvae by treating stagnant waters and marshes with petroleum and to suppress the bushy vegetation which grows there, its humid foliage being the day-time refuge of the adults. Among other plants, this applies especially to the *diflā*, rose-laurel/oleander (*Nerium oleander*). On the other hand, certain odoriferous plants (*rayāḥīn*) have the effect of repelling mosquitoes with their emissions of perfume; this would apply, so it is said, to the *ḥabaḳ*, basil (*Ocimum basilicum*), a herb dear to all Muslim populations and carefully cultivated in pots in every household from Morocco to Indonesia. In dwellings, fumigation with dried herbs still takes place. In the natural world, gnats (*s̲h̲arrān*) and mosquitoes have enemies for which they provide the staple diet; by day, these are swallows (*k̲h̲uṭṭāf*, pl. *k̲h̲aṭaṭīf, sunūnū*) and swifts (*samāma*, pl. *samāʾim*) and, by night, nightjars (*subad*, pl. *sibdān*) and bats (*k̲h̲uffās̲h̲*, pl. *k̲h̲afāfīs̲h̲, waṭwāṭ*). Al-D̲j̲āḥiẓ suggests (*Ḥayawān*, iii, 320, vi, 400) that, in households, flies can be useful because they chase and devour mosquitoes that have perched on the walls; but he does not forget the equally important role played, in this respect, by spiders (iii, 336, iv, 295, v, 411, 415).

In literature, mosquitoes have given little inspiration to poets, which is understandable. However, al-D̲j̲āḥiẓ has been able to collect (*Ḥayawān*, v, 402-9) a few scattered verses, most of them in *rad̲j̲az* metre and by anonymous writers, evoking the rustlings of the nocturnal dance of these "long-nosed creatures" (*d̲h̲awāt al-k̲h̲arāṭīm*), all grey (*rumd*), elusive and bloodthirsty, the sleeper's nightmare. In contemporary usage the mosquito, by its tiny and fragile constitution, has given rise to metaphors such as *aḍʿaf min baʿūḍa* "more puny than a mosquito" and, to define something practically impossible to obtain, the saying is *aʿazz min muk̲h̲kh̲ al-baʿūḍ* "more rare than the marrow of a mosquito". Still with the notion of insignificance, a *ḥadīt̲h̲* of the Prophet states *lā yazinu ʿind Allāh d̲j̲anāḥ baʿūḍa* "(this) will not weigh, for Allāh, even as much as (the weight of) a wing of a mosquito", referring to the Day of Judgment and the wealth accumulated by the powerful of this world. On the other hand, seeking to show that this present, lower world has some importance for Allāh, the Prophet also said: "If, for Allāh, this world weighed no more than the wing of a mosquito, He would not grant an infidel one mouthful of water." Finally, to express a cheated hope, the Moroccans have the following saying, complete with assonance: "I thought I saw a fig-tree bearing figs (*karmūs*) and now I see it was only a ruin infested with mosquitoes (*nāmūs*)!".

NĀNAK, commonly called GURŪ NĀNAK, Hindū religious reformer, born in the village of Talwandī some 50 km/30 miles south-west of Lāhawr, in 874/1469, some half a century after Kabīr [*q.v.*] and died in 945/1538; there is much in common between the two teachers, both in the rejection of formal Hinduism and in the acceptance of ideas derived from Islam, especially an uncompromising monotheism. The Talwandī district was well forested, and the young Nānak is said to have resorted often to the religious recluses who had settled there, Hindū and Muslim. He is said to have learnt Persian, in order to assist his father in accountancy, and also to have rejected investiture with the Hindū sacred thread, and to have spent many years in wanderings and meditation; he attracted followers, and the poems used in their worship have been preserved in his *Ādī Granth*, including many by other religious reformers, but especially Kabīr.

Nānak cannot be said to have influenced Islam in India directly, although an indirect influence is tangible through his effect on the intellectual climate of his age; for this saw the growth of the *bhakti* movement in Hinduism, a movement directed to individual freedom of religious thought and to the perception of the relationship between God and Man, to the displacement of priestly authority and dependency on formalised and ritualised expressions of worship. There was much contact between Hindū and Muslim mystics, as frequently observed in the Indian hagiographies, and many Ṣūfīs encouraged friendly relations; the growing popularity of the monism of Ibn al-ʿArabī did much to make the acceptance of Hindū mysticism easier for liberal Ṣūfīs. (None, perhaps, went as far as ʿAbd al-Wāḥid Bilgrāmī, whose *Ḥaḳāʾiḳ al-Hindī* sought to reconcile the expressions and symbols of the *bhakti* poets with the doctrines of *waḥdat al-wud̲j̲ūd*.) There was, moreover, considerable contact between Hindūs and Muslims at a more popular level. There is a percipient account of this period in S.A.A. Rizvi, *Muslim revivalist movements in northern India in the sixteenth and seventeenth centuries*, Agra 1965, esp. 59 ff. Nānak himself attracted many legends, not excluding his visit to Mecca in the pilgrim dress, all of later invention.

Nānak's followers were distinguished by the title of "pupil", Skr. *śiṣya*, Pand̲j̲ābī *sikkh*, Hindī/Urdū *sīkh*, and their involvement with Islam became political rather than religious. For these see SĪKH.

NĀNDEŔ, a town situated in 19°9′N., 77°20′E., a former district headquarters in Ḥaydarābād State, now in Mahārāshtra, on the north bank of the River Godāvarī. Once a fort of the Kākatīya dynasty, it was conquered early in the 8th/14th century by ʿAlāʾ al-Dīn Khaldjī [see dihlī sultanate], passing through Tughluḳ hands to the Bahmanīs; on the disintegration of the Bahmanī state it passed to the Ḳuṭb Shāhīs of Golkoṇḍā, forming a defence on their north-east frontier with the Niẓām Shāhīs of Aḥmadnagar, and apparently was later in the possession of the latter since a mosque at Nāndeŕ was built by Malik ʿAnbar [*q.v.*]. In 1009 Ilāhī/1601 the Mughal forces engaged Malik ʿAnbar in battle at Nāndeŕ, putting him to flight (Abū ʾl-Faḍl, *Akbar-nāma*, iii, 791 f.; tr. iii, 1185-6); it seems that Nāndeŕ finally fell to the Mughals after Shāhdjahān's arrival in the Deccan in 1046/1636. Hereafter its history is vague, until a Marāṭhā clan captured it about 1110/1698. The last Sikh gurū, Govind Singh, pursued by Mughal forces, eventually made his way from the Pandjāb and settled in Nāndeŕ, where he was stabbed by an Afghān in the Mughal service in 1120/1708.

There appears to be no reliable description of Nāndeŕ, which is said to have a Ḳuṭb Shāhī mosque as well as that of Malik ʿAnbar, the shrines of several Muslim saints, and the *gurūdwāra* of Gurū Govind Singh, a pilgrimage centre for Sikhs from all over India. The town is noted for very fine gold-edged muslin.

Bibliography: *Imperial gazetteer of India*², xviii, 349-55. (J. Burton-Page)

NANDURBĀR, an ancient town of India in west Khāndēsh [*q.v.*; Map], situated in lat. 21°22′N., long. 74°14′E., in the valley of the River Tapti and formerly an important trade centre. As Nandigara it is said to have been founded by Nanda Gawlī, a local tribal chief, and it is asserted that it remained in his family "until conquered by the Muhammadans under Muin-ud-din Chishti" (*IGI*², xviii, s.v. 362-3, *Nandurbar*); this sounds improbable, and perhaps refers to an early Ṣūfī settlement. Its possession seems to have changed at various times between Gudjarāt and Khāndēsh. For example, first Rāy Karan, *ca.* 706/1306-7, then ruling Gudjarāt from Anahilwāḍa, escaped from general slaughter and plunder there and went via Deogīrī to Nandurbār, where he is said to have rebuilt the town and the fortress. After 814/1411 the various sultanates of western India become involved in the area. Aḥmad Shāh of Gudjarāt, opposed to Hūshang Shāh of Mālwā, hurried to its defence on the report of the invasion of Nandurbār by Mālwā troops; in 832/1429 Aḥmad Shāh, now allied with Khāndēsh against Mālwā, marched against Hūshang, but moved north hearing of Hūshang's invasion of Gudjarāt, and Nandurbār was occupied by Nāṣir Khān of Khāndēsh; by 841/1437 even the Bahmanīs appeared on the scene, in conflict with Khāndēsh, and a Bahmanī general was chased from Nandurbār by Mālwā and Gudjarāt forces and compelled to withdraw to the Deccan. There were many more examples of such petty squabbles between neighbouring powers, the position of Khāndēsh often being weakened by the fratricidal disputes between members of the royal family. It was not until the mid-10th/16th century that the Gudjarāt sultan formally bestowed the Sulṭānpur and Nandurbār districts on Mubārak Fārūḳī of Khāndēsh; but shortly after this other contenders were appearing on the scene, with the Mughal advance on Mālwā and the depredations of the Niẓām Shāhīs [*q.v.*] of Aḥmadnagar. Relations were good with the Mughal powers while Rādjā ʿAlī Khān was alive, but after his death in 1005/1597 fighting for the Mughals against a Deccan confederacy, relations worsened until in 1009/1601 Khāndēsh was annexed and became a *ṣūba* of the Mughal empire.

West Khāndēsh and the Nandurbār region appear to have been less disturbed than the east, and the district was so well-known for its fertility (grapes, melons) and its strategic position on trade-routes that an English factory was established, English factors moving here from Aḥmadābād in 1080/1670. But all Khāndēsh declined under the Marāṭhās [*q.v.*], and Nandurbār was half-deserted by the time it was occupied by the British in 1816.

Bibliography: Nandurbār is mentioned sporadically, though not at any great length, in the chronicles dealing with Gudjarāt, Mālwā, and Khāndēsh; for these see the *Bibl.* to fārūḳids.

(J. Burton-Page)

NANGRAHĀR, Ningrahār, the name of the province of modern Afghānistān (post-1964 administrative organisation) which covers essentially the basin of the middle Kābul River from the Pakistan frontier near Landī Kōtal to a short distance to the west of the province's administrative centre, Djalālābād [*q.v.* in Suppl.] and the mountain regions on each bank. Before Laghmān and Kunaŕ provinces were carved out from it in 1964, Nangrahār province extended northwards to include Nūristān (L. Dupree, *Afghanistan*, Princeton 1973, 156-7).

The name itself goes back to the pre-Islamic period and to Buddhist Gandhara, when it had the form Nagarahāra, whence the Chinese form *Na-ki-lo-ho* in the travel account of the early 7th century Buddhist pilgrim Hiuen-Tsang (Marquart, *Ērānšahr*, 284; Abdur Rahman, *The last two dynasties of the Śāhis*, Islamabad 1979, 14). In early Islamic times the region formed part of the kingdom of the Hindūshāhīs before being conquered by Sebüktigin and his son Maḥmūd of Ghazna [see hindūshāhiyya and ghaznawids]. The name appears only sporadically in the Islamic geographers, in particular, in the *Ḥudūd al-ʿālam* (end of the 4th/10th century), tr. Minorsky, §§ 6.13 and 10.50, tr. 72, 91, comm. 252-3, which describes Nīnhār as a district whose ruler made a show of Islam but whose population were largely idol worshippers. Hence the use of this toponym in modern Afghān administrative geography is a revival. The present population of the province is largely composed of Pashto-speaking Pushtūns, but there are also Pashaʾī speakers [see afghān. i, ii, and dardic and kāfir languages].

Bibliography: Given in the article. See also kāfiristān and lamghānāt. (C.E. Bosworth)

NĀR (a.), pl. *nīrān*, denotes fire, whereas *nūr*, pl. *anwār*, denotes light. In Akkadian, Aramaic, Hebrew, Syriac and Arabic, the root *n-w-r* simply denotes "flash", "dazzlement", "florescence", "tattooing", anything, in short, which gives light and anything which stands out clearly. The other Arabic term which signifies light, *ḍawʾ*, is to be associated with the Sanskrit *dev/w* which appears in Zeus, Dieu, *dies*, and expresses the notion of the personification of the luminous and calorific phenomena of nature.

Nār occurs 129 times in the Ḳurʾān, of which 111 are references to the eternal fire of Hell; only six apply to fire as a utility (II, 17, XIII, 17, XVIII, 96, XXIV, 35, XXXVI, 80, LVI, 71), four to cosmogonic fire (VII, 12, XV, 27, XXXVIII, 76, LV, 15), three to

the fire of Sinai (XX, 10, XXVII, 7-8, XXVIII, 29), three to fire as punishment (II, 266, XXI, 69, XXIX, 24), one to celestial fire as proof of the prophetic mission (III, 183), one to fire as a sign of divine omnipotence (LV, 35).

Al-Djāḥiẓ (d. 255/868-9) devotes a lengthy section of his *K. al-Ḥayawān* to fire (ed. Hārūn, Beirut 1388/1969[3], iv, 461-92, and v, 4-148, with numerous digressions). This section, intitled "Fires and their varieties" is located at the end of a chapter dealing with the male ostrich, and the connection is established as follows: "The fire of the stomach (of flying creatures) is unlike the fire (obtained) from flint and stone". This statement emerges from an anecdote describing how a precious stone swallowed by a male ostrich diminished in size by a half during the time that elapsed between the swallowing and the discovery of the fact. However, what this stone lost in weight it gained in colour and as a result its value was increased.

In this section al-Djāḥiẓ proposes to study "the full range of knowledge concerning fires and their varieties, concerning the role of each of them, concerning those attributed to non-Arabs and those attributed to Arabs". Furthermore, he declares his intention to speak of fires of religious and non-religious nature, of those who have venerated them and those who have scorned them, of those who have elevated their veneration of fire into the status of a cult. There will also be mention of the places where the cult of fire has been implanted (iv, 461). There follows a list of different types of fire, a list interspersed with long digressions and frequent repetitions.

The present article will proceed to examine material relating to fire in the Ḳurʾān and in ancient Arabic writings, a subject tackled by T. Fahd in *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 9-18, and in *Le feu dans le Proche-Orient antique*, Leiden 1973, 43-61. Fires will be discussed in the following order: those of religious nature, those of tribal nature, and others.

1. *Nār al-Ḳurbān* ("the fire of the sacrifical offering"), also called *nār al-riḍā* (the fire of acceptance), a fire established by God to test the sincerity of the Children of Israel and the purity of their intentions. This fire recalls Ḳurʾan, III, 183, but also Genesis, iv, 3-5 (the offerings of Cain and Abel) and I Kings, xviii, 21 ff. (Elijah on Mount Carmel). Ibn al-Athīr (*Kāmil*, i, 40) establishes a link between this fire and the account in Genesis. He writes: "After Ḳābīl (Cain) had killed Hābīl (Abel) and fled before his father to the Yemen, Iblīs came to him and said: "If the offering of Hābīl was accepted and consumed by the fire, it is because he served the fire and worshipped it; you too should set up a fire which will be for you and for your posterity". He then erected a pyre (*bayt nār*) and was also the first to build (a sanctuary for) the fire and to worship it".

2. *Nār Ibrāhīm* ("the fire of Abraham"). In two instances the Ḳurʾān speaks of the punishment by fire inflicted on Abraham by his polytheist adversaries, before his departure from Mesopotamia (XXI, 69, XXIX, 24). It is not impossible that this fire could be a reminiscence of Daniel, iii, 13 ff. (the three Hebrews in the furnace). Traditional accounts collected by al-Ṭabarī in connection with Ḳurʾān XXI, 69, reveal certain similarities to the Biblical version. Here it is stated: "They imprisoned him in a construction built for this purpose, collected a great quantity of wood and piled it up beneath this construction. Then, Abraham looked up towards the heavens. Heavens, earth, mountains and angels said: 'Lord God, Abraham is about to be burned for our sake!'— 'I know that better than you', God replied, 'If he calls on you for help, grant it.' Abraham addressed God, saying: 'O God, You are the only one in Heaven, and I am the only one upon earth, since no one other than me worships You. I place my trust in You!' He was pushed into the fire. The Archangel Gabriel said then: 'O fire, be for Abraham coolness and protection!' The fire was extinguished at once and Abraham was seen in the company of another man who wiped the sweat from his brow. This man was the angel of the shadow. Abraham came out and was introduced to the king, in whose presence he had not been previously" (*Tafsīr*, xxvii, 29).

3. *Nār Sināʾ* ("the fire of Sinai"). This fire is mentioned in the Ḳurʾān (see above), where Moses appears like Prometheus, acquiring fire for the human race. "Have you heard the story of Moses?", Allah asked Muḥammad. "When he saw a fire, he said to his family: 'Stay here! I have just seen a fire; perhaps I shall bring to you a brand (*ḳabas*) from it or I shall find, thanks to it, good guidance'. Having approached it, he heard a voice saying: 'I am your Lord; take off your sandals! You are in the holy Valley of Ṭuwāʾ'" (al-Ṭabarī, *Tafsīr*, xvii, 94 ff.).

4. *Nār al-istisḳāʾ* ("the fire of rogation"), called also *nār al-istimṭār*, refers to a practice dating back to the earliest Antiquity. In times of prolonged drought, the people gathered together all the cattle which they could find; then they tied to their tails and between their knees branches of cisse (*salaʿ*) and calotrope (*ʿushar*), made them climb to a barely accessible peak, set fire to the branches and raised to the sky their cries of supplication. They believed that this could cause rain to fall. The poet al-Walīd b. Hishām al-Ḳaḥdhamī (d. 222/837) says in regard to this: "How great must have been the delusion of those who sought to obtain rain in time of drought by means of *ʿushar*! [How did you conceive the idea] of taking cattle adorned with *ʿushar* as intermediaries between God and you?" (quoted by al-Djāḥiẓ, *Ḥayawān*, iv, 468). For further details, see *Panthéon*, 10 ff. and ISTISḲĀʾ.

5. *Nār al-taḥāluf wa 'l-ḥilf* ("the fire of the conclusion of pacts"). This fire served to give a solemn nature to the conclusion of a pact. The parties gathered around the fire, its usefulness was invoked and prayers were offered to the Divinity, calling upon Him to deprive of it whichever of the two parties might break the alliance. They declared a formulaic oath and approached the fire to the point where they risked being burnt. This actually happened to the Muḥāsh ("the Burnt"), a sub-group of the Banū Murra b. ʿAwf (*Ḥayawān*, iv, 471).

According to al-Nuwayrī (*Nihāya*, i, 111), sulphur and salt were thrown on the fire without the knowledge of the contracting parties, with the purpose of intimidating them with the crackling sound. Hence the name *nār al-hawla* (the fire of intimidation) which is sometimes given to it. A *kāhin* [*q.v.*] presided over the ceremony; it was he threw the salt in the fire (*Aghānī*, ed. Cairo, xx, 39, 1. 38); he is called *al-muhawwil* (the intimidator) and the fire *nār al-ḥilfān* in a verse of al-Kumayt (d. 126/743), quoted by al-Nuwayrī, *loc. cit.* In another verse of Aws b. Ḥadjar (6th century A.D.), this fire is called *nār al-muhawwil* (the fire of the intimidator).

There also existed a pact involving salt called *al-taḥāluf wa 'l-taʿāḳud ʿalā 'l-milḥ*, which could be analogous with the "salt of the covenant" of Leviticus, ii, 13, but which is understood otherwise by al-Djāḥiẓ who gives to the term *milḥ* (salt) two mean-

ings: the first being *marḳa*, "meat soup" and the second *laban*, "milk", while in Arabic lexicography, *milḥ* denotes, in addition to the current sense of "salty" and "briny", "grease" (*s̲h̲aḥm*), "butter" (*samn*), "the sacred thing", in particular the alliance, the pact (*ḥurma, ḥilf, d̲h̲imām*), "knowledge" (*ʿilm*) and "scholars" (*ʿulamāʾ*), in the sense of Matthew, v, 13. *Mulḥa* is the benediction (*baraka*), the witticism (*al-kalima al-malīḥa*); it is also whiteness, by analogy with that of salt and, hence, fine colour, attractive face (*malāḥa*). *Mumālaḥa*, a term whose antiquity is disputed by the author of the *TA* (ii, 233, l. 29), is the act of breaking bread with someone and sharing food, an act which symbolises the establishment of sacred and privileged links by the consumption of salt, present in the food or distributed to the commensals, as among the Hebrews, at the beginning of the meal. It is said that salt (*milḥ*)—currently bread and salt (*k̲h̲ubz wa-milḥ*)—exists between Person A and Person B when they are linked by a pact, an alliance. It is stated in *TA*, ii, 233 l. 13: "The Arabs venerated salt, fire and ash", and a little further on: "The Arabs swore by salt and water on account of the reverence that they had for them" (l. 19).

6. *Nār al-musāfir* ("the fire of the traveller"), also called *nār al-ṭard* ("the fire of return"). It was lit after the departure of an unwelcome guest, in the hope that he would never return. It was applied in particular to those who came to claim blood reparations or to collect the proceeds of ransom or tribute. The following formulaic curse was then declared: "May God take him far away for ever! May he light (*wa-awḳada* in al-D̲j̲āḥiẓ, *wa-awḳadū* in al-Nuwayrī) a fire after him and upon his footprints!"

7. *Nār al-ḳirā* ("the fire of hospitality"). This was one of the most popular themes of ancient Arab poetry, in both eulogistic and satirical contexts. It was lit most often in winter to guide travellers towards a warm haven and nourishing food. The higher the place in which the fire was lit, the greater was the credit accorded to the host (*Ḥayawān*, v, 134-6, numerous verses on this subject). A Ḳuray̲s̲h̲ite poet, Ibrāhīm b. Harma, says in praise of the hospitality of the Hās̲h̲imite clan: "If their guest loses his way, they set up for him, in the blackness of night, red poles (*alwiya*) of fire" (quoted by al-Nuwayrī, i, 113).

8. *Nar al-salāma* ("the fire of safe return"), lit on the return of a traveller, arriving home safe and well and anticipating a successful outcome from his journey (al-Nuwayrī, i, 111, not mentioned by al-D̲j̲āḥiẓ).

9. *Nār al-ḥarb* ("the fire of war"), also called *nār al-ind̲h̲ār* ("the fire of warning") and *nār al-uhba* ("the fire of preparations for war"), lit on high ground to warn those who were far away and to summon them to a muster. When the attack was imminent and the muster urgent, two fires were lit simultaneously. Ibn al-Rūmī (d. 283/896) mentions them in this verse: "There are two fires: the fire of hospitality and the fire of war. You see them both glowing" (quoted by al-Nuwayrī, i, 111; al-D̲j̲āḥiẓ, v. 133 f., supplies other quotations). Ibn al-Mud̲j̲āwir, *Taʾrīk̲h̲ al-Mustabṣir*, ed. O. Löfgren, ii, 214, speaks of luminous signs which marked the route of the Radrāḍ, linking Nad̲j̲rān with Baṣra.

10. *Nār al-fidāʾ* ("the fire of ransoming"), lit, after a raid, by the victorious tribe. It signified, for the leaders of the defeated tribe, that they could come and reclaim that which the victors were willing to give back, and redeem that for which a price was demanded. This encounter took place at night, on the one hand to spare captive women the shame of exposure in broad daylight, and on the other, to enable the victors to conceal the real value of the things that they chose to keep, those which they were prepared to give back, and those for which ransom was demanded (a fire mentioned by al-Nuwayrī, i, 112; no mention in al-D̲j̲āḥiẓ).

11. *Nār al-g̲h̲adr* ("the fire of treachery"), lit on al-Ak̲h̲s̲h̲ab, the mountain overlooking Minā, during the Pilgrimage, to denounce the treachery of a patron towards his protegé (*d̲j̲ār*). This was accompanied by a proclamation in these terms: "Such is the treachery of such a one" (al-Nuwayrī, i, 111; not mentioned by al-D̲j̲āḥiẓ).

12. *Nār Muzdalifa* ("the fire of Muzdalifa"), inaugurated by Ḳuṣayy [*q.v.*], reformer of the cult at Mecca. It served to guide pilgrims in their nocturnal journey between ʿArafa and Muzdalifa, at the very beginning of the Pilgrimage (see ḤAD̲J̲D̲J̲; mentioned by al-Nuwayrī, i, 109, not mentioned by al-D̲j̲āḥiẓ).

13. *Nār al-ṣayd* ("the fire of the hunt"), lit for the hunting of gazelles and young ostriches. These animals are dazzled by the fire; similarly the lion, on seeing it, stops and stares at it; the frog stops croaking. Thus, they can be taken by surprise. This fire is also used for seeking out the eggs of the ostrich in hollows and crevices.

14. *Nār al-g̲h̲ūl* ("The fire of the ogre"). The nomadic Arabs believed that ogres (*g̲h̲īlān*), ogresses (*saʿālī*) and d̲j̲inns lit fires to lead travellers astray.

15. *Nār al-salīm* ("the fire of the bitten one, lit., of the safe and healthy, by antiphrasis), lit to keep awake one who has been stung by a snake or a scorpion, or bitten by a rabid dog (al-Nuwayrī, i, 112; omitted by al-D̲j̲āḥiẓ, who speaks instead of the suspension over the bitten person of jewels and small chains which keep him awake with their tinkling, *Ḥayawān*, iv, 24).

16. *Nār al-wasm* ("the fire of branding"), lit for the purpose of branding livestock. It denotes the different marks placed on the herds. When someone was asked: "What is your fire?", he replied: *ʿilāṭ* ("broad mark") on the neck of a camel, or *siṭāʿ* ("long mark") in the same place, or *k̲h̲ibāṭ* ("mark on the thigh") which may be long or broad (as in the case of the Banū Saʿd) or *ḥalaḳa* ("round mark like a ring") on the thigh or at the base of the ear, etc. (cf. Ibn Sīda, *Muk̲h̲aṣṣaṣ*, vii, 154-6: *simat al-ibil*). With the aid of these marks of origin, knowledgeable persons could distinguish the qualities and defects of camels offered for sale.

There exists a series of fires which are more in the nature of proverbial or metaphorical expressions. A selection follows:

17. *Nār al-ḥubāḥib*: this denotes any fire which is seen but cannot be put to practical use (the glow-worm, sparks from flint or from horse-shoes). Al-D̲j̲āḥiẓ compares it with the *nār al-barḳ*, quoting the saying of an Arab nomad: "The fire of the lightning renews the greenness of the branches, while any other fire burns them", since the lightning presages rain (*Ḥayawān*, iv, 488).

18. *Nār al-k̲h̲ulaʿāʾ wa 'l-hurrāb*: this denotes the absence of fire; since these outcastes and fugitives cannot run the risk of lighting fires, lest they be located.

19. *Nār al-miʿda* (the fire of the stomach): this refers to the organic fire of digestion. Good health depends on its strength, its weakness causes ill-health (al-Nuwayrī, i, 114; not mentioned by al-D̲j̲āḥiẓ).

20. *Nār al-ḥummā* ("the fire of fever"). In this regard, it is said: "The fires are three in number: a fire which neither eats nor drinks, this is the fire of the Afterlife; a fire which eats and drinks, this is the fire of fever which consumes the flesh and drinks the blood; a fire which eats and does not drink, this is the fire of here

below" (al-Nuwayrī, i, 114; not mentioned by al-Djāḥiẓ).

21. *Nār al-shawḳ* ("the fire of desire").
22. *Nār al-sharah* ("the fire of greed").
23. *Nār al-shabāb* ("the fire of youth").
24. *Nār al-sharāb* ("the fire of drink").
25. *Nār al-ghaḍā* ("the very hot fire of tamarisks").
26. *Nār al-ʿarfadj* ("the fire of fast-flowering rosaceous plants").
27. *Nār al-ḥalfāʾ* ("the fire of the alfalfa which flares up and withers with equal rapidity").

Finally, two fires of a quite specific nature should be mentioned:

28. *Nār al-iḥtiyāl* ("the fire of guile"). This refers to tricks which priests, guardians of sanctuaries (*sadana*), performed with fire to deceive the people. Al-Djāḥiẓ mentions the trickery of the monks of the Church of the Holy Sepulchre in Jerusalem with their lamps, pretending that the oil was ignited without fire on the eve of some of their festivals. Al-Masʿūdī states (in *Murūdj*, iii, 405 = § 1288) that, on 5 October, fire descends from Heaven in Jerusalem, in the Church of the Resurrection, but in the *Tanbīh* (ed. Ṣāwī, Cairo 1357/1938, 123), fire appears on Holy Saturday (*al-sabt al-kabīr*) in the church built by Saint Helena. This appears to be a reference to the Paschal candle.
29. *Nār al-ḥarratayn* ("the fire of the two *ḥarras*, two volcanic regions"). This is a reference to the Ḥarrat laylā of the Banū Murra and the Ḥarrat al-nār of the Banū Ghaṭafān, both situated close to Medina. This fire forms part of the legend of the Arab prophet Khālid b. Sinān who was sent by God to extinguish it (for details, see *Le feu chez les anciens Arabes*, 56 ff.).

Yāḳūt, s.v., lists twenty-two *ḥarras* dispersed between the east of Ḥawrān and Medina. The best known is Ḥarrat al-nār near Khaybar; it was still active at the dawn of Islam, under the caliphate of ʿUmar. Medina is situated between the Ḥarrat Wāḳim, to the east, which last erupted in 652/1254 (the lava failed to reach Medina) and Ḥarrat Wabra, situated to the west of the town, at the start of the road leading to Mecca.

Regarding the cult of fire, Arab polygraphs have accumulated a considerable amount of data testifying to the influence of Iranian culture in Arab circles. According to al-Djāḥiẓ, this cult, deriving from excessive initial veneration, has existed among all peoples. In particular, there was adoration of the celestial fire (Ḳurʾān, XXVII, 24): the cult of the Sun at Sabā; the Sun, the Moon and Venus worshipped by the persecutors of Abraham (Ḳurʾān, VI, 74; XXXVII, 86, XLI, 37). The People of the Book make the appeal to God: "Do not let the fire in my home be extinguished" (cf. Leviticus, vi, 6). This is why fire is lit night and day in synagogues, churches, places of worship (*buyūt al-ʿibādāt, buyūt al-nīrān*, in al-Nuwayrī, i, 107). Well-paid employees of the cult (*sadana*) are assigned to the maintenance of fires in sanctuaries (*buyūt*). Al-Masʿūdī, Murūdj, iv, 72-86 = §§ 1399-1412, supplies a long list of places of worship in the Sāsānid empire, a list subsequently reproduced by heresiographers like al-Shahrastānī and by encyclopaedists like al-Nuwayrī.

Concerning the various philosophical conceptions of fire, inspired for the most part by the *Meteorologics* and the *Treatise on sensation and sensibles* of Aristotle, al-Djāḥiẓ has preserved a lengthy *disputatio* between one of his masters, al-Naẓẓām the eminent Muʿtazilī, and his opponents. It is followed by a series of reflections on fire and on colours (*Ḥayawān*, 5 ff., 81 ff.).

(T. Fahd)

NARĀḲ, Nirāḳ, a small town of Persia (lat. 34° 00′ N., long. 50° 49′ E.), in the modern province of Ḳum, 60 km/38 miles to the west of Kāshān and at the northwestern end of the Kūh-i Kargas. It is not mentioned in the classical Islamic geographers, but has some fame as the origin of the scholar Muḥammad Mahdī b. Abī Dharr Nirāḳī (d. ?1209/1794-5), author of Persian and Arabic works on rhetoric, the Shīʿī martyrs, mathematics, etc. (Storey, i, 219-20, iii, 213; Brockelmann, S II, 824) and of his son Mullā Aḥmad Nirāḳī (d. 1244/1828-9), theologian and poet with the *takhalluṣ* of Ṣafāʾī (Browne, *LHP*, iv, 411).

The modern town is the chief-lieu of a *dihistān*, group of villages, of the same name in the *shahrastān* or district of Maḥallāt. In *ca.* 1960 it had a population of 3,600 (Razmārā, *Farhang-i Djughrāfiyā-yi Īrān*, i, 222).

Bibliography: Given in the article. See also Ḥasan Narāḳī, *Āthār-i taʾrīkhī-yi shahrastānhā-yi Kāshān wa Naṭanz*, Tehran 1348/1970.

(C.E. Bosworth)

NARĀḲĪ, Ḥādjdjī Mullā Aḥmad (1185-1245/1771-1829), a Shīʿī religious leader, a man of letters, a social critic and a religious polemicist, was born in Narāḳ [*q.v.*], a village 60 km/40 miles from Kāshān, Persia. He studied under his father, Ḥādjdjī Muḥammad Mahdī Narāḳī (d. 1209/1794) who was also a well-known *mudjtahid* [*q.v.*]. After his father's death he migrated to ʿIrāḳ where he continued his studies on Islamic philosophy, theology and jurisprudence and attended the teaching circles of Baḥr al-ʿUlūm, Āḳā Sayyid ʿAlī, and a number of other disciples of Āḳā Muḥammad Bāḳir Bihbihānī. It is said that Narāḳī did not study under a sufficient number of professors, and owed his great learning achievements mainly to his own sagacity and intelligence (Muḥammad Tunukābunī, *Ḳiṣaṣ al-ʿulamāʾ*, Tehran 1976, 132). Nevertheless, his proficiency in the Islamic sciences not only is shown in his various books he wrote on *fiḳh* and *ʿuṣūl al-fiḳh* but was also particularly admired by Shaykh Murtaḍā Anṣārī [*q.v.*], a disciple of Narāḳī and himself the most prominent Shīʿī religious leader of the 19th century.

Narāḳī spent most of his life in Kāshān where he enjoyed a great deal of social popularity and influence to the extent that he is said to have expelled an oppressive governor appointed by the Ḳādjār ruler Fatḥ ʿAlī Shāh (Tunukābunī, *Ḳiṣaṣ*, 130). This is, of course, not to say that Narāḳī was opposed to the Shāh; rather, he praised Fatḥ ʿAlī Shāh in most of those books which he wrote for the benefit of the general public and had dedicated some of them to him.

Narāḳī's attitude toward rulership forms the most interesting and thought-provoking part of his writings, and the study of it, though difficult, seems to be of paramount importance. His approach to the problem of government took three different forms. He had great respect for Fatḥ ʿAlī Shāh and depicted him as an example of goodness and excellence, and likened

him to God and called him "the Shadow of God" (Narāḳī, *Taḳdīs*, Tehran, 1954, 4,9). To legitimise and support his rule, Narāḳī went as far as to quote a *ḥadīth* reported on the authority of the Seventh Shīʿī *Imām*, that "if the Shāh is just, do ask God to perpetuate his life; if his is tyrannical, you should ask God to lead him to the right path because your being righteous is dependent upon your sultan's righteousness" (Narāḳī, *Miʿrādj al-saʿāda*, Tehran n.d., 360).

Despite his friendly relations with the Shāh and his legitimisation and admiration of Ḳādjār rule in his popular books, in dealing with the Shīʿī theory of government in a book meant to be read by the student of religion, he refused to recognise the legitimacy of the Shāh's rule. In this line of discussion, Narāḳī refers to nineteen *ḥadīth*s through which he argues that, during the Greater Occultation (*ghaybat-i kubrā*) of the Twelfth *Imām*, and after the death of the latter's four Specified Agents (*nuwwāb-i khāṣṣ*), it is only the qualified *faḳīh*s who carry the authority of the Hidden *Imām* as his General Agents (*nuwwāb-i ʿāmm*) and are genuinely legitimate rulers of the Muslim community (for more details on this subject, see Abdul-Hadi Hairi, *Shīʿīsm and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977, 55 ff.). Basing himself on another *ḥadīth* reported on the authority of the Prophet Muḥammad, Narāḳī considers the *faḳīh*s as "the trustees of the Prophet", and warns the Muslims to dissociate themselves from those *faḳīh*s who are tied up with kings (*ʿAwāʾid al-ayyām fī bayān ḳawāʿid al-aḥkām wa-muhimmāt masāʾil al-ḥalāl wa 'l-ḥarām*, 1913, 185-8).

As is obvious, this type of argumentation shows a volte-face in Narāḳī's approach to the problem of rulership, and it was the latter line of argument which provided an important source of reasoning for the founder of the post-1979 régime in Persia to formulate his own theory of government put into operation in 1399/1979 ([Rūḥ Allāh Mūsawī], *Ḥukūmat-i Islāmī*, 1971; for an English tr. of this book, see Khumaynī, *Islam and revolution: writings and declarations of Imam Khomeini*, tr. and annotated Hamid Algar, Berkeley 1981, 27-166).

In the third type of his treatment of the problem, Narāḳī not only does not attempt to legitimise the rule of either the king or the *faḳīh* but rather he renounces both of them. In some of his lyrics and mystical poems, he regrets his past activities which were in favour of the Shāh, remarking, "I disdain to be associated with the royal crown and throne" (*zi tādj-u takht-i ṣultanim ʿār ast*) (Narāḳī, *Ghazal-i Mullā Aḥmad Narāḳī mutakhalliṣ bi Ṣafā*, ed. Akhtar Narāḳī, 1972, 118-9, 121). He also condemns all things related to asceticism (*zuhd*), the prayer-carpet (*sadjdjāda*), the rosary (*subḥa*), the religious college (*madrasa*), the people, the Islamic preachers and the *faḳīh*s; he even declares the latter to be barriers to progress (*sadd-i rāh u māniʿ-i takmīl shud*) (Narāḳī, *Taḳdīs*, 104, 279, 323). In fact, being a religious leader, Narāḳī was in practice himself a target of his own criticism.

The explanation for these contradictory views seems to be that Narāḳī in theory believed in the legitimacy of the *ʿulamāʾ*'s rule. In reality, however, power and authority were in the hands of the Ḳādjār ruler who at the same time needed the *ʿulamāʾ*'s support to protect "the Islamic territory" (*bayḍa-yi Islām*) against internal corruption and external invasion. Consequently, Narāḳī gave his full support to Fatḥ ʿAlī Shāh, especially when the latter was involved in the long, bloody wars with the Russians in the years 1219-28/1804-13 and 1242-4/1826-8. It was in this connection that Narāḳī declared a *djihād* against the Russians (M.T. Lisān al-Mulk Sipihr, *Nāsikh al-tawārīkh: salāṭīn-i Ḳādjāriyya*, Tehran 1974, i, 184); and, according to Willock, he even, in 1241/1826, "arrived at the royal camp clad in shrouds" as a sign of his own "preparation for jihad and martyrdom" (cited in Hamid Algar, *Religion and state in Iran 1785-1906*, Berkeley and Los Angeles 1969, 89).

Narāḳī's criticism of Islamic customs, institutions and even the *faḳīh*s suggests that he did not find contemporary Islamic society—as well as the custodians of religion, including himself—on the right path, but since he was not able to break with the community, he acted reluctantly in harmony with its displeasing characteristics.

In the arena of religious polemics, Narāḳī was certainly not inactive. In 1226/1811 when the British Protestant clergyman, Henry Martyn, wrote a treatise in Persian against Islam, a number of Persian men of the pen and religious leaders including Mullā ʿAlī Nūrī, Mullā Riḍā Hamadānī and Narāḳī wrote books in refutation of Martyn. Narāḳī's refutation appears to have enjoyed a wider readership as it was, it seems, the only book of this nature which did not remain in the form of a manuscript. (For a detailed treatment of this subject, consult Hairi, *Nakhustīn rūyārūyīhā-yi andīshagarān-i Īrān bā du rūya-yi tamaddun-i burzhuāzī-yi gharb*, Tehran 1988, 507-45.)

In compiling his refutation, Narāḳī studied the Bible and consulted a group of learned authorities from among the Christians and Jews. It was in this context that he found an opportunity heavily to attack the European way of life. His sharp criticism was particularly directed against the European Christians who permitted the consumption of wine, pork, snake meat, etc., and gave men and women freedom to have physical contact and kiss each other without having been married to each other. Narāḳī also considered the Christians' reverence for the Cross and their worship before it as an idolatrous act (Narāḳī, *Sayf al-umma wa-burhān al-milla*, 1912, 84, 87-8).

Narāḳī finally died of cholera in the village of his birth, Narāḳ, when he was 58 years of age (Muḥammad ʿAlī Mudarris, *Rayḥānat al-adab fī tarādjim al-maʿrūfīn bi 'l-kunya aw al-laḳab*, Tabriz, n.d., vi, 160-3, and the various sources cited there).

(ABDUL-HADI HAIRI)

NĀRANDJ, Arabised substantive borrowed from the Persian *narang* (derived from the Sanskrit, with the meaning of "red") and designating in a collective manner, in parallel with *laymūn*, hesperideous or aurantiaceous fruits, including oranges and lemons (modern Arabic *ḥamḍiyyāt*). The term *nārandj* has passed, at a relatively late stage, along with the introduction of these fruits, into the majority of European languages, sometimes with alterations (loss of the initial *n*). Thus, at the beginning of the 14th century A.D., French adopted the expression "la pomme d'orenge", while Spanish preserved the Arabic form with *naranja*. Arabic dialects have also retained

nārandj, but under the forms *narendj*, *nanerdj* in Syria, Lebanon and Palestine and *larendj*, *lārendj* in Morocco. It is surprising that Ibn Manẓūr (7th/13th century) made no mention of the term *nārandj* in his copious *Lisān al-ʿArab*. Furthermore, it should be noted that in some Arabic-speaking countries, *nārandj* is not the prevalent term for the designation of hesperideous fruits; the names in usage are those which refer to their far eastern origin; thus in the Maghrib the expression *letshīna* ("from China", cf. German *Apfelsine*) may be heard. It is believed that Arab caravan-traders would have been responsible for introducing the orange to the Near East and the Maghrib, while the Portuguese would have brought it from the Indies to Spain and Portugal, whence its current name *burtukāl/burtukān* (Turkish *portakal*) which has supplanted *narandj* in numerous local dialects; modern botanical science has created *burtukāliyyāt* to define these fruits. In Western Europe, the Crusaders are credited with the introduction of oranges and lemons, whence, for the latter, the old French name "poncire" (from the Provençal "pomsire" = Syrian apple).

From the scientific point of view, the hesperideous or aurantiaceous fruits are classed in the family *Rutaceae*, and as fruitgrowers began, by artificial means, to increase the number of types and varieties, the latter were distinguished in Arabic by local names other than *nārandj*, which seems to have been applied originally to the Bitter, or Seville orange (*Citrus aurantium amara* or *vulgaris* or *bigaradia*) also called *naffāsh*. The Common orange (*Citrus sinensis Osbeck*) is known, besides *nārandj*, by the names *Abū ṣuffayr, zuffayr*, and in the Yemen, *shamsh*. The Mandarin orange (*Citrus aurantium deliciosa, nobilis, madurensis*) is known as *Yūsuf Afandī, yūsufī*. The Grapefruit tree or shaddock (*Citrus decumana* or *macrocarpa*) is the *zunbūʿ, zanbūʿ*. Among lemons, it is the Cedrate tree or Adam's apple (*Citrus medica Risso*, var. *cederata*) which bears the greatest number of names with *utrudj, utrudjdj, turundj, ṭurundj, utrundj, matk, mutk, mitk, kabbād, kubbād, tuffāḥ māhī, tuffāḥ māʿī* and, in the Maghrib, *ḳars, ḳāriṣ*. As for the Bergamot orange (*Citrus bergamia*), native to southern Italy, although called *laymūn aḍālya*, it is often confused with *zunbūʿ*, the Grapefruit tree; the perfume known as bergamot (*ʿiṭr barghamūt*) is extracted from it. The varieties of lemons are all included in the collective substantive *laymūn, līmūn, līm*, differentiated by the adjectives *ḥāmiḍ* for the Common lemon (*Citrus medica*) and *ḥulw* for the Sweet lemon tree (*Citrus aurantium aurantifolia* or *limetta*). The *laymūn baladī* or *banzahīr* is the Egyptian small lime (*Citrus limonum pusilla*).

The well-known legend of the "Golden apples of the Hesperides" (τὰ Ἑσπεριδῶν χρύσεα μῆλα) guarded by the Nymphs, daughters of Atlas, and the Dragon, plucked away and carried away by Hercules for his eleventh "labour", a truly daunting task, has given rise to various hypotheses regarding the location of this fabulous orange-grove. It is supposedly located in Mauritania Tingitana, near the Phoenician trading-centre of Lixus (Larache), or in Cyrenaica, in the city of Hesperis (Benghāzī), or in Spain, near Gades (Cadiz), or, finally, in the "Fortunate Isles" (*al-Khālidāt*), the Canaries. All these imaginary interpretations are an invitation to contemplate the existence of a distant memory of the introduction, at a very early stage, of certain fruits of this kind into the western Mediterranean region, and the Phoenicians may well have had a hand in this.

It is impossible to ignore the primal place which citrus fruits of all types have occupied and continue to occupy in culinary preparations, as well as in baking, confectionery, perfumery and the making of refreshing drinks; orange-trees and lemon-trees supply flowers, fruits and leaves suitable for all these purposes. Arab authors writing about the culinary art in the Middle Ages have left us a large number of recipes and descriptions in which these fruits play a major role. Thus in the range of perfumes, odiferous powders include a powder made from the Cedrate tree (*utrundja*) and another from orange-blossom (*zahriyya*). Among drinks, orangeade and cedrate syrup were known; acidic juices were obtained from lemons and bitter oranges. Among cooked dishes, familiar examples are chicken with orange, meats with the juice of the bitter orange (*nārandjiyya*) or the lemon (*laymūniyya*) or with the pulp of one or the other (*ḥummāḍiyya*). These fruits could also be salted and preserved. One of the major scented waters obtained by distillation continues to be orange blossom water (*māʾzahr*), an effective means of enhancing the flavour of desserts. Finally, the buds of the blossom of the bitter orange provide, in perfumery, oil of Neroli (*ʿiṭr al-ḳaddāḥ, duhn al-* ...) first extracted, in the 17th century, by an Italian princess of this name.

Arab agronomists, geographers and travellers of the Middle Ages have mentioned, in their works and accounts, citrus fruits and the places where they were cultivated. Thus following al-Idrīsī, in the 7th/13th century the Andalusian Ibn al-ʿAwwām, in his *Kitāb al-Filāḥa*, quoting the *Kitāb al-Filāḥa al-nabaṭiyya* [see FILĀḤA], repeats that the Hesperides emanate from India. In the following century, the Moroccan Ibn Baṭṭūṭa, having spent a considerable period of time in that country, specifies three varieties which are cultivated there, one sweet, one bitter and one between the two called *ʿanba*, a kind of sweet lemon the fruit of which is salted while still green.

In literature, oranges and lemons have made some appeal to the imaginations of Arab poets; over the space of three centuries, from the 3rd to the 5th/9th to 11th, at least four major poets are known to have evoked the golden fruits. The first is Ibn al-Muʿtazz [*q.v.*] who, in three verses (*ṭawīl* metre, *-ri* rhyme) compared the orange with the cheeks of young maidens and, in two verses (*sarīʿ* metre, *-ri* rhyme), with a golden ball used in a game of polo which was apparently caught up in the foliage. Lemons are for him, in two verses (same metre, same rhyme), golden phials of perfume. In the following century, in three verses (same metre, same rhyme), clearly patterned on those of Ibn al-Muʿtazz, Kushādjim [*q.v.*] refers to the contrast between the golden oranges and their emerald foliage. The same poet evokes the same image, in four verses (*munsariḥ* metre, *-īlā* rhyme), for lemons. Also in the 4th/10th century, al-Sarī al-Raffāʾ used this imagery (see al-Nuwayrī, *Nihāya*, xi, 111-16). Finally, inspired by these two predecessors, the Andalusian poet Ibn Khafādja (7th/11th century [*q.v.*]), has composed a fine description of the orange-tree in eight verses (*mutaḳārib* metre. *-ab* rhyme) using the same image of gold against a background of emerald.

NARBONNE [see arbūna].

NARCISSUS [see nardjis].

NARD (p.), a word of Persian origin designating the game of backgammon (trictrac). The form attested in Pehlevi treatises, *nēv-artakhshēr* "brave Ardashīr", was contracted to *nardashīr* (widely attested in Arabic) and the latter abridged to *nard*. This development is quite probable (cf., for instance, the place name Nēw Hormizd Ardashīr > Narmas(h)īn, see R.N. Frye, in *JSAI*, xiii [1990], 40); nevertheless the doubts raised by T. Nöldeke (*Persische Studien. II*, in *SBWAW*, Philos.-hist. Cl. cxxvi [1892], 25-6) remain valid, especially in view of the fact that the probably oldest known occurrence (Bab. Talmud, Keth. 61b) already shows the contracted form *nrdshyr*; *nēv-artakhshēr* could possibly be popular etymology. Attempts to explain *nardashīr* from two Persian words, *nard* and *shēlīr*, were already made by Arabic lexicographers and continue to have their supporters.

No detailed old descriptions of the precise rules of the game as played in the past have become known so far. It is doubtful whether the few lost works supposedly dedicated exclusively to *nard* filled the gap. We learn that the board had twenty-four (twice twelve) points (fields, *bayt*), and the game was played with thirty (twice fifteen) men ("dog" *kalb*, Persian *muhra*), see al-Yaʿḳūbī, *Taʾrīkh*, i, 99-100; al-Masʿūdī, *Murūdj*, i, 157-8 = § 161); a pair of six-sided dice was used, and the pips were indicated by Persian numerals. The word *nard* could also be used to refer to any kind of dicing (Rosenthal, *Gambling*, 36, also 41 [*kūba*]). A strange transformation is its use to translate Greek *orchēseōn hyphēgetas* "dance masters" as *ʿālim bi 'l-nard* "expert in *nard*" (correct *Gambling*, 36, with reference to D. Pingree's edition of Dorotheus, *Carmen astrologicum*, Leipzig 1976, Ar., 79, tr. 234, Greek, 359). According to Murray, *Board-games*, 54, Firdawsī described a somewhat different game as *nard* (Nōshirvān, ed. Mohl, 2792 ff., ed. Moscow, 2714 ff.).

The traditional stories of its origin are didactic and unhistorical. It is said to have been invented for an Indian king or for the Persian Ardashīr in order to depict the universe and time reckoning or to symbolise the dependence of all worldly goods on luck or fate (al-Yaʿḳūbī and al-Masʿūdī).

The game has remained extraordinarily popular through modern times. Its popularity greatly frustrated the jurists, who had little choice but to consider it strictly forbidden gambling. It was obviously a game of chance, in addition to being a diversion that interfered with religious observance; one's sense of time was lost when playing, as Ibn Bādjdja put it (P. Lettinck, *Aristotle's Physics*, Amsterdam 1991, 286). In order to be really enjoyed, it also required the exchange of stakes between winner and loser. A quotation from an *Āyīn-nāma* states that on the highest social levels, playing chess or *nard* without a stake (*khaṭar*) was actually forbidden because it would detract from the players' full concentration (*Books on Chess*, ms. facsimile published by Fuat Sezgin, Frankfurt a/M 1986, 8; cf. *EIr*, I, 692, s.v. *Āʾīn-nāma*). Whether historical or not, a number of important early Muslims could be cited as devoted to *nard*, and it is clear that the game was familiar to Muslims in the 1st/7th century. A tradition such as that playing *nard* without stakes (*ḳimār*) was permissible, while with them it was forbidden, circulated widely (cf. also Ibn Ḳutayba, *ʿUyūn*, i, 324), obviously as something to fall back on if legal cases of a minor nature should arise, although problems most likely occurred in connection with gambling in notorious public places. One of the negative traditions compared playing *nardashīr* to putting one's hand in pork meat and blood (*Concordance*, vi, 405). This could be modified, in the name of Abū Hurayra, to read: "One who plays *nard* with stakes (*ḳimāran*) is like one who eats pork; one who plays without stakes is like one who puts his hand in pig's blood; and one who watches the game is like one who looks at pork meat" (al-Bukhārī, *al-Adab al-mufrad*, ed. M.F. ʿAbd al-Bāḳī, Cairo 1375, 326-8). However, it does not seem possible for us to document in detail any influence of the jurists' negative consensus on the popularity of the game.

Nard was in no way comparable to chess, with which it is often mentioned in one breath, but in a story that originated in the heyday of the Muʿtazila in the early 3rd/9th century, it was praised—no doubt, with tongue in cheek—as superior to chess, since with its reliance on pure luck, it implied greater trust in God (*Gambling*, 165 ff.). On a less exalted level, *nard*, or some variant of it, was also praised and recommended to scoundrels as superior to chess for defrauding people (al-Djāḥiẓ, *Ḥayawān*, ii, 133, ed. Hārūn, ii, 367, quoting, he says, ʿUthmān al-Khayyāṭ's *Waṣiyya li 'l-shuṭṭār wa 'l-luṣūṣ*).

For artistic representation of the backgammon board, from a Sāsānid silver bowl to the famous manuscript of Alfonso el Sabio and to a *Shāh-nāma* illustration, see, for instance, M. Rosen-Ayalon, in *JSAI*, iv (1984), 78, pls. 4, 7; A. Steiger, *Libros de acedrex, dados e tablas*, in *Romanica Helvetica*, x, Geneva-Zürich 1941, pls. 73, 75, showing the use of three dice which distinguishes the Western from the Eastern game; and O. Jacoby and J.R. Crawford, *The Backgammon book*, New York 1970, 12.

(F. Rosenthal)

NARDJIS, the narcissus, in Turkish *nergis*, in Persian *nargis* and also *ʿabhar* (cf. F. Meier, *Die schöne Mahsatī*, Wiesbaden 1963, i, 251).

In classical Arabic, Persian and Turkish poetry the narcissus appears both in descriptions of nature and in erotic poetry. Instances of the narcissus as one of the items of the garden can be found in the exordia of panegyric *ḳaṣīdas*, in wine and love poetry (*khamriyyāt*, *ghazaliyyāt*) and, of course, in the specialised genres of garden, flower and spring poetry (*rawḍiyyāt*, *zahriyyāt*, *rabīʿiyyāt*). A number of Arab poets, e.g. Ibn al-Muʿtazz and Ibn al-Rūmī [*q.vv.*], discuss the respective merits of the narcissus and the rose in the *munāẓara* [*q.v.*] (altercation, *Rangstreit*) genre, the former poet preferring the rose, the latter the narcissus (a fine example is his *dāliyya*, *Dīwān*, ed. Naṣṣār,

Cairo 1973, ii, 643). Word counts of Persian *ghazal* poetry (Ḥāfiẓ, Ḳabūlī) show that "*gul*" (rose) occurs roughly five times as often as "*nargis*" (narcissus). Some poets, e.g. Kamāl al-Dīn Ismāʿīl [*q.v.*] (*Dīwān*, ed. Baḥr al-ʿulūmī, Tehran 1970, *bayts* 1628-1711) and in his wake Salmān-i Sāwadjī and others, have used *nargis* for the *radīf* of lengthy *ḳaṣīdas*.

The white colour of the petals and the yellow, red or brownish colour of the crown are the basis for most of the poetic images used in connection with the narcissus. The petals may be compared to stars (e.g. Farrukhī, *Dīwān*, ed. Dabīrsīyāḳī, Tehran 1957, *bayt* 5948), silver dirhams (e.g. Ḥāfiẓ, *Dīwān*, ed. Ḳazwīnī and Ghanī, Tehran n.d., no. 119) or ointment-boxes made of pearl (Ibn al-Muʿtazz, in ʿAbd al-Ḳāhir al-Djurdjānī, *Asrār al-balāgha*, ed. Ritter, Istanbul 1954, 85), and the crown to the moon, a beaker full of wine or the stone cornelian respectively. Most common, however, is the comparison of the narcissus to the human eye. The poets speak of "the eyes of the narcissi" and use "narcissus" as a common metaphor for "eye" (e.g. Abū Nuwās, in Ibn Rashīḳ, *ʿUmda*, ed. ʿAbd al-Ḥamīd, Beirut 1972, i, 294; ʿUnṣurī, *Dīwān*, ed. Ḳarīb, Tehran 1945, 128; Nedīm, *Dīwān*, ed. Nihād, Istanbul 1338-40/1919-22, 138). Adjectives used to characterise the narcissus when it is compared to or used as a metaphor for the eyes of the beloved in Persian, Čaghatāy and Ottoman Turkish, are *bēmār/bīmār* (ailing), *mast* (drunken), *khʷāb-ālūd* (sleepy), referring to the languorous lustre of the eyes, or simply *shahlā* (reddish-brown or of a dark blue colour).

As an item of the poetic lexicon of the *ghazal*, "narcissus" has also entered the dictionaries of mystical symbolism, e.g. the *Iṣṭilāḥāt* ascribed to Fakhr al-Dīn ʿIrāḳī [*q.v.*] (cf. *Kulliyyāt*, ed. Nafīsī, Tehran 1959, 421) where the expression *čashm-i nargis* (narcissus-eye) is said to stand for "the secret of the states and perfections and the elevation of the rank of the [mystic] ..."

Bibliography: G. Schoeler, *Arabische Naturdichtung—Die Zahrīyāt, Rabīʿīyāt, Rauḍīyāt von ihren Anfängen bis aṣ-Ṣanaubarī*, Beirut 1974 (Beiruter Texte und Studien, 15); C.H. de Fouchécour, *La description de la nature dans la poésie lyrique persane du XIe siècle*, Paris 1969. (M. GLÜNZ)

In al-Andalus, the narcissus figures among the objects which poets were required to deal with in the course of their more or less official meetings. In this repect, they imitate their eastern colleagues and pile up the metaphors. Three terms are used: *nardjis ḳādūsī* (the meadow narcissus; rare), *n. aṣfar* (jonquil) and above all *bahār* (<*ʿabhar*?). Ibn al-Rūmī's and Ibn al-Muʿtazz's preferences are well known, and Ibn Burd al-Aṣghar [*q.v.*] follows in the way of the first of these in a *risāla* written in defence of the rose (extracts in vol. ii of Ibn Bassām's *Dhakhīra*, cf. A. Ḍayf, *Balāghat al-ʿArab fī 'l-Andalus*, 153-6; al-Nuwayrī, *Nihāya*, xi, 196-200), whilst Abu 'l-Walīd al-Ḥimyarī replies to his compatriot by proclaiming, in *al-Badīʿ*, the superiority of the *bahār*. Still further comparisons are met with, notably that of the violet, which is preferred to the narcissus, or the *bahār* considered as superior to the jonquil. See H. Pérès, *La poésie andalouse, en arabe classique, au XI^e siècle*, 2nd ed. Paris 1953, index s.v. narcisse. (ED.)

NARGHĪLA [see TÜTÜN].

NARKH (P.), a term used in Ottoman Turkish for the prices determined by official authorities for various goods. Although under Islamic law, buying and selling principally take place with the mutual consent of both sides, and the state's intervention with regard prices is acceptable only in extraordinary circumstances, the Ottomans gave great importance to *narkh* in order to secure the comfort of the public. Thus authors of "books of advice" (*naṣīḥat-nāme*) made frequent reference to this subject (e.g., Lüṭfī Pasha, *Āṣaf-nāme*, Üniv. Ktb. TY. no. 786, fols. 63b-65a; Ālī, *Fuṣūlu 'l-ḥall ve 'l-ʿaḳd ve uṣūlu 'l-khardj ve 'n-naḳd*, Nuruosmaniye Ktb. no. 3399, fols. 2a-b; Hezārfen Hüseyin Efendi, *Tenḳīḥ-i tewārīkh-i mulūk, Telkhīṣu 'l-beyān fī ḳawānīn-i Āl-i ʿUthmān*, Nuruosmaniye Ktb, no. 3265, fol. 272b; Tewḳīʿī ʿAbdurraḥmān Pasha, *Ḳānūn-nāme*, in *MTM*, i/3, [1331], 499, 503-4; Defterdār Ṣārī Meḥmed Pasha, *Neṣāyiḥu 'l-wüzerā we 'l-umerā*, ed. H.R. Ugural, Ankara 1969, 25-7; and Ḳoči Bey, *Risāle*, ed. A.K. Aksüt, Istanbul 1939, 114).

Although *narkh* prices were determined for almost all commodities, food, shoes and some other basic goods were the ones that were most meticulously adjusted.

Normally, the *narkh* for food was given according to the seasonal changes. The prices were determined almost every day for early fruit and vegetables, until they became ripe. On the other hand, the prices for commodities made of meat and milk were fixed only two or three times a year, in the spring, a few days before the first lamb of the year was cut (*rūz-i khiḍir*, May). Bread prices were lowered just after threshing time, and were thereafter adjusted according to the stock level of flour. In order that people could have a good Ramaḍān, the prices for principal foods were reviewed at the end of the previous month, Shaʿbān.

However, in some extraordinary circumstances, such as droughts and floods, wars (Ḥasan Kāfī, *Uṣūlü 'l-ḥikem fī niẓāmi 'l-ʿālem*, ed. M. İpşirli, in *Tarih Enstitüsü Dergisi*, no. 10-11, 253) and blockades (Naʿīmā, *Tārīkh*, Istanbul 1283, vi, 214), and after changes in the parity of currency, price adjustments were also realised. Prices would go up considerably at times of inflation; following the readjustment of the value of money, called *sikke taṣḥīḥi*, the prices of all goods were re-adjusted (see M.S. Kütükoğlu, *1009 (1600) tarihli narh defterine göre Istanbul'da çeşidli eşya ve hizmet fiatları*, in *Tarih Enstitüsü Dergisi*, no. 9; idem, *1624 sikke tashihinin ardından düzenlenmen narh defterleri*, in *Tarih Dergisi*, no. 34; idem, *Osmanlılarda narh müessesesi ve 1640 tarihli narh defteri*, Istanbul 1983).

Narkh was to be established under the supervision of the *ḳāḍī*, according to the proposals of craftsmen such as the *kedkhudā*, *yighitbashi*, and the *ehl-i wuḳūf*, and the suggestions of the *muḥtesib*. The price of products that were made using various raw materials were determined by computing the sum of the prices of ingredients and then adding a 10-12% profit margin to this sum. Upon the determination of the *narkh* prices, these figures were recorded in the *ḳāḍī sidjilli*, and were consequently announced to the craftsmen and to the public by *münādīs* (public criers [*q.v.*]). In Istanbul, where there were four *ḳāḍīliḳs*, the prices were determined at the metropolitan *ḳāḍīliḳ*, and thereafter sent to the Üsküdar, Galata and Eyüb *ḳāḍīliḳs*, who in turn informed the courts that were connected to them. The *ḳāḍī* also used to send a copy of the price lists to the *Bash-muḥāsebe Ḳalemi*, an important office where the state's financial affairs were audited.

The conformity of the craftsmen's prices to the given *narkh* were verified by various inspections. The *ḳāḍī*, who was responsible for the administration of the *narkh*, performed his daily controls via the *muḥtesib* and *ḳol oghlanis* in his company, as well as by his occasional inspections. The *ḳāḍī* also attended the inspections by the *ṣadr-i aʿẓam* (called *ḳola djiḳmak*, which started at

Sultan Ahmed, and continued through the Eminönü-Unkapanı-Zeyrek route). Those found not to conform with the *narkh* were punished if they were not *dirlik* owners; otherwise, they were handed over to their officers (*Tewḳīʿī ʿAbdurraḥmān Pasha ḳānūn-nāmesi*, 503-5).

In settlements other than Istanbul, *aʿyān* and *eshrāf* (the chief men) of the town also participated in the determination and control of the *narkh*. As a basis for the prices, the *narkh* values of Istanbul could be sent to the provincial cities (e.g. *Tekir-daghï sidjilli*, dated 1034/1624, 117a, and *Bursa sidjilli*, dated 1050/1640, 122, in Ankara Milli Kütüphane).

(M.S. Kütükoğlu)

NARMĀSHĪR, Narmāsīr, a town and a district of eastern Kirmān [*q.v.*] in mediaeval Islamic Persia, lying to the south-east of Bam [*q.v.*], adjacent to the southern end of the Dasht-i Lūṭ and on the road connecting Kirmān with Sīstān. The classical Islamic geographers list the district as one of the five *kūras* of Kirmān and describe the town as prosperous and populous, the resort of merchants who travelled from Khurāsān to ʿUmān and an emporium for Indian goods. It had a protective wall with four gates, a citadel and a congregational mosque constructed out of fired brick. As late as the 8th/14th century, Mustawfī describes the town as still in existence, but by the 19th century, when travellers such as E. Pottinger (1810) and Sir Percy Sykes (1895) traversed the area, it had disappeared. Its site seems to be marked by ruins at the site of a small village now known as Čughukābād "Sparrow town", administratively in the *bakhsh* or sub-district of Fahradj.

NARNĀLA, a hill-fort in the Barār region of India [see berār], in lat. 21°15′N. and long. 77°4′E., in the former Ḥaydarābād native state (now in Maharāshtra State), at the southernmost end of the Satpura hills. The fortress is presumably pre-Muslim, since Firishta (*Gulshan-i Ibrāhīmī*), states that it was restored and repaired by Aḥmad Shāh Bahmanī between 828-31/1425-8, and the earliest buildings there appear to be of the Bahmanī period, although later the fort passed into ʿImād Shāhī [*q.v.*] hands. It played an important role in the warfare of the rulers in the Deccan of the Bahmanids, Khāndesh sultans, ʿImād Shāhīs and Niẓām Shāhīs [*q.vv.*], being held for the latter princes 979-1005/1572-97 till its capture by the Mughals [*q.v.*].

The fortifications comprise three distinct but conjoined forts, with a competent and still well-preserved water supply. There are insufficient remains of the old Djāmiʿ masdjid to relate it now to the characteristic ʿImād Shāhī style, although there are features of the excellent main central (Mahākālī) gateway, of 892/1487, which seem to have determined the later mosque architecture: a central arch of fine dressed stone within a larger arch, under a pylon crowned with trefoil merlons, and liberally decorated with stringcourses, embossed medallions and rosettes; there are flanking chambers and galleries, with projecting balconies on corbelled brackets, and fine lattice tracery. This is an architectural achievement of a high order, and important in the development of the ʿImād Shāhī style. The other buildings (*ḥammām, bāradārī*, stables, etc.) are of less value; there is also a small mosque of the time of Awrangzīb.

Bibliography: See also *Imperial gazetteer of India*², xviii, 379-80; H.K. Sherwani and P.M. Joshi (eds.), *History of medieval Deccan*, ii, A.P. Govt. 1975, with full description of the gateway at 257 and illustration on Pl. xxvi. (J. Burton-Page)

NĀRNAWL, an ancient town of India, in lat. 28°3′N. and long. 76°10′E., in the modern Haryana State, some 80 miles south-west of Dihlī. It was probably (Ishwari Prasad, *Life and times of Humayun*, 95) the birthplace of Shīr Shāh, his family having been associated with the place for some time. But Nārnawl has much older Islamic associations, with the inscription at the *dargāh* of Shāh Wilāyat showing that the saint was living here in and before 531/1137, i.e. over fifty years before the Muslim conquest of Dihli; his *dargāh* shows signs of the pre-Muslim style of coffered-roof construction, familiar from such early sites as Adjmēr and Bayāna (description and discussion in K.V. Soundara Rajan, *Islam builds in India*, Delhi 1983, 89-90), and may well be contemporary with the saint. Indeed, the town could well be earlier, since the approach from a distance reveals it as an obvious *tell*; but unfortunately Nārnawl has not been excavated. In the 18th century it was at times held by Rādjput princes and the Marāthās [*q.v.*]. Its Muslim Nawwāb was involved in the Sepoy Mutiny of 1857-8, hence the town was afterwards awarded to the loyal Maharādjā of Patiālā.

There is evidence of all phases of Indian Muslim building, from early Dihlī sultanate, through Khaldjī, Tughluḳid and Lōdī, to early and late Mughal and to Mughal-inspired Rādjpūt. The earlier phases are mostly to be seen in and around the *dargāh* complex; many Lōdī-style buildings, frustratingly but typically undated, occur not only in Nārnawl itself but also sporadically all the way to Dihlī (at, e.g., Rewārī, Sōhnā and Gurgāʾōn); the best example of the late-sultanate styles is in the tomb of Ibrāhīm Khān Sūr, which stands within the *dargāh* complex. Ibrāhīm was the grandfather of Shīr Shāh, and the building of this

tomb was Shīr's first preoccupation after his arrival in Dihlī, having expelled Humāyūn in 947/1540. It is a tall square structure in polychromatic stonework (sandstone, schist and marble), well decorated with carved and inlaid stone, the dome surrounded by a high octagonal drum with ornate polychrome *guldastas* and with *čhatrīs* at the four corners; the walls, with a slight batter, and the trabeate entrance doorways, continue the traditions of the Lōdī style. Other buildings show the Mughal styles at their most felicitous, with tombs and pavilions set within gardens and tanks, showing again fine stonework, such as the Djal maḥall and the tomb of Shāh Ḳulī Khān, the latter introducing the octagonal type. Within the town there is, among other fine buildings, a particularly fine *hawēlī*, the Čhattā Rā'i Bāl Mukund Dās, with courtyards surrounded by elegant marble pillars, fountains, projecting balconies, richly bracketed eaves, and culminating in a curved-cornice *bāradārī* of the "Bengali" style introduced to north India in the time of Shāh Djahān and later to be so popular in Rādjpūt building. Unfortunately, Nārnawl has not been adequately surveyed, or even photographed, and a monograph on the site would be valuable and instructive.

Bibliography: G. Yazdani, *Narnaul and its buildings*, in *JASB*, N.S., iii (1907), 581-6, 639-44; *Imperial gazetteer of India*², xviii, 380-1. K.V. Soundara Rajan, *op. cit.* above, provides an imaginative description and discussion, with some good illustrations.

(J. BURTON-PAGE)

NARRATOR, NARRATION [see ḤADĪTH, ḤIKĀYA, ḲĀṢṢ, KHABAR, ḲIṢṢA, NĀDIRA, RĀWĪ, RIWĀYA].

NARSHAKHĪ, ABŪ BAKR MUḤAMMAD B. DJAʿFAR B. ZAKARIYYĀ', historian of the Sāmānid period. Presumably from Narshakh in the vicinity of Bukhārā (cf. al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 77-8), nothing however is known of his life except that he composed in Arabic a history of Bukhārā and presented it to the *amīr* Nūḥ b. Naṣr in 332/943-4; this is the only book of his known. The history was translated into Persian by Abū Naṣr Aḥmad b. Muḥammad Ḳubāwī (sc. from Ḳubā in Farghānā, cf. *ibid.*, x, 322-3) in 522/1128 because, it is there said, people did not want to read the Arabic original; also, Ḳubāwī omitted "tedious" passages, but brought the history up to 365/975-6. Then in 574/1178-9 one Muḥammad b. Zufar abridged this, added information from other works, and presented this to the *Ṣadr* or spiritual leader of the Ḥanafīs in Bukhārā Burhān al-Dīn ʿAbd al-ʿAzīz II b. Muḥammad (see Bosworth, art. *Āl-e Borhān*, in *EIr*). Finally, an unknown author added details in the Mongol period about the Mongol conquest of Bukhārā. Thus the Persian text as we know it (ed. Ch. Schefer, Paris 1892, ed. Mudarris Raḍawī, Tehran n.d. [*ca.* 1939]; Russian tr. N. Likoshin, Tashkent 1897, Eng. tr. with comm. R. N. Frye, *The history of Bukhara*, Cambridge, Mass. 1954; cf. Storey, i, 369-70, 1300, Storey-Bregel, ii, 1108-12) must be much altered from its original form and supplemented by other hands.

The *Ta'rīkh-i Bukhārā* is very valuable for the early Islamic history of Central Asia and for the Ṭāhirid and Sāmānid periods there, with many details from local traditions going back to the pre-Islamic period and with information from otherwise lost works like ʿAbd al-Raḥmān b. Muḥammad al-Nayshābūrī's *Khazā'in al-ʿulūm* and Muḥammad b. Ṭālūt al-Hamadhānī's *Faṣl al-khiṭāb* and also from the work of the well-known historian ʿAlī b. Muḥammad al-Madā'inī [*q.v.*] on the Arab conquest of Transoxania and the rise of the Sāmānids.

Bibliography (in addition to references given in the article): Barthold, *Turkestan down to the Mongol invasion*, 13-15.

(C.E. BOSWORTH)

NASĀ, NISĀ, the name of several places in Persia. Yāḳūt enumerates Nasās in Khurāsān, Fārs, Kirmān and the district of Hamadhān in Djibāl, but W. Eilers has assembled a much larger number of Persian place names containing the element *nasā(r)* or containing linguistic elements apparently connected with it. Scholars like Bartholomae and Marquart sought an etymology in Old Iranian *śai-* "to lie" (Grk. κεῖσθαι), with the ideas of "settlement" or "low-lying place"; Eilers however explains it as from NP *nasā, nasa(r), nisā*, "place lying in the shade (e.g. of a mountain)" (*Iranische Ortsnamenstudien*, in *SB Österr. Akad. der Wiss.*, 465. Band, Vienna 1987, 64-71).

1. Nasā in Khurāsān was situated in the cultivated zone which lies north of the range separating Khurāsān from the Turkoman steppes, near the modern Ashkhābād in the Turkmen SSR. It corresponds to the Νίσαια, Νίσαιον πεδίον of the classical authors, celebrated for its breed of horses (Herodotus, iii, 106; cf. Strabo, xi, ch. xiv, § 7). Alexander the Great is said to have built an Alexandropolis at Nisaia. According to Isidore of Charax, ed. W. Schoff, Philadelphia 1914, 8, the tombs of the Parthian kings were in the town of Νίσα. Rawlinson, in *JRAS* (1839), 100, believed he saw in the stock of Turkoman horses descendants of the ἵπποι Νίσαιοι (Avesta, *Vīdēvdāt*, i, 7, seems to have a different locality in view).

According to al-Iṣṭakhrī, the town of Nasā was very like Sarakhs and had much water, many gardens and green places and the country round about was very fertile. Al-Muḳaddasī, 320, 331-2, says that the ten gates of the town were buried in verdure. He confirms the abundance of springs but says the water was not of good quality. Muḥammad al-Nasawī, *Sīrat Djalāl al-Dīn*, ed. Houdas, 22, says that the place was very unhealthy on account of its very hot and humid climate and that the Turks could only live a short time there. According to al-Nasawī, 50, the town had a strong citadel. The number of tombs of *shaykhs* and famous men was so great that the Ṣūfīs called Nasā "little Damascus", cf. Muḥammad b. Munawwar's biography of Shaykh Abū Saʿīd al-Mayhanī [*q.v.*], the *Asrār al-tawḥīd*, ed. V.A. Zhukovski, St. Petersburg 1899, 45, written in the 7th/13th century.

Yāḳūt, *loc. cit.*, places Nasā 5 days' journey from Marw, one day from Abīward and 6-7 days from Nīshāpūr. Of its dependencies, he mentions: i, 480: Bālūz (Fīrūza); i, 857: Taftāzān; iii, 343: Shahristān; iii, 866: Farāwa (= Ḳizil-Arwat); iv, 328: Kawk. Durūn, with the fortress Ṭāḳ (afterwards Yazir) also belonged to Nasā, cf. Barthold, *K istorii orosheniya Turkestana*, 37-41. Cf. also the *Ta'rīkh-i Nādirī* of Mahdī Khān (Nādir's stud was at Khurrābād, cf. under the year 1144/1731-2. The ruins of the capital of Nasā are near the little town of Bagir about 12 miles from Ashkhābād and 8 from the station of Bāsmā'īn on the Trans-Caspian railway.

2. The Nasā in the district of Hamadhān is probably the Old Persian Nisāya- , a region in Media, Akkad. ᵏᵘʳNi-is-sa-a-a, Herodotus's "Nisaean plain" (vii, 40), where Darius defeated the false Smerdis, mentioned in that Emperor's Bisutūn inscription, § 13.

Bibliography: Le Strange, *Lands*, 393-4; Barthold, *Turkestan down to the Mongol invasion*, index; idem, *An historical geography of Iran*, Princeton 1984, 89-90; *Ḥudūd al-ʿālam*, tr. 103, § 23.9, comm. 326.

For the scholars of Nasā in northern Khurāsān, see Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 84-92, 95-7.

(V. Minorsky-[C.E. Bosworth])

NASAB (a.) "connection, pedigree, genealogy" designates the most fundamental organising principle of Arab society. It would seem to be an inheritance from the earliest times. Since no convincing cognate has as yet been determined in other Semitic languages, it is not entirely implausible to suggest a prehistoric relationship between the roots *s-b-b* and *n-s-b*, unconsciously reflected in the parallelism of *nasab* and *sabab* "rope, connection" in the *ḥadīth* (*Concordance*, ii, 388).

Genealogy provides the historical validation of kinship and all that it involves. Kinship always dominated group life in human society and to a large extent still does today. In Arabia, the remarkable aspect of genealogy was its connection with tribes rather than individuals. With the coming of Islam and its social imperatives, combined with the enormous increase of people constituting society and the growing reduction of the Bedouin component, it could be expected that the power of kinship would change and diminish. However, kinship continued to remain a most important factor in Muslim society, for reasons such as the enduring determination of "nobility" with its attending privileges on the basis of tribal descent (and descent from the Prophet and ʿAlī) and, for instance, the survival of pre-Islamic social custom, the strong trend toward heredity in the bureaucracy and in the crafts and trades, or the eventual domination of the scholarly establishment at certain periods by family relationships. This contributed to the continuous cultivation of a genealogical literature. By dint of their work, genealogists (*nassāba*, sing. and coll., also *nassāb*, *nāsib*, pl. *nussāb*) exercised a certain influence which at times made their motives suspect; it is not by chance that an emphatic remark of the Prophet that genealogists could be liars is displayed prominently in the *nasab* literature (e.g. Goldziher, *Muh. St.*, i, 180, Eng. tr., i, 166; Ibn al-Kalbī, *Djamhara*, ed. Ḥasan, 17; al-Balādhurī, *Ansāb*, i, 12; Ibn Khaldūn, *ʿIbar*, ii, beginning).

It appears clear that interest in genealogy somehow found written expression already in pre-Islamic Arabia, in whatever language this may have been and regardless of whether one accepts or does not accept I. Shahid's argumentation in favour of written pre-Islamic documents dealing with tribal relationships (forthcoming). There can be no doubt that genealogical relations were put into writing in the first century of Islam. Tribal registers for military and tax purposes are reported to have already been commissioned by ʿUmar [see dīwān]. For the activities of the many dimly-remembered early genealogists such as Daghfal or Ibn Sharya [*q.v.*], we have no reliable historical information; at any rate, they appear to have found no expression in authentic published works. But literary genealogical writing—at first, it seems, dealing mostly with individual tribes—is well attested among the earliest Arabic works. In the bibliographies of the historians of the first ʿAbbāsid century (see, for instance, al-Haytham b. ʿAdī, al-Madāʾinī, Muḥammad b. Ḥabīb), genealogical works are preponderant. Titles including *nasab*, pl. *ansāb*, were numerous; unfortunately, practically nothing is preserved in its original form. We are on safe ground with the assumption that genealogy, in pre-Islamic times and when books were published on the subject in Islam, was always a repertory of tribal lore going far beyond simple filiations and containing stories (*akhbār*) of all sorts, discussing excellence [see faḍīla] and the political and legal subject of tribal rivalries [see mathālib and mufākhara], and, above all and most basic, featuring poetry. The so far earliest preserved small monograph by Muʾarridj al-Sadūsī (d. *ca.* 200/815-16), edited by Ṣ. al-Munadjdjid (Cairo 1960), attests to it, and so does the large standard work, which was never surpassed, the *Djamharat al-nasab* compiled by Hishām b. al-Kalbī (d. 204 or 206/819-21) on the basis of information gathered by his father Muḥammad b. al-Kalbī (see al-kalbī; recent editions by Suhayl Zakkār (Damascus 1983, vol. i only?) and Nādjī Ḥasan (Beirut 1407/1986); Ḥasan has also edited *Nasab Maʿadd wa 'l-Yaman al-kabīr* (Beirut 1408/1988) and plans to edit Yāḳūt's *Muḳtaḍab* of the *Djamhara*. While the authorship of *Nasab Maʿadd* goes back to Ibn al-Kalbī, its identification as the missing part of the *Djamhara* is doubtful. Scattered quotations of earlier works in the preserved literature hardly allow their reconstruction, as each work's character was governed by the extent to which the various ingredients were represented in it, which holds good also for the subsequent literature (see Shākir's introduction to his edition of al-Zubayr's *Djamhara*, 4-6). Government records such as those referred to probably contained only barebones genealogy without any further material, but they were not meant to be literary or scholarly efforts.

With the 3rd/9th century, the pre-occupation with genealogy was firmly entrenched as part of the literary and historiographical heritage. Apart from family history, it also became a strictly scholarly undertaking as attested, among other things, by the fact that specialised scholars not only wrote on the subject but also copied older works with great care and thus preserved some of them for posterity. *Adab* works such as Ibn ʿAbd Rabbih's *ʿIḳd* included a special long chapter on genealogy (which was a subject of much interest in Spain). Genealogy as the prime expression of historical consciousness in Arabia and the source of information for early Muslim history maintained its alliance with historiography. Already al-Zubayr b. Bakkār's *Djamharat nasab Ḳuraysh* (vol. i, ed. Maḥmūd M. Shākir, Cairo 1381) could be called a work of *akhbār* rather than *ansāb* (*Taʾrīkh Baghdād*, viii, 469, cf. similarly Ibn al-Athīr, *Lubāb*, introd., of al-Samʿānī, *Ansāb*). From near the end of the century, al-Balādhurī's *Ansāb* is indeed more historical/biographical than genealogical. Vice-versa, family history and individual biography tried to present as much genealogical information as possible, and much of Shīʿī historiography would naturally rest in a genealogical framework. Although quite different from genealogy, another term from the same root, *nisba*, pl. *nisab* [*q.v.*], the naming after an ancestor or tribe but also after a locality or profession, was seen as the same thing. ʿUmar is supposed to have spoken contemptuously of the native inhabitants of ʿIrāḳ as leading their *nasab* back to their villages (*ʿIḳd*, iii, 312; for the significance of the passage, see R.P. Mottahedeh, in *IJMES*, vii [1976], 161-82), but for the lexicographers as, for instance, al-Azharī, *Tahdhīb*, xiii, 14-15, the extended understanding of *nasab/nisba* was taken as a fact, as it was in the basic reference work on *nisbas* by al-Samʿānī.

As bibliographical references show, in the 3rd/9th century, if not earlier, attempts began to be made to present the essence of genealogical works in "tree" form (*tashdjīr*, *mushadjdjar*), see al-Hamdānī, *Iklīl*, ed. Löfgren, i, 6, l. 8, and Löfgren, in *Studi Orientalistici ... G. Levi Della Vida*, Rome 1956, ii, 94. This procedure became frequent in the course of time, see Rosenthal, *A history*[2], 97-8. Ibn al-Fuwaṭī, for

instance, describes it in connection with al-Zubayr b. Bakkār's *Djamhara*, i, 105, 321, 379. Ibn Khaldūn, *op. cit.*, ii, 14, praises graphic representation in tree form (with its central *ʿamūd* "column") as providing an immediate understanding of genealogical relationships; the Būlāḳ edition reproduces these trees in print.

The Muslim approach to the eternal debate about the greater worth, for society and individual, of either noble descent or personal qualities is succinctly expressed by *ḥasab wa-nasab* [*q.v.*]. The two words were originally allied, since noble descent and noble qualities were celebrated in Arabia as inseparable for true glory. In Islam, they tended to split into contrasting concepts, *nasab* being defined as nobility by parentage and *ḥasab* as nobility in character and deeds; the lexicographers' arbitrary re-interpretation of a verse by al-Mutalammis (ed. Vollers, no. I, v. 2) as embodying the contrast is typical for the process (al-Azharī, *Tahdhīb*, iv, 329a = *LA*). Islam distinctly preferred the egalitarian view (and the religious attitude later found firm support in philosophical ethics). In Ḳurʾān, XLIX, 13, the statement declaring the best person to be the one most pious followed upon a recommendation of "mutual acquaintance", something later understood as the core of *nasab* relationship; ignorance of *nasab* ultimately means exclusion from humanity (e.g. *ʿIḳd*, iii, 312). The reputed radical proponents of equality, the Shuʿūbiyya/Ahl al-taswiya, supposedly argued that "human beings differ in worth not through ancestors and *aḥsāb* but through their deeds and character qualities, their personal nobility and highmindedness" (*ʿIḳd*, iii, 410, cf. Mottahedeh, *loc. cit.*). The continuing debate on the topic is marked by speculations such as that of al-Kindī's pupil al-Sarakhsī who, as befits a courtier, favours the view that noble ancestry plus outstanding achievement constitutes double nobility, while lack of personal achievement vitiates ancestral distinction (al-Tawḥīdī, *Baṣāʾir*, ed. Ḳāḍī, ix, 198 ff.), and it is, for instance, illustrated by al-Rāghib, *Muḥāḍarāt*, Būlāḳ 1286-7, i, 208 ff., where it is seen as a matter strictly concerning individuals and is no longer tribally oriented; noble descent has its advantages, but individual worth is decisive and may even compensate for ancestral misdeeds.

The importance of blood lines in animals such as horses and racing pidgeons was well-known, and treatises were written on them [see ḤAMĀM and KHAYL]. G. Levi Della Vida's standard edition of Ibn al-Kalbī's *Nasab al-khayl* (*Les "livres des chevaux"*, Leiden 1928) has been followed by more recent printings (Cairo 1948; Beirut 1407/1987); see also Sezgin, *GAS*, viii, 128, 272.

Bibliography: For the early *ansāb* literature, see *Fihrist*, 89-115; Marzubānī, *Nūr al-ḳabas*, Wiesbaden 1964, ed. R. Sellheim, 347 ff. For tribal lore and history, F. Wüstenfeld's *Genealogische Tabellen der arabischen Stämme und Familien*, Göttingen 1853-4, has been superseded by W. Caskel, *Ǧamharat an-nasab. Das genealogische Werk des Hišām Ibn al-Kalbī*, Leiden 1966, the most complete treatment of tribal genealogy and, in its introduction, the best treatment so far of the problems of Arabic genealogical literature. By its very nature, the subject comes up constantly in studies of Arab history and literature, without having as yet found the exhaustive treatment it requires, but cf., for instance, Goldziher, *Muh. St.*, i, 177-207, Eng. tr. C.R. Barber and S.M. Stern, London 1967, i, 164-90; Bishr Farès, *L'honneur chez les Arabes*, Paris 1932, 81-8; S.D. Goitein's introd. to his edition of Balādhurī, *Ansāb*, v, Jerusalem 1936; F. Rosenthal, *A History of Muslim historiography*², Leiden 1968, 95-100; ʿAbd al-ʿAzīz al-Dūrī, *Baḥth fī nashʾat ʿilm al-taʾrīkh ʿind al-ʿArab*, Beirut 1960, 39-43, Eng. tr. L.I. Conrad, Princeton 1983, 50-4; Sezgin, *GAS*, i, 244-8, 256 ff., ii, 36 ff.

(F. ROSENTHAL)

NASAF [see NAKHSHAB].

AL-**NASAFĪ**, the *nisba* of several religious figures and scholars from Nasaf or Nakhshab [*q.v.*] in the environs of Bukhārā (see al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, xiii, 92-4).

I. ABU 'L-ḤASAN MUḤAMMAD B. AḤMAD AL-BAZDAWĪ or AL-BAZDAHĪ (i.e. from the village of Bazda near Nasaf), distinguished philosopher-theologian of the Ismāʿīlīs in Sāmānid Khurāsān and Transoxania, who is generally credited with the introduction of Neo-Platonic philosophy into Ismāʿīlī circles. He succeeded Ḥusayn b. ʿAlī al-Marwazī in the headship of the *daʿwa* [*q.v.*] of Nīshāpūr. As a *dāʿī* he travelled to Transoxania and succeeded in converting the Sāmānid ruler Naṣr b. Aḥmad and several dignitaries of the court to the Ismāʿīlī faith. This success, however, was short lived, and the fortunes of Ismāʿīlīs were reversed when the Turkish army revolted and effected a complete reversal of policy under Naṣr's successor Nūḥ. Al-Nasafī, along with a large number of Ismāʿīlīs and their sympathisers, was massacred in 332/943. For this reason Nāṣir-i Khusraw calls him *Khʷādja-yi Shahīd* and *Shaykh-i Shahīd*.

The *K. al-Maḥṣūl* was the major work of al-Nasafī wherein Neoplatonism was adapted to Ismāʿīlī doctrines. This caused a sharp reaction within Ismāʿīlī circles and raised a bitter controversy. His contemporary Abū Ḥātim al-Rāzī [*q.v.*], the chief *dāʿī* of Rayy, wrote his *K. al-Iṣlāḥ* to rectify the errors in the *Maḥṣūl*. He criticises al-Nasafī with regard to some of his metaphysical conclusions, such as the precedence of *ḳaḍāʾ* over *ḳadar*, the imperfect nature of emanation of the Soul from the Intellect and the dissociation of *sharīʿa* from the first *Nāṭiḳ*, i.e. Ādam. Soon afterwards, Abū Yaʿḳūb al-Sidjistānī [*q.v.*] wrote his *K. al-Nuṣra*, in which he criticised al-Rāzī but upheld the conclusions of al-Nasafī. This, in turn, led Ḥamīd al-Dīn Aḥmad al-Kirmānī [*q.v.*] to compile his *K. al-Riyāḍ fi 'l-ḥukm bayn al-ṣādayn* (i.e. *al-Iṣlāḥ* and *al-Nuṣra*). The *Maḥṣūl* has not survived, but some fragments and excerpts have been preserved in other works. An attempt to reconstruct the contents of the *Maḥṣūl* from those fragments is a desideratum. Two manuscripts, entitled *K. Kayfiyyat kawn al-ʿālam*, to be found in private Ismāʿīlī collections in India, are ascribed to al-Nasafī.

Bibliography: The main sources about al-Nasafī's activities are Ibn al-Nadīm, *Fihrist*, ed. Riḍā Tadjaddud, Tehran 1971, 239-40; Niẓām al-Mulk, *Siyāsat-nāma*, ed. H. Darke, Tehran 1962, 267-75; These were studied by S.M. Stern, *The early Ismāʿīlī missionaries in North-West Persia and in Khurāsān and Transoxania*, in *BSOAS*, xxii (1960), 78-80. For a full description of his works and sources, see Ismail Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Calif. 1977, 40-43.

(I. POONAWALA)

II. ABU 'L-MUʿĪN MAYMŪN B. MUḤAMMAD B. MUḤAMMAD...B. MAKḤŪL...AL-ḤANAFĪ AL-MAKḤŪLĪ (d. 508/1114), one of the *mutakallimūn* [see KALĀM] whose scholastic position is between that of the early period as represented by ʿAbd al-Ḳāhir al-Baghdādī [*q.v.*], who is still endeavouring to find a convenient arrangement and an adequate formulation of the contents of *kalām*, and the younger *mutakallims* who have

at hand the necessary formulas for ready use. At least five works by him are known, including: 1. *Tamhīd li-ḳawāʿid al-tawḥīd* (Cairo, ms. 2417, fols. 1-30; cf. *Fihris... Miṣr*, ii, 51), a treatise in which the contents of the creed are proved according to the scholastic method. The first chapter consists of an exposition of the doctrine of cognition, the last of the doctrine of the imāmate. The work closes with a *murshida* which contains the *doctrina de Deo* in an abridged form; 2. *Tabṣirat al-adilla* (Cairo, mss. 2287, 6673; cf. *Fihris... Miṣr*, ii, 8), an elaborate work on dogmatics of nearly the same scheme as the *Tamhīd*; 3. *Baḥr al-kalām*, printed at Cairo 1329/1911 differs from the two foregoing works in so far as it deals with heresies and is polemical. It is identical with *Mubāḥathat ahl al-sunna wa 'l-djamāʿa maʿa 'l-firaḳ al-ḍālla wa 'l-mubtadiʿa* (Leiden, cod. or. 862) as well as with *ʿAḳāʾid* (Berlin, no. 1941; cf. Ahlwardt, *Verzeichnis*, ii, 400). The work is preserved in several libraries under one of these titles, and Brockelmann, I², 547, SI, 757, lists two others.

Bibliography: Given in the article; cf. also Ḥadjdjī Khalīfa, ed. Flügel, index, no. 6453.

III. ABŪ ḤAFṢ ʿUMAR NADJM AL-DĪN AL-MĀTURĪDĪ (d. 537/1142), jurist and theologian. Of his works the only one edited is the *ʿAḳāʾid*, which has the form of a catechism. It became popular and was much commented, probably because it was the first abridged form of the creed according to the scholastic method of the new orthodoxy. In Europe it became known as early as 1843 through the edition by Cureton (*The pillar of the creed*, no. 2). For editions of and commentaries on this work as well as for the other works of this scholar that have come down to us, cf. Brockelmann, I², 548-50, SI, 758-62.

Bibliography: Given in the article.

(A.J. WENSINCK)

IV. ḤĀFIẒ AL-DĪN ABU 'L-BARAKĀT ʿABD ALLĀH B. AḤMAD B. MAḤMŪD, an important Ḥanafī legist and theologian, born in Nasaf in Sogdiana, was a pupil of Shams al-Aʾimma al-Kardarī (d. 642/1244-5), Ḥamīd al-Dīn al-Ḍarīr (d. 666/1267-8) and Badr al-Dīn Khʷāharzāde (d. 651/1253). He taught in the Madrasa al-Ḳuṭbiyya al-Sulṭāniyya in Kirmān, came in 710 to Baghdād and died in Rabīʿ I 710/August 1310 (according to Ḳurashī and Ibn Taghrībirdī : 701) apparently on his way back to Īdhadj (in Khūzistān), where he was buried. His pupils were Muẓaffar al-Dīn Ibn al-Saʿātī, author of the *Madjmaʿ al-baḥrayn* (d. 694/1294-5), and Ḥusām al-Dīn al-Sighnāḳī, a commentator on the *Hidāya* (d. 714/1314-15) [see AL-MARGHINĀNĪ].

The best of his works is thought to be the *Kitāb al-Manār fī uṣūl al-fiḳh*, a concise account of the foundations of law (Delhi 1870, Constantinople 1326 and often later); there are numerous later commentaries, but he himself wrote two, one of which is entitled *Kashf al-asrār* (2 vols., Būlāḳ 1316). Out of his original plan of writing a commentary on the *Hidāya* of al-Marghinānī [*q.v.*] there came the law book modelled on it *Kitāb al-Wāfī*, on which he composed in 684/1285 a special commentary, the *Kitāb al-Kāfī* (delivered in lectures in Kirmān in 689/1290). He had previously prepared a synopsis of the *Wāfī* entitled *Kanz al-daḳāʾiḳ* (Cairo 1311, Lucknow 1294, 1312, etc.) which Ibn al-Saʿātī in 683/1284 (this is no doubt the correct reading for 633 in Kaffawī) heard him deliver in Kirmān. This synopsis was used as late as the 19th century in Damascus and at the al-Azhar in Cairo (v. Kremer, *Mittel-Syrien u. Damaskus*, Vienna 1853, 136; idem, *Ægypten*, Leipzig 1863, ii, 51). The best-known printed commentaries on the *Kanz* are: (*a*) *Tabyīn al-ḥaḳāʾiḳ* of al-Zaylaʿī (d. 743/1342-3) in 6 vols., Būlāḳ 1313-15; (*b*) *Ramz al-ḥaḳāʾiḳ* of al-ʿAynī (d. 855/1451) in 2 vols. Būlāḳ 1285 and 1299; (*c*) *Tabyīn al-ḥaḳāʾiḳ* of Mollā Miskīn al-Harawī (written in 811/1408-9), Cairo 1294, 1303, 1312; (*d*) *Tawfīḳ al-Raḥmān* of al-Ṭāʾī (d. 1192/1778), Cairo 1307 etc.; (*e*) the most important: *al-Baḥr al-rāʾiḳ* of Ibn Nudjaym (970/1562-3) in 8 vols., Cairo 1334.

He also wrote a series of commentaries, e.g. two on the *Kitāb al-Nāfiʿ* of Nāṣir al-Dīn al-Samarḳandī (d. 656/1258) entitled *al-Mustaṣfā* and *al-Manāfiʿ*; on the *Manẓūma* of Nadjm al-Dīn Abū Ḥafṣ al-Nasafī (d. 537/1442-3) on the differences of opinion between Abū Ḥanīfa, his two pupils, and al-Shāfiʿī and Mālik entitled *al-Mustaṣfā*, as well as a synopsis entitled *al-Muṣaffā* (finished on 20 Shaʿbān 670/22 March 1272); cf. Brockelmann, I², 550, S I, 761; also on the *Muntakhab fī uṣūl al-dīn* of al-Akhsīkatī (d. 644/1246-7; Ibn Taghrībirdī, Ḥādjdjī Khalīfa, no. 13095). On the other hand, he did not write a commentary on the *Hidāya*, as Ibn Ḳuṭlūbughā and Ḥādjdjī Khalīfa, vi, 484, say (cf. the story of the origin of his *Wāfī* according to al-Itḳānī (d. 758/1357) in Ḥādjdjī Khalīfa, vi, 419). He also wrote a commentary on the Ḳurʾān, *Madārik al-tanzīl wa ḥaḳāʾiḳ al-taʾwīl* (printed in 2 vols., Bombay 1279, Cairo 1306, 1326).

His confession of faith *al-ʿUmda fī uṣūl al-dīn* (apparently also called *al-Manār fī uṣūl al-dīn*: Ḳurashī, Ibn Duḳmāḳ) became known quite early in Europe from Cureton's edition (*Pillar of the creed*, London 1843). In it he closely follows the *ʿAḳīda* of Nadjm al-Dīn al-Nasafī (see III. above) and also wrote a special commentary on it, *al-Iʿtimād fi 'l-iʿtiḳād*.

Bibliography: The following borrow from the same unknown source: Ḳurashī, *al-Djawāhir al-muḍīʾa*, Ḥaydarābād 1332, i, 270; Ibn Duḳmāḳ, *Naẓm al-djumān fī ṭabaḳāt aṣḥāb al-nuʿmān*, ms. Berlin, Pet. ii, 24, fol. 147b; Ibn Ḳuṭlūbughā, *Tādj al-tarādjim*, ed. Flügel, Leipzig 1862, no. 86; Ibn Taghrībirdī, *al-Manhal al-ṣāfī*, Ms. Paris, Bibl. Nat., Arabe 2071, fol. 16a. Also Kaffawī, *Iʿlām al-Akhyār*, ms. Berlin, Sprenger 301, fols. 282a-283b (extract: Laknawī, *al-Fawāʾid al-bahiyya*, Cairo 1324, 101); Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, ed. Flügel, index; Flügel, *Classen d. hanafit. Rechtsgelehrten*, Leipzig 1860, 276, 323, where the date of death is wrongly given; Brockelmann, II², 250-3, S II, 263-8; Sarkīs, *Dictionnaire de bibliogr. arabe*, col. 1852-3; N.P. (W. HEFFENING)

AL-**NASĀʾĪ**, ABŪ ʿABD AL-RAḤMĀN AḤMAD B. ʿALĪ B. SHUʿAYB B. BAḤR B. SINĀN, author of one of the six canonical collections of traditions [see ḤADĪTH], b. 215/830, d. 303/915. Very little is known about him. He is said to have made extensive travels in order to hear traditions, to have settled in Egypt, afterwards in Damascus, and to have died in consequence of ill-treatment to which he was exposed at Damascus or, according to others, at Ramla, in consequence of his feelings in favour of ʿAlī and against the Umayyads. On account of this unnatural death he is called a martyr. His tomb is at Mecca. Al-Nasāʾī's collection of traditions is divided into 51 chapters, each of which is subdivided into *bābs*. As to the subjects, considerable space is given to traditions dealing with the ceremonial duties (*ʿibādāt*); the chapters *iḥbās, nuḥl, ruḳbā* and *ʿumrā* (forms of bequest, donation etc.) do not occur in any of the other collections, although a part of the materials contained in them appears under different heads. On the other hand, chapters on eschatology (*fitan, ḳiyāma*, etc.), on the recounting of

virtues (*manāḳib*, etc.), on the Ḳurʾān, are lacking.

Sezgin, *GAS*, i, 167-9, cf. Brockelmann, I², 170-1, SI, 269-70, mentions nine other works by al-Nasāʾī, either extant or known by citations, in addition to his *Sunna*. These include a work on the virtues of ʿAlī, the *K. al-Khaṣāʾiṣ fī faḍl ʿAlī b. Abī Ṭālib*, printed Cairo 1308/1890-1; a work on weak and unreliable narrators of traditions, the *K. al-Ḍuʿafāʾ wa 'l-matrūkīn*, printed Agra 1323/1905-6 and Allahabad 1325/1907-8; a *Tasmiyat fuḳahāʾ al-amṣār*; a *Tafsīr*; etc.

Bibliography: Ibn Khallikān, ed. ʿAbbās, i, 77-8, tr. de Slane, i, 58-9; Dhahabī, *Ṭabaḳāt al-ḥuffāẓ*, ii, 266 ff.; Ibn Ḥadjar al-ʿAsḳalānī, *Tahdhīb al-Tahdhīb*, Ḥaydarābād 1325, 1907, i, 36 ff.; Samʿānī, *Kitāb al-Ansāb*, facs. fol. 559, ed. Ḥaydarābād, xiii, 87-8; Goldziher, *Muhammedanische Studien*, ii, 141, 249 ff.; idem, in *ZDMG*, 1 (1896), 112; Wüstenfeld, *Der Imâm el-Schâfiʿî und seine Anhänger*, in *Abh. GW Gött.*, xxxvii, 108-9; Ziriklī, *Aʿlām*, i, 164. (A.J. Wensinck*)

NAṢĀRĀ, plural of Naṣrānī, rarely Naṣrān, Naṣrāna in the feminine form, a noun which currently denotes Christians in the Muslim Arab world, is used fifteen times in the Ḳurʾān and is interpreted, by the majority of commentators and Arab geographers and lexicographers, as derived from the name of the locality of Nazareth (al-Nāṣira [*q.v.*]) (A. Jeffery, *The foreign vocabulary of the Qurʾan*, Baroda 1938, 280-1).

This designation refers to the name given to Jesus by his contemporaries, who called him Jesus of Nazareth, or the Nazarene, whence his disciples were initially called "Nazarenes" by the Jews, as is shown in the Acts of the Apostles (xxiv, 5), where Saint Paul is described as "a leader of the sect of the Nazarenes". This name, the most ancient applied to the Christians, is attested in ancient Armenian, and is still in use today in the Malayalam dialect, in the form "Nazranikal", as the name of the evangelist of southern India, St. Thomas.

The name "Nazarenes", preserved by the Ḳurʾān, thus precedes the name "Christians" which appears for the first time, in Antioch, in approximately 50 A.D. (Acts, xi, 26). It is true that in sources later than the apostolic era of Christianity but previous to Islam, there is a distinction made between "Nazarenes" and "Christians", the term "Nazarenes" being then applied to Judaeo-Christian sects which "acknowledged the Messiah as Son of God, but conducted themselves in all respects as Jews", as stated by Theodore bār Ḳūnī, as late as 800 A.D.

This distinction is attested in Iranian sources (inscription of Kartir at Naḳsh-i Rustam, around 286 A.D.), as well as in Greek sources (references, for example, in J.M. Magnin, in the journal *Proche Orient Chrétien*, Jerusalem, 1973-8) and in Syriac sources (Payne-Smith, *Thesaurus*, cols. 1821 and 2444, and S.P. Brock, *Some aspects of Greek words in Syriac*, Göttingen, Symposium on *Synkretismus im syrisch-persischen Kulturgebiet*, 91-5).

But the term "Naṣārā" does not seem to have had the Judaeo-Christian connotation in the Ḳurʾān, where it appears rather to involve the more ancient denomination mentioned above and continuing in use, in the form "Nazeri", among the Jews, more numerous than Christians in the regions of Mecca and Medina (*Encyclopedia Judaica*, Jerusalem, 4th edition, 1978, xii, col. 1521). It recurs in the malediction against the Nazarenes contained in the official prayer of the Synagogue, the Tephilla, in the form codified by Rabban Gamaliel II towards the end of the first century (cf. J. Bonsirven, *Le judaïsme palestinien au temps de Jésus Christ*, ii, Beauchesne 1935, 146).

The influence of groups specifically described as "Nazarene", Ebionites or Elkasaites (M.P. Roncaglia, in *Proche Orient Chrétien*, xxi [1971], 101-26) which, it has been claimed, are perceptible in the Ḳurʾān, have led some to believe that the Ḳurʾān was a "Nazarene preaching mission" (cf. *al-Ḳurʾān daʿwa naṣrāniyya*, Paulistes, Harissa 1969, by "al-Ustādh Ḥaddād", a thesis summarised in French by the author, in fact the archimandrite Joseph Dora-Ḥaddād, in *Proche Orient Chrétien*, xxiii [1973], 148-55), but no such conclusions are to be drawn from the presence of the word "Naṣāra" in the Ḳurʾān. Here the word denotes Christians in general, in the eastern groups known to the Muslims, groups which were to be distributed in the classical sources on *al-milal wa 'l-niḥal* into sects: Nestorian (Naṣṭūriyya), Melkite (Malkāniyya) and Jacobite (Yaʿḳūbiyya).

As for the term *masīḥī* (pl. *masīḥiyyūn*), Arabic transcription of the Greek Χριστιανοι, and derived from the name of Christ (*al-Masīḥ*), it was only used, according to the Muslim writer al-Samʿānī (*al-Ansāb*, v, 300), in the 6th/12th century, by Christians among themselves. The forenames Masīḥ, Masīḥī, or ʿAbd al-Masīḥ, provided the *nasab* of a Muslim of the 4th/10th century, Abū ʿAlī Muḥammad b. Zakariyyāʾ al-Maṣīḥī of Baghdād. This was also the name of a Nestorian family, also of Baghdād, consisting of physicians and a Catholicos [see MASĪḤĪ]. However, in their works, even Christian writers habitually use the terms al-Naṣrānī and al-Naṣārā when referring to Christians. Only one writer, apparently, Sulaymān al-Ghazzi (6th/end of 11th century), uses either al-Nasrāniyya or al-Masīḥiyya to refer to Christianity.

The other terms used denote either the Byzantine Christians (*Rūm*) or, especially after the Crusades, the western Christians (*Ifrandj*).

Specific histories of the various religious communities.

The doctrinal position of the Ḳurʾān, of *ḥadīth* and of polemicists in regard to Christians in general has been examined in the article AHL AL-KITĀB. Similarly, general aspects of the behaviour of Muslims towards non-Muslims, on the level of institutions and of day-to-day social life, have been dealt with under the heading AHL AL-DHIMMA. The studies cited, both of Tritton and of Fattal, have already given historical examples of the application of different Ḳurʾānic and judicial principles.

Some histories of particular groups have already been or are soon to be the subject of articles, for example the Copts (s.v. ḲIBṬ, AL-ḤĀKIM, FĀṬIMIDS) or the Melkites (s.v. RŪM).

This article will therefore be limited to a summary of the condition of the remaining groups, the Syriacs, divided, as is well known, into two groups: the first, the western or "Jacobite" Syriacs, suspected of Monophysitism, belonging to the patriarchate of Antioch, were particularly well represented in the Syrian region of the formerly Roman and subsequently Byzantine empire, with extensions into the formerly Persian empire. As for the eastern Syriacs, Nestorians, owing allegiance to the Catholicos (*al-djathalīḳ*) of Seleucia-Ctesiphon (al-Madāʾin [*q.v.*]), they were particularly abundant in the former Persian empire, in what are now ʿIraḳ and Persia. They were also to be found in the Arabian Peninsula and, further afield, in Central Asia, extending as far as India, China and Tibet.

Christians of Arabia and the Gulf.

New references regarding Christianity in the Arabian Peninsula are to be added to those—still useful—of the NAṢĀRĀ article in *EI*¹. The following list

is by no means exhaustive: J. Ryckmans, *Le christianisme en Arabie du sud préislamique*, in *L'Oriente christiano nella storia*, Acad. Lincei, quaderno no. 62 (Rome 1964), 413-53; C. Hechaïme, *Louis Cheikho et son livre "Le christianisme dans la littérature chrétienne en Arabie avant l'Islam"*, in *Recherches*, Institut de lettres orientales de Beyrouth, 2nd series, xxxviii (Beirut 1967), especially 54-122; J. Spencer Trimingham, *Christianity among the Arabs in pre-islamic Times*, Beirut 1973 (useful for the documentation, with reservations as to interpretation); Irfan Shahid, *Byzantium in South Arabia*, in *Dumbarton Oaks Papers*, xxxiii (1979), 25-94; idem, *Byzantium and the Arabs in the fourth century*, Washington D.C. 1984; J. Beaucamp and Chr. Robin, *Le christianisme dans la péninsule arabique d'après l'epigraphie et l'archéologie*, in *Travaux et Mémoires*, viii (Paris 1981) 45-61; G. Fiaccadori, *Yemen nestoriano*, in *Studi in onore di Edde Bresciani*, Pisa 1985, 195-212.

Following Beaucamp and Robin, it is possible to identify two zones of Christianity in the peninsula in the period before Islam: first the south-western corner, comprising the high territories of the Yemen, dominated at that time by the tribe of Ḥimyar and inhabited by a population composed largely of sedentary farmers, speaking a Semitic language distinct from Arabic, South-Arabian; and the rest of the peninsula, inhabited mainly by nomadic herdsmen, speaking Arabic and belonging to fluctuating tribal confederations.

The oases of the South, Nadjrān, Maʾrib and the Ḥaḍramawt, were familiar with Christianity, especially as a result of the Byzantine-Ethiopian invasion of the 6th century. In 518, they had been subjected to violent persecution [see AṢḤĀB AL-UKHDŪD, DHŪ NUWĀS, NADJRĀN, and the studies of Irfan Shahid]. As for the northern Ḥidjāz and the western shore of the Arabo-Persian Gulf, with ʿUmān and the island of Ṣukuṭrā, these had been evangelised progressively from the north, placed by the Sāsānids under the control of the Arabs of Ḥīra [see AL-ḤĪRA, LAKHM], and attached to the diocese of Perside (Fars). They formed, from the 5th century onward, a district with numerous bishoprics (Mashmahīdj, Dayrīn, Māzun (ʿUmān), Hadjar and Yamāma, Hatta (al-Khaṭṭ) and Suḳuṭrā), often having separatist tendencies with regard to the Nestorian see of Madāʾin (cf. J.M. Fiey, *Diocèses syriaques orientaux du Golfe Persique*, in *Memorial Mgr G. Khouri-Sarkis*, Louvain 1969, 177-219, repr. in *Communautés syriaques en Iran et Irak, des origines à 1552*, Variorum Reprints, London 1979.

It is difficult to summarise the fluctuating situation of the communities of the eastern coast. Numerous conversions to Islam came about as a result of heavy taxation, a half of all property according to al-Balādhurī and the letters of the patriarch Īshōʿyabh III (cf. Fiey, *Ishoʿyaw le Grand*, in *Orientalia Christiana Periodica*, xxxvi/2 [Paris 1970], 31-41), especially in Baḥrayn and ʿUmān.

References to the last known bishops of the dioceses mentioned above date from 676. However, there were still Christians in Yamāma and Baḥrayn between 893 and 899, when the Ḳarmaṭī Abū Saʿīd seized power for a brief period and treated the Christians with benevolence.

The see of Mashmahīdj (Samāhidj) still had a bishop in 900 (J. Beaucamp and Chr. Robin, *L'évêché de Mashmahidj dans l'archipel de Bahrayn (Ve-IXe siecles)*, in *Dilmun* [Berlin 1983], 171-96). A Syriac text of 1007 indicates that the ecclesiastical province of Perside still had ten suffragan bishops; unfortunately, the sees are not named. The last Nestorian bishop of Suḳuṭrā is mentioned in 1283.

In the south-west of the peninsula, Ṣanʿāʾ and the Yemen were still served by a bishop between 837 and 850 (Thomas of Marga, *Livre des supérieurs*, iv, ch. 20).

The situation of the Christians of the peripheral Arab tribes has already been surveyed in the articles BAḤĪRA, BOṢRĀ, GHASSĀN and AL-ḤĪRA.

The Christians of ʿIrāḳ in the first centuries of Islam.

The years immediately preceding the Islamic conquest of what is today ʿIrāḳ had seen an important change in the situation of the Christians. Since 486, the Church of the "Lands of the Persians" had been officially Nestorian. However some dissidents, later to reveal themselves openly as Monophysites, had survived and had evolved an embryonic hierarchy. The conquest of the whole of northern ʿIrāḳ by Heraclius, in 628-9, radically altered the situation. Under the shadow of Byzantine military might, and with a Byzantine governor established in Takrīt, the western Syriacs were enabled to establish a community with a Grand Metropolitan (later called Maphrian) at Takrīt itself and eight (later ten) dioceses, covering all of the conquered sector. Although in his own territory Heraclius favoured the Melkites and persecuted the Jacobites, in the annexed territories he pursued a different policy. Here he favoured the Jacobites against the local Nestorian church, which had links with the Sāsānids. The Jacobites thus enjoyed new privileges, while the Nestorians lost their former pre-eminence.

The welcome given in 635 to the conquering Muslims by the two rival groups had the aim of gaining their support, in one case for the preservation of privileges recently gained, in the other, for the recovery of lost ascendancy. In the absence of Byzantine troops to defend the towns, bishops of both camps were seen welcoming the Muslims and offering them hospitality (cf. Fiey, in *Proceedings of the Second Symposium on the History of Bilād al-Shām*, Amman 1987, 96-103).

From the outset, as was to become a common occurrence, the divided Christians exchanged mutual accusations in their dealings with the new authorities. There were few reported cases of forcible conversion on the part of the latter, but the imposition of the *djizya* provoked numerous defections, so numerous that al-Ḥadjdjadj b. Yusuf, governing ʿIrāḳ on behalf of the Umayyads, was obliged to forbid the Syriac Nabaṭ of Kaskar-Wāsiṭ to embrace Islam, even inventing bogus *ḥadīths* to this effect (cf. Fiey, *Les Nabaṭ de Kaskar-Wāsiṭ dans les premiers siecles de l'Islam*, in *MUSJ*, li [1990], 51-87).

Further inter-Christian rivalries and the intervention of the physician Sargūna led the Muslim authorities to support the interloper John the Leper against the Nestorian patriarch Ḥnānīshōʿ (685-700), which resulted in a fourteen-year vacancy at the head of the patriarchal see (Mārī, *Akhbār baṭārikat al-mashriḳ*, 63-4; Ṣalība, same title, 59). On the other hand, the governor Khalīl b. ʿAbd Allāh al-Ḳasrī (the "son of the Christian") upheld the authority of the patriarch Pethion (731-40) (Mārī, 66).

For their part, the western Syriac chronicles paint a rather black picture of the tribulations endured by the peasants of Syria (perhaps not only the Christians) under the Umayyad caliphs, against a background of incessant natural disasters and wars between rival princes. A word which constantly recurs in the chronicles, always with an air of doom about it, is "census". For the people this meant new taxes, levied for the building of magnificent palaces from which only the princes benefited, or for the building of canals to irrigate their gardens. Worse still was when the caliph died before the completion of his project,

and all proved to have been in vain. The Christian chroniclers, unlike their Muslim colleagues, saw the world from the point of view of the people, and this was not always rosy (cf. Fiey, *The Umayyads in Syriac sources*, in *Proceedings of the third Symposium on the History of Bilād al-Shām*, Amman 1989, ii, 11-25).

Under the ᶜAbbāsids.

During the period of the ᶜAbbāsids, it was not primarily as a result of taxation that the numbers of Christians continued to diminish. The most important factor in conversion to Islam, especially among the educated classes, physicians or *kuttāb*, seems to have been social pressure. Institutionally, the Christian occupied a marginal position and could not be fully integrated into society except through conversion. This was often necessary in order to retain a post or to gain promotion to a higher post.

This fact is made clear in three texts which cover the whole period and thus illustrate the situation in an unbroken sequence. These emanate from the Nestorian philosopher and physician Ḥunayn b. Isḥāḳ (d. 260/873), from the Muslim poet Abū ᶜAlāʾ al-Maᶜarrī (d. 449/1058) and from the Jewish philosopher and oculist Ibn Kammūna (d. 683/1284) (cf. Fiey, *Conversions des juifs et de chrétiens a l'Islam sous les Abbassides, dans les sources arabes et syriaques*, 17th International Congress of Historical Sciences, Madrid 1990). Such self-interested conversions were treated with scepticism by the Muslims, by the caliph al-Maʾmūn for example, but over the course of time, families continued to observe the new faith adopted by their ancestors.

There were, certainly, blemishes in the record, popular demonstrations accompanied by the pillage and destruction of churches, provoked by the announcement, true or false, of a victory of the Byzantines, or later of the Crusaders, of a massacre of Muslim prisoners, or by the preaching of a fanatic. The Christians, perhaps more vulnerable than the Muslims, were sometimes the victims of extortion on the part of greedy princes, but apart from the execution of a few renegades, there were no massacres of any significance.

It is a fact, however, that Christians gradually disappeared from whole regions of the ᶜAbbāsid caliphate, expecially in those where fighting between local principalities, out of the control of central authority, provoked instability.

Any attempt at a quantitative evaluation of defections, based on the examination of names (such as has been undertaken, for example, by R.W. Bulliet in *Conversions to Islam in the mediaeval period*, Cambridge, Mass. 1979) is unlikely to succeed, since names such as ᶜAlī, Ḥasan and Ḥusayn were born by Christians as well as by Muslims (cf. Ḥabīb Zayyāt, *Names, forenames and surnames of Christians in Islam* (in Arabic), in *al-Khizāna al-sharḳiyya*, i, Beirut 1952, 1-22).

As regards the conversions of the common people, documentation is more sparse. There are, however, recorded cases of Muslim demonstrations of popular piety which resulted in large-scale collective conversions. The funeral of Ibn Ḥanbal in Baghdād, in 211/855, is supposed to have induced the conversion of 20,000 Christians, Jews and Zoroastrians.

As for the survival of the dioceses, there seems to be no point in distinguishing (as was done by J. Spencer Trimingham, *op. cit.*) between "Arab" dioceses and "Aramaean-Arab" dioceses; the former, having no roots in Arab consciousness, would have disappeared more quickly. Among the "Arab" dioceses, Sindjār and the western Syriac Beth ᶜArabāye (of which the last see was the Dayr al-Muᶜallaḳ near Balad, to the west of Mawṣil), and which comprised the Ṭuᶜāyē, ᶜAḳulāyē and Tanūkhāyē nomads, is attested until the 8th/14th century, Karma and the diocese of the middle Tigris until the 6th/12th century, and its neighbour Baḥrīn and the Djazīra until about the 3rd/9th century. As for the originally Taghlibī dioceses, that of the south, "ᶜĀna and the tribes" was to last until the 4th/10th century, that of the north, Djazīrat Ibn ᶜUmar, until 1915; Takrīt remained the see of the western Syriac "Maphrian" until 551/1156. The Nestorian diocese of Balad is attested until the 7th/13th century.

The fact that Christians survived until these various dates does not mean that they felt at ease with their status as *dhimmīs*. It may well be supposed that they dreamed of reversing the situation, throwing off their subjugation and taking power in their turn.

From this point of view, the impact of the Crusades [*q.v.*] cannot be ignored. It is true that the Crusaders did not penetrate as far as Mawṣil and Baghdād, but, just as in former times the Christian envoy of the Sāsānids felt his heart melt when he experienced the noise of the ten thousand semantrons (wooden boards) of the Byzantine camp, so the Syriac Christians may well have dreamed of a terrestrial kingdom, finally established with the help of strangers from foreign lands overseas, a kingdom such as would enable them to mention the names of "Christian kings" in the diptychs even though they had not felt the same emotional attachment towards the Byzantines, who considered them heretics.

Even if it is possible to refute the accusations of Ibn Naḳḳāsh and Ibn Ḳayyim al-Djawziyya of active collusion of the Christians with the Crusader enemy, except in the territories conquered by the latter, it cannot be denied that the Christians of Baghdād considered as "martyrs" the Frankish prisoners executed there between 1149 and 1195/544-91, and buried in the church of Sūḳ al-Thalātha.

When, in 557/1162, Georgian Crusaders came to Mawṣil for an exchange of prisoners and paraded in the streets of the town on horseback (a forbidden act for Christians), with crosses (also forbidden) displayed on the tips of their lances, a naive Jacobite sculptor was inspired to depict the patron of his monastery (a saint of the 4th century) in Crusader costume, striking down the demon, i.e. "the other", Islam. This small picture (reproduced in J. Fiey, *Assyrie chrétienne*, 11, Beirut 1965, before p. 593) says more than any number of texts about the mentality of the time. Al-Mutawakkil had only recently commanded the Christians to place wooden images of the Devil on the doors of their homes, and here the situation was totally reversed, if only in a dream.

The hopes which the Syriacs had pinned on the Crusaders were dashed when, in 583/1187, Salāḥ al-Dīn recaptured Jerusalem. This loss was felt by the Christians, Nestorian as well a Jacobite, as a cause for national lamentation, as the colophons of manuscripts testify. But their sensibilities were wounded most of all when, in 1189, after Salāḥ al-Dīn had sent to Baghdād the official, great cross carried in battle captured from the Crusaders, this cross was buried in the threshold of the gate known as Bāb al-Nūbī al-Sharīf, so that passers-by could trample it underfoot and spit on it. Did whoever was responsible for devising this humiliation evidently remember that the very name of this gate came from the ceremonial entry, in 836, of George, son of the King of Nubia, with bishops and a veritable retinue of horsemen, bearing crosses of gold?

The gulf between Christians and Muslims was now firmly fixed. It became even deeper when the Christ-

ian dream was shattered once more by the capture of Saint Louis, in 1250. The Christians of Baʿlabakk, for example, "veiled and covered the faces of their idols", their icons in other words, as a sign of mourning. The Muslim authorities permitted the Jews to take revenge on them (cf. Fiey, *Chrétiens syriaques sous les Abbasides*, CSCO, vol. ccccix, Subsidia t. 52, Louvain 1980, Arabic tr. Ḥusnī Zayna, *Aḥwāl al-Naṣārā fī khilāfat Banī 'l-ʿAbbās*, Beirut 1990).

Syriac Christians under the Mongols.

However, other hopes for the Christians were appearing on the horizon. After 1221 a Syriac chronicler noted: "Advance from the north of pagan Turks. Complete and humiliating defeat of Djalāl al-Dīn, the great king of the Turks (of Khʷārazm), by Turks who are called in the Turkish language Tatars, and in Syriac the Huns".

After 1232 the same author (an unnamed citizen of Edessa) noted with interest that these barbarians "were determined to annihilate Turks rather than Christians, Muslims rather than Jews". This was because numerous Mongol tribes, Uighurs, Naimans and Keraits, were in fact Christians.

Initial contacts with the vanguard of the invading hordes were somewhat painful. There were some deplorable massacres among Christians and monks, but in the course of time new developments became increasingly favourable to the Christians. In 1244 Haythum, king of Armenia, made an alliance with the Mongols. The prince of Mawṣil, Badr al-Dīn Luʾluʾ [*q.v.*], failing to gain support from the frivolous caliph al-Mustaʿṣim, capitulated in his turn.

At the same time western envoys, Franciscans and Dominicans, had begun to make contacts with the Mongol princes. Initially these contacts consisted, on the Mongol side, of ultimata demanding universal submission to the "Master of the World", and on the Christian side of exhortations to accept baptism, but relations were established and Eastern Christians participated in diplomatic legations dealing with Europe.

When the Il-Khān Hūlāgū [*q.v.*] was approaching Baghdād, the caliph himself included the Nestorian Catholicos in the delegation sent to meet him. But he was too late. The delegation was not received and, in 656/1258, Baghdād was taken and sacked.

Although Arab chronicles exaggerated the atrocities and the scale of destruction, there were nevertheless some 90,000 deaths. The Christians (and those Muslims who were able to take refuge with them) were systematically spared, on the insistence of the all-powerful Nestorian wife of Il-Khān, Doḳuz Khātūn. The caliphal palace known as Dār al-Duwaydār, as well as the Dār al-Falak and a women's *ribāṭ*, were given to the Catholicos, who established a church there and struck semantrons, which the Muslims considered an impertinence. The euphoric mood engendered among the Christians by this new situation is accurately reflected by an illustration in a Jacobite gospel of 1260, representing the "new Constantine" and the "new Helena", responsible for the "triumph" of the Cross, bearing the features of Hūlāgū and Doḳuz Khātūn (Jules Leroy, *Les manuscrits syriaques à peintures*, ii, Geuthner 1964, 99, upper right corner).

Christian governors were installed in numerous towns, Mawṣil, Irbil, Djazīrat Ibn ʿUmar, etc.

Only a few days after the completion of the illustrated manuscript which has just been cited (cf. Fiey, in *Le Muséon*, lxxxviii/1-2 [1974], 64-99), a first warning was delivered to the Christians that the reign of the Mongols could not last, this being their defeat at ʿAyn Djalūt [*q.v.*]. It was to take a further twenty years and the battle of Ḥimṣ in 680/1281 for the tide of invasion to be definitively stemmed in Syria, but the Christians were so intoxicated by the prospect of enjoying real power, at last, that they failed to act with circumspection, especially in their dealings with Muslims. They were to pay dearly for having overstepped the "threshold of tolerance". The majority of Christian governors were to be assassinated. (For an analysis of the situation of Christians in Damascus during the brief Mongol occupation of the city in 658/1260 and during the 7th/13th century in general, see L. Pouzet, *Damas au VIIe/XIIIe siecle, vie et structures religieuses dans une métropole islamique*, Coll. Recherches, 15 A, Beirut 1988, 306-34, 450-9.)

Among those belonging to this "golden age" of the Syriacs under the Mongols was Bar Hebraeus [see IBN AL-ʿIBRĪ], the Jacobite Maphrian who, among other scientific activities, collaborated with Naṣīr al-Dīn al-Ṭūsī and numerous scholars, including a Chinese, in constructing the magnificent observatory of Hūlāgū at Marāgha. He died in 685/1286.

After an initial alarm under Aḥmad Tegüder (see Fiey, *Pourquoi la tentative de rapprochement Mongols-Mamelouks échoua-t-elle sous Tegüder-Ahmad et Ḳalāwūn?*, in *Annales d'histoire et d'archéologie*, Faculty of Letters, Université St. Joseph, Beirut, iii [1984], 1-33), the Islamisation of the Mongols, begun by the common people and continued by the *amīrs*, gained the upper hand in 694/1295. Despite the occupation of the catholical see by an Ongüt Turk from China, Yahwlāhā III (1281-1317), the Christians once again fell into disfavour (cf. Fiey, *Le grand catholicos turco-mongol Yahwalaha III*, in *Proche Orient Chrétien*, xxxviii [1988] 209-28). The reaction of the Muslims against the Christians was often violent, in response to what the Muslims saw as provocations. Thus at Irbil [*q.v.*] in 708/1309, almost the entire Christian population of the town was massacred. Yahwālāhā himself barely escaped death.

The Il-Khānid period in Persia ended in anarchy during the reign of Abū Saʿīd (716-36/1316-35). During the 8th/14th century, the Black Death decimated the Middle East. At the end of the century, came the ravages of Tīmūr; much of Christendom perished at this time. (Cf. C. Lemercier-Quelquejay, *La paix mongole*, xiii, 1970; Fiey, *Chrétiens syriaques sous les Mongols*, CSCO, vol. ccclxii, subsidia t. 44, Louvain 1975.)

AL-NASAWĪ, SHIHĀB AL-DĪN MUḤAMMAD b. Aḥmad b. ʿAlī b. Muḥammad al-Khurandizī al-Zaydarī (d. 647/1249-50), secretary and biographer of the Khʷārazm-Shāh Djalāl al-Dīn [*q.v.*] Mingīrnī (for this name, usually rendered as Mangubirtī, see Jackson, in *Iran*, xxviii [1990], 51, n. 1). He was born in Khurandiz, a fortress near the town of Zaydar and among the dependencies of Nasā in Khurāsān (Yāḳūt, ii, 415); according to al-Nasawī, his family was believed to have held the place from the establishment of Islam in the region (*Sīra*, ed. Houdas, 53). When Nasā became the first town in Khurāsān to fall to the Mongols, al-Nasawī bought off the invaders with gifts including 10,000 cubits (*dhirāʿ*) of cloth, so that Khurandiz was spared. For his aid to a Khʷārazmian official on this occasion he obtained a large *iḳṭāʿ* from Uzlāgh-Shāh, son and heir-presumptive of the Khʷārazm-Shāh Muḥammad (*ibid.*, 57-9); though in the circumstances it is unlikely that he ever enjoyed the grant. Al-Nasawī entered the service of the new ruler of Nasā, Ikhtiyār al-Dīn Zangī

b. Muḥammad b. ʿUmar b. Ḥamza, who at the time of the Mongol invasion had recovered his patrimony following a period of internment in Kh^w^ārazm (*ibid.*, 50, 99). As Zangī's representative on the staff of Īnānč Khān, a fugitive Kh^w^ārazmian *amīr*, he was present at the victory near Nasā over a Mongol detachment and also at Īnānč Khān's defeat by the Mongols in the plain between Djurdjān and Astarābād in 619/1222-3, after which al-Nasawī returned to Khurandiz (*ibid.*, 65-9). He then became *nāʾib* to Nuṣrat al-Dīn Ḥamza b. Muḥammad b. Ḥamza b. ʿUmar, Zangī's successor at Nasā (*ibid.*, 104). In the dispute among the Kh^w^ārazm-Shāh's sons following his death, Nuṣrat al-Dīn favoured Djalāl al-Dīn and declined to read the *khuṭba* for Ghiyāth al-Dīn, who therefore launched against him an army under Īnānč Khān's son Doluḳ (Ṭuluḳ). Al-Nasawī, sent to appease Ghiyāth al-Dīn, learned en route that most of the prince's commanders had deserted to Djalāl al-Dīn; he thereupon joined the latter's forces. The money destined for Ghiyāth al-Dīn was instead presented to Djalāl al-Dīn's *wazīr* Sharaf al-Mulk, who ordered Doluḳ to raise the siege. But within a few days news came that Nasā had fallen and that Nuṣrat al-Dīn had been killed. Al-Nasawī's dependants were massacred and his property pillaged, despite his services to Doluḳ's father (*ibid.*, 106-9).

From this point al-Nasawī's fortunes were closely intertwined with those of Djalāl al-Dīn, who in 622/1225 made him *kātib al inshāʾ* after the fall of Marāgha (*ibid.*, 110). Al-Nasawī came to acquire considerable standing at the Kh^w^ārazm-Shāh's court. Having superseded Ḍiyāʾ al-Mulk ʿAlāʾ al-Dīn Muḥammad b. Mawdūd as *wazīr* of Nasā, he faced a conspiracy by Ḍiyāʾ al-Mulk and his ally Sharaf al-Mulk, but Djalāl al-Dīn upheld al-Nasawī, and Ḍiyāʾ al-Mulk died soon afterwards (*ibid.*, 149-50). In 627/1230 al-Nasawī was sent on an embassy to Alamūt [*q.v.*] to demand that the Assassin leader ʿAlāʾ al-Dīn Muḥammad read the *khuṭba* in the Kh^w^ārazm-Shāh's name; ʿAlāʾ al-Dīn was allegedly impressed by his boldness. After rejoining his master at Tabrīz, he fled with him into Mūghān on the news that Mongol forces had arrived in pursuit. Al-Nasawī was employed in unsuccessful missions to woo the rebellious city of Gandja and to persuade al-Muẓaffar Ghāzī, the Ayyūbid ruler of Mayyāfāriḳīn, to furnish Djalāl al-Dīn with reinforcements against the Mongols. During the Kh^w^ārazm-Shāh's final battle with the Mongols in 628/1231, al-Nasawī escaped to Āmid, where he was incarcerated for two months by its Artuḳid [*q.v.*] prince, and thence went to Irbil and Mārdīn before returning by way of Ādharbāydjān to Mayyāfāriḳīn; it was here that he learned of Djalāl al-Dīn's death at the hands of a Kurdish bandit. After staying some years at Mayyāfāriḳīn, he joined the Kh^w^ārazmian general Berke Khān in northern ʿIrāḳ, serving as his *wazīr* until Berke Khān's death in battle with the Egyptians in 644/1246. He spent his last few years at Aleppo (Ḥalab), where he died in 647/1249-50. Al-Nasawī is to be distinguished from another of Djalāl al-Dīn's chancellery officials, Nūr al-Dīn Munshī, with whom he has in the past been identified.

Al-Nasawī wrote two works: *Nafthat al-maṣdūr*, written in 632/1234-5, an account in Persian of his tribulations prior to his arrival at Mayyāfāriḳīn; and *Sīrat al-sulṭān Djalāl al-Dīn Mingīrnī*, a history of the Kh^w^ārazm-Shāh, which dates from 639/1241-2, in Arabic. The latter work is cited by a number of authorities from the middle of the 7th/13th century onwards, beginning with Abū Shāma (*al-Dhayl ʿalā al-rawḍatayn*, ed. M.Z. al-Kawtharī, *Tarādjim ridjāl al-ḳarnayn al-sādis wa 'l-sābiʿ*, Cairo 1347/1966, 101). There exists also a Persian translation dating from the late 7th/13th century (but according to Mīnuwī, no earlier than 660/1261-2); this important version unfortunately omits some material, particularly of an autobiographical nature.

(P. JACKSON)

NAṢB (A.) "setting up, raising", a technical term of Arabic grammar denoting the vowel /a/ which affects the final consonant of words (nouns and verbs) which are inflected (*muʿrab*). The term does not indicate a function, but the position of the tongue raised (*manṣūb*) in the middle of the palate in order to pronounce the vowel /a/. European grammarians see in this vowel the mark of the accusative case in nouns and that of the subjunctive in verbs. For the Arab grammarians, the /a/ vowel affects the nouns which the speaker mentions in order to increase the concern (*fāʾida*) of the speaker, after a complete (*tāmm*) speech utterance (*kalām*) or a complete noun.

Nouns which are "raised up" by the vowel /a/ after a complete speech utterance are of two kinds. (1) The noun on which an action is exerted (*mafʿūl*), that which specifies time or place, i.e. is identical with the *ẓarf* (*mafʿūl fīhi*), that which is the cause for the action (*mafʿūl lahu*), and that which accompanies it in its operation (*mafʿūl maʿahu*); that which exercises rection (*ʿāmil*) is a verb for which its agent (*fāʿil*) is sufficient (*istaghnā*). (2) The assimilated noun (*mushabbah*) in the name of what is acted upon. This noun can be the same as the agent noun, for which it is a state (*ḥāl*) or a specification (*tamyīz*). That which exercises rection may be a true verb, or a word which has the form of a verb, which can vary and behave like a verb, but which is not a true verb (*kāna* and its sisters), or a fixed and invariable particle (*inna* and its likes). However, this noun may also be something other than the agent and be a part of it, sc. the excepted noun (*mustathnā*); the regent is a verb appropriate for its agent.

As for nouns "raised up" after a complete noun, these are of two kinds. (1) The noun which specifies (*mayyaza*) a noun of lineal measure (*miḳdār*), of surface area (*misāḥa*), of volume (*kayl*) or of weight (*wazn*), annexed (*muḍāf*) to another noun. (2) The noun which specifies a noun of number (*ʿadad*) to which a *nūn* is suffixed (like the tens) or which is built up (*buniya*) with another number (like the units with the tens). In both cases, the regent is the noun made complete by annexation, a suffix or a construction, which prevents the noun specified being itself annexed.

In the verb, only the imperfective aspect can be "raised up", because it is analogous (*muḍāriʿ*) to the agent noun. The Arab grammarians considered that the vowel /a/ which affects the imperfective is determined by two kinds of particles. (1) The particles *an* "that" (after a wish, hope, etc.), *kay* "in order that", *idhan* "then" (if this particle introduces a reply (*djawāb*) and if the verb which follows it refers to the

future) and *lan* as the negation of an action in the future. These four particles determine the vowel /a/ by themselves (*bi-anfusihā*). (2) The particles *ḥattā* "until, in order that", *li-* "so that", *aw* "unless", *wa-* "with the fact that" and *fa-* "with the result that" (only after an order, prohibition, negation, question, wish or offer). These five particles do not determine the vowel /a/ by themselves, but by the implicit (*muḍmara*) and "supposed" (*muḳaddara*) particle *an*, which can only be made explicit (*muẓhara*) by use after the particles *li-* and *wa-*.

Fatlī, i, 158-60, ii, 147-56; Ibn Yaʿīsh, *Sharḥ al-Mufaṣṣal*, ed. Cairo, i, 109-31, ii, 2-117, vii, 15-40. (G. Troupeau)

NASDJ [see bisāṭ in Suppl., ḥarīr, ḳuṭn, libās, ṣūf].

NASHĀṬ, Mīrzā ʿAbd al-Wahhāb of Iṣfahān, one of the best Persian poets and stylists of the period of the early Ḳādjārs. He was a physician in Shīrāz and *kalāntār* [*q.v.*] and governor in his native city, devoting his leisure hours to poetry in which he displayed a great facility. He wrote verse in Arabic, Persian and Turkish and was further celebrated for his great skill in *shikasta*. Rumours of his poetical gifts induced the Ḳādjār Fatḥ ʿAlī Shāh (1797-1834) to invite him to Tehran as court poet. There Nashāṭ soon rose to great honour and in 1809 was appointed Munshī al-Mamālik (secretary of state [see munshī]) with the title of Muʿtamad al-Dawla. In this capacity he carried through several important negotiations for the Shāh, such as the restoration of peace among the nomad tribes of Khurāsān in 1812 and 1818. Besides his own poems, he wrote an introduction to Ṣabā's famous *Shāhanshāh-nāma* and drew up a whole series of important diplomatic documents. Specially celebrated is the letter written by him to George III of England in which he expressed regret at the interruption of the friendly relations between England and Persia. He died in 1244/1828-9. He collected his poems into a book subsequently published in Tehran in 1266/1850 under the title *Gandjīna-yi nashāṭ* (the "Treasury of Joy"). Nashāṭ's *ghazals* are all imitations of those of his great predecessors, particularly Ḥāfiẓ, but are distinguished by elegance and simplicity, smooth rhythm and considerable depth of feeling.

Bibliography: H. Ethé, in *G I Ph.*, ii, 313-14; E.G. Browne, *LHP*, iv, 225, 307, 311; E. Berthels, *History of Persian literature* [in Russian], Leningrad 1928, 81-2; J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 327-8; the text and English tr., with commentary, of 100 *ghazals* (for some reason only nos. 76-175) has been published by Kh. Sh. Dastur, *Dīwān-i Nashāṭ*, Bombay 1916. (E. Berthels)

NASHAWĀ, name given by the geographers writing in Arabic to the city of Nakhčiwān [*q.v.*].

al-NĀSHIʾ al-AKBAR, Abu 'l-ʿAbbās ʿAbd Allāh b. Muḥammad b. ʿAbd Allāh b. Mālik al-Anbārī, called (Ibn) Shirshīr, poet and Muʿtazilī theologian who died in 293/906.

All we know about his life refers to the period when he lived in Baghdād, obviously as a state official (*kātib*); when he left ʿIrāḳ before 280/893, possibly in connection with the downfall of the vizier Ibn Bulbul in 279/892, in order to go to Egypt, he disappears from our sources. He was a man of vast culture, but he used his knowledge mainly for criticism and therefore did not always win friends. He attacked the philosopher al-Kindī [*q.v.*] as well as the logicians and the adherents of Greek medicine; he also found fault with *uṣūl al-naḥw* and the metrical system of al-Khalīl. Al-Marzubānī saw in this an immature quest for originality, but others who had a chance of looking at Nāshiʾ's books admired him for his independent judgement. Even as a Muʿtazilī theologian he remained an outsider. He did not have much in common with his contemporary al-Djubbāʾī [*q.v.*], who was going to shape the outlook of the Baṣran school and much of later Muʿtazilī scholasticism. He rather shared the ideas of the "Murdjiʾite" wing which was represented during his time by Abu 'l-Ḥusayn Muḥammad b. Muslim al-Ṣāliḥī. He therefore believed that even mortal sinners will not be eternally punished in Hell as long as they are Muslims, and defined belief as a mere act of consent, without works. He stressed the singularity of God in a way unheard of in the Muʿtazila up to that time, by denying even nominal similarity with creation: God is the absolute Other in contrast to whom man cannot be said to possess positive attributes (like knowing, acting etc.) unless in a metaphorical way. The only exception he made was with respect to the Prophet: when Muḥammad brought forth the revelation he spoke the truth in a veritative, not only in a metaphorical way. Moreover, the metaphorical character of human action did not entail determinism; man has a free will because he possesses a soul which grants him free disposition of his body.

None of Nāshiʾ's books has been preserved in its entirety. But there are excerpts from a doxographical work which seems to have born the title *al-Kitāb al-Awsaṭ* (*fi 'l-maḳālāt*). We also possess a few fragments of his *K. Naḳd al-shiʿr*. The *K. Uṣūl al-niḥal* attributed to him of which the first chapter (on *imāma*) is preserved is spurious; the book may have been composed by Djaʿfar b. Ḥarb. Nāshiʾ's poetry has recently been collected by Hilāl al-Nādjī, in *al-Mawrid*, xi/1 (1982), 89 ff.; no. 2, 61 ff.; no. 3, 43 ff.; no. 4, 27 ff., and xii (1983), no. 1, 57 ff.

NASHĪD (a., pl. *anāshīd, nashāʾid, anshād*), a piece of oratory, a chant, a hymn and a form of vocal music. The root *n-sh-d* signifies to search for (a lost object), to ask for it, plead for it; and in its form IV *anshada* means to recite poetry. "The original sense of *inshād*", according to the *TA*, "is the raising of the voice (*nishda*), whence derives *inshād al-shiʿr*, a protracted poetical recitation delivered in a loud voice." The term *nashīd*, itself considered as referring to the raising of the voice, probably took on its musical connotation at the time when the melodious recitation of poetry in public became fashionable. The term as it appears in literature relating to music, from the 3rd/9th century onward, denotes, in addition to its general sense of singing, various forms associated with scholarly music. This type of *nashīd* is always placed at the head of a vocal composition, or at the start of a musical performance in the guise of a prelude leading to the main theme, borrowing from it the fragment of text which is essential to its development; the sources assign different lengths to it.

To demonstrate the artistic brilliance of the great

musician Isḥāḳ al-Mawṣilī, the author of the *K. al-Aghānī* (v, 128) relates: "He began the song with a *nashīd* followed by a *basīṭ*; he employed in it the technique of octaviation, he included a refrain ... and all this in the singing of only four words." This testimony reveals that the *nashīd* developing on one or two words constituted a type of vocal improvisation followed by the *basīṭ*, a musical form of metrical character following the specifications of al-Fārābī and of other later authors. The sequence *nashīd, basīṭ*, etc., appears in an extensive form of composition introduced into Spain by Ziryāb. "It was established in al-Andalus that the one beginning a musical performance would intone the *nashīd* at the outset of his song irrespective of the rhythm; he would then bring in the *basīṭ* and conclude with *muḥarrikāt* and *anzādj* (rapid singing with light rhythms) following the rules laid down by Ziryāb" (al-Maḳḳarī, *Analectes*, ii, 88). Al-Ḥasan al-Kātib (5th/11th century) relates that al-Kindī, Ibn al-Ṭayyib (al-Sarakhsī) and certain others declare that the *nashīd* consists of singing at the beginning of a poem, or at the beginning of a speech which is not in verse, a number of words in an unspecified tempo, and that the *istihlāl* consists of declaiming, at the beginning of a song, a single word in a free rhythm (A. Shiloah, *La perfection des connaissances musicales*, 128-9). Al-Fārābī, in his *Kitāb al-Mūsīḳī al-kabīr*, provides a lucid definition of the *nashīd* and of the *istihlāl*. Speaking of different methods of commencing a song, the author lists: simple vocalisations, octaviation (a highly-regarded technique of interpretation) and preludes based on the text of the song, adding that "The Arabs give ... the name of *istihlāl*, when the words which are adapted to it constitute a small part of the logos, or indeed a larger position which is still inferior to a medium part. This will be the *nashīd* if this portion is a medium part of the logos or a more extensive portion" (R. d'Erlanger, *La musique Arabe*, ii, 85). For the 9th/15th century author Fatḥ Allāh al-Muʾmin al-Shirwānī, the *nashīd* or *nashīd al-ʿArab* is composed of two verses on free notes, then two others on timed notes. The *basīṭ* is, according to him, an isolated fragment sung on a heavy rhythm (*op. cit.*, iv, 233; see also A. Shiloah, *The theory of music in Arabic writings*, Munich 1979, 331-3).

In the contemporary period, the term *nashīd* (and also *unshūda*) is employed as the equivalent of "hymn"; thus *nashīd waṭanī* or *ḳawmī* denotes a national anthem, *al-nashīd al-umamī*, the Internationale. It seems that this sense of *nashīd* derives from the type of popular usage described in the *Muḥīṭ al-muḥīṭ*, where it is stated that "the people use *nashīd* in the sense of *madḥ* (praise, e.g. hymn)" and also from the translations of Biblical canticles, such as *nashīd* Deborah or *nashīd al-anshād* for the Song of Songs. The term is also employed in specific cases to denote for example official songs, the songs of children, the songs of Boy Scouts and even the serenade (*nashīd laylī*).

Bibliography: Given in the article.

(A. Shiloah)

NASHĪṬ, a singer of Persian origin, acquired as a slave by ʿAbd Allāh b. Djaʿfar b. Abī Ṭālib [*q.v.*], and who flourished in the second half of the 1st century A.H. in Medina. His Persian style of singing was a great success there, compelling other singers to imitate it, but Nashīṭ himself had to learn the Arab style and songs in order to enlarge his repertoire. He was one of the teachers of the *ḳayna* [*q.v.*] ʿAzza al-Maylāʾ and of the renowned singer Maʿbad b. Wahb [*q.v.*].

(Ed.)

NASHWĀN b. SAʿĪD b. Nashwān al-Ḥimyarī al-Yamanī, an Arab philologist, d. ?573/1178.

The reports on this individual and his career are exceedingly scanty. In Yāḳūt's *Irshād* and in Suyūṭī's *Bughya* he is described in laudatory terms in the usual phrases as a great scholar, authority on *fiḳh*, philology and *naḥw*; he was also distinguished as a historian and poet and was equally versed "in the other branches of *adab*". He compiled a dictionary entitled *Shams al-ʿulūm wa-dawāʾ kalām al-ʿArab min al-kulūm* in eight (according to others eighteen) volumes which his son later revised and condensed into two volumes; he also wrote a treatise on rhyme, *Kitāb al-Ḳawāfī*, and a book of a religious and philosophical nature, *Kitāb al-Ḥūr al-ʿīn wa-tanbīh al-sāmiʿīn*. We know neither the year nor the place of his birth, nor with whom he studied nor in what places he lived. Only one story of his life has survived and that sounds improbable. Yāḳūt says he was a great chief who besieged cities and fortresses and ruled over a hill-tribe in the Ṣabr range. Al-Suyūṭī takes this story from Yāḳūt. According to al-Suyūṭī, he was a follower of the Muʿtazila. He is said to have died on 24 Dhu 'l-Ḥidjdja 573/13 June 1178. The importance of Nashwān lies in the fact that he was particularly well-acquainted with the South-Arabian tradition. He took up from his predecessor al-Hamdānī [*q.v.*], the task of rescuing from oblivion the legends of the South Arabian kingdoms. He uses these as the basis of his work and gives long quotations from the writings of his predecessor. His famous so-called Ḥimyarite *Ḳaṣīda*, *al-Ḳaṣīda al-Ḥimyariyya*, is based on such traditions of the Ḥimyarite rulers; it celebrates their deeds and the splendour of their ancient kingdom. In the commentary on this poem the annotator gives very full notes, in which he narrates legends of South Arabian princes and their history. Von Kremer supposed, relying on internal evidence, that the author of the *Ḳaṣīda* and the commentator are the same person, i.e. that Nashwān himself wrote the commentary on his *Ḳaṣīda*. At any rate, the commentator, whose name is not given, must have been very well acquainted with Ḥimyarite tradition. In the already-mentioned dictionary *Shams al-ʿulūm*, Nashwān again uses his knowledge of South Arabian history. Whether all the facts given by him are historical cannot be discussed here; many of them are certainly based on tradition, since Nashwān himself, as his *nisba* shows, was of South Arabian blood.

In recent times, renewed interest in Nashwān and the other "authorities" on pre-Islamic South Arabian history has led Arab, especially Yemeni, scholars to make fresh studies on him and to bring out new editions of some of his works. However, the negative consensus on their historical value remains (see, though in a different context, A. Rippin, in *JSAI*, xiii, 162 n. 21). Yet his works played a part in the struggle of the tribes of South Arabian origin against the northern Arabs for predominance in the Muslim world.

(ILSE LICHTENSTÄDTER)

NASĪʾ (A.), intercalary month, intercalation, or person (pl. *nasaʾa*) charged with the duty of deciding on intercalation. The word occurs in Ḳurʾān, IX, 37, and in Muḥammad's sermon at the Farewell Pilgrimage (Ibn Hishām, 968; see ḤADJDJ). *Nasiyy, nasy* and *nasʾ* are variants and the word is connected with *nasaʾa* to "postpone" or "add" or with *nasiya* to "forget". In any case, it is given in Islamic tradition a meaning which brings it into connection with the method of reckoning time among the pagan Arabs. The Ḳurʾānic verse describes *nasīʾ* as "a further expression of unbelief" and it is therefore forbidden to the believers.

The context of the above-mentioned passages, where sometimes the number of months in the year is put at twelve and sometimes the number of "holy" months at four, allows us to connect *nasīʾ* with the calendar. Ḳurʾānic exegesis as a rule connects *nasīʾ* with the "holy" months and explains it sometimes, it is true, as the postponement of the Pilgrimage from the month fixed by God for it, but sometimes, and preferably, as "transference of the sanctity of one holy month to another, in itself not holy". The expositors are also able to give the reasons for such a postponement in full detail. As a rule, however, these are pure inventions in which suggestions and perhaps memories of old traditions are freely expanded. A collection of such expositions in the form of regular *ḥadīths* is given in al-Ṭabarī, *Tafsīr*, 2nd ed., x, 91-3.

The critical examination of these explanations reveals, however, traces of an older conception not quite unknown to Tradition, even in the form in which we have it, according to which *nasīʾ* denotes neither the intercalation of an intercalary month nor the month itself. This interpretation of the word is the only one really acceptable in the circumstances. The association of the pre-Islamic pilgrimage with annual markets made it necessary to fix the *ḥadjdj* in a suitable season of the year. For that purpose, a prolongation of the lunar year in some way was necessary, and nothing contradicts that older tradition according to which it was obtained by the intercalation of an intercalary month. The lunar month was the only unit of time available for the purpose because it was the only one which the Bedouins, the customers at the markets, could observe directly. Thus one had only to let them know at the *ḥadjdj* of a year whether they had to reckon to the next *ḥadjdj* twelve or thirteen months.

Definite evidence of this intercalation of a month is found in the astronomer Abū Maʿshar al-Balkhī (d. 272/886 [*q.v.*]) in his *Kitāb al-Ulūf* (see *JA*, ser. 5, xi [1858], 168 ff.), and, following him, in al-Bīrūnī, who also deals at length with this intercalation in his *Chronology* (ed. Sachau, 11-12, 62-3). According to him, the Arabs took this intercalation from the Jews. How much in what these scholars tell us is really historical knowledge, and how much intelligent reconstruction, can hardly be decided. It is remarkable, however, that al-Bīrūnī when dealing fully with the Jewish intercalation (*op. cit.*, 52, l. 17) connects the Hebrew word for intercalary year, *ʿibbūr*, with *meʿubbārāth* "pregnant woman" and observes: "they compare the addition of a superfluous month to the year to the woman carrying something which does not belong to her body". In this connection we may recall that al-Ṭabarī (*op. cit.*, 91, l. 6) explains the Arabic *nasīʾ* as *nasūʾ* "pregnant woman", among other interpretations, saying *nusiʾat al-marʾa* "on account of the increase which the child in her means". This agreement in the two explanations, which can hardly be accidental, might really indicate that *nasīʾ* in the sense of intercalation or intercalary month is modelled on the Hebrew word *ʿibbūr* and thus support al-Bīrūnī's statement which is in itself not impossible. Caussin de Perceval (*JA*, ser. 4, i, 349) even quotes the Hebrew *nāsī* (prince) as a title of honour of the leader of the Sanhedrin, to whom fell the duty of dealing with the intercalation (cf. *Bab. Talmud, Sanhedrin*, 11ᵃ: "the intercalation of the year may only be done with the approval of the *nāsī*"). According to one of the meanings of the Arabic *nasīʾ* given in Tradition, it was really the "name of a man", a meaning which is all the more remarkable in this connection as it does not suit the Ḳurʾānic passage. There is a definite agreement on the fact that in the Jewish intercalation only the month following Adar was an intercalary month while in the Arab system, as the critical examination of Tradition — contradicting the literal interpretation of its text— shows, only the month following Dhu 'l-Ḥidjdja, i.e. the intercalated month, in both cases was inserted between the normally last month and the normally first one of the year, Nisān (or, amongst the Arabs, al-Muḥarram).

Nothing certain is known about the process of intercalation among the Arabs. It can only have been periodic and irregular attempts at correction based on observation of nature, particularly vegetation. The technical part must have been exceedingly simple and primitive. The same is true of the Jewish intercalation in the older period (see *Bab. Talmud, Sanhedrin*, 10b-13b). As the Jewish system served to move the feast of Pesaḥ to a suitable season of the year, the Arab system can only have been intended to do the same for the *ḥadjdj* and the fairs associated with it in the vicinity of Mecca. It was not intended to establish a fixed calendar to be generally observed. The Bedouins had never had one and they have no use for one. According to Tradition, the management of the *nasīʾ* was a prerogative of the Banū Kināna [*q.v.*]; and, indeed, fairs were held on their lands.

(A. MOBERG)

NASĪʾ (Hebr.), a title used in Judaeo-Islamic societies generally to designate descendants of the house of David, who were accorded particular respect. Many individuals of Davidic descent held this honorific title, which was inherited through the patrilineal line. Davidic descent alone did not confer political authority. The *nasīʾ* Daniel b. Azarya, who served as head of the Palestinian academy, pronounced that members of the house of David were not authorised to hold public office except when appointed by him (T.-S. 12.229, cited in Goitein, *A Mediterranean society*, ii, 19 and n. 47). Nonetheless,

individuals of the house of David did on occasion claim authority for themselves in Jewish communities, and by the end of the 12th century A.D., *nasīʾ*s had established themselves throughout the Islamic world. The Muslim authorities recognised their special status within the Jewish community and stipulated that the head of the Jews should treat them with deference (*ḥurma*) [see Gottheil, 530 top line].

Since the exilarch or head of the diaspora (*rōsh ha-gōlā, rēsh gālūthā, ra's al-djālūt*), an official serving as secular head of the Jews, was always of Davidic descent, he also bore the title *nasīʾ*. But the title *nasīʾ* alone does not designate the office of exilarch. David b. Daniel, the son of Daniel b. Azarya, was called "our *nasīʾ*," "our lord the *nasīʾ*," and "the *nasīʾ* of all Israel" in documents up to the year 1089, when he first advanced his claims to the exilarchate. But it was only after he was actually elevated to the office of exilarch that he came to be designated specifically as "our lord the head of the diaspora." Similarly, Daniel b. Ḥasday (d. 1174), whose title was "exilarch of all Israel" (*rōsh galūyōt kol yisrāʾēl*) was described by the 12th century Jewish traveller Benjamin of Tudela as having a "pedigree going back to David King of Israel." The Muslim authorities, he tells us, referred to him as *sayyidnā ibn dāʾūd* (our master, the son of David).

NASĪB (A.), a generic term in Arabic literature applied in mediaeval sources to love poetry. In its modern understanding it denotes the amatory prologue of the *ḳaṣīda* [*q.v.*], the polythematic ode, as distinguished from *ghazal* [*q.v.*], the independent love-poem. According to Arabic lexicography, the term is derived from the root *n-s-b* in its special meaning *nasaba bi 'l-nisāʾi* "to make amatory verses about women" (*shabbaba bi-hinna fī 'l-shiʿr wa-taghazzala; LA*, i, 756a). Another derivation is suggested by R. Blachère, who considers a connection with the term *nasb*, "a kind of camelmen's lament" [see GHAZAL].

1. *Nasīb* in Arabic poetics.

The meaning of *nasīb* is rarely defined by mediaeval scholars, nor can the semantic relation between the terms *nasīb* and *ghazal* be established with precision. As a generic term *nasīb* first appears in the *Ṭabaḳāt al-shuʿarāʾ* by Ibn Sallām al-Djumaḥī (d. 231/845 [*q.v.*]), together with *fakhr* [see MUFĀKHARA], *madīḥ* [*q.v.*] and *hidjāʾ* [*q.v.*]. According to this classification, which must be older than the *Ṭabaḳāt*, the four terms constitute "the houses of poetry" (*buyūt al-shiʿr*), i.e. the principal poetic themes (ed. Hell, Leiden 1916, 87). It is evident that *nasīb* here refers to love poetry in general, for Ibn Sallām not only uses the term when discussing the *ḳaṣīda* but also with regard to *ghazal* poets. Thus he reports a tradition saying that Djamīl [*q.v.*] surpasses Kuthayyir [*q.v.*] in his "amatory verses" (*fi 'l-nasīb; op. cit.* 124). The meaning of *nasīb* is limited to the emotional aspect of love poetry in Ibn Ḳutayba's (d. 276/889) [*q.v.*]) famous description of the tripartite *ḳaṣīda* (*Shiʿr*, 14), for in the tradition which he quotes a distinction is made between *nasīb* and the poet's complaint at the "deserted campsite", a leitmotif of the amatory prologue. This differentiation seems unusual and is, apparently, not supported by other sources.

A list of "poetic themes" (*aghrāḍ*) containing the term *nasīb* is provided by Ḳudāma b. Djaʿfar (d. 320/932 [*q.v.*]) in his *Naḳd al-shiʿr* (ed. Bonebakker, Leiden 1956, 23). He is the first theorist, moreover, to attempt a definition of *nasīb* as contrasted to *ghazal* (*op. cit.* 65), which has influenced later authors. According to Ḳudāma, *nasīb* denotes the poetic expression of the traditional amatory themes, whereas *ghazal* means love and preoccupation with women; *nasīb* is "the expression of *ghazal*" (*dhikru ghazal*), and *ghazal* is "the content itself" (*al-maʿnā nafsuh*).

From the 10th century onwards both terms are used in works of literary theory with varying semantic connotations, but *nasīb* apparently remains the more general concept. This is evidenced in *al-Muwāzana bayna shiʿr Abī Tammām wa 'l-Buḥturī* by al-Āmidī (d. 370/981). He applies the term to the whole variety of erotic themes and motifs employed by the two poets, for after a detailed survey he declares that now "all subdivisions of the *nasīb* have been treated" (*maḍat anwāʿ al-nasīb kulluhā*), and proceeds to discuss the transition from *nasīb* to *madīḥ* (ed. Ṣakr, Cairo 1965, ii, 291). As to *ghazal*, it is clearly conceived by al-Āmidī as a "subdivision" (*nawʿ*) of *nasīb*, specified as "description and praise of women, passionate desire, remembrance, longing and grief" (ii, 59).

In a later treatise, *al-ʿUmda fī maḥāsin al-shiʿr* by Ibn Rashīḳ (d. 456/1064 or 463/1071 [*q.v.*]), a whole chapter is devoted to *nasīb* (ed. 'Abd al-Ḥamīd, Cairo 1963³, ii, 116-28). As in the *Muwāzana*, the term denotes love poetry in general and is explained by Ibn Rashīḳ as a synonym of *taghazzul* and *tashbīb*. With regard to *ghazal*, however, he explicitly refers to Ḳudāma, slightly rephrasing his definition (ii, 117). But Ibn Rashīḳ is not quite consistent in his application of the term. In a previous chapter of the *ʿUmda*, when discussing the point that every occasion demands its own kind of speech, he enumerates, by way of demonstration, several generic terms, among them *ghazal*, which is listed together with *mazḥ* (jest), *mukātaba* (correspondence), *mudjūn* [*q.v.*] (frivolous verses), *khamriyya* [*q.v.*] (bacchic poem). There can be no doubt that these terms signify genres in the modern understanding,. i.e. texts of a certain kind. The list suggests that Ibn Rashīḳ has been influenced by *dīwān* recensions of "modern" (*muḥdath*) poetry, which are often arranged according to genres. All terms mentioned in this context figure as headings of chapters, *ghazal* being employed with reference to love poems. Since the amatory prologue forms part of a greater unit, it is not listed, but must have been subsumed under the heading of *madīḥ* (G. Schoeler, *Die Einteilung der Dichtung bei den Arabern*, in *ZDMG*, cxxiii [1973], 9-55, cf. 42 ff.). Thus Ibn Rashīḳ, without being aware of it, referred to two different systems of genres.

From the evidence of the *ʿUmda* it would seem that a semantic evolution of the term *ghazal* towards the notion "love poem" had taken place, but if so, it has not been accepted unanimously by later authors. Al-Tibrīzī (d. 502/1109) in his introductory lines to the *Bāb al-nasīb* of Abū Tammām's [*q.v.*] *Ḥamāsa* (*Sharḥ dīwān ashʿār al-Ḥamāsa*, ed. ʿAbd al-Ḥamīd, Cairo 1385) heavily relies on Ḳudāma, without mentioning him, however, and Ibn al-Athīr (d. 637/1239 [*q.v.*]) uses the term *ghazal* when discussing the amatory prologue of the *ḳaṣīda* (*al-Mathal al-sāʾir*, ed. Ṭabāna, Cairo 1959, iii, 96). In the same chapter (118), *ghazal* and *nasīb* are united in one sentence. While commenting on the introduction of a particular *ḳaṣīda*, Ibn al-Athīr states that the poet presented an apology "in the guise of love poetry" (*fī hayʾat al-ghazal*), expressing it "in the form of *nasīb*" (*fī maʿriḍ al-nasīb*), as G.J. van Gelder translates (*Beyond the line*, Leiden 1982, 148).

Here, again, *ghazal* and *nasīb* seem to be conceived, in accordance with Ḳudāma's definition, as content and form.

The semantic relation of the two terms in mediaeval sources deserves a more detailed study, but a few conclusions can be drawn from the material presented above. It is evident that *nasīb* constitutes the older generic term, and that it has always been applied to love poetry in general. Its accepted meaning hardly changed, on the whole, whereas *ghazal* has been conceived in different ways: *a.* as content (*maʿnā*) of *nasīb*, *b.* as subdivision (*nawʿ*) of *nasīb*. *c.* as independent love poem.

Turning from the question of terminology to the genre itself, the amatory prologue of the *ḳaṣīda*, there is some information on it in mediaeval poetics, usually in connection with a discussion of the ode. As in other literatures, the origin of the genre is attributed to the ingenuity of an individual person. The first *ḳaṣīda* was allegedly composed by Muhalhil b. Rabīʿa, the uncle of Imruʾ al-Ḳays [*q.v.*] (Ibn Sallām, *Ṭabaḳāt*, 13). The aspect of proportion is discussed by Ibn Rashīḳ, who quotes a tradition to the effect that the amatory theme should not exceed the *madīḥ* in weight and length (ii, 123). He also treats the question whether a *marthiya* [*q.v.*] might be introduced by amatory verses, which he denies (ii, 151). It is true that the combination of love poetry and a lament of the dead has never been accepted as a convention in classical Arabic poetry, but there is some evidence of it in early Islamic and Umayyad texts. The structure of the ode, and how the amatory prologue should be linked to subsequent themes, has been widely discussed in mediaeval poetics. The subject is studied in detail by G.J. van Gelder (*op. cit.*, see Index).

Western scholars from the 19th century onwards have always applied the term *nasīb* to the first section of the ode, whereas *ghazal* has been conceived as "love poem". In the following survey, *nasīb* and *ghazal* will be used as generic terms in the Western tradition, denoting the amatory prologue and the independent love poem respectively. It should be kept in mind, however, that modern studies by Arab scholars usually employ *nasīb* in an unspecific sense, in accordance with mediaeval poetics, and that the first section of the *ḳaṣīda* is often referred to as "prologue" (*maṭlaʿ*, *muḳaddima*).

2. *Nasīb* in Arabic poetry.

Arabic love poetry in the classical period, whether *nasīb* or *ghazal*, is based on a common heritage, a reservoir of formulas, motifs and images from the Bedouin past. As a result, the two genres present certain similarities and have often been treated together without differentiation. However, since the *nasīb* constitutes an integral part of a greater unit, it is related to other themes and influenced in its composition by the form as a whole. With the gradual transformation of the tribal *ḳaṣīda* into the ceremonial ode of Islamic times, moreover, its components changed as to structure and function. Accordingly, the *nasīb* must be considered from two different aspects, as love poetry within its social context, and as structural unit of the polythematic ode.

a. Pre-Islamic period.

The *nasīb* is the only kind of love poetry preserved from the *djāhiliyya* [*q.v.*]. The earliest texts date back to the end of the 5th century, but the *ḳaṣīda* appears already fully developed and suggests a well-established tradition. As is characteristic of oral literature, the poet rarely refers to his own individual experience. Although he always speaks in the first person, his verses are based on a collective experience, which is recreated in such a way that each member of the tribal aristocracy can identify himself with it. In the *nasīb*, as in other sections of the ode, the poet conducts himself as the hero, the Bedouin par excellence (cf. A. Hamori, *The Poet as hero*, in *On the art of medieval Arabic literature*, Princeton 1974, 3-30). The attitudes he adopts, the problems he encounters, and the moral solutions he offers represent the main aspects of Bedouin life and conform to the values of tribal society. Repeating them means safeguarding the tribal system. This is the principal function of the *ḳaṣīda* and provides a key to the interpretation of the *nasīb*.

Pre-Islamic odes extend from 30 to more than 100 verses. The *nasīb* varies from 3 to about 20 verses, but not necessarily in proportion to the length of the ode. It consists of short narrative units, interrupted by descriptive passages and allusions to the poet's emotional state. The basic situation is always the same, the separation of lovers belonging to neighbouring tribes. In spring the tribes camp together, but when the season of abundant pasture ends, they depart and lovers must separate. The *nasīb* invariably refers to a love-affair of the past, or to the time of separation. The following three motifs are most frequent (cf. I. Lichtenstädter, *Das Nasīb der altarabischen Qaṣīde*, in *Islamica*, v [1931-2], 17-96):

1. On his desert journey the poet and two friends discover a "deserted campsite" (*dār, manzil*), where he once spent happy days together with his beloved. He describes the "traces" (*aṭlāl*) consisting of hearth stones, tent-pegs and trenches almost obliterated by wind and rain. He alludes to the loneliness of the place, which is now visited by wild animals, and calls out to it, but receives no answer. After indulging in memories, tears and complaints, he resolves to forget his beloved, since there is no hope for a reunion.

2. The poet and his fellow-travellers rest at night in the desert. While his companions are asleep, the poet is awake, or suddenly awakened, and perceives the "vision" (*khayāl, ṭayf*) of his beloved, whom he knows to reside in a distant place. He wonders how she managed to cross the perilous desert on foot to reach him. The *khayāl* evokes memories of the past and renews love and sorrow, but finally he overcomes his grief and sends the *khayāl* back. The "vision" has been interpreted by mediaeval scholars as a dream, but the narrative structure of early versions indicates that the *khayāl* originally was conceived as an apparition confronting the poet in the external world (cf. R. Jacobi, *The Khayāl motif in early Arabic poetry*, in *Oriens*, xxxii [1990] 50-64).

3. One morning, the poet discovers to his dismay that the beloved's tribe is about to depart. He watches the preparations, describes the litter bearing his beloved, and at last observes it passing out of sight, while the tears are streaming down his face. He imagines the route her tribe is going to take and contemplates following her, but the feeling of futility and loss prevails.

Not all conventional details of the narrative are present in each version. The poet chooses among them, sometimes uniting two motifs in one *nasīb*, or alluding to it in a few lines. There are two further situations of tribal life occasionally referred to. The poet perceives camels bearing litters of women from afar, and asks himself whether his beloved is travelling in one of them, or he watches the lightning of an approaching thunderstorm shining from the direction where her tribe dwells.

A detailed description of the beloved can be inserted at different points of the narrative. It usually

constitutes a sort of catalogue, whereby her beauty is praised and her social standing emphasised with stereotyped epithets and comparisons. As the poet is the Bedouin hero, she is the heroine, whose perfection is never questioned. As to her character, she is depicted as capricious, unyielding at first, unfaithful in the end. It is she who takes the initiative in ending the affair, who "severs the bond". In the pre-Islamic *nasīb*, the woman seldom appears emotionally engaged in the relationship. The poet, on the other hand, displays violent passion and grief, which manifests itself in copious tears and sleeplessness by night. A favourite motif in this context is "the long night", whose stars seem never to disappear; its most famous rendering is a passage in the *Muʿallaḳa* [*q.v.*] of Imruʾ al-Ḳays (vv. 42-6).

The concept of love implied in the *nasīb* is closely related to the norms of tribal society, where individual interests are subordinated to the interests of the group. Illicit love affairs between members of neighbouring tribes were obviously tolerated, or even approved of, since the poet boasts of them. They heightened his prestige and did not disparage the woman, whose freedom of choice indicates the strength of her social position in the *dj̲āhiliyya* (cf. Lichtenstädter, *op. cit.*, 81 ff.). But faithfulness after separation, the perseverance in futile love, was not demanded by tribal ethics, since it would threaten the collective welfare. The woman is expected to depart with her tribe, and the poet is blamed by his friends, the voice of reason, who advise him to leave his folly and to regain his soberness of mind. This seems to be the principal message of the *nasīb*. Love means pleasure and prestige; if there is no longer hope to gain these ends, it should be abandoned.

There are compensations, however, which brings us to the question of how the *nasīb* is connected with subsequent themes. Several patterns of the *ḳaṣīda* can be established, one of them closely related to a motif of the *nasīb*, the poet's complaint of his old age and failing success with women. His melancholy mood is then compensated by memories of the pleasures and activities of his youth. Here, the *nasīb* serves as a justification of the poet's self-praise, which fits in with G. Richter's theory that the polythematic ode generated from the *nasīb*. It is consistent with a limited number of texts, but cannot be generally applied (*Zur Entstehungsgeschichte der altarabischen Qaṣīde*, in *ZDMG*, xcii [1938], 552-69; cf. also R. Jacobi, *Studien zur Poetik der altarabischen Qaṣīde*, Wiesbaden 1971, 101 ff.).

The *nasīb* is usually followed by a description of the poet's camel, sometimes without transition (*tak̲h̲alluṣ*), but there are also formulaic expressions connecting *nasīb* and camel section. After narrating the departure of the beloved's tribe, the poet reflects whether his camel will be able to catch up with her, and embarks upon a praise of its strength and endurance. If the *nasīb* ends with the decision to forget his love affair, he turns to his excellent camel for consolation. Some odes are composed without a camel theme; in this case, the poet resolves to forget his beloved, and turns to more important issues, e.g. praising his patron.

In the tripartite ode the camel section is followed by a self-praise [see MUFĀK̲H̲ARA], a praise of the poet's tribe, or a panegyric [see MADĪḤ]. In some panegyrical odes from the end of the 6th century, *nasīb*, camel theme and *madīḥ* appear to constitute a narrative sequence. The poet stops at a "deserted campsite", then continues his journey, and finally reaches the adressee of his *madīḥ* (cf. Jacobi, *Studien zur Poetik*, 85 ff., 104). The panegyrical ode is most important for the history of the *nasīb*, as it is the main form to survive in later court poetry.

Pre-Islamic odes present characteristic features of oral literature, e.g. additive style and semantic independence of detail. As a consequence, the *nasīb*, like all thematic units, retains a certain degree of autonomy, even if it is linked up to other themes. In this respect, texts from the *dj̲āhiliyya* differ from odes composed in Islamic periods, which must be kept in mind when the origin of the genre and the function of the *nasīb* within its context is considered. Various theories have been advanced, some of them from the aspect of comparative literature, either suggesting influence or pointing out analogy (see *Bibl.*), but no explanation has been generally accepted so far. Most of these studies contain valuable points, however. Thus A. Bloch drew attention to the mnemonic function of the *nasīb*, which usually includes a sequence of place names, motivated in accordance with the narrative unit selected by the poet (*Qaṣīda*, in *Asiatische Studien*, ii [1948] 106-32). It is conceivable that they constitute ancient itineraries inserted into the *nasīb* so as to be more easily remembered.

At our present stage of knowledge, the origin of the *ḳaṣīda* remains a matter of speculation, but a careful assessment of the evidence presented by pre-Islamic texts points to a gradual assimilation of independent genres, at first united by metre and rhyme, and later growing into a coherent form. The *nasīb* seems appropriate as an introduction, if viewed from the aspect of tribal ethics. It is concerned with a love affair of the past which the poet tries to forget. His feelings are still involved, and when he is reminded of his beloved by the *aṭlāl* or the *k̲h̲ayāl*, his sorrow is renewed, he weeps and complains, but then recovers and returns to the manly pursuits expected of him by his tribe. Thus the *nasīb* seems meaningful and has a definite function within the structure of the ode. With the breaking up of tribal society, however, the "heroic" attitude becomes obsolete, and later poets are faced with the alternative either to abandon the *nasīb*, or to reinterpret it and to provide it with a new function.

b. Early Islamic period.

In the first half of the 7th century, the time of the *muk̲h̲aḍramūn* [*q.v.*], poets still follow pre-Islamic tradition, but they also seek new modes of expression, and there are subtle changes with regard to concepts of thought and moral attitudes. Instead of alluding to a love affair of the past, the *nasīb* now sometimes refers to a present affair the poet wishes to continue. Thus the Hud̲h̲alī poet Sāʿida b. D̲j̲uʾayya promises to remain faithful to his beloved for years after separation (*S̲h̲arḥ as̲h̲ʿār al-Hud̲h̲aliyyīn*, ed. Farrād̲j̲, Cairo 1384/1965, no. IX 2, p. 1173), and his clansman Abū D̲h̲uʾayb [*q.v.*] expresses his firm belief in a reunion (*op. cit.*, no. XVIII 1, p. 121). Another *muk̲h̲aḍram* even dispenses with the habitual gloom of the *nasīb* and gaily declares that "we will soon sport again with Laylā" (*sa-nalhū bi-Laylā*), since her tribe is not pasturing far away (*al-Mufaḍḍaliyyāt*, ed. Lyall, Oxford 1921, no. CXIV 2, p. 742). Both the elegiac and the frivolous attitude are incompatible with the function of the traditional *nasīb*, since the poet projects his hopes into the future.

Some poets manifest a degree of psychological insight unknown before. This is evidenced in the *dīwān* of al-Aʿs̲h̲ā Maymūn, who is famous, moreover, for the introduction of bacchic themes into the *nasīb* (cf. K. Dalgleish, *Some aspects of the treatment of emotion in the Dīwān of al-Aʿs̲h̲ā*, in *JAL*, iv [1973], 97-111). It is even more striking in the verses of Abū

D͟hu'ayb, one of the most innovative poets of the period. He seems to be the first to treat love as an independent theme, and he also tries out the combination of *nasīb* and *mart͟hiya* in an ingenious way (cf. R. Jacobi, *Die Anfänge der arabischen Ġazalpoesie: Abū Ḏu'aib al-Huḏalī*, in *Isl.*, lxi [1984], 218-50). In the *nasīb* the conventional motifs are sometimes replaced by individual scenes, and the woman seems to take a more active part in the relationship than in the *d͟jāhiliyya*. The introduction of the poet's individual experience is also evidenced in the verses of Kaᶜb b. Zuhayr [*q.v.*], who in a *nasīb* describes a quarrel with his wife (*Dīwān*, ed. ᶜAbd al-Ḳādir, Cairo 1368/1949, 153 ff.). Significant changes are further apparent in the rendering of conventional motifs. The "vision" (*k͟hayāl*) of the beloved, once haunting the sleepless poet, is now conceived as a pleasant dream fulfilling his secret wishes (cf. Jacobi, *The khayāl motif*, 58 ff.). There is also an attempt to transfer the motif from its Bedouin setting to urban environment (cf. Ibn Muḳbil, *Dīwān*, ed. Ḥasan, Damascus 1381/1962, no. 37, 1-2).

The *nasīb* in the early Islamic period anticipates the development of Umayyad love poetry in several ways. The most important aspect is a new concept of love indicating that the ideal of the "Bedouin hero", who renounces love and the beloved, is about to disappear. This implies a shift of emphasis from tribal loyalties to individual commitments. It also suggests that poets gained more insight into their emotional needs and problems, which means discovering a new kind of reality, their own self (cf. Jacobi, *Time and reality in Nasīb and Ghazal*, in *JAL*, xvi [1985], 1-17). These changes can hardly be due to the immediate influence of Muḥammad's preaching, but must be regarded as a result of the same intellectual and social tensions which preceded and accompanied the rise of Islam.

c. Umayyad period

In the course of the 7th century, pre-Islamic oral tradition is gradually transformed according to the demands of a literate urban society. The *g͟hazal*, both in its elegiac and in its frivolous variant, now constitutes the principal erotic genre voicing the intellectual and moral trends of the time. As a consequence, the *nasīb* looses some of its former significance, but poets in the employment of the caliphs and their governors continue to introduce their odes with amatory verses as a rule, expressing love, longing and sorrow, as also the melancholy and resignation of old age. The pre-Islamic "heroic attitude", however, the proud rejection of the beloved, is abandoned, and when al-Farazdaḳ [*q.v.*] boasts, in the spirit of tribal *fak͟hr*, of the many women he forgot (*Dīwān*, ed. Ṣāwī, Cairo 1354/1936, 78, 5 f.; cf. also 87,-1), he speaks as an individual, and not as a representative of his social group.

The Umayyad *nasīb* develops in contact with *g͟hazal* poetry and assimilates some of its innovations in content and style. It therefore differs considerably from the pre-Islamic *nasīb*. The traditional inventory of motifs and images is still in evidence, but the structure of narrative units is dissolved, the "deserted campsite" or the "departure of the beloved" being only alluded to in one or two lines as a rule. A notable exception is the *nasīb* of al-Ak͟hṭal [*q.v.*], the most conservative of Umayyad court poets. He continues the tradition of al-Aᶜs͟hā, moreover, of inserting bacchic scenes into his *nasīb*. Poets also lost interest in descriptive detail, which figures so prominently in verses from the *d͟jāhiliyya*. Instead, they concentrate on their emotional state and on their relation with the beloved, whose beauty and perfection are praised but not catalogued as before. Memories are not evoked to be soon forgotten; as in *g͟hazal* poetry, their function is to justify the poet's concern in his present love affair. The emotional impact of the *nasīb* is frequently enhanced by stylistic means (exclamation, repetition). A further innovation is the blending of motifs which in pre-Islamic oral tradition are kept strictly apart.

The *nasīb* varies in length from 4 to more than 20 verses. It occurs in combination with *hid͟jā'*, *madīḥ* and, very rarely, with *mart͟hiya*. The juxtaposition of love poetry and satire, usually without transition, was favoured by professional poets, as evidenced in the *Naḳā'iḍ* [*q.v.*] of D͟jarīr [*q.v.*] and al-Farazdaḳ, and must have been appreciated by their audience (cf. van Gelder , *Genres in collision: Nasīb and Hijā'*, in *JAL*, xxi [1990], 14-25). In the panegyrical ode, the *nasīb* is either placed before the *madīḥ*, or it is followed by a *raḥīl*, the poet's desert journey to his patron (*mamdūḥ*), which in the tripartite *ḳaṣīda* now replaces the former description of the poet's camel, and is sometimes blended with the *madīḥ* (Jacobi, *The camel-section of the panegyrical ode*, in *JAL*, xiii [1982], 1-22; cf. 14-19). The poet's aim to impress the dangers of the way and the hardships he endured on the way to the *mamdūḥ* is also apparent in the *nasīb*, where elements of the *raḥīl* are introduced under various pretexts. In the motif of the nocturnal "vision", the only narrative unit substantially changed and elaborated by Umayyad poets, the *k͟hayāl* visits a group of travellers, all of them asleep. Besides dwelling on the pleasures he enjoyed in his dream and on his disenchantment in the morning, the poet always emphasises and sometimes describes at length the traces of hardship and exhaustion visible on the sleepers and their mounts (cf. al-Farazdaḳ, *Dīwān*, 219; D͟jarīr, *Dīwān*, ed. Ṣāwī, Cairo 1353, 526, 10 ff.). Thus in the Umayyad ode the panegyrical function not only determines the camel-section, but also affects the composition of the *nasīb*.

The *k͟hayāl* motif frequently forms the end of the amatory prologue, and is now sometimes used as a transition to the following section. This is a favourite technique of D͟hu 'l-Rumma [*q.v.*] (cf. *Dīwān*, ed. Macartney, Cambridge 1919, nos. 1, 25, 41, 52, 67, 68, 78). The *nasīb* of D͟hu 'l-Rumma deserves special attention as one of the great achievements of Umayyad poetry. In contrast to most contemporary poets, he retains the descriptive elements of the ancient *nasīb* and vividly depicts sceneries of the desert, thereby creating an atmosphere of Bedouin life. But the result is far from being an imitation of the pre-Islamic *nasīb*, for his amatory verses, despite of their richness in descriptive detail, reveal the emotional depth and heightened tension of Umayyad love poetry, together with a nostalgia for a mode of life about to disappear.

There are different reactions to the changes of society, however. At the beginning of the 8th century, the elegiac prologue of the *ḳaṣīda* is not accepted without reserve. Al-Farazdaḳ composed 50% of his panegyrics without *nasīb*, and explicitly preferred *g͟hazal* verses of ᶜUmar b. Abī Rabīᶜa [*q.v.*] to the "weeping at the *aṭlāl*" (*Ag͟h.*[1], ii, 134). He also sometimes describes sensual pleasures in his *nasīb*, if only in a dream (*Dīwān*, 349). About the same time, an anonymous persiflage of the *aṭlāl* was recited and received with enthusiasm at the court of al-Walīd b. Yazīd [*q.v.*] (*Ag͟h.*[1], ii, 27), the first "anti-*nasīb*" in Arabic poetry.

d. ᶜAbbāsid period

The ᶜAbbāsid *nasīb* reflects in all its aspects the intellectual brilliance and sophistication of the time. This regards content, style, and, above all, its func-

tion within the structure of the ode. As to the first aspect, "modern" (*muḥda<u>th</u>*) poets like Ba<u>sh</u><u>sh</u>ār b. Burd [*q.v.*] and Muslim b. al-Walīd [*q.v.*] add to the Umayyad elegiac concept of love a courtly dimension. The social superiority of the beloved, her cruelty and power are emphasised and contrasted to the poet's devotion, which is never compensated, but heightens his moral standard. The courtly attitude is to be perceived in varying degrees in *<u>gh</u>azal* and *nasīb* alike, but whereas in *<u>gh</u>azal* verses the poet's love affair is often provided with an urban background, in the *nasīb* a Bedouin setting is retained as a rule, forming a stylised world deliberately opposed to reality. As a result, the poet's message acquires a timeless validity appropriate to the ceremonial function of the ᶜAbbāsid ode.

The transformation of the "Bedouin encampment" referred to by pre-Islamic and Umayyad poets into a place of symbolic significance could only be achieved by techniques of the "new style" [see BADĪᶜ]. Rhetorical devices, e.g. parallelism, antithesis, allusion, and particularly metaphor, are ingeniously applied so as to produce an intricate pattern, in which the lines of the *nasīb* are related to each other and to the following sections of the ode on different linguistic levels. This is evidenced in the *dīwān* of Ba<u>sh</u><u>sh</u>ār (J. Scott Meisami, *The uses of the Qaṣīda: thematic and structural patterns in a poem of Ba<u>sh</u><u>sh</u>ār*, in *JAL*, xvi [1985], 40-60), and in the odes of the great court poets of the 9th century, Abū Tammām (S. Pinckney Stetkevych, *Abū Tammām and the poetics of the ᶜAbbāsid age*, Leiden 1991; cf. Part II) and al-Buḥturī [*q.v.*] (S. Sperl, *Mannerism in Arabic poetry*, Cambridge 1989, cf. 28 ff.). Topoi of the ancient *nasīb* are assimilated by various techniques. One of the most important devices is turning them into metaphor, whereby the symbolic world of the *nasīb* and the poet's inner world seem to merge in each other . By metaphorical transformation, his heart becomes a "campsite", where the "trace" (*ṭalal*) of love is not yet effaced (al-Buḥturī, *Dīwān*, ed. Ṣayrafī, Cairo 1963, iv, no. 806,7).

The *nasīb* can be combined or even blended with a bacchic theme and with the description of flowers and gardens, another innovation starting with Ba<u>sh</u><u>sh</u>ār and continued by Muslim b. al-Walīd and other *muḥda<u>th</u>ūn* (cf. G. Schoeler, *Arabische Naturdichtung*, Beirut 1974, 48 ff.). Some poets stay faithful to convention by describing desert sceneries in spring, whereas others, e.g. al-Buḥturī and Ibn al-Rūmī [*q.v.*], mostly refer to urban gardens (Schoeler, *op. cit.* 133 ff., 167 ff.). The description of gardens later sometimes replaces the *nasīb*, especially in Andalusian poetry.

A variation of the bacchic theme is the "anti-*nasīb*", the poet's rejecting the complaint at the *aṭlāl* in preference of wine and the enjoyment of life. It is a favourite opening of the *<u>kh</u>amriyya* and becomes a convention of the genre, but it is also used before a panegyric by Muslim b. al-Walīd and, in particular, by Abū Nuwās [*q.v.*], whose *nasīb* presents the greatest variety of modes and themes. He occasionally conforms to convention, but he often introduces urban themes and even dispenses with the courtly attitude, describing erotic pleasures in his *nasīb* (cf. E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 234 ff.). The "anti-*nasīb*" and other innovations motivated by the intellectual and social aspirations of Persian *mawālī* seem to be limited to the early ᶜAbbāsid period, as far as the ode is concerned.

The ᶜAbbāsid *nasīb* can be fully appreciated only when it is considered as an integral part of the *ḳaṣīda*. The ceremonial ode is bipartite in structure as a rule, *nasīb* and *madīḥ* being juxtaposed without transition, or linked up by a few lines of the travel theme, now a mere introduction to the panegyric. The *nasīb* usually extends over 10-15 lines, independent of the full length of the poem. As has been pointed out by S. Sperl with reference to caliphal odes, the two sections constitute a carefully structured antithesis, "strophe and anti-strophe", each theme of the *nasīb* being echoed, as it were, in the *madīḥ* (*Islamic kingship and Arabic panegyric poetry in the early 9th century*, in *JAL*, viii [1977], 20-35). The antithesis is based on an analogy supported by the ideal of courtly love: the relation of poet and beloved on the one hand, and of poet and patron on the other. Loss and frustration experienced in love are compensated by the caliph's grace and generosity; the transitoriness of human affairs, symbolised by the *aṭlāl*, are counterbalanced by the cosmic power of the ruler to rejuvenate the earth. The analogy is not limited to odes to the caliph, and can be put to different use, moreover, by forming a parallel, the patron's behaviour equalling that of the beloved (cf. Meisami, *op. cit.* 48 ff.).

The technique of contrasting *nasīb* and *madīḥ* is still in evidence in odes of the Būyid-period poet Mihyār al-Daylamī [*q.v.*] (cf. Sperl, *Mannerism*, 48 ff.), but further analysis is required in order to establish its application in later poetry. As for al-Mutanabbī [*q.v.*], one of the most famous panegyrists of mediaeval Islam, a certain weariness of the *nasīb* is apparent, although there are brilliant specimens in his *dīwān*. Many of his *Sayfiyyāt* are composed without a *nasīb*, however, and in an often-quoted verse referring to the convention of beginning an ode with amatory verses, he doubts whether "all poets can be in love" (*Dīwān*, ed. Dieterici, Berlin 1861, 439, 5). Despite his or other poets' reserve concerning the *nasīb*, odes with amatory prologues continued to be composed throughout the Middle Ages up to the 19th century, and even after the *ḳaṣīda* had become obsolete as a genre, *aṭlāl*, *<u>kh</u>ayāl* and other topoi of the *nasīb* did not lose their æsthetic appeal to modern Arabic poets and their readers.

As has been established, the amatory prologue underwent considerable changes in the course of the first centuries of Islam. It remains to ascertain the generic features which determine its identity as a literary form. If we disregard individual attempts to change the character of the *nasīb*, and innovations limited to a particular period, they are to be defined as follows: *a.* an elegiac concept of love, *b.* the evocation of memories and *c.* a Bedouin setting alluded to by generic signals, i.e. place-names of the Ḥid<u>j</u>āz, traditional names of the beloved, terms and formulas from pre-Islamic love poetry. Since they constitute a linguistic code which must be understood, they depend on a society familiar with a normative poetic convention. Thus it is to be assumed that the *nasīb*, more perhaps than most other genres, served as a means of identification for the intellectual élite of mediaeval Islam.

NAṢĪBĪN, Naṣībīn, classical Nasibis, modern Turkish form Nusaybin, a town in upper Mesopotamia, now in modern Turkey. It is situated on the modern Görgarbonızra Çayı, the classical Mygdonios river, the early Arabic Hirmās, Syriac Nehar Māsā or Māshī, in the plain to the south of the mountain region of Ṭūr ᶜAbdīn [*q.v.*], and today faces the Syrian town of al-Ḳāmishlī.

Naṣībīn is an ancient town, its name being probably Semitic. In classical sources we find the form Νάσιβις and on coins ΝΕΣΙΒΙ. In Armenian, it is usually Mcbin, Nsepi or Nsepin. The countryside between Naṣībīn and the Tigris was known to the Syriac Christians as Bēth ᶜArbāyā and to the Armenians as Arvastan. The town is mentioned as early as Assyrian times under the name of Naṣibina and was subsequently under the rule of the Seleucids and then, according to Armenian historians, was the capital of the Armenian Arshakunid kings, but then in early Christian times possession of it alternated between the Parthians and Romans. In 195 A.D. Septimius Severus came to Nisibis and made it the capital of a new province, Septimia Nesibi Colonia Metropolis, according to Dio Cassius. In the 3rd and 4th centuries A.D., control of it was disputed by the Sasanids, and after 363 was more or less permanently in Persian hands. It was during this period that Nisibis became the centre of the theological school of the same name, founded by the monk Jacob of Nisibis, and in 489 the Nestorian academy of Edessa was transferred thither by the Metropolitan Barṣawmā because of persecutions by the Byzantines, so that for several centuries it remained the intellectual centre of Nestorian Christianity (cf. al-Masᶜūdī, *K. al-Tanbīh*, 150). (For a detailed consideration of Naṣībīn's pre-Islamic history, see E. Honigmann, *EI*[1] s.v.).

In the year 18/639 the Arab commander ᶜIyāḍ b. Ghanm advanced against Naṣībīn which after a brief resistance submitted to the Arabs on the same terms as had been granted to al-Ruhā (Caetani, *Annali dell' Islām*, iv, 35, 37, 55, 57, year 18 A.H., § 83, 87, 127, 129; according to al-Balādhurī, *Futūḥ*, 175-6, and al-Khwārazmī, ed. Baethgen, in *Abh. f.d. Kunde d. Morgenl.*, viii/3. 110-11, not till the following year; cf. Caetani, *op. cit.*, 165, 19 A.H., § 42b, 43). In the reign of ᶜAbd al-Malik in 684 A.D., Burayda rebelled in Naṣībīn (Mich. Syr., ii, 469; Barhebr., *Chron. Syr.*, ed. Bedjan, 111; Caetani, *Chronographia islamica*, i, 755, 65 A.H., § 15). An earthquake devastated the town in 717 (al-Khwārazmī, *op. cit.*, 122, year 99 A.H.). The Metropolitan Cyprianus in 758-9 completed the choir of the Church (κόγχη) and the altar of the Cathedral of Naṣībīn (al-Khwārazmī, *op. cit.*, 128, year 141 A.H.). In the period of troubles in Mesopotamia, the people of Dārā, Naṣībīn and Āmid used to go out on plundering expeditions (Mich. Syr., iii, 103; Barhebraeus, *Chr. syr.*, 153). A band of Ḳarmaṭians in 315/927-8 attacked Kafartūthā, Rās al-ᶜAyn and Naṣībīn (al-Masᶜūdī, *Tanbīh*, 384).

The Ḥamdānid Sayf al-Dawla [*q.v.*] began his campaign against Armenia in 328/940 from Naṣībīn (Freytag, in *ZDMG*, x, 467). Byzantines in 331/942 under John Curcuas invaded Mesopotamia and took Mayyāfāriḳīn, Arzan and Naṣībīn (Barhebraeus, *op. cit.*, 179; Weil, *Gesch. der Chal.*, ii, 690). Naṣībīn by this time probably belonged to the Ḥamdānid Nāṣir al-Dawla [*q.v.*] (cf. Barhebraeus, 183, under the year 347/958, *ZDMG*, x, 482). After his death in 358/968-9, his son Abu 'l-Muẓaffar Ḥamdān was for a short time governor of Naṣībīn (*ZDMG*, x, 485). The Byzantines again attacked the town under the Domesticus (the Armenian Mleh) on 1 Muḥarram 362/12 Oct. 972, and instituted a dreadful massacre in it (Barhebraeus, 192; *ZDMG*, x, 486; Weil, iii, 19-20; Yaḥyā b. Saᶜīd al-Anṭākī, ed. Kračkovskiy-Vasiliev, 145 = *Patrol. Orient.*, xxiii, Paris 1932, 353 wrongly makes the Emperor John Tzimisces himself conduct the campaign; cf. against this D.N. Anastasievič, in *Byz. Zeitschr.*, xxx [1929-30], 403-4).

The Saldjūḳid Ṭoghrīl Beg's army in 435/1043 laid waste the country round Naṣībīn (Barhebraeus, *op. cit.*, 226). Sultan Ghiyāth al-Dīn in 1106 sent Abū Manṣūr al-Djawalī, lord of al-Mawṣil, to Naṣībīn against the Franks (Mich. Syr., iii, 193). Soon afterwards the Artuḳid Īlghāzī Nadjm al-Dīn took the town (Mich. Syr., *loc. cit.*; Barhebraeus, *Chron. Syr.*, 273) and after the Sultan had granted it to the *amīr* Mawdūd b. Altuntakin (Mich. Syr., iii, 215) Ilghāzī took it again in 513/1119-20 (*ibid.*, 217). But it changed hands again very soon, when in 515/1121-2 Sultan Maḥmūd gave it to the *amīr* Bursuḳī along with al-Mawṣil, Djazīrat Ibn ᶜUmar and Sindjār (Barhebraeus, 283). The Franks in 523/1128-9 advanced as far as Āmid, Naṣībīn and Raʾs al-ᶜAyn (Barhebraeus, 289). In 1134, Zangī put down a rising in Naṣībīn (Mich. Syr., iii, 242). Bābak, installed there as governor by Zangī himself, destroyed all the fortresses in the neighbourhood so that Zangī might have no base against him (Mich. Syr., iii, 264). Nūr al-Dīn of Ḥalab in 566/1171 took the town without opposition and dealt rigorously with the Nestorian Christians there. All their new buildings were destroyed, the treasuries plundered and about 1,000 volumes of their writings burned (Mich. Syr., iii, 339-40). After his death, his nephew Sayf al-Dīn of al-Mawṣil seized the town (Mich. Syr., iii, 360). It surrendered to Ṣalāḥ al-Dīn in 578/1182 (Barhebraeus, *Chron. Syr.*, 360). In the following year, the latter gave to ᶜImād al-Dīn Sindjār, Naṣībīn and other towns in exchange for Ḥalab (Barhebraeus, 362) and he ruled there till his death in 594/1198 (Barhebraeus, 398, 402). In the region of Naṣībīn there was fierce fighting in 582/1186-7 between Kurds and Turkomans (Barhebraeus, 370). ᶜImād al-Dīn was succeeded in 594/1198 by his son Ḳuṭb al-Dīn, but Nūr al-Dīn Arslānshāh of al-Mawṣil immediately took the town from him. But when a severe epidemic wrought great havoc in his army, he abandoned it and Ḳuṭb al-Dīn returned thither (Barhebraeus, 402). Nūr al-Dīn in 600/1203-4 had to break off a second siege of Naṣībīn prematurely (Barhebraeus, 416-17). Al-Malik al-ᶜĀdil took the town in 606/1209-10 from Ḳuṭb al-Dīn (Barhebraeus, 424). After his death (615/1218-9) it passed to al-Malik al-Ashraf of Urfa (Barhebraeus, 424, 439).

The Arab geographers placed Naṣībīn in the fourth clime, the southern boundary of which ran about 12 *farsakhs* south of the town on the direction of Sindjār

(al-Masʿūdī, *Tanbīh*, 32-3, 35, 44). According to Yāḳūt, it lay on the upper course of the Hirmās in the midst of numerous gardens. Ibn Ḥawḳal, who in 358/968-9 visited the town, which lay at the foot of Djabal Bālūsā, speaks of the pleasant life in it, apart from the dangerous scorpions found there. Al-Muḳaddasī describes the fine houses and baths, the market, the Friday mosque and the citadel. Ibn Djubayr also visited it in 580/1184-5, and mentions its gardens, the bridge over the Hirmās inside the town, the hospital (*māristān*), several schools and other places of interest. In the 8th/14th century it was already for the most part in ruins; but the Friday mosque was still in existence and the gardens around it from which rose-water was exported (Ibn Baṭṭūṭa). Ḥamd Allāh Mustawfī, according to whom the walls had a circumference of 6,500 paces, praises its fruits and wine but laments the unhealthy moistness of the climate, the large number of scorpions and the plague of midges.

Hūlāgū in 657/1259 occupied al-Ruhā, Naṣībīn and Ḥarrān (Weil, *Gesch. der Chalifen*, iv, 10). The Mongol Khān Mangū-Tīmūr [*q.v.*] died, poisoned in Djazīrat Ibn ʿUmar, on his way from there to Naṣībīn, on 16 Muḥarram 681/26 April 1282 (Barhebraeus, 546-7). When Tīmūr Khān in 1395 was on his way to Ṭūr ʿAbdīn, the people of Naṣībīn and Maʿarra hid in caves from the Mongols but were suffocated in them with smoke (Appx. to Barhebraeus, *Chronography*, ed. Wallis Budge, ii, p. xxxiv). The Ḥasanāyē Kurds in 1403 pillaged Naṣībīn and the country around (*ibid.*, p. xxxvi).

The town passed into the hands of the Ottomans in 921/1515 (von Hammer, *GOR*, ii, Pest 1828, 449). It became the capital of a *sandjak* in the *pashalïk* of Āmid (Ḥādjdjī Khalīfa, *Djihan-numā*, Istanbul 1732, 438). Later, it was placed in the *sandjak* of Mārdīn in the *pashalïk* of Baghdād (St. Martin, *Mémoires sur l'Arménie*, i, Paris 1818, 161-2).

In the present century, Nusaybin's strategic importance has arisen not only from its position on the southern fringes of the eastern Anatolian highlands but also from the passing through it, with a station, of the Istanbul-Aleppo-Baghdād railway. In contemporary Turkey, Nusaybin town (lat. 37° 03' N, long. 41° 13' E) is the chef-lieu of an *ilçe* or district of the *il* or province of Mardin, agriculturally prosperous from cereal and rice growing and from stock-raising. In 1970 the town had a population of 13,941 and the district one of 43,309.

NĀṢĪF AL-YĀZIDJĪ [see AL-YĀZIDJĪ].

NAṢĪḤAT AL-MULŪK (A.), literally "advice for rulers", a phrase under which may conveniently be considered the genre of pre-modern Islamic literature which consists of advice to rulers and their executives on politics and statecraft (*siyāsa* [*q.v.*] or *tadbīr al-mulūk*); the ruler's comportment towards God and towards the subjects or *raʿiyya* [*q.v.*] whom God has entrusted to his charge; the conduct of warfare, diplomacy and espionage; etc. All these themes correspond to the genre of mediaeval European literature known as that of "mirrors for princes" or *Fürstenspiegel* (see on this, *Dict. of the Middle Ages*, New York 1982-9, viii, 434-6, art. *Mirror of princes* (Patricia J. Eberle)).

In their more theoretical aspect, these Islamic works overlap the fields of practical ethics (for which see AKHLĀḲ (i)) and of the testament or *waṣiyya* [*q.v.*] of a chief or ruler, which (in the examples known to us, such as the testaments of ʿUmar I, Muʿāwiya and al-Manṣūr) seem often to have contained advice on rulership and its problems, aphorisms on the responsibilities of power, exhortations to justice and godly rule, etc. intended for the testator's heir. But many of them also have a distinctly practical aspect. The emphasis here is often on *Realpolitik* as a mainspring of political action, so that contemporary pragmatic attitudes to the exercise of power are revealed; and, in the later, Persian mirrors for princes there is often a considerable amount of historical information conveyed as anecdotes or as illustrative, practical examples of general principles. They thus contain material of value to students of Islamic history and of Islamic administration and its institutions.

The genre has a further significance for the unfolding of early Islamic culture in that it constitutes a meeting-point for various ethical, philosophical and practical strands. Some of these developed purely within the Islamic religious tradition, such as the concept of the caliph-*imām* as deriving all his power from God and only deserving his exalted position so long as he exercised this authority in conformity with the *sharīʿa* [*q.v.*]. Others were non-Islamic. The Persian bureaucratic tradition, already influential in Islamic administration by the later part of the Umayyad period (see below), was strengthened in the ʿAbbāsid period by the formation of the influential body of secretaries or *kuttāb* [see KĀTIB. i. In the caliphate] imbued with ancient Persian ideas and ideals; whence the frequency in the mirrors for princes literature of stories illustrating the beneficent and just government of Sāsānid emperors like Ardashīr I Pāpakān, Bahrām [*q.v.*] Čūbīn, Khusraw I Anūsharwān [*q.v.*] and Khusraw II Aparwīz, and the wisdom of their ministers such as Buzurgmihr [*q.v.*]. A lesser influence was mediated from India through such animal fables has those of Bidpay, the later Arabic *Kalīla wa-*

Dimna [*q.v.*], going back to the Sanskrit *Pančatantra*, but much more significant was the classical Greek and Hellenistic component, derived in great part through translations and illustrated by the roles as sages assigned to Plato and Aristotle [see AFLĀṬŪN and ARISṬŪṬĀLĪS] and to Alexander the Great, regarded as the pupil of the latter philosopher, as an exemplar of wise rule [see AL-ISKANDAR].

1. In Arabic literature.

The genre, as known to us in Arabic, may be said to develope towards the end of the Umayyad period when, during the caliphate of Hishām (105-25/724-43), a distinct interest in Persian administrative ways is discernible (see H.A.R. Gibb, *The social significance of the Shuʿūbīya*, in *Studies on the civilization of Islam*, Boston 1962, 62-3). His caliph's chief secretary, the *mawlā* Abu 'l-ʿAlāʾ Sālim, seems to have composed a collection of epistles which purported *inter alia* to contain advice on ruling given by Aristotle to Alexander, in particular, a *Kitāb fi 'l-siyāsa al-ʿāmmiyya*, almost certainly in large part deriving from a Greek original but with distinct Persian-derived touches, and possibly having a practical aim with regard to Hishām's policies in Khurāsān and the increasing difficulties of the Umayyad governors there [see J.D. Latham, *The beginnings of Arabic prose literature: the epistolary genre*, in *The Cambridge history of Arabic literature* [i.] *Arabic literature to the end of the Umayyad period*, Cambridge 1983, 154-64, and the works of M. Grignaschi listed on p. 533).

Sālim's successor in the Umayyad *dīwān al-rasāʾil*, the celebrated ʿAbd al-Ḥamīd b. Yaḥyā al-Kātib [*q.v.*], wrote a lengthy and elaborate epistle to the designated *walī 'l-ʿahd* and son of the last Umayyad caliph Marwān (II) b. Muḥammad (127-32/744-50), ʿAbd Allāh. It comprises an ethico-political section on the moral qualifications necessary for princes, the practical responsibilities of the prince for maintaining good government, followed by a more strictly practical discourse on questions of military organisation (see Latham, in *op. cit.*, 167-72).

The genre has thus a respectable prehistory dating from at least a generation before the work of the figure who was, in the past, usually taken (e.g. by G. Richter, *Studien zur Geschichte der älterer arabischen Fürstenspiegel*, Leipzig 1932, 4 ff.) as the pioneer composer of an Arabic mirror for princes, ʿAbd Allāh b. al-Muḳaffaʿ (d. *ca.* 140/757 [see IBN AL-MUḲAFFAʿ]). The latter's work as a communicator of the imperial Sāsānid Persian governmental tradition through his translations from Pahlavi into Arabic, is well-known. His *Risāla fi 'l-Ṣaḥāba*, apparently addressed to the second ʿAbbāsid caliph al-Manṣūr (136-58/754-75 [*q.v.*]), hence stemming from Ibn al-Muḳaffaʿ's last two or three years of life, treats of the importance for the ruler of choosing reliable companions and executives but also of more general political and military topics, and especially, of the importance of justice in the practical exercise of authority (see text and Fr. tr. in Ch. Pellat, *Ibn al-Muqaffaʿ, mort vers 140/757 "Conseilleur" du calife*, Paris 1976; Latham, *Ibn al-Muqaffaʿ and early ʿAbbasid prose*, in *CHAL* [ii.] *ʿAbbasid belles-lettres*, Cambridge 1990, 64-72). More clearly in the specific mirrors for princes genre is his *K. Ādāb al-kabīr*. The second part of this is probably addressed to the caliph's son and enjoins him to acquire *adab* [*q.v.*], whilst the third part is addressed to the caliph's minister or companion and advises him on the correct *adab* for the ruler's service, and the fourth part appears to deal with personal relations within the secretary's own milieu, stressing the value of true friendship. In its emphasis on the importance of the heritage of the ancients and their transmitted wisdom, Ibn al-Muḳaffaʿ clearly had in mind the Greek authorities and also the old Persian monarchical and secretarial traditions—from the latter of which he and his father stemmed directly—but these strands were mingled with his own first-hand experience of political life: the morality of the epistle is Machiavellian rather than elevated in tone (see Richter, *op. cit.*, 4-22; Latham, in *op. cit.*, 57-64; and the Bibl. to Gabrieli's art. IBN AL-MUḲAFFAʿ).

Over the next two centuries, Arabic *adab* literature continued to include, as one of its components, elements of advice on the ethics of rulership and the practical conduct of affairs. From the caliphate of al-Maʾmūn [*q.v.*], well-known for his interest in the movement for translation from Greek into Syriac and Arabic and for the mediation of classical scientific and philosophical knowledge to the Islamic world, dates the terse but meaty epistle of the Khurāsānian commander Ṭāhir b. al-Ḥusayn Dhu 'l-Yamīnayn [*q.v.*] addressed to his son ʿAbd Allāh [*q.v.*] when the latter was in 206/821 about to take up a provincial governorship. Notable here is the dominant place accorded to Islamic religion and the vitalness of the ruler's behaving in conformity with both the old Arab tribal virtues (*ḥilm*, *murūʾa* [*q.vv*]) and also the Ḳurʾān and Sunna; the influence of the old Persian ideals of rulership and ideas about subjects' obedience is here very subordinate. Possibly it was this strongly Arab-Islamic ethos, combined with the literary appeal of its elegant and balanced phrases, which made the epistle popular with later generations; as well as figuring in the surviving portion of the *K. Baghdād* of Ibn Abī Ṭāhir Ṭayfūr [*q.v.*], it is given by al-Ṭabarī, Ibn al-Athīr and Ibn Khaldūn (see Richter, 80-3; Eng. tr. in C.E. Bosworth, *An early Arabic mirror for princes: Ṭāhir Dhū l-Yamīnain's epistle to his son ʿAbdallāh (206/821)*, in *JNES*, xxix [1970], 25-41).

The many-sided genius of al-Djāḥiẓ (d. 255/869 [*q.v.*]) absorbed the wisdom of the Greeks and Persians through the translations which had been appearing since the time of Ibn al-Muḳaffaʿ, and was in close contact, if not with caliphs, with viziers, chief judges and members of the ʿAbbāsid family of his time. A largely lost *K. Akhlāḳ al-wuzarāʾ* (Pellat, *Nouvel essai d'inventaire de l'oeuvre ǧāḥiẓienne*, in *Arabica*, xxxi [1984], 163 no. 238) must have been a manual for the use of viziers, but the *K. al-Tādj*, dedicated to al-Mutawakkil's commander and courtier al-Fatḥ b. Khāḳān [*q.v.*], hence from the middle years of the 3rd/9th century, and dealing with the comportment of the monarch, the organisation of his court and the conduct required of his boon-companions (*nudamāʾ*, sing *nadīm* [*q.v.*]), is obviously one of the many apocryphal works of al-Djāḥiẓ. Given the prominent role in it of Sāsānid-derived material, it was probably written by an ethnically Persian author imbued however with Arabic culture also; its title is indeed reminiscent of a Pahlavi *Tādj-nāmak* said to have been one of the works translated by Ibn al-Muḳaffaʿ (see the Fr. tr. of Pellat, *Le Livre de la Couronne ... attribué à Ǧāḥiẓ*, Paris 1954, introd., and also Richter, *op. cit.*, 47-60; as Richter notes, 39, the authenticity or otherwise of al-Djāḥiẓ's authorship does not affect the work's significance as a product of the cultural atmosphere of the time).

Certain of the *adab* works of the writers one generation after al-Djāḥiẓ like Ibn Ḳutayba (d. 275/889 [*q.v.*]) and of two generations later like Ibn ʿAbd Rabbihi (d. 328/940 [*q.v.*]) merit consideration for material within them which is very much in the genre of advice to princes, although treated very much in a

literary and bellelettristic vein. The former's *ʿUyūn al-akhbār* includes lengthy sections entitled *kitāb al-sulṭān* on the qualities necessary for rulership, *k. al-ḥarb* on the conduct of warfare and *k. al-suʾdud* on the quality of leadership and success in worldly affairs (see Richter, 39 ff., and G. Lecomte, *Ibn Qutayba (mort en 276/889), l'homme, son oeuvre, ses idées*, Damascus 1965, 145-6). Ibn ʿAbd Rabbihi likewise opens his *adab* collection *al-ʿIḳd al-farīd* with sections on government (*sulṭān*), the conduct of war and a subsequent one on the addressing of kings, and appears to have drawn upon sources parallel to those of Ibn Ḳutayba (see Richter, 72-9);

The *Fürstenspiegel* genre continued in Arabic literature for at least two or three centuries more. Works which were either themselves mirrors for princes or contained elements of the genre include two works, both extant, by al-Māwardī (d. 450/1058 [*q.v.*]), including a *Naṣīḥat al-mulūk* and a *K. Ḳawānīn al-wuzarāʾ wa-siyāsat al-mulūk*, the latter being one of several composed on the *adab al-wazīr* (see on this, D. Sourdel, *Le vizirat ʿaabbāside*, Damascus 1959-60, i, 13-14). Al-Thaʿālibī (d. 429/1038 [*q.v.*]) composed at the court of the Khʷārazm-Shāh Maʾmūn b. Maʾmūn [see KHʷĀRAZM-SHĀHS] a *K. Ādāb al-mulūk al-khʷārazmshāhi* (ed. and Eng. tr. Tevfik Topuzoğlu, *Kitāb ʿAdāb al-Mulūk al-Khwārazm-Shāhī of ... ath-Thaʿālibī*, Ph.D. diss., Manchester 1974, 2 vols., unpubl.).

Such works were as popular in the Muslim West as in the central and eastern Islamic lands, as already evidenced by Ibn ʿAbd Rabbihi's *ʿIḳd* (whose contents, however, are entirely within the Baghdād-centred traditions of the Mashriḳ; it does not seem that any distinctive, local versions of the genre ever developed in al-Andalus or the Maghrib); see, e.g., Ibn Abī Randaḳa al-Ṭurṭūshī (d. 520/1126 or 525/1131 [*q.v.*])'s *Sirādj al-Mulūk* (Span. tr. M. Alarcón, *Lámpara de los príncipes por Abubéquer de Tortosa*, Madrid 1930-1), and the *Sulwān al-maṭāliʿ fī ʿudwān al-atbāʿ* of the Sicilian emigrant to Mecca, Ḥudjdjat al-Dīn Ibn Ẓafar (d. 565/1169 or 568/1172 [*q.v.*]), which contains many animal fables and stories of Indian origin, not all of them taken from *Kalīla wa-Dimna* (Ital. tr. M. Amari, *Conforti politici*, Florence 1882; see also Richter, *op. cit.*, 90-2). Closely connected with, and dependent upon, Ibn Ẓafar's work was the mirror for princes of the easterner Sibṭ Ibn al-Djawzī (d. 654/1256 [*q.v.*]), the *Kanz al-mulūk fī kayfiyyat al-sulūk*, who omitted, however (possibly because of the rigorist attitudes from his Ḥanbalī family background) the animal and bird fables much used by Ibn Ẓafar (ed. G. Vitestam, *The treasure of princes on the fashion of behaviour ascribed to Sibṭ ibn al-Djauzi*, Lund 1970).

The most notable author of these times to compose in the genre was the great theologian Abū Ḥāmid al-Ghazālī (d. 505/1111 [*q.v.*]). As well as touching on the topic of rulership and its duties in such works of his as the *K. al-Mustaẓhirī* and the Persian-language *Kīmiyā-yi saʿādat*, it seems that al-Ghazālī wrote a special treatise on the Islamic religious ideals required of a godly ruler and on practical questions of statecraft for a Saldjūḳ prince, either Muḥammad b. Malik-Shāh or his brother Sandjar [*q.vv.*], and this forms the first part of the work which has been generally attributed to him and called the *Naṣīḥat al-mulūk*. The second part of this, however, is probably the work of an unknown Persian author of a generation or so later working very much in the Persian ethical and political tradition (see Patricia Crone, *Did al-Ghazālī write a Mirror for Princes? On the authorship of Naṣīḥat al-mulūk*, in *JSAI*, x [1987], 167-91). Both parts of this Persian-language work were subsequently translated into Arabic (according to Ibn Khallikān, by Ṣafī 'l-Dīn Abu 'l-Ḥasan al-Irbilī for a Turkish Atabeg of Mawṣil towards the end of the 6th/12th century) as *al-Tibr al-masbūk fī naṣīḥat al-mulūk*, and this had a much wider circulation than the Persian original, being frequently copied in Mamlūk and Ottoman times, whereas so few of the Persian version circulated that Goldziher, e.g. believed that it had been irretrievably lost (*Streitschrift des Gazālī gegen die Bāṭinijja-Sekte*, Leiden 1916, 98) until mss. turned up in Istanbul and Tehran. As well as imparting the usual Islamic and pre-Islamic Persian counsels for the ruler, al-Ghazālī's part of the work expresses the Ṣūfī view of life which one would expect from such a noted practitioner of Ṣūfism as its author: the ruler's spiritual life is of paramount importance. Following the traditional Islamic view, al-Ghazālī stresses that kingship is a gift bestowed by God, for which the ruler will be fully accountable on the Last Day; the ruler does not owe his power to his fellow-men and is not accountable to them, hence he must be especially careful to avoid the meretricious attractions of this world. The patently different emphasis of the second part, on the qualities required by kings, is seen in the extensive quotation of the examples set by the Sāsānid Persian emperors and in its praise of the justice and benevolent rule of the "Magians" for some 4,000 years until God decided to send the Prophet Muḥammad for mankind and to let the political sovereignty pass to the Arabs; even so, the fame of the wise and just Khusraw Anūsharwān still redounds during Islamic times because his salient qualities of justice and magnanimity are valid for all times and valid during all manifestations of God's favour to subsequent religions and dynasties. The anonymous author recognises, in the period of the decline of the caliphate's effective power, the fait accompli of the practical exercise of power by the *sulṭān* [*q.v.*], and regards this last as divinely-inspired also; maxims like "the sultan is God's shadow on earth" are cited with approval, and the sultan's power is viewed as being consecrated by the old-Persian idea of the "divine effulgence" (*farr-i īzadī*) (see on the whole work, Richter, *op. cit.*, 67-9; Eng. tr. with extensive and valuable introd., F.R.C. Bagley, *Ghazālī's Book of Counsels for Kings*, London 1962; Carole Hillenbrand, *Islamic orthodoxy or Realpolitik? Al-Ghazālī's views on government*, in *Iran JBIPS*, xxvi [1988], 91-3; A.K.S. Lambton, *The theory of kingship in the Naṣīḥat al-mulūk of Ghazālī*, in *IQ*, i [1954], 47-55; idem, *State and government in medieval Islam*, Oxford 1981, 117-26).

2. In Persian literature.

The genre in Arabic was always of a pronounced literary cast, reflecting the dominant role accorded to *adab* and its practitioners in Arab-Islamic culture. The literary, idealising element remains discernible in the Persian mirrors for princes, but practical considerations obtrude much more perceptibly here, perhaps in part reflecting the fact that two of the outstanding Persian composers of works in the genre, Kay Kāwūs b. Iskandar and Niẓām al-Mulk [*q.vv.*] were themselves exponents of the art of practical politics and far from being academic theoreticians.

It was seen in section 1. above that the contributory pre-Islamic Persian strand in the development of the genre, derived from the collections of animal and bird fables and from works on the conduct of the Sāsānid emperors and the organisation of their courts, was always notable. Furthermore, Middle Persian literature had quite an appreciable amount of moralising works containing admonitions, ethical directives

and advice on correct behaviour in various walks of life, the so-called *andarz* "teachings" and *pand-nāmak* "book of counsels" literature (see J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 37-9), and this emphasis was carried over into the Islamic period when New Persian Islamic literature developed from the 3rd/9th century onwards; it may further be seen in the moralising element prominent in such literary collections of stories as the *Gulistān* and *Būstān* of Saᶜdī [*q.v.*].

As in Arabic, the genre in Islamic Persian literature begins with works on a modest scale or with sections in works essentially concerned with broader or with different topics. From the middle years of the 5th/11th century are the references within the *Taʾrīkh-i Masᶜūdī* of the Ghaznawid author Abu 'l-Faḍl Bayhaḳī [*q.v.*] to earlier works like Ibn al-Muḳaffaᶜ's translation of the pre-Islamic Persian *Khudāy-nāmak* "Book of kings", which he calls the *Taʾrīkh-i Mulūk-i ᶜAdjam*, and his comments on the ideal conduct of the ruler, his coercive powers and the subjects within his jurisdiction (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 48-50; Marilyn R. Waldman, *Toward a theory of historical narrative, a case study in Perso-Islamicate historiography*, Columbus, Ohio 1980, 69-70). The founder of the dynasty, Sebüktigin [*q.v.*] allegedly left behind a *waṣiyya*, a collection of aphorisms and pieces of advice on the business of kingship, the *Pand-nāma*, known to us from its inclusion in a general history of the 8th/14th century, Muḥammad b. ᶜAlī Shabānkāra'ī's *Madjmaᶜ al-anṣāb*, but that a Turkish steppe barbarian like Sebüktigin could have put together this sophisticated opuscule, whose contents include much that is discernible in the longer and more elaborate Persian mirrors for princes, is highly unlikely, and it must surely have been composed well after his death in 387/997 and attributed to him in later Ghaznawid times as the heroic founder of the dynasty (see M. Nazim, *The Pand-Nāmah of Subuktigīn*, in *JRAS* [1933], 605-28; Bosworth, *Early sources for the history of the first four Ghaznavid sultans (977-1041)*, in *IQ*, vii [1963], 18-20 = *The medieval history of Iran, Afghanistan and Central Asia*, Variorum Reprints, London 1977, no. XIII). This process of attribution happened not infrequently in Persian literature where the supposed aphorisms or counsels of a prominent figure were involved. Niẓām al-Mulk's *Siyāsat-nāma* (see below) was "edited" in some degree and probably added to, after his death, by Muḥammad Maghribī, and the great vizier's so-called *waṣāyā* or *naṣāʾiḥ* were not compiled till the 9th/15th century, though apparently from genuine family traditions and possibly from contemporary or near-contemporary materials (see H. Bowen, *The* sargudhasht-i sayyidnā, *the "Tale of the three school-fellows" and the* waṣāyā *of the Niẓām al-Mulk*, in *JRAS* [1931], 776-8).

The second half of the 5th/11th century saw the appearance of the three greatest, complete-work mirrors for princes, the *Ḳābūs-nāma*, the *Siyāsat-nāma* and the *Naṣīḥat al-mulūk*. That they should appear within a span of three or four decades can hardly be fortuitous. It may possibly reflect the recognition by their ethnically Persian (in fact, largely eastern Persian) authors that the centre of gravity of the orthodox Sunnī world was now Persia rather than ᶜIrāḳ or Syria or Arabia, that the division of caliphate and sultanate—the latter under the Saldjūḳs, now at the height of their power—was permanent and irrevocable, and that treatises on statecraft and kingship ought to take account of these changed conditions. The work of the most conservative and traditional in ethos of these writers, al-Ghazālī, and of his more pragmatic unknown colleague/continuator in Persian, has already been considered in section 1. above.

The Ziyārid prince of Gurgān and Ṭabaristān Kay Kāwūs b. Iskandar [*q.v.*] named his *Ḳābūs-nāma*, written in 475/1082-3, after his ruthless and cunning grandfather Ḳābūs b. Wushmagīr [*q.v.*], whom Kay Kāwūs clearly admired and regarded as a fine exponent of *Realpolitik* unrestrained by the more noble ethical considerations of fairness and charity towards opponents, when these conflicted with necessity and expediency. At the top level, the book gives advice on statecraft, the arts of war and diplomacy, and the organisation of court life, but also, on a lower level, with the practice of various more humdrum professions and with the successful conduct of daily affairs like buying slaves or horses. R. Levy (introd. to his Eng. tr., *A mirror for princes, the Qābūs-nāma*, London 1951, p. ix) justly characterised it as combining "the functions of popular educator, manual of political conduct and text book of ethics, with expediency as its motto" (see E.I.J. Rosenthal, *Political thought in medieval Islam, an introductory outline*, Cambridge 1968, 78-91, Bagley, *Ghazālī's Book of Counsel for Kings*, introd., pp. xiii-xiv). Its brisk practicality made it a favourite with later generations of the Perso-Islamic cultural world, and at least five Ottoman Turkish translations of it were made.

The vizier to the Saldjūḳ sultans Alp Arslan and Malik-Shāh [*q.vv.*], Niẓām al-Mulk, composed his *Siyāsat-nāma* or *Siyar al-mulūk* at the court of the latter sultan in 484-5/1091-2, possibly at Malik-Shāh's suggestion, and placed within it the distilled wisdom of some four decades of administrative activity in Persia; the result is the supreme work of its kind in Persian. In some ways, it was a political manifesto, setting forth the things which he considered his master the sultan should undertake and reproving his lack of concern with certain vital affairs of rule; his exemplars here are not only the old Persian kings but also such forceful Islamic despots as the Būyid ᶜAḍud al-Dawla and Maḥmūd of Ghazna. But Niẓām al-Mulk's basic premise for all human affairs is the divine authority of the ruler, whether he be caliph-*imām* or sultan, as being designated by God and as holding his power in trust from God, with the corollaries that the ruler's supreme task is the furtherance of right religion and the suppression of all religious and social deviance and that it is the duty of subjects to give unconditional obedience. This concept of the ruler's untrammelled power was to live on throughout the Islamic lands virtually unchallenged until modern times, and in this wise, Niẓām al-Mulk, good Muslim though he was, was restating the old Persian traditions of government based on force majeure and opportunism, as distinct from the traditional Islamic idea of true authority being based on the Ḳurʾān and *Sharīᶜa*. Because of the high proportion of illustrative anecdotal and historical material within it, the *Siyāsat-nāma* is a significant, if not always totally reliable, straight historical source, above all for the period of the caliphate's decline and disintegration on the rise of provincial dynasties like the Sāmānids, Ṣaffārids and Ghaznawids, and for various socio-religious protest movements arising in the Persian lands, from Mazdakism to Ismāᶜīlism (see Rosenthal, *op. cit.*, 81-3; Bagley, *op. cit.*, introd. pp. xiv-xv; Lambton, *The dilemma of government in Islamic Persia: the Siyāsat-nāma of Niẓām al-Mulk*, in *Iran JBIPS*, xxii [1984], 55-66).

Even more in the traditional Islamic mould than al-Ghazālī's *Naṣīḥat al-mulūk*, and in fact heavily depen-

dent on that author's *Kimiyā-yi saʿādat* and, to a lesser extent, on his *Iḥyāʾ ʿulūm al-dīn*, is the *Baḥr al-fawāʾid* (tr. Julie S. Meisami, *The sea of precious virtues* (Baḥr al-Favāʾid), *a medieval Islamic mirror for princes*, Salt Lake City 1991). This was written in Syria, probably at Aleppo, by an unknown author for one of the Aḥmadīlī [*q.v.*] Atabegs of Ādharbāydjān, and its tone is homilectic rather than prosaic and practical, with its examples almost entirely Islamic; it reflects the atmosphere of *djihād* against the Crusaders and the contemporary resurgence, under the Saldjūḳs and Zangids, of Sunnī orthodoxy, and not the continued influence of the Persian past.

The genre of mirrors for princes retained an enduring interest for later generations of Persian writers, and this interest is visible in such works as the *Dhakhīrat al-mulūk* of the Kubrawī Ṣūfī saint of Kashmīr, Sayyid ʿAlī Hamadhānī (d. 786/1385 [see ʿALĪ B. SHIHĀB AL-DĪN HAMADĀNĪ]; the *Naṣāʾiḥ-i Shāhrukhī*, written in 813/1411 by Djalāl al-Dīn Zakariyyāʾ Ḳazwīnī for the Tīmūrid Shāhrukh [*q.v.*]; and the *Sulūk al-mulūk* of Faḍl Allāh Rūzbihān Khundjī (d. 927/1521 [*q.v.*]), written as a guide for the strongly Sunnī Shaybānid ruler ʿUbayd Allāh Khān (see Rypka *et alii*, *op. cit.*, 427).

Hamadhānī's work was written in Muslim India, and mirrors for princes remained equally popular within the Persian cultural world of India. This Indian aspect of the genre has not been thoroughly studied, but a concern with statecraft, the art of war and political ethics were of burning relevance to a Muslim society like the Indian one, which had to maintain itself against strong non-Islamic internal forces such as the Hindu princes and against invaders from outside the subcontinent like the Mongols and Tīmūr. Muslims never became anything like a numerical majority of population over the country as a whole, hence writers in India were more exercised by such topics as *djihād* and by the status of non-believers within the Indian *Dār al-Islām* than were writers in the Persian lands proper. Some Indo-Muslim writers in the mirrors for princes vein during the Sultanate period, like Fakhr-i Mudabbir Mubārak Shāh (*flor.* late 6th-early 7th/late 12th-early 13th centuries [*q.v.* in Suppl.]) recognised in his *Ādāb al-mulūk* that unbelievers should be treated justly and assigned a protected, if subordinate, place in society; whereas the Tughluḳid period author Ḍiyāʾ al-Dīn Baranī (d. after 758/1357 [*q.v.*]), in his mirror, the *Fatāwā-yi Djahāndārī*, took up a rigorist attitude on the treatment of infidels, involving the necessity of humiliating them. The Mughal empire saw the production of various mirrors, such as the *Akhlāḳ-i Humāyūn* of Ikhtiyār al-Dīn Ḥusayn (written in 912/1506-7 for Bābur's son Humāyūn [*q.v.*]), and the *Akhlāḳ-i Ḥakīmī* by Ḥasan ʿAlī Munshī (wrote 987-8/1579-80 for the half-brother of the Emperor Akbar, Muḥammad Ḥakīm Mīrzā [*q.v.* in Suppl.]). From the reign of Djahāngīr—whose interest in ethical and didactic literature may have stimulated the composition of these works—in the first part of the 11th/17th century stem no fewer than three works in the genre, Ḳāḍī Nūr Allāh Khāḳānī's *Akhlāḳ-i Djahāngīrī*, Shaykh ʿAbd al-Ḥaḳḳ Dihlawī's *Risāla-yi Nūriyya-yi sulṭāniyya* (the only one of these works by an *ʿālim* who was not also a courtier; and the *Mawʿiẓa-yi Djahāngīrī* of Muḥammad Bāḳir Nadjm-i Thānī (d. 1047/1637 [*q.v.*]), recently ed. with Eng. tr. as *Advice on the art of governance ... an Indo-Muslim mirror for princes*, by Sajida Sultana Alvi, Albany N.Y. 1989. This last work does not seem to show that the genre had developed much originality in Muslim India, although a lessened pre-occupation with threats from the infidels may reflect the more secure conditions of the time compared with the earlier, troubled Sultanate period (see Alvi's introd., 29-34). Finally, Rypka, *History of Iranian literature*, 427, mentions a *Tuḥfa-yi Ḳuṭbshāhī* written in this same 11th/17th century by ʿAlī b. Ṭayfūr Bisṭāmī for the Ḳuṭb-Shāhī ruler of Golkondā [*q.v.*] ʿAbd Allāh b. Muḥammad [see ḲUṬB SHĀHĪ].

NĀSIKH [see NASKH].

NĀSIKH, SHAYKH IMĀM BAKHSH (d. 1838), a leading Urdu poet of the Lucknow School, though often now considered more important as an arbiter of the language, as opposed to the literary Urdu of Dihlī. This is no doubt the reason for his *takhalluṣ Nāsikh* "abrogator". He was born in Fayḍābād (Fayzabad), and became the adopted son and heir of a tent-maker, Khudā Bakhsh. He studied Persian and Urdu, and took Sawdā [*q.v.*] as his model in poetry. His formative years were spent at the court of a nobleman Mīrzā Ḥadjdjī, where he was able to indulge his pre-occupation with language. His relations with other patrons were not so friendly, and at times he feared for his life. Moreover, Khudā Bakhsh's real sons resented what they considered the poet's depriving them of their rightful inheritance. Nevertheless, Nāsikh soon achieved fame as a poet in both Urdu and Persian, as a teacher and as a corrector of other men's poetry, especially in respect of their language. Nawnahārwī (190-7) lists 86 poets as his pupils.

Nāsikh came on the scene when the establishing and standardising of Urdu as the literary language of Indian Muslims was developing, especially in Lucknow, to which political events had led many Dihlī poets to emigrate. Nāsikh became the leader of language reform, aimed at replacing many idioms current in Dihlī by others considered superior, particularly for the use of poets, it is in this that Nāsikh's poetry gained importance: it constitutes a show-case for the reformed language. It consists of three *dīwāns* and a handful of *mathnawīs*. His favourite poetical form was *ghazal*, but he also wrote shorter pieces such as quatrains, chronograms, didactic poems and gnomic verse (*tamthīliyyāt*). He did not write *ḳaṣīdas* in Urdu, though it was often said that almost all his poetry is *ḳaṣīda*-like in tone. He was a master of poetic technique. Such was his reputation that it was claimed that mss. and editions of his poetry are probably more numerous than those of any other Urdu poet. There is also a Persian *dīwān*, written in uncomplicated style.

The same cannot be said of his Urdu style, and this may account for the decline of his reputation in the 20th century. His failings are clearly explained by Muhammad Sadiq in his *A history of Urdu literature* (134-7). He says: "Nasikh is one of those poets who make up in ingenuity for what they lack in inspiration". Sadiq also mentions his "excessive interest in conceits and other artificialities", stating that one rarely hears a personal note. The poet is also accused of being "excessively devoted to difficult rhymes". Saksena (101) refers to his "florid and ornate poetry, full of rhetorical embellishments, metaphor, hyperbole and far-fetched similes". But he describes him (102) as the founder of the Lucknow School.

His reform of the Urdu language include the

following matters: the elimination of Hindi words, and preference for those of Arabic and Persian origin; determination of the gender of nouns, which had been vague from the days of Dakhani Urdu, and of the spelling of common words, particularly in the use of long or short vowels. Thus *idhar* (here/hither) and *udhar* (there/thither) were preferred to *īdhar* and *ūdhar*.

Nāsikh also wrote, in Persian, a very short treatise on Urdu rhyme, *Risāla-yi-ḳāfiya*, of no great importance.

Bibliography: For a detailed study of Nāsikh, see Shabīb al-Ḥasan Nawnahārwī, *Nāsikh: Tadjziya wa taḳdīr* Lucknow 1975. A shorter study is the 130-page Introduction to selected verse, Rāshid Ḥasan Khān, *Intikhāb-i-Nāsikh*, New Delhi 1972. For shorter accounts, see Muhammad Sadiq, *A history of Urdu literature*, Oxford 1962, 17, 133-6, and Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 17, 101-6. Among many editions of his *dīwāns*, the one published in Lucknow in 1923 may be recommended. (J.A. HAYWOOD)

AL-**NĀSIKH** WA 'L-**MANSŪKH** [see NASKH].

NASĪM, DAYĀ SHANKAR KAWL (1811-32), a Kashmīrī paṇḍit who studied poetics under the *ghazal* poet of Lucknow Ātish [*q.v.* in Suppl.]. His fame rests entirely upon one poem, a romance called *Gulzār-i Nasīm*, composed when he was 22. It greatly resembles Mīr Ḥasan's *Siḥr al-bayān*, and is generally awarded the second place among Urdū poetic romances. Nasīm also translated the Arabian Nights into Urdū. Nasīm is among the great Urdū *mathnawī* [*q.v.*, 4. in Urdu] (*mathnawī* in the sense of poetic romance) writers, and is one of the very few Urdū authors who were Hindūs.

NASĪM-OGHLU [see AḲ ḤIṢĀRĪ].

AL-**NĀṢIR** [see AL-UṬRŪSH].

AL-**NĀṢIR**, honorific of the fourth sovereign of the dynasty of the Almohads [see AL-MUWAḤḤIDŪN], ABŪ ᶜABD ALLĀH MUḤAMMAD B. YAᶜḲŪB AL-MANṢŪR B. YŪSUF B. ᶜABD AL-MUᵓMIN. He was proclaimed on the death of his father on 22 Rabīᶜ I 595/25 Jan. 1199. The beginning of his reign was marked by the suppression of a rising led by an agitator in the mountainous country of the Ghumāra [*q.v.*] and a long stay at Fās, during which the rebuilt a part of the wall of the *ḳaṣaba* of the city. Hearing of the rising of Yaḥyā b. Isḥāḳ Ibn Ghāniya [see GHĀNIYA, BANŪ] in Ifrīḳiya, he set out for the eastern part of his empire and laid siege to the town of Mahdiyya [*q.v.*] which was taken on 27 Djumādā I 602/ 9 Jan. 1206. He returned to Morocco in the following year, leaving as his deputy in Ifrīḳiya the *shaykh* Abū Muḥammad ᶜAbd al-Wāḥid b. Abī Ḥafṣ al-Hintātī, ancestor of the Ḥafṣids [*q.v.*]. In 599/1202-3 he had despatched from Algiers against Majorca [see MAYŪRḲA], which had belonged to the Banū Ghāniya since the period of the last Almoravids, a fleet which took the island; this remained in Muslim hands till 627/1230. In 607/1211, al-Nāṣir sent an expedition to Spain which ended in a disaster for the Muslim troops at Las Navas de Tolosa [see AL-ᶜIḲĀB] on 15 Ṣafar 609/16 July 1212. This severe reverse deeply affected al-Nāṣir, who returned to Morocco and made his subjects take the oath of allegiance to his son Yūsuf. He then retired to his palace. He died at Rabat (Ribāṭ al-Fatḥ [*q.v.*]) on 10 Shaᶜbān 610/25 Dec. 1213. According to some chroniclers, he died a violent death on the same date in Marrakesh, his capital, the victim of a conspiracy hatched by his viziers.

This ruler, whose reign marks the beginning of the decline of the Almohads, left behind virtually nothing of lasting memory, and no inscription in his name seems even to have been carved at Marrakesh, where, on the night of 11 Rabīᶜ I 607/2-3 September 1210, the Ḳayṣāriyya was devastated by a catastrophic fire. It is nevertheless recorded that he built a workshop for coining money at Fās.

Bibliography: See that for AL-MUWAḤḤIDŪN. (E. LÉVI-PROVENÇAL)

AL-**NĀṢIR**, the name of two Ayyūbid sultans.

I. AL-MALIK AL-NĀṢIR ṢALĀḤ AL-DĪN DĀWŪD B. AL-MALIK AL-MUᶜAẒẒAM, born in Djumādā I 603/ December 1205) in Damascus.

After the death of his father at the end of Dhu 'l-Ḳaᶜda 624/November 1227 Dāwūd succeeded him on the throne of Damascus and the Mamlūk ᶜIzz al-Dīn Aybak acted as regent. Dāwūd's uncle however, covetous of territory, did not leave him long in peace. Al-Malik al-Kāmil [*q.v.*] first of all claimed the fortress of al-Shawbak [*q.v.*], and when it was refused him he occupied Jerusalem, Nābulus and other places (625/1228). In this perilous position, Dāwūd appealed to another uncle al-Malik al-Ashraf, who administered the Ayyūbid possessions in Mesopotamia. The latter came to Damascus, but then took al-Kāmil's side and arranged with him a formal division of the whole kingdom. By the arrangement between the two brothers, al-Ashraf was to receive Damascus and Dāwūd Ḥarrān, al-Raḳḳa and Ḥimṣ, while al-Kāmil took southern Syria with Palestine, and Ḥamāt was left to Dāwūd's brother al-Malik al-Muẓaffar. But when Dāwūd would not consent to this, al-Ashraf began to besiege Damascus. After al-Kāmil had concluded peace with the Emperor Frederick II, he joined al-Ashraf and after a three months' siege, forced his nephew to yield (Shaᶜbān 626/June-July 1229), whereupon al-Ashraf was recognised as lord of Damascus under al-Kāmil's suzerainty while Dāwūd had to be content with al-Karak [*q.v.*], al-Shawbak and several other places. In spite of this unfriendly treatment, Dāwūd remained loyal to al-Kāmil when the other Ayyūbids combined against him, and entered his service in Egypt. Soon after al-Kāmil accompanied by Dāwūd had taken Damascus, he died in Radjab 635/March 1238 and Dāwūd, whom al-Kāmil had appointed governor of Damascus, had to return to al-Karak. In Egypt, al-Kāmil's son al-Malik al-ᶜĀdil was recognised as his successor and appointed his cousin al-Malik al-Djawād Yūnus governor of Damascus. When Dāwūd tried to assert his claims to Damascus, he was defeated at Nābulus. In the following year Yūnus, who did not feel secure against al-ᶜĀdil, exchanged Damascus with his cousin al-Malik al-Ṣāliḥ Ayyūb for Sindjār, al-Raḳḳa and ᶜĀna. This pleased neither al-ᶜĀdil nor Dāwūd, so they joined forces for an attack on Ayyūb.

The events that followed are related in AL-MALIK AL-ṢĀLIḤ NADJM AL-DĪN AYYŪB, so that the reader may be referred to it. After Dāwūd had lost all his possessions except al-Karak, he appointed his youngest son al-Malik al-Muᶜaẓẓam ᶜĪsā as his deputy and fled to Aleppo (647/1249-50), where he was kindly received by al-Malik al-Nāṣir Yūsuf (see below). His private fortune in the form of valuable jewels, valued at least 100,000 *dīnārs*, he entrusted to the care of the caliph al-Mustaᶜṣim [*q.v.*], who acknowledged the receipt of them but never could bring himself to restore the treasure entrusted him. Soon afterwards, Dāwūd's

two older sons, who had felt themselves neglected, turned to al-Malik al-Ṣāliḥ Ayyūb and offered him al-Karak in return for fiefs in Egypt, which offer the latter gladly accepted. Alleging unfavourable reports about Dāwūd, al-Malik al-Nāṣir Yūsuf had him brought to Ḥimṣ in the beginning of Shaʿbān 648/October 1250 and put under arrest. In 651/1253-4, he was released on the intercession of the caliph, on condition that he was not to stay in any lands under the rule of al-Malik al-Nāṣir Yūsuf. He therefore wanted to go to Baghdād, but was not admitted into the city. He then lived for a time very wretchedly in the region of ʿĀna and al-Ḥadītha until he found a place of refuge in al-Anbār. His appeals to the caliph were not answered; finally, however, the caliph obtained for him permission to settle in Damascus. After several unsuccessful efforts to get back his property in Baghdād which had been confiscated, he was in the desert when he was taken prisoner by al-Malik al-Mughīth, then lord of al-Karak and al-Shawbak, and brought to al-Shawbak. As the caliph thought he could be of use to him in the impending fight with the Mongols, he sent an envoy to al-Shawbak to fetch him; the envoy was bringing him back to Damascus when he heard of Hūlāgū's capture of Baghdād; he thereupon left Dāwūd who went to al-Buwayḍāʾ, a village near Damascus. Here he died of the plague on 27 Djumādā I 657/21 May 1259. Abu 'l-Fidāʾ speaks highly of Dāwūd's eloquence and poetical gifts.

II. AL-MALIK AL-NĀṢIR, ṢALĀḤ AL-DĪN YŪSUF, often referred to as al-Nāṣir Yūsuf, the last Ayyūbid ruler of Aleppo and Damascus (ruled 634-58/1236-60).

Born in 627/1230, he came to the throne as a child, owing to his father al-ʿAzīz Muḥammad's premature death, and his long reign was a troubled and ultimately tragic one, for he died in the autumn of 658/1260 as a prisoner of the Mongols. His reign falls into three phases: (i) the regency of his grandmother Ḍayfa Khātūn, 634-40/1236-42; (2) the ascendancy of the *amīr* Shams al-Dīn Luʾluʾ al-Amīnī, 640-8/1242-51; and (3) his fully independent rule, 648-58/1251-60. The first two phases were successful and even triumphant; his dominions grew until by 648/1250 he controlled almost the whole of Syria and Diyār Muḍar. But these achievements were lost in his last decade of rule and by the time the Mongols appeared in Syria, his régime was on the verge of disintegration.

Ḍayfa Khātūn proved a vigorous and effective regent, whose power was never challenged despite Islam's rejection of a legitimate role for women in public affairs; she wielded in fact far greater real power than the more famous Shadjar al-Durr [*q.v.*]. Her main task was to preserve Aleppo's autonomy in the period of disorder around the death of al-Malik al-Kāmil [*q.v.*], having already before the latter's death allied with al-Malik al-Ashraf Mūsā of Damascus and with the Saldjūḳs of Rūm, so that Kay Khusraw II (634-43/1237-46 [*q.v.*]) was formally recognised as al-Nāṣir's suzerain, including on the coinage of Aleppo. She also fought off the expansionist efforts of the Atabeg of Mawṣil, Badr al-Dīn Luʾluʾ [*q.v.*] and the ravages of undisciplined bands of Khwārazmian troops, the remnants of Djalāl al-Dīn Mingburnu's [*q.v.*] army, not definitively suppressed till 640/1242.

But the hopes of Ḍayfa Khātūn that by her death (640/1242), her grandson's patrimony would be secure, proved illusory; the Rūm Saldjūḳ allies of Aleppo were crushed by the Mongols at Köse Dagh [*q.v.*] (641/1243), bringing Mongol raiders into the fringes of northern Syria. More immediately pressing, however, over the next seven years was Aleppo's mercurial relationship with al-Malik al-Ṣāliḥ Ayyūb of Egypt, whose ambitions embraced not only Damascus but also al-Djazīra. The *amīr* Shams al-Dīn Luʾluʾ accordingly allied with the rulers of Ḥimṣ, Damascus and even the Franks of Acre, and the distraction of the Crusade of King Louis IX of France enabled Aleppo to consolidate its position in northern Syria, so that by 648/1250 al-Malik al-Nāṣir entered Damascus, which was to remain his capital for the rest of his reign.

His principality now almost replicated that of Nūr al-Dīn a century before, with a centralised polity and recognition of his overlordship by e.g. the local, autonomous rulers of Diyār Bakr and Diyār Rabīʿa. At this point still only 18 years old, he remained under the influence of Shams al-Dīn, but the latter was killed in an abortive invasion of Egypt (winter of 648/1251), depriving the ruler of his wisest and most trusted counsellor; for the rest of his reign, he was to be reduced to passivity and indecision. Despite peace with the Mamlūk régime in Egypt, his freedom of action was seriously reduced by the factionalism of his Turkish *mamlūks* (including those of the Baḥriyya *mamlūks* of Egypt who in 651/1254 fled to his lands under Baybars al-Bunduḳdārī [*q.v.*]) and the Kurdish elements (including the Ḳaymariyya and Shahrazūriyya) among his troops.

By now, the shadow of the Mongols was becoming threatening, especially with the election of Mönggke as Great Khan in 1251 and the decision to resume expansion in both China and the Middle East. The Khan's brother Hülegü [*q.v.*], having sacked Baghdād in 656/1258, marched towards Syria in the following year, and in Ṣafar 658/January 1260 captured and sacked Aleppo. Al-Nāṣir could only abandon Damascus and flee to Gaza, where he sought an alliance (in effect his submission) with the Mamlūks. The towns of central and southern Syria submitted to the Mongols, and despite Hülegü's withdrawal to Ādharbaydjān when Mönggke died in August 1259, al-Nāṣir lost his nerve and surrendered to the Mongol commander in Syria, Kitbuḳa. He was taken to Marāgha and at first treated well, but on the news arriving of the Mongol defeat at ʿAyn Djālūt [*q.v.*], he and every male member of his family except for his son al-ʿAzīz Muḥammad were put to death; the Ayyubid princes who henceforth remained in Syria at Ḥimṣ, Ḥamāt and Karak were in effect Mongol puppets.

Al-Nāṣir was a notable patron of religious architecture, although, oddly enough, he built nothing in his own name at Aleppo. But Damascus saw several major foundations during the decade of his rule there, despite the strained financial situation, including a

madrasa intra-muros to the north of the Umayyad Mosque and a (no longer extant) *dār al-ḥadīth-ribāṭ* complex said to have been the most elaborate religious edifice founded by any Ayyūbid prince in the city.

AL-**NĀṢIR**, the regnal title of five Mamlūk sultans:

1. al-Nāṣir Muḥammad b. Ḳalāwūn, *regn.* 693/1293-4, 698-708/1299-1309, 709-41/1310-41.
2. al-Nāṣir Aḥmad b. al-Nāṣir Muḥammad, *regn.* 742-3/1342.
3. al-Nāṣir Ḥasan b. al-Nāṣir Muḥammad, *regn.* 748-52/1347-51, 755-62/1354-61.
4. al-Nāṣir Faradj b. Barḳūḳ, *regn.* 801-8/1399-1405, 808-15/1405-12. See FARADJ.
5. al-Nāṣir Muḥammad b. Ḳāʾitbāy, *regn.* 901-4/1496-8.

1. AL-NĀṢIR MUḤAMMAD B. ḲALĀWŪN (684-741/1285-1341). His mother, Ashlūn Khātūn, was the daughter of a Mongol notable, Shaktāy, who migrated from Anatolia to Egypt in 675/1276. This ancestry may explain why until 715/1315-16 al-Nāṣir and his Mamlūks wore their hair long in the Mongol fashion. When his elder brother, al-Ashraf Khalīl [*q.v.*] was murdered in Muḥarram 693/December 1293, al-Nāṣir, aged 8, was installed as sultan by the loyalist faction headed by Kitbughā al-Manṣūrī, who took office as his vicegerent (*nāʾib al-salṭana*) but usurped the throne in Muḥarram 694/December 1294. Lādjīn [*q.v.*] who dethroned Kitbughā in Muḥarram 696/November 1296, exiled al-Nāṣir to al-Karak in Ṣafar 697/January 1298. He was recalled to Cairo in Djumādā I 698/February 1299, and again enthroned as sultan. The actual government was headed by two senior *amīrs*, Salār al-Manṣūrī the vicegerent and Baybars al-Djāshnikīr the steward (*ustādār*). The sultan accompanied the army which was routed by the Īlkhān Ghāzān [*q.v.*] at Wādī al-Khāzindār in Syria (Rabīʿ I 699/December 1299), and participated also in the expedition against a second Mongol invasion, which was defeated at Shaḳhab (Ramaḍān 702/April 1303). Ghāzān's death in the following year marked the virtual end of the threat to the Mamlūk sultanate from the Mongols. The conquest of the island of Arwād (i.e. Rhodes) in Muḥarram 702/August-September 1302 finally deprived the Franks of a base from which to menace Syria-Palestine. Al-Nāṣir's second reign thus saw the elimination of the external dangers which had nurtured the rise of the Mamlūks to military and political dominance. Meanwhile, the young sultan was building up his own military household, the Nāṣiriyya Mamlūks, and becoming increasingly restive under the duumvirate of Salār and Baybars. An attempt in Muḥarram 707/July 1307 to use the Nāṣiriyya in a military coup miscarried, and the sultan was formally reconciled with the regents. He now had recourse to another expedient. In Ramaḍān 708/February 1309 he announced his intention of making the Pilgrimage, and left Cairo with an escort of Nāṣiriyya. On reaching al-Karak, he garrisoned the fortress with his Mamlūks, and perhaps notified the regents of his abdication. In any event, the throne was vacant, and Baybars was recognised as sultan with the title of al-Malik al-Muẓaffar, while Salār continued in office as vicegerent.

Under the surface, deep divisions existed. The most powerful group in Cairo were the Burdjiyya, the Circassian Mamlūks recruited by Ḳalāwūn. They had insisted on the election of their fellow-countryman, Baybars, as sultan instead of the Mongol, Salār. This ethnic polarisation appeared also in Syria, where the new régime was supported by the Circassian governor of Damascus, Āḳḳūsh al-Afram, while Ḳabdjaḳ (i.e. Ḳipčaḳ) al-Manṣūrī of Ḥamāt, Asandamur Kurdjī (Georgian) of Tripoli, and Ḳarāsunḳur al-Manṣūrī of Aleppo secretly corresponded with al-Nāṣir, who left al-Karak on 1 Shaʿbān 709/4 January 1310. He entered Damascus without meeting any resistance 11 days later. Baybars abdicated and fled, and on 2 Shawwāl 709/5 March 1310 al-Nāṣir was again enthroned as sultan.

During the 31 years that followed, al-Nāṣir was concerned to secure his own position, and to establish his personal autocratic rule. He proceeded first to eliminate his opponents. Baybars was brought to Cairo on 14 Dhu 'l-Ḳaʿda 709/15 April 1310, and forthwith strangled. Salār was allowed to retire to al-Shawbak but was soon summoned to Cairo, arrested and starved to death. The Syrian kingmakers were seen as potential rivals. Although they had been rewarded for their assistance, and even Āḳḳūsh was pardoned, they quickly disappeared. Ḳabdjaḳ died in 710/1310. Asandamur was arrested and imprisoned in

Cairo in the same year. Ḳarāsunḳur and Āḳḳūsh prudently fled early in 712/1312 to the Īlkhān Öldjeytü [*q.v.*], who made a final and abortive raid into Syria on their behalf. Al-Nāṣir steadily increased his Mamlūk household, and promoted its members, e.g. in Shawwāl 709/March 1310 he created 32 new *amīrs*. He also carried out the difficult operation, which had been fatal to some earlier sultans, of substituting his own Mamlūks for veteran *amīrs* in the great offices. The key post of vicegerent of Egypt was given to Arghūn al-Nāṣirī in Djumādā I 712/September 1312, while another of his Mamlūks, Tankiz al-Ḥusāmī al-Nāṣirī, had been appointed governor of Damascus in the previous month. Two years later the other Syrian governors were ordered to communicate with the sultan only through Tankiz, thus making him virtually governor-general of all Syria. To strengthen the financial basis of his régime, al-Nāṣir carried out a cadastral survey (*rawk*) of his dominions, followed by a re-allocation of the assignments of revenue (sing. *iḳṭāʿ* [*q.v.*])—a measure which had been disastrous for Lādjīn. A pilot survey of the province of Damascus (713/1313-14) was followed by the great *rawk* of Egypt (completed 716/1316), and by similar operations in Tripoli (717/1317) and Aleppo (725/1325). The result was to increase the share of assignments held by the sultan's fisc (*khāṣṣ*) from 1/6 to 5/12, while the remaining 7/12 were allocated to the *amīrs* and the *Ḥalḳa* [*q.v.*]. The central place of the fisc in the sultan's administrative system is indicated by the unusual prominence in the chronicles of two of its supervisors (sing. *nāẓir al-khāṣṣ*), who were not Mamlūks but civilians and converts from Christianity. Karīm al-Dīn al-Kabīr held office from early in the reign until Rabīʿ II 723/April 1323, when he was suddenly disgraced and arrested. Al-Nashw was supervisor of the fisc from Radjab 732/April 1332 to Ṣafar 740/August 1339, when he too lost the sultan's favour, and was put to death. The vast profits of office accumulated by both these officials were sequestrated when they fell.

Throughout his third reign, al-Nāṣir had a series of confidential advisers, who acquired great wealth from the sultan's lavish bounty. Two of them held great offices of state: Tankiz al-Ḥusāmī, governor of Damascus to 740/1340, with whom al-Nāṣir was constantly in correspondence, and Arghūn al-Nāṣirī, vicegerent of Egypt until 727/1326. Two others, Baktamur al-Muʿaẓẓamī and Ḳawṣūn al-Nāṣirī, held the high domestic office of cupbearer (*sāḳī*) in the middle and last years of the reign respectively. Ḳawṣūn lived in perpetual rivalry with another of the sultan's favourites, Bashtāk al-Nāṣirī. Their careers give some indication of the sultan's precarious favour. Tankiz was, after long years of service, imprisoned and put to death; Arghūn, more fortunate, was in effect banished as governor of Aleppo, while Baktamur died with his son in suspicious circumstances. Ḳawṣūn and Bashtāk succeeded in briefly outliving their master. A less intimate but safer friendship was enjoyed by the loyal and somewhat obsequious al-Muʾayyad Ismāʿīl (Abu 'l-Fidā, [*q.v.*]), the Ayyūbid prince for whom al-Nāṣir revived the autonomous sultanate of Ḥamāt. Still further outside the court circle but nevertheless influential in Syrian affairs was the great tribal chief of Āl Faḍl, *amīr al-ʿArab* Muhannā b. ʿĪsā, one of the sultan's principal agents for the purchase of Arabian horses.

Unlike his successful predecessors in the Mamlūk sultanate, al-Nāṣir did not owe his position and authority to leadership in war. In a Syro-Egyptian state no longer threatened by external enemies, he built up his autocratic power by the force of his pertinacious, devious and ruthless personality. The security he established for himself is shown by the fact that, unlike any other sultan, he made the Pilgrimage to Mecca three times (712/1313, 719/1320, 732/1332). He confirmed the hereditary nature of the sultanate, although competing *amīrs* usurped the power under the later Ḳalāwūnids.

2. AL-NĀṢIR AḤMAD (742-3/1342). He was the son of al-Nāṣir Muḥammad by a concubine, the singing-woman Bayāḍ. From the age of about 10 he lived almost continuously in the castle of al-Karak. He was explicitly rejected as heir to the sultanate by his dying father (18 Dhu 'l-Ḥidjdja 714/4 June 1341). The *amīr* Ḳawṣūn, ruling in the name of the infant al-Ashraf Kudjuk (Küčük), fearing an attack, sent an expeditionary force against al-Karak under the *amīr* Ḳuṭlūbughā al-Fakhrī (Rabīʿ II 742/October 1341), who, however, went over to Aḥmad, and proclaimed him sultan in Damascus (Radjab 742/January 1342). In Cairo, Ḳawsūn was overthrown, Kudjuk deposed, and Aḥmad invited to come to his capital. He was reluctant to leave al-Karak, and only after much pressure did he arrive in Cairo, in Arab dress and with a small retinue (28 Ramaḍān 742/6 March 1342). His enthronement on 10 Shawwāl/19 March was a splendid occasion, attended by the notables of both Egypt and Syria. However, he profoundly alienated the magnates who had installed him by secluding himself in the Citadel with a circle of favourites from al-Karak, on whom he entirely relied. On 2 Dhu 'l-Ḥidjdja 742/9 May 1342 he left for al-Karak at a day's notice, taking with him the two chief financial and secretarial officials as well as the regalia, his father's treasures, horses, cattle and sheep. Again secluded in al-Karak, he neglected state business and refused to return. The magnates thereupon deposed him, and installed his brother, al-Ṣāliḥ Ismāʿīl, as sultan. A series of military expeditions sent against al-Karak ended in Ahmad's capture. He was put to death on 6 Rabīʿ I 745/18 July 1344 at the age of 26.

Bibliography: Shudjāʿī, *Taʾrīkh al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn al-Ṣāliḥī wa-awlādihi*, ed. Barbara Schäfer, i, 143-275, ii, 181-311; Ṣafadī, *al-Wāfī bi 'l-wafayāt*, viii, 86-90; Maḳrīzī, *K. al-Sulūk*, ii/3, 593-619; Ibn Taghrībirdī, Cairo, x, 50-72; Weil, *Chalifen*, iv, 436-51.

3. AL-NĀṢIR ḤASAN, (748-52/1347-51, 755-

62/1354-61). He was the son of al-Nāṣir Muḥammad by a concubine. He was enthroned at the age of 11 on 14 Ramaḍān 748/18 December 1347, after his brother, al-Muẓaffar Ḥādjdjī, had been overthrown and killed by a conspiracy of the magnates. A council of regency was set up, but the real power was held by two brothers, the *amīrs* Baybughā Urus and Mandjak al-Yūsufī, together with Shaykhūn (or Shaykhū) al-ʿUmarī, all three veterans of al-Nāṣir Muḥammad's Mamlūk household. On 24 Shawwāl 751/25 December 1350 Ḥasan took advantage of the absence of Baybughā on Pilgrimage and Shaykhūn on a hunting expedition to declare himself of age, and to assume full sovereign powers. This period of personal rule was brief. He was deposed by *amīrs* who feared that they were threatened by him, and his brother, al-Ṣāliḥ Ṣāliḥ, was installed as sultan (28 Djumādā II 752/2 August 1351). During this reign, the Mamlūk realm was ravaged by the Black Death (*al-wabāʾ*), which reached Syria in Djumādā I 748/August 1347, and spread in Egypt throughout 749/1348-9. Another revolt of the *amīrs* brought about the deposition of Ṣāliḥ and the restoration of Ḥasan on 2 Shawwāl 755/20 October 1354. He was, however, under the domination of Shaykhūn and another Nāṣirī veteran, Ṣarghatmush. The former died late in 758/1357, and on 20 Ramaḍān 759/26 August 1358 Ḥasan arrested Ṣarghatmush, who had been plotting his overthrow. A fight followed between the Royal Mamlūks and those of Ṣarghatmush, and the former were victorious. Ḥasan now sought to secure his position by promoting his own Mamlūks and also, most unusually, the descendants of Mamlūks (*awlād al-nās* [*q.v.*]) to key positions. Growing resentment between the sultan and his own Mamlūk, Yalbughā al-ʿUmarī, led to an armed clash in which Ḥasan was defeated. He was captured and put to death on 9 Djumādā I 762/17 March 1361 by Yalbughā, who installed Ḥādjdjī's son, al-Manṣūr Muḥammad. Al-Nāṣir Ḥasan left as his chief memorial his beautiful *madrasa*-mosque in Cairo.

Bibliography: Ṣafadī, *al-Wāfī bi 'l-wafayāt*, xii, 266-7 (first reign only); Maḳrīzī, *K. al-Sulūk*, ii/3, 745-843, iii/1, 1-63; Ibn Taghrībirdī, Cairo, x, 187-233, 302-17; Weil, *Chalifen*, iv, 466-89, 500-5.

5. AL-NĀṢIR MUḤAMMAD (901-4/1496-8). He was the son of al-Ashraf Ḳāʾitbāy [*q.v.*] by a Circassian concubine, Aṣalbāy, and born in Shawwāl 887/November-December 1482. When his father died, the ascendancy in Cairo was held by the faction of Ḳānṣawh Khamsumiʾa min Ṭarābāy and Kurtbāy al-Aḥmar, who had recently expelled the chief of the rival faction, Āḳbardī al-Dawādār, Ḳāʾitbāy's cousin. Ḳānṣawh Khamsmiʾa had designs on the throne, but on the day before Ḳāʾitbāy's death, 26 Dhu 'l-Ḳaʿda 901/6 August 1496, he brought about the accession of al-Nāṣir Muḥammad. He was himself appointed *atābak*, while his accomplice, Kurtbāy, accumulated the offices of *wazīr*, *ustādār* and chief *kāshif*. The appearance of Āḳbardī at Gaza, and the mutual sympathy between him and the young sultan, provoked Ḳānṣawh Khamsumiʾa to attempt a coup. On 28 Djumādā I 902/1 February 1497 al-Nāṣir was formally deposed by the caliph al-Mutawakkil, and Ḳānṣawh Khamsumiʾa usurped the sultanate. Al-Nāsir, however, held the Citadel, and aided by his maternal uncle, another Ḳānṣawh, maintained a stout resistance, in which artillery and firearms were used by both sides. Seriously weakened by desertions to the sultan, Ḳānṣawh Khamsumiʾa was defeated, and on 1 Djumādā II/4 February he fled, while al-Mutawakkil obligingly reinstated al-Nāṣir. The power behind the throne was the sultan's uncle, who held only a minor domestic office. Ḳānṣawh Khamsumiʾa unsuccessfully attempted another coup on 18-19 Djumādā II/21-22 February, and again fled. After fighting with Āḳbardī at Khan Yūnus, he was put to death Aḳbardī returned to Egypt, and accumulated the offices of *amīr silāḥ*, *dawādār*, *wazīr*, *ustādār* and chief *kāshif*. A new factionalism developed in which Āḳbardī confronted Ḳānṣawh, who was supported by the former partisans of his namesake. Āḳbardī attempted a rising on 4 Ramaḍān 902/6 May 1497, was defeated, and fled to Upper Egypt. Urged by the sultan to return as a liberator, he entered Cairo on 25 Dhu 'l-Ḳaʿda/25 July, accompanied by uncouth tribesmen of Banū Wāʾil and Banū ʿAzzāla. Thereupon Ḳānṣawh brought in tribesmen of the Banū Ḥarām, and disorder ensued. Again the Citadel was besieged, but by late Dhu 'l-Ḥidjdja/August Āḳbardī was in flight to Syria. Ḳānṣawh was now appointed *dawādār* and subsequently *wazīr* and *amīr silāḥ*. His relations with his nephew deteriorated, and in Radjab 903/February-March 1498 the sultan's mother made them swear mutual loyalty, but to no avail. On 15 Rabīʿ I 904/31 October 1498 al-Nāṣir was assassinated, probably at the instigation of *amīrs* of his father's Mamlūks in league with Ḳānṣawh, who was duly elected sultan two days later.

Although al-Nāṣir was a transient and insignificant figure, his reign presents points of interest. It is notable for the unprecedented use of firearms and artillery in factional warfare. The sultan himself had a force of 500 black slaves carrying firearms—an innovation which alarmed the antiquated Mamlūk cavalrymen. The murder of the black commander, Faradj Allāh, in a skirmish with Mamlūks on 27 Djumādā II 903/20 February 1498, and the subsequent dispersal of the force (perhaps by sale to the Ottomans) probably marked the turning point in the sultan's fortunes. Another feature of interest is the employment of Arab tribal warriors by the factional leaders, anticipating the polarisation of Ottoman Egypt into Niṣf Saʿd and Niṣf Ḥarām.

(P.M. HOLT)

AL-**NĀṢIR** B. ʿALENNĀS (the last name is also written ʿAlnās, ʿAnnās and even Ghilnās by Ibn ʿIdhārī), fifth ruler of the Ḥammādid dynasty, succeeded his cousin Buluggin b. Muḥammad in 454/1062. His reign marks the apogee of the little Berber kingdom founded by Ḥammād [*q.v.*]. The ephemeral rise of the Ḥammādids was the immediate result of the downfall of their relations and neighbours, the Zīrids of Ifrīḳiya, the first victims of the Hilālī invasion [see HILĀL, BANŪ]. On his accession, al-Nāṣir, who lived in the Ḳalʿat Banī Ḥammād [*q.v.*], was already ruler of a little kingdom, the chief towns of which were Ashīr, Miliana, Algiers, Hamza (Buira), Ngaus and Constantine. Shortly afterwards, he regained Biskra, whose governor had rebelled against Buluggīn; but his chief hope of extending his territory lay in the decline of the kingdom of Ḳayrawān.

The abandonment of the old capital by the Zīrid al-Muʿizz [*q.v.*] and his flight to al-Mahdiyya in 449/1057 had left Ifrīḳiya a prey to anarchy. The country districts were in the hands of the Arabs, and the towns had chosen their own rulers; on all sides governors were in rebellion; leaders of the tribes imposed their authority on the threatened citizens; some towns turned to the Ḥammādids who were able to protect them. The people of Ḳasṭīliya [*q.v.*] for example sent a deputation to al-Nāṣir to convey him their homage; the people of Tunis did the same. At their request, the Ḥammādid sent them as governor ʿAbd al-Ḥaḳḳ of the Ṣanhādja family of the Banū Khurāsān. The latter worked wonders; he negotiated agreements with the marauding Arabs which secured the safety of the city. Later, after casting off Ḥammādid suzerainty, he made Tunis the capital of a kingdom.

If the arrival of the invading nomads had meant an immediate accession of strength to al-Nāṣir and an increase of population and economic activity to his capital, they were not without danger as neighbours. The Arabs soon involved him in a dangerous adventure. In 457/1064 the Athbadj, one of their tribes, asked him to help them against their enemies, their brethren the Riyāḥ, who had joined the Zīrid ruler Tamīm [*q.v.*]. Al-Nāṣir agreed, seeing an opportunity to invade and perhaps annex Ifrīḳiya. He put himself at the head of a large army which included Arabs, Ṣanhādja, and even Zanāta, led by the king of Fās, al-Muʿizz b. ʿAṭiyya. The Riyāḥ in their turn received subsidies and arms from al-Mahdiyya. The armies met at Sbība, near the ancient Sufes. From the first, the Zanāta of Fās, won over by the enemy, gave way, which resulted in the rout of al-Nāṣir. With great difficulty, he reached Constantine with 200 men, then the Ḳalʿa, the outskirts of which were systematically sacked by the Arabs.

After this disaster, al-Nāṣir tried to make terms with the prince of al-Mahdiyya; the negotiations failed, perhaps through the fault of the ambassador, and al-Nāṣir, incited again by the Athbadj, resumed hostilities against the unfortunate Zīrid kingdom. He entered Lurbus (the ancient Lorbeus) and Ḳayrawān (460/1067), but these successes led to nothing; he had to abandon them again as he could not hold his conquests. These adventures, into which he was dragged by the Arabs and which brought him no lasting advantage, lasted for some then years. In 470/1077 al-Nāṣir made peace with the Zīrid Tamīm and gave him his daughter in marriage.

The Arab scourge which had ruined the kingdom of Ifrīḳiya began now to threaten seriously the Ḥammādid kingdom. The Zanāta, hereditary enemies of the Ṣanhādja lords of the Ḳalʿa, found among the immigrant nomads allies always ready to resume the conflict. In 468/1075, the Zanāta chief Ibn Khazrūn, supported by the Arab Banū ʿAdī of Tripolitania, seized Msīla and Ashīr [*q.vv.*]. Al-Nāṣir succeeded in driving him back to the desert where, drawing him into a trap, he had him murdered. He sent his son al-Manṣūr against the Zanāta Banū Tūdjīn, who had joined the Banū ʿAdī and were laying waste the country districts of the central Maghrib. The rebels were caught and tortured.

The Athbadj Arabs themselves, of whom al-Nāṣir had hoped to make valuable auxiliaries, proved most undesirable neighbours. Although he seems to have put down—not without cruelty—the majority of the revolts, life in his ancestral capital became more and more difficult from year to year. This decided him to select another. Occupying the lands of the Bidjāya Berbers, he founded there, on the site of the ancient port of Saldae, a town which was first called al-Nāṣiriyya and later became known as Bidjāya [*q.v.*] (Bougie). There he built the splendid Palace of the Pearl (*Ḳaṣr al-Luʾluʾ*). "Having peopled his new capital he exempted the inhabitants from the *kharādj* and in 461/1069 he settled there himself" (Ibn Khaldūn). The exodus of the Ḥammādid royal family to the coast was caused by the same event as had led the Zīrids of Ḳayrawān to move to al-Mahdiyya: the settlement of the nomad Arabs in Barbary and the insecurity which resulted in the interior. This exodus was only completed under al-Nāṣir's successor, his son al-Manṣūr [*q.v.*], who assumed power at his father's death in 481/1088.

MARÇAIS)

NĀṢIR AL-DAWLA, ABŪ MUḤAMMAD AL-ḤASAN B. ʿABD ALLĀH, a prince of the Ḥamdānid dynasty [*q.v.*]. From the year 308/920-1 he acted as lieutenant to his father, Abu 'l-Haydjāʾ ʿAbd Allāh in the governorship of al-Mawṣil, and on the latter's death in 317/929 succeeded to the leadership of the Ḥamdānid family. Owing to the part played by Abu 'l-Haydjāʾ in the second temporary deposition of the ʿAbbāsid caliph al-Muḳtadir [*q.v.*], the latter, on his restoration, attempted to put an end to the Ḥamdānids' control of al-Mawṣil by appointing a governor unconnected with them. Nevertheless, when this officer died during the same year, al-Ḥasan was confirmed in all his father's holdings.

The Ḥamdānids profited by the rapid decline in the power of the ʿAbbāsids, that set in from this time, to extend their rule; and though they remained tributary to the caliphs, by 332/943-4 they had secured control of most of the Djazīra and of northern Syria. Al-Ḥasan also made two unsuccessful attempts, in 322/934 and 326/938, to add Ādharbāydjān to his dominions. During the early part of this period of expansion, al-Ḥasan was much occupied in the suppression of local rebellions. He was anxious also to remain in the caliph's good graces, and for this reason declined to assist the general Muʾnis al-Muẓaffar [*q.v.*] in his quarrel with al-Muḳtadir, which ended in the latter's death. In 323/935, however, the caliph al-Rāḍī attempted to displace him in the governorship of al-Mawṣil in favour of his uncle Saʿīd. Al-Ḥasan thereupon had Saʿīd murdered; and though al-Rāḍī at first sought to impose his will by force of arms, he was in the end obliged to agree to al-Ḥasan's restoration.

The reign of al-Rāḍī saw the final collapse of the traditional ʿAbbāsid system of government with the appointment of Ibn Rāʾiḳ as *amīr al-umarāʾ* [*q.v.*]. This development resulted in a still greater weakening of the caliph's power; and in 327/938-9 al-Ḥasan made an attempt to withhold his dues, which, however, were promptly exacted by Ibn Rāʾiḳ's successor, Badjkam [*q.v.*]. In 330/941-2 again, when the caliph al-Muttaḳī [*q.v.*] and Ibn Rāʾiḳ (who had meanwhile been restored) fled to al-Mawṣil from Baghdād on its occupation by the brothers al-Barīdī [*q.v.*], al-Ḥasan

had Ibn Rāʾiḳ assassinated, forced the caliph to give him the amīrate together with the *laḳab* Nāṣir al-Dawla, and later married his daughter to the caliph's son. But though he and his more celebrated brother ʿAlī, who was at the same time entitled Sayf al-Dawla [*q.v.*], were able to restore al-Muttaḳī to his capital and drive the Barīdīs back to al-Baṣra, they were almost immediately obliged by a revolt of the Turkish troops under Tūzūn to retire again to al-Mawṣil. Al-Muttaḳī now appointed Tūzūn *amīr* in Nāṣir al-Dawla's place. But his evident helplessness encouraged Tūzūn to abuse his power; and in 332/943-5 the caliph again sought refuge with the Ḥamdānids. Sayf al-Dawla now tried, though without success, to defeat Tūzūn in battle, while al-Ḥasan removed the caliph for greater safety from al-Mawṣil to al-Raḳḳa. After some months, however, al-Muttaḳī was persuaded by Tūzūn's professions of loyalty into returning to Baghdād, only to be met on the way by the *amīr*, who blinded and deposed him. On this Nāṣir al-Dawla again withheld his dues. But Tūzūn and al-Mustakfī [*q.v.*], the new caliph, came against him and forced him to pay. Tūzūn, however, died in 334/945-6, whereupon Nāṣir al-Dawla made a bid to recover the amīrate. But later in this same year Baghdād was occupied by Aḥmad b. Būya Muʿizz al-Dawla [*q.v.*]; and henceforward Nāṣir al-Dawla's career hinged chiefly upon the maintenance of his power against that of the Būyids.

The struggle began immediately. As soon as he was established in Baghdād, Muʿizz al-Dawla led an expedition against the Ḥamdānids, and though Nāṣir al-Dawla forced him to return to the capital by himself occupying the east bank and blockading the Round City, in the end he drove the Ḥamdānid forces out. Nāṣir retired to ʿUkbarā, and from there sued for a peace that should grant him the tributary lordship of all the country north of Takrīt, as well as Syria and Egypt. But a revolt among his Turkish troops forced him to flee before this was concluded, and it was only by the aid of a force sent by Muʿizz al-Dawla that he succeeded in suppressing it. Muʿizz al-Dawla's object in helping him was no doubt to preserve some order in the Ḥamdānid dominions until he should be ready to absorb them. For he now took one of Nāṣir al-Dawla's sons as a hostage for his obedience, and two years later led another expedition against al-Mawṣil. This again came to nothing, however, since Muʿizz al-Dawla was obliged to make peace before attaining his object, owing to the outbreak of trouble in Persia, where his brother required his assistance. Nāṣir al-Dawla now agreed to pay tribute for Diyār Rabīʿa, the Djazīra and Syria, and to have the names of the three Būyids pronounced in the *khuṭba* after that of the caliph throughout this territory.

It was not till 345/956-8 that further trouble arose between the rival potentates. In that year Muʿizz al-Dawla was called away from Baghdād to deal with a revolt, whereupon Nāṣir al-Dawla sent two of his sons to occupy the capital. Muʿizz al-Dawla, however, succeeded in overcoming the rebel; and on his return the Ḥamdānids decamped. Yet in spite of this provocation Muʿizz al-Dawla contented himself with exacting an indemnity and a renewal of Nāṣir al-Dawla's contract to pay tribute, and it was only when Nāṣir al-Dawla withheld the second year's payment that he took further steps against him. He then advanced into his territory, took al-Mawṣil and Niṣībīn, and finally sent a force to al-Raḥba. Nāṣir al-Dawla, who had fled first to Mayyāfāriḳīn [*q.v.*] and then to Aleppo, which was now held independently by Sayf al-Dawla, attempted to make peace. But Muʿizz al-Dawla rejected his advances, and came to an agreement only when Sayf al-Dawla offered to take his brother's place as tributary for al-Mawṣil, Diyār Rabīʿa and al-Raḥba.

Five years later, in 353/964, Nāṣir al-Dawla opened negotiations to recover his position as tributary for these territories. But he included in his demands one for the recognition of his son Abū Taghlib al-Ghaḍanfar as his successor, which Muʿizz al-Dawla was unwilling to grant. He again attacked the Ḥamdānids, occupying both al-Mawṣil and Niṣībīn. But they were more successful in withstanding him on this occasion; and an agreement was arrived at whereby Abū Taghlib undertook the payment of tribute for his father's former holdings.

In 356/967 both Muʿizz al-Dawla and Sayf al-Dawla died. Almost the last action recorded of Nāṣir al-Dawla is the advice he then gave his sons to refrain from attacking Muʿizz al-Dawla's son and successor Bakhtiyār [*q.v.*] till he should have exhausted the resources bequeathed to him. For on the death of Sayf al-Dawla, to whom he had been much attached, Nāṣir al-Dawla lost all interest in life, and so antagonised his family by his avarice that they resolved to take the control of affairs into their own hands. Abū Taghlib, who had in any case taken his place as tributary, and his mother, Nāṣir al-Dawla's Kurdish wife Fāṭima bint Aḥmad, contrived to gain possession of all his property and fortresses; and when Nāṣir al-Dawla attempted to enlist the help of another son, they imprisoned him in the castle of al-Salāma in the fortress of Ardumusht. He died, still in confinement, either the next year, 357/968 or the year after.

Nāṣir al-Dawla's rule was disastrous for the territory over which he had control. The contemporary Ibn Ḥawḳal [*q.v.*] refers in several passages to his ruinous exactions and tyrannical seizures of land (see his descriptions of al-Mawṣil, Balad, Sindjār and Niṣībīn); and Miskawayh notes that by bringing fictitious claims against landowners he would force them to sell to him at low prices, till he became not only the lord, but also the owner, of most of the region of al-Mawṣil.

NĀṢIR AL-DĪN ḲUBAČA [see SIND].

NĀṢIR AL-DĪN AL-ṬŪSĪ [see AL-ṬŪSĪ].

AL-NĀṢIR LI-DĪN ALLĀH, honorific title of several Zaydī *imāms*.

I. Among the Caspian Zaydīs, this title was borne by 1. AL-NĀṢIR AL-KABĪR AL-UṬRŪSH [see ḤASAN AL-UṬRŪSH] and his great-grandson 2. AL-NĀṢIR AL-ṢAGHĪR AL-ḤUSAYN B. AL-ḤASAN B. ʿALĪ. The latter gained for himself a dominion beginning in Hawsam, where he could find associations with the earlier period of Zaydī rule. He laid great emphasis on the religious character of Zaydism; he gave out of the state treasury funds to support people who learned the Ḳurʾān by heart. He was also a poet. After his death (476/1083), his tomb in Hawsam was a much visited place of pilgrimage.

II. Among the Yaman *imāms*, this title was borne by 1. AL-NĀṢIR AḤMAD, son of al-Hādī Yaḥyā and his

brother's daughter Fāṭima; on him, see the next article. All succeeding bearers of the title except the next one: 2. ABU 'L-FATḤ AL-NĀṢIR AL-DAYLAMI, so-called from his first Caspian sphere of activity, were of his family although of different lines. In the Yaman, in contrast to his predecessors, he began operations south of Ṣanᶜāʾ, fell in 447/1055 fighting ᶜAlī al-Ṣulayḥī [see ṢULAYḤIDS] there and was buried near Dhamār. The life of 3. AL-NĀṢIR ṢALĀḤ AL-DĪN was marked by internal strife which ultimately caused his death. In the first half of the 8th/14th century, several *imāms* had disputed the succession. About the middle of the century, his father al-Mahdī ᶜAlī b. Muḥammad attained considerable influence, which was however much reduced in the period before his death at Dhamār in 774/1372. Ṣalāḥ al-Dīn became sole *imām* and advanced as far as the Tihāma against the Rasūlids [*q.v.*]. But when in 793/1391 he died at Ṣanᶜāʾ, his death was concealed for two months on account of the insecurity, and his body was concealed in the castle in a coffin covered with plaster. It was only when rumours of his death reached the Ḳāḍī al-Dawwārī in Ṣaᶜda that the latter arranged for his burial in Ṣanᶜāʾ. The son ᶜAlī b. Ṣalāḥ al-Dīn could only obtain recognition as "Imām of the Djihād" and fell in 840/1336, one of the many victims of the great plague. When in spite of opposition a Zaydī power was once more built up, it was destroyed by the young dynasty of the Ṭāhirids [*q.v.*] from the Tihāma (850-923/1446-1517), especially by its second member ᶜAbd al-Wahhāb b. Dāwūd, from 883/1478, until at the end of the 9th/15th century al-Hādī ᶜIzz al-Dīn b. al-Ḥasan again re-established and extended their power. His son 4. AL-NĀṢIR AL-ḤASAN B. ᶜIZZ AL-DĪN (*ca.* 900-929/1494-1523), who had primarily inherited from his father a love of learning, could only maintain a limited power in the north. He had to put up for a long time with an anti-*imām* al-Manṣūr Muḥammad b. ᶜAlī al-Sarādjī in Ṣanᶜāʾ. 5. AL-NĀṢIR AL-Ḥasan b. ᶜALĪ B. DĀWŪD at the end of the 10th/16th century organised in the north one of the centres of resistance to the Turks, who had been penetrating into the country since 927/1521 and 943/1536, but was taken prisoner by them in 1004/1596-7. Among the pretenders within the family of al-Manṣūr b. al-Ḳāsim (d. 1029/1620), the liberator from the first Turkish conquest, was 6. AL-NĀṢIR MUḤAMMAD B. ISḤĀḲ B. AL-MAHDĪ AḤMAD; he set up first in 1136/1723-4 in the north in the hills of Sufyān among the Banū Bakīl, then in 1139/1726-7 away in the south at Ẓafār, but had finally to submit to his cousin's son al-Manṣūr al-Ḥusayn b. al-Ḳāsim b. al-Ḥasan b. al-Mahdī Aḥmad and died in 1167/1753 as a private individual in Ṣanᶜāʾ. In 1252/1836, the dissatisfied troops who had been discharged by the very extravagant *imām* al-Manṣūr ᶜAlī b. al-Mahdī ᶜAbd Allāh summoned 7. AL-NĀṢIR ᶜABD ALLĀH B. ḤASAN to the imāmate. He had inherited strong religious tendencies from his grandfather al-Mutawakkil Aḥmad and from his great-grandfather al-Mahdī ᶜAbbās, and isisted on the strict observance of the neglected *sharīᶜa*. He had even to appoint teachers to instruct in the divine service. He was ambushed and murdered with 6 followers in 1256/1840 while on a peaceful excursion to the Wādī Ḍahr northwest of Ṣanᶜāʾ by people of the Banū Hamdān, and was succeeded by the brother of his predecessor, al-Hādī Muḥammad b. al-Mahdī ᶜAbd Allāh, who had been long kept in prison by ᶜAbd Allāh b. Ḥasan. As required of an *imām*, most of the above wrote a great deal; a number of works, chiefly of a legal nature, have survived, mainly by the earlier Yaman *imāms*.

Bibliography: See that to ZAYDIYYA.

(R. STROTHMANN)

AL-**NĀṢIR LI-DĪN ALLĀH**, AḤMAD ABU 'L-ḤASAN, third incumbent of the Rassī Zaydī imāmate in northern Yemen and a son of its founder, Yaḥyā al-Hādī ilā 'l-Ḥaḳḳ [see ZAYDIYYA]. The date of his birth cannot be determined from extant sources. Neither can it be assumed that he was younger than his full brother and predecessor, Imām Muḥammad al-Murtaḍā [*q.v.*], both of whom accompanied their father to Yemen from their native Ḥidjāz in 284/897. Although noticed in accounts as early as 285/898, Aḥmad is first referred to as a military leader for his father only in 294/907-8.

Aḥmad al-Nāṣir was elected *imām* at Ṣaᶜda in Ṣafar 301/September 913, following his return to Yemen from a lengthy sojourn in Ḥidjāz and some time after the abdication, amid rather unclear circumstances, of his brother Muḥammad, who apparently supported Aḥmad's candidacy. With the allegiance of forces drawn mainly from the northern lands of Hamdān, Nadjrān and Khawlān, this vigorous *imām* struggled against the aggressive followers of Ismāᶜīlī Fāṭimid *dāᶜīs* in Yemen, particularly those concentrated in Djabal Maswar [see MANṢŪR AL-YAMAN]. These operations culminated during Shaᶜbān or Ramaḍān 307/January 920 in a major three-day contest near Nughāsh, northwest of Ṣanᶜāʾ. Imām Aḥmad's forces triumphed, while the more numerous ones of the Ismāᶜīlī leader, ᶜAbd al-Ḥamīd b. Muḥammad, lord of Djabal Maswar, were routed disastrously. Thereafter, the unity and influence of the Fāṭimid Ismāᶜīlīs—often referred to as Ḳarāmiṭa or Bāṭiniyya—remained shattered beyond recovery.

Except for his subsequent conquest of Aden, possibly in 310/922-3, the sources make scant further references to al-Nāṣir before his death, at Ṣaᶜda, reported variously to have occurred in 315/927-8, 322/934 or 325/937, with most accounts favouring the latter. Although he produced five sons, at least two of whom declared themselves his successor, the Zaydī imāmate in Yemen entered a period of political obscurity following his demise. All of Imām Aḥmad al-Nāṣir's compositions, of which al-Ḥibshī lists nine and Zabāra eight, are doctrinal in nature and, with one exception, no longer extant.

(J.R. BLACKBURN)

AL-**NĀṢIR LI-DĪN ALLĀH**, ABU 'L-ᶜABBĀS AḤMAD (reigned 575-622/1180-1225), 34th ᶜAbbāsid caliph, was born in 553/1158. Son and successor of al-Mustaḍīʾ bi-Amr Allāh [*q.v.*], he had strained relations with his conservative father, who had kept him in seclusion for a while for fear that he might be influenced by harmful innovations. Yet, after his father's death, he successfully defended his claim to the throne against the court clique. His relations with his

mother, a Turkish slave called Zumurrud Khātūn, were more balanced. During al-Mustaḍī'’s and al-Nāṣir's caliphates, she made a name for herself by establishing important pious foundations and by energetically interceding for positions for the Ḥanbalīs in Baghdād.

After the secular power of the ʿAbbāsid caliphate had been restricted for centuries, and had even disappeared completely because of the dominance of the Būyids and the Saldjūḳs [*q.vv.*], al-Nāṣir succeeded in restoring ʿAbbāsid sovereignty. He strengthened and consolidated the caliphate against all kinds of military, political and ideological attacks. For the period of his own reign, and down to that of his grandson al-Mustanṣir [*q.v.*], he restored this specifically Islamic institution to its former prestige. On the other hand, he unintentionally contributed to the later fall of the caliphate of Baghdād at the hands of the Mongols.

Al-Nāṣir's policy aimed at orienting and obligating all Muslims towards the caliphate as the sole spiritual and secular centre of this world. The way to this aim he saw in a rapprochement of the different opposite dogmatic trends in Islam, perhaps even in an attempt to reunite them. The same objective was served by a sophisticated policy of alliances with Islamic and non-Islamic partners, by the reorganisation of the *futuwwa* [*q.v.*], that is to say by establishing it as a men's confederation attached to the caliph himself, and by the systematic spread, inside the Islamic world, of an encyclical from his own hand dealing with *ḥadīth*.

1. Political events. Al-Nāṣir again disposed of an army of his own, but the most important strategic advantages came from his policy of alliances. With the support of the Khʷārazmshāh Tekish [*q.v.*], in whom he had recognised the strongest rival of his own most feared opponent, the Saldjūk Ṭughril III, he succeeded in wiping out once and for all the Saldjūḳ dynasty in Persia by having the ruler killed by the sword on 29 Rabīʿ I 590/25 March 1194. The decline of the Saldjūḳ empire had revealed itself long since by internal unrest in Persia. Already in 583/1187 al-Nāṣir had ordered in Baghdād the ancient Saldjūḳ palace, the symbol of tutelage by a foreign régime, to be torn down (*Kāmil*, xi, 560). There are enough reasons to justify the opinion that the caliph addressed a direct request to the Khʷārazmshāh to intervene against the Saldjūḳ sultan. Yet the contemporary sources do not provide a consistent presentation (cf. *Mir'āt*, fols. 263a-264a [the decisive passage is missing in the Ḥaydarābād edition, viii, 444-5], with *Kāmil*, xii, 106-8). A message of the caliph to Tekish, in which he is said to complain vehemently of the Saldjūḳ sultan (*Kāmil*, xii, 107), is considered to be an important document in this context.

Shortly after having overthrown Ṭughril III, al-Nāṣir, for the same reasons which had induced him to invoke Tekish's help against the Saldjūḳs, felt forced to look for military support from the outside against Tekish himself. This he received from the Ghūrids [*q.v.*] (*Kāmil*, xii, 135-7). Only one year after the fall of the Saldjūḳs, the caliph found himself confronted, in the person of the Khʷārazmshāh, with a new power that was more dangerous to him than that of the Saldjūḳs. Tekish, after the death of his brother Sulṭān Shāh in 589/1193, had not only become absolute ruler of the region south of the Aral Sea, including Khurāsān (Marw), but also considered himself as the heir to the entire Saldjūḳ empire. In his quarrel with the caliph over the province of Djibāl, i.e. Persian ʿIrāḳ, he felt that the right of exercising secular power was entirely on his side, as it had been with the Saldjūḳs before him. Apart from the military confrontation (590/1194: *Kāmil*, xii, 108-9; *Tārīkh-i Djahān-gushā*, ii, 32-3; 591/1195: *Mir'āt*, viii, 445; 592/1196: *Kāmil*, xii, 112; *Mir'āt*, fols. 265b-266a [missing in the Ḥaydarābād edition, viii, 449]; *Tarīkh-i Djahān-gushā*, ii, 38. Only Khūzistān remained temporarily as the caliph's gain; later he had to acknowledge that it belonged to the Khʷārazmshāh's territory, just like Khurāsān and Turkistān), the dispute between Tekish and al-Nāṣir expanded into a wide-ranging legal fight, which reached its climax after Tekish's death in 596/1200 (*Kāmil*, xii, 156-8) during the reign of his son Muḥammad II [*q.v.*]. In a much harsher tone than that of the Saldjūḳ, Muḥammad II claimed recognition of his sovereignty (*Siyar*, xxii, 139-43), which was to be also expressed by mentioning his name in the *khuṭba* in Baghdād. According to *Kāmil*, xii, 135, Tekish too had demanded this, and in case of refusal he had threatened to march against Baghdād. Years of mutual provocation (*Ta'rīkh Manṣūrī*, fol. 132a-b; *Tārīkh-i Djahān-gushā*, ii, 120; *Sīra*, 51; *Kāmil*, xii, 298, 319) and several wars waged by the Ghūrids in the name of the caliph (*Tārīkh-i Djahān-gushā*, ii, 47-66) now followed. The non-Muslim Ḳarā Khiṭāy [*q.v.*], who in the end were on the side of the militarily stronger Khʷārazmshāh (*Ta'rīkh Manṣūrī*, fols. 123a-125a) were also implicated. The Khʷārazmshāh, whose power reached from the Caspian Sea to the Indus and from the Jaxartes to the Gulf of ʿUmān (*Kāmil*, xii, 316-8), arrogated to himself the title of "second Alexander" and questioned altogether the legitimacy of the ʿAbbāsid caliph. With the help of a *fatwā*, he declared al-Nāṣir deposed, nominated as anti-caliph a Shīʿī from Tirmidh who was a direct descendant of Ḥusayn b. ʿAlī b. Abī Ṭālib and had his name, ʿAlā' al-Mulk, placed on the coinage and mentioned in the *khuṭba* (*Tārīkh-i Djahān-gushā*, ii, 120-2). Through diplomacy, al-Nāṣir tried to resolve this conflict and the threat of Muḥammad II's march against Baghdād in 614/1217-18, but he failed (cf. *Mir'āt*, viii, 582-3, and *Sīra*, 51-2, for the unsuccessful mission of ʿUmar al-Suhrawardī [*q.v.*] to Muḥammad II regarding the function of the caliphate). Baghdād was nevertheless spared a direct attack, for the Khʷārazmian troops, while advancing into ʿIrāḳ, withdrew to Khurāsān and Transoxiana in the winter of the following year (*Tārīkh-i Djahān-gushā*, ii, 98; *Sīra*, 64; *Ta'rīkh al-khulafā'*, 449). During the Friday sermon, Muḥammad II had the ʿAbbāsid caliph declared dead (*Kāmil*, xii, 318).

According to the approved method, al-Nāṣir probably had entered into negotiations with the Mongols about delaying and overpowering the Khʷārazmshāh. If credence can be given to a contemporary western source (*Epistulae*, 144-7,7, Letter of 1221), al-Nāṣir, driven to extremity by the advance on Baghdād of the Khʷārazmian army, had ordered the Catholicos of the Nestorians to request the intervention of the "mysterious King David", i.e. Čingiz Khān [*q.v.*] against the Khʷārazmshāh. The army of the Mongol ruler in fact included numerous Nestorian Christians. All Muslim historiographers are silent on this indeed extraordinary, but by no means unlikely, mission of a Christian dignitary on behalf of the highest Muslim ruler to obtain military aid from unbelievers against a Muslim army. In the 7th/13th century it was only surmised that al-Nāṣir summoned the Mongols into the Muslim territories by means of an embassy which is not specified any further (e.g. *Kāmil*, xii, 440; the same conjecture later in *Bidāya*, xiii, 106-7; *Sulūk*, i, 218). A description of a delegation sent by al-Nāṣir is only found in the 9th/15th century, but there is no allusion to Christians

either (*Rawḍat al-ṣafāʾ*, iv, 397-400). Other historiographers, however, explain the penetration of the Mongols into the Islamic territory of the Kh^w^ārazmshāh as follows. The members of a Mongol trade mission had been accused by Muḥammad II of spying and had therefore been tortured or killed; this is said to have provoked the Mongol's vengeance (*Taʾrīkh Manṣūrī*, fols. 136a-140a; *Tārīkh-i Djahān-gushā*, ii, 99; *Rawḍat al-ṣafāʾ*, 85-7). It is not possible to discover completely the actual events, but in any case one of the greatest tragedies in Islamic history began with the Mongol invasion of the Kh^w^ārazmian empire. After the death of Muḥammad II in 617/1220, his son Djalāl al-Dīn Kh^w^ārazmshāh (Mankubirnī or Mingīrnī [see AL-NASAWĪ]) [*q.v.*] (*Siyar*, xxii, 326-9) continued his father's legal claim against the caliph. In 622/1225-6 he invaded ʿIrāḳ and extended his conquests as far as 200 km from Baghdād (*Kāmil*, xii, 425-8; *Mirʾāt*, viii, 234; *Taʾrīkh Manṣūrī*, fol. 149a-b). His battles against the caliph as well as those against the Mongols he declared to be *djihād*.

The year 618/1221-2 (cf. *Akhbār*, 109; *Mirʾāt*, viii, 619; *Taʾrīkh al-Islām*, fol. 135a; *Siyar*, xxii, 238-9, and the quotations from ʿAbd al-Laṭīf al-Baghdādī, in *BEO*, xxiii [1970], 125-8) showed how unstable the alliance between al-Nāṣir and the Mongols, if it ever existed, in fact was. The Mongols were preparing for battle in ʿIrāḳ, and al-Nāṣir had to reckon with a direct attack on Baghdād. Renouncing earlier enmities and summoning up all power, the rulers of Irbil and al-Mawṣil joined forces with the caliph on behalf of *djihād*. As already had been the case with the Kh^w^ārazmian call to *djihād* against the east, the Ayyūbids did not see their way to lend a helping hand against the Mongols. A battle did not take place because Čingiz Khān withdrew to the east. Thus the Mongol threat against ʿIrāḳ seemed to have been warded off for the time being.

A few years after al-Nāṣir had come to power, the Ayyūbids for their part complained of his lack of interest in the "Holy Combat" of Muslims. Their bitter disappointment influenced the situation in the eastern Arab lands and in south-east Asia Minor. Ṣalāḥ al-Dīn [*q.v.*] and al-Nāṣir, each with his own appetite for expansion, sought to enlarge their territories wherever an occasion presented itself, especially in al-Djazīra. The caliph extended his territory northward exactly at a time when Ṣalāḥ al-Dīn urgently needed his assistance at the ill-fated siege of ʿAkkā [*q.v.*] by the Crusaders, which lasted for two years (585-7/1189-91). In 585/1189 al-Nāṣir conquered Takrīt (*Rawḍatayn*, ii, 178; *Kāmil*, xii, 42), Ṣalāḥ al-Dīn's birthplace, which had submitted to the Ayyūbids in 579/1183-4, together with Irbil (*Miḍmār*, 215). Other places on the Euphrates were also captured by al-Nāṣir (*Kāmil*, xii, 58-9) and Salāḥ al-Dīn's rights, as well as his projects of expansion in al-Djazīra, thus were curtailed. The caliph's subversive lack of interest vis-à-vis Ṣalāḥ al-Dīn was apparently rooted in the fear that military successes of the Ayyūbids, especially after Jerusalem had been reconquered from the Franks in 583/1187, might spread to the caliph's territory. After all, Ṣalāḥ al-Dīn's army, having conquered the strategically-important town of al-Mawṣil in 1186, had been only 200 km. from Baghdād. Notwithstanding an active exchange of delegations during the entire period of his caliphate, al-Nāṣir showed himself clearly aloof, even distrustful, towards Ayyūbid requests to grant diplomas of investiture (*taḳlīd*, pl. *taḳālīd*) and to give military assistance against the Franks (*Miḍmār*, 51: *taḳlīd* granted in 576/1180; *Miḍmār*, 62-5: necessity of the *djihād* and exhortation of the caliph in 577/1181-2; *Miḍmār*, 162-4: negotiations regarding the situation in al-Mawṣil in 579/1183-4; *Miḍmār*, 184-5: repeated exhortations concerning the *djihād* addressed to the caliph in 580/1184-5). Ṣalāḥ al-Dīn was severely criticised in Baghdād when he awarded himself the epithet *al-Malik al-Nāṣir* (*Bidāya*, xii, 327). In 586/1190 Ṣalāḥ al-Dīn put a region directly bordering on the caliphate under the administration of a vassal who, at that time, was well-disposed towards him (*Kāmil*, xii, 56; Gökbürī of Irbil is invested with the region of the Banū Ḳifdjāḳ).

After the reign of the Saldjūḳs had come to an end in 590/1194, the interest in this region of both the caliph and Ṣalāḥ al-Dīn's successor al-Malik al-Afḍal [*q.v.*] intensified. Al-Afḍal skilfully tried to build good relations with al-Nāṣir. He expected to be able to use the caliph as a possible intermediary in present and future conflicts with the Zangids of al-Mawṣil. On the other hand, the concept of *djihād* against the Crusaders gradually lost impact in the letters exchanged with the caliph after Ṣalāḥ al-Dīn's death in 589/1193. In the same way, requests for a premature grant of a *taḳlīd* or for military assistance stopped. In 615/1218, at the time when the Crusaders attacked Damietta, the caliph declined a call for help, but in 616/1219 he summoned local rulers to assist al-Malik al-Kāmil in Damietta (*Taʾrīkh Manṣūrī*, fol. 136a).

In 618/1221 al-Nāṣir in his turn directed unsuccessful requests to al-ʿĀdil's son, the Ayyūbid al-Malik al-Ashraf [*q.v.*]. Instead of executing his planned march to Egypt, al-Malik al-Ashraf, together with caliphal forces, was to take up positions against the Mongols, who were advancing from Khurāsān. But the official Ayyūbid propaganda kept silent about the Mongol danger, and the political mission in 621/1224 of ʿUmar al-Suhrawardī, the theologian-counsellor of the caliph, did not bring about the desired military alliance against Djalāl al-Dīn Kh^w^ārazmshāh, who was threatening Baghdād. The Ayyūbids had not forgotten that the caliph had refused them any real support since the Fifth Crusade.

Al-Nāṣir neither could nor would associate himself with the type of unity of Islam so urgently being called for by Ṣalāḥ al-Dīn when he stressed the notion of *djihād*. According to the caliph, Islam should close ranks in the struggle against the eastern dynasties which fought against the sovereignty of the ʿAbbāsid caliphate. Nor could this unity be restored, as had been hoped for, by al-Nāṣir's policy towards Ḳatāda b. Idrīs [*q.v.*], the Sharīf of Mecca (*Kāmil*, xii, 401-2; *Mirʾāt*, viii, 217-18), towards the Zaydī Imāms of Yemen or towards the Ayyūbids of Egypt who had occupied southern Yemen at the turn of the 13th century (*Taʾrīkh Manṣūrī*, fols. 113a-120a). Only economic revival and important financial reserves, which might have enabled this caliph, his predecessors or successors, to maintain an adequate army, could again have brought about political unity and therefore a fundamental and lasting regeneration of the ʿAbbāsid state.

2. The *futuwwa*. Against the background of these events and shortcomings, the unification and reorganisation of the federal system of the *futuwwa*, carried through by al-Nāṣir, was neither bizarre (*Kāmil*, xii, 440: pure bragging) nor an isolated political idea. To al-Nāṣir the credit is due of having consolidated on a moral basis the various forms of the *futuwwa* which, at his accession to the throne, hardly kept to the virtuous requirements of the original ideal

of the *fatā*. These forms were developed by al-Nāṣir into a mean of political power in the service of the caliphate. The reformed *futuwwa* provided the caliph with the framework for a new awareness of solidarity among Muslims of all confessions and social ranks up to the princes. At the same time, the renewed rules of this new community, related directly to the person of al-Nāṣir, entailed dependence on the ʿAbbāsid caliph as the highest authority (*ḳibla*) in the Islamic world (*Tuḥfa*, fol. 108b).

In his chronicle, the *Miḍmār*, al-Malik al-Manṣūr [*q.v.*] gives information about the separate steps leading to the final execution of the reform. Soon after assuming power, the caliph joined a branch of the *futuwwa* which was influenced by Ṣūfism. In 578/1182-3 its *shaykh* performed with him the rite of initiation, which consisted in putting on the trousers (*sarāwīl*) of the *futuwwa* (*Miḍmār*, 86). Al-Nāṣir also established contacts with other leaders of Ṣūfī groups of *fityān* (*Miḍmār*, 177). The caliph's turning to the Ṣūfī manifestation of the *futuwwa* incited an important section of the population to follow his example and to take more seriously the required virtues, which had regained influence in public life.

3. Supervision of communications. Moreover, already before the actual reform, al-Nāṣir succeeded in realising important parts of his political and social aims. For example, he gradually concentrated in his own person the permission to shoot with pellets (*al-ramy bi 'l-bunduḳ*). He also tried to bring pigeon breeding under his control. This brought the advantage of being able to supervise communications. In 590/1194 he had all fully-grown carrier pigeons killed in Baghdād in order to force the population to use only his young pigeons, which flew on courses fixed by himself (*Mirʾāt*, viii, 437), so that any pigeon post first came into his hands or into those of his confidants. In order to obtain an audience with the caliph, one had to have received a pigeon from him first, which honour guaranteed the noble character of the receiver. Thus the following saying came into being in Baghdād: receipt of a pigeon from the caliph, adherence to the *futuwwa*, and "shooting with pellets" (*al-ramy bi 'l-bunduḳ*) make it impossible for a man to tell a lie (*Miḍmār*, 180).

4. The reform. From 599/1203 onwards, al-Nāṣir personally decided on the admission into the *futuwwa* of princes and governors (*Mirʾāt*, viii, 513: al-ʿĀdil's admission). In doing so, the caliph confirmed them as rightful and absolute leaders of the *fityān* in their territories, but, since he himself was their superior in the hierarchy of the *futuwwa*, their adherence increased their dependence on him. The adherence of any prince automatically caused the admission into the *futuwwa* of all his subjects. This should have prevented any individualistic trend in the Islamic community. Notwithstanding this, there remained a great number of different groups and gangs (*ʿayyārūn* [*q.v.*]) of the *futuwwa*, which vied with each other and, because of their great power in the districts of Baghdād, often conjured up situations that were close to civil war (*Djāmiʿ*, ix, 222, 226, 228). This caused the caliph in 604/1207 to issue a decree in which the *futuwwa* was fundamentally reformed. Non-observance of this decree was a capital offence. The new *futuwwa* was described as "the purified *futuwwa*" and was completely centralised on al-Nāṣir under the following principles: 1. ʿAlī b. Abī Ṭālib is the unquestionable foundation of the *futuwwa*; he is the basis of all legal decisions. 2. Al-Nāṣir li-Dīn Allāh is explicitly recognised as emulator of ʿAlī. 3. It is the *futuwwa*'s task to perform a "purified, imāmite duty, which grants victory to the religion of Allāh". 4. Any *fatā* who maltreats a fellow-member is expelled from the *futuwwa*. 5. *Ḥadīths* of the Prophet himself confirm the caliph's legal position when issuing this decree (*Djāmiʿ*, ix, 223-5).

In his *Tuḥfat al-waṣāyā*, al-Khartabirtī, a contemporary inclined to Shīʿism, gives information on the reform. Al-Nāṣir changed the genealogy of the *futuwwa* by having its tree brought down to his own name from Adam, through the Prophet Muḥammad and his son-in-law ʿAlī (*Tuḥfa*, fol. 117a-b). He also claimed the exclusive right to grant *futuwwa* titles and orders. In his *Kitāb al-Futuwwa*, written in the spirit of Islamic law, Ibn al-Miʿmār (d. 642/1244) describes the hierarchic structure of the entire society of the *futuwwa*. All members were comrades (*rafīḳ*, pl. *rifāḳ*), but were related as a younger one (*ṣaghīr*) to an elder one (*kabīr*) or—with the same meaning—as a son (*ibn*) to his father (*ab*) and grandfather (*djadd*). The community of *rifāḳ* is called "house" (*bayt*), and several *buyūt* are brought together into a "host" (*ḥizb*, pl. *aḥzāb*). Supreme master of all these groups was the caliph (*Kitāb al-Futuwwa*, 190-9). In al-Nāṣir's *futuwwa*, the function of head (*naḳīb*) of the nobility was held by a member of the ʿAlid family al-Maʿiyya (or al-Muʿayya?) (*ʿUmdat al-ṭālib*, 150).

By indicating himself as the highest authority (*ḳibla*, see above) for all *fityān*, al-Nāṣir established a relation between *sharīʿa* and *futuwwa*. For this, it was necessary to find a compromise between Sunnīs and Shīʿīs. Inside the *futuwwa* the caliph could not favour one group over the other, nor could he accept both groups as being independent from each other if he wanted to attain his aim, namely, keeping the community of the believers within the structure of the state. His policy had to be built unconditionally on the points of agreement between the two parties. In this way, he succeeded in making the *futuwwa* confederations, disorganised and quarrelling among each other before his reform, into "an element of social solidarity" on behalf of the caliphate. Al-Nāṣir thus created a powerful organisation which, more than his army, made his caliphate acceptable as a binding form of sovereignty for all religious and political factions in Baghdād and in the Islamic lands. The authority which the caliph thus exercised over his subjects allowed him also to regain an important portion of his secular power and prevented, after the downfall of the Saldjūḳs, tutelage by an outside secular ruler. The reorganisation of the *futuwwa* was more than a tactical measure. It was not "an artificial resuscitation of the caliphate"—as still assumed by Taeschner (*Futuwwa*, in *Schweizerisches Archiv für Volkskunde*, lii [1956], 143)—but an effective means of making policy, in which greater importance was attributed to the ʿAbbāsid caliphate. This structure of the federal system continued under al-Nāṣir's successors, but the *ʿayyārūn* resumed their attacks as a result of the weakening of the ʿAbbāsid dynasty in the last years of its existence in Baghdād. This form of courtly *futuwwa* came to an end with the fall of the ʿAbbāsid caliphate at the conquest of Baghdād by the Mongol Hūlāgū [*q.v.*] in 656/1258. From 659/1261 onwards, an aftermath survived in Mamlūk Egypt [*q.v.*].

5. The theory of the caliphate. For his legitimation as caliph, and for the *futuwwa* as instrument for the theoretical foundation of his claim to power, al-Nāṣir found an energetic propagandist in the Shāfiʿī Ṣūfī *shaykh* Abū Ḥafṣ ʿUmar al-Suhrawardī, who supported the union between *sunna* and moderate Shīʿa on the one hand, between *futuwwa* and Ṣūfism on the other. In his works, the *futuwwa* is part of *taṣawwuf*,

and his theory on the caliphate definitely posited that Ṣūfism could be sanctioned by the caliphate. In his *Idālat al-ʿiyān ʿalā 'l-burhān* he develops a theory in which the concepts of *futuwwa*, Ṣūfism and caliphate are coordinated in an ascending order. In analogy with the relation between *shaykh* and *murīd* [*q.vv.*], he considers the caliph as the mediator (*wāsiṭa*) between the Unique One and the people, appointed by God (*Idāla*, fol. 88a). As such, he is "God's representative on earth". This is not the standard argument in the orthodox Sunnī theory on the caliphate because the reference to consensus is missing. Since the concept of *khalīfat Allāh* cannot be deduced from the Ḳurʾān, the argument that the caliphate is a necessity is put by Ibn Khaldūn [*q.v.*] on the same level as the assertions according to which the caliphate is required by mere reason; the consensus itself (*idjmāʿ*) comes only in the second place and confirms the reason (*al-ʿIbar*, i = *al-Muḳaddima*, 339-40). Al-Nāṣir's court theologian does not mention *idjmāʿ* at all. He does not seem to have omitted unintentionally this important concept of Sunnī law, because when he explains that the Imām is the absolute mediator between God and man, he comes close to Shīʿī notions according to which the Imām, because of his authority as teacher and his charismatic function, is beyond consensus. According to al-Nāṣir and al-Suhrawardī, the Imām holds the function of mediator in an absolute way, just as the Ṣūfī, once he has obtained the dignity of *shaykh*, is a mediator between God and the novice (*ṭālib* or *murīd*) (*Idāla*, fol. 88a).

The concept of *khalīfa* was in any case widening in the 7th/13th century. It was not only used in its legal and political meaning of *amīr al-muʾminīn*, but, in the language of the mystics of the Ṣūfi orders, it was also understood as indicating the "leader of a *ṭarīḳa*" [*q.v.*]. This double meaning of the term appears with al-Suhrawardī and al-Nāṣir and is used theoretically and practically, in both the mystical and the political sense. After the centuries-old distrust of Islamic mystics by the ruling power, al-Nāṣir was willing to draw the political consequences from the requirements established by al-Suhrawardī. Under his caliphate, a purposeful, officially directed turn to Ṣūfism took place: "The exalted caliphate is a register (*daftar*) and *taṣawwuf* is part of it; *taṣawwuf* in its turn is a register of which the *futuwwa* is a part. *Futuwwa* is specified by pure ethics (*al-akhlāk al-zakiyya*); *taṣawwuf* includes pious acts and private religious practices (*awrād*); the noble caliphate comprises mystic situations, pious acts and pure ethics" (*Idāla*, fol. 89a-b). The comparison of the caliphate, to which *taṣawwuf* and *futuwwa* are subordinated, with a register reminds one of the likewise hierarchical rank of the concepts *sharīʿa*, *ṭarīḳa* and *ḥaḳīḳa* found in al-Suhrawardī's *Risālat al-Futuwwa*, fol. 186b. *Khilāfa* and *sharīʿa* are the higher concepts which, in their relations to each other, require unconditional unity. With these axioms, the caliph, through his protagonist al-Suhrawardī, took the wind out of the sails of those critics who maintained that he neglected the requirements of the *sharīʿa*. At the same time, he opened the caliphate to two forms of organisation of human society which came into being simultaneously and which apparently were mutually conditional, namely, the reformed confederation of men, the *futuwwa*, and the order of *taṣawwuf*.

According to contemporary statements, the caliph "in the middle of his reign" intended to give up his governmental function in favour of ascetic practices and the life of a Ṣūfī (*Akhbār al-zuhhād*, fols. 96b-101b; *Siyar al-nubalāʾ*, xxii, 202, cf. 197: at this time al-Nāṣir was also engaged in transmitting *ḥadīths*, cf. *Nakt al-himyān*, 95; *Wāfī*, vi, 314). After some time, however, he distanced himself from this intention and returned completely to governmental business. All the same, by recognising a direct relation between mystics and the caliphate, al-Nāṣir had created the possibility of being accepted on a larger basis.

6. Al-Nāṣir's religious programme (*daʿwa hādiya*). The caliph's religious-political propaganda (*daʿwa hādiya*, roughly "guiding call") also bears witness to such a wider basis. In order to spread it, he sent messengers to Syria, Egypt, Asia Minor and Persia. Al-Nāṣir's *daʿwa* was quite different from the Sunnī orthodox one of his father and predecessor al-Mustaḍīʾ [*q.v.*], as well as from that of the Zangid Nūr al-Dīn b. ʿImād al-Dīn [*q.v.*] and of Ṣalāḥ al-Dīn [*q.v.*]. Al-Nāṣir was no longer concerned about the "moral armament and unity of the Sunnīs" against the Shīʿa, but about equating all Islamic confessions. In this respect, the rapprochement of the Ismāʿīlis under their Grand Master Rukn al-Dīn Ḥasan III [*q.v.*] towards Sunnī Islam was convenient on the one hand, while on the other he had succeeded in protecting the legitimacy of the caliph against the claims of the ʿAlids by involving *futuwwa* and *taṣawwuf* in the theory of the caliphate and in meeting, perhaps personally, the moderate Shīʿa, as his domestic policy clearly shows. He was in close contact with the *naḳībs* of the ʿAlids and was surrounded by Imāmī viziers and other high officials and counsellors. In an inscription found in the Ghaybat al-Mahdī in Sāmarrāʾ [*q.v.*], which he caused to be renovated expensively and to be enlarged into a mausoleum (*mashhad*), he designates himself as builder and protector of the Shīʿī sanctuary (*Miḍmār*, 178). Nor did he seclude himself from certain branches of the Ismāʿīliyya: in the inscription on the Bāb al-Ṭilasm in Baghdād [*q.v.*] (*Djāmiʿ*, ix, 215) he borrowed the Ismāʿīlī eulogy, and his messengers of the *daʿwa hādiya*, as well as his *futuwwa* emissaries, were provided with a special warrant, the *wakāla djāmiʿa* or *wakāla sharīfa* (*Djāmiʿ*, ix, 222 *et passim*). The caliph's attempt to control, as far as northern Syria, the supervision of the markets and its centralisation is perhaps to be placed in connection with this propaganda activity. When receiving the warrants, al-Nāṣir's officials committed themselves through reciprocal absolute vows of fidelity to each other and, altogether, to the caliph.

7. Anti-philosophical tendencies. From al-Nāṣir's domestic policy it is clear that he did not consider the Shīʿīs as a threat and an undermining influence in the Muslim community. For him, the danger of inner disintegration came rather from the philosophers and their followers. Although he had occupied himself with "the sciences of the ancient Greeks" (*ʿulūm al-awāʾil*), if only in a rudimentary way, razzias, auto-da-fés and all possible reprisals took place against suspects (*Idāla*, fol. 85b; *Rashf*, fol. 16a: destruction of philosophical literature; *Dhayl*, i, 445, ii, 71, 73; *Akhbār al-khulafāʾ*, 119-21; *Djāmiʿ*, ix, 81; *Bidāya*, xiii, 45: burning of libraries; *Dhayl*, ii, 66-8; *Bidāya*, xiii, 65: denunciations). From this period dates al-Suhrawardī's *Rashf al-naṣāʾiḥ al-īmāniyya wa-kashf al-faḍāʾiḥ al-yūnāniyya*, the most important polemic against philosophy, which is at the same time a written defence of the caliphate as understood by al-Nāṣir. One of the most striking features of this work is that it keeps its distance from any polemic against the Bāṭiniyya [*q.v.*], considered to be the promoters of the "Greek sciences". This attitude is perhaps related to the conversion to Sunnī Islam of Ḥasan III, ruler of the Assassins of Alamūt [*q.v.*] in 608/1211-2 (*Kāmil*,

xii, 306-7; *Tārīkh-i Djahān-gushā*, ii, 120, 242-3), by which the Bāṭiniyya ceased for a number of years to be the most dangerous enemy of the ʿAbbāsids. Indeed under al-Nāṣir the Assassins, so feared before, became loyal allies, a fact which the caliph considered as his greatest success in religious matters, his greatest political achievement being the destruction of the Saldjūḳs.

8. The accusation of Shīʿī inclinations. Al-Nāṣir is often reproached by Sunnī chroniclers as having been a partisan of the Shīʿīs (*mutashayyiʿ*; *Mukhtaṣar Taʾrīkh al-bashar*, iii, 142: *kāna yatashayyaʿu*: *Mufarridj*, iv, 163; *Fakhrī*, 232; *Siyar*, 200). Two remarks should be made in this connection. Because of his excellent spy network (*Siyar*, 200), al-Nāṣir was considered on the one hand to be "all-knowing", even in religious matters. A later chronicler remarks that the Shīʿīs indeed considered him as the infallible, sinless Imām, for "the infallible Imām knows what is in the womb of a pregnant woman and what lies behind the wall" (*Taʾrīkh al-khulafāʾ*, 449). On the other hand, the caliph's tolerance toward the Shīʿa —apart from his personal propensities—is to be seen as a reaction to the concrete political situation. If al-Nāṣir wanted to raise the caliphate in Baghdād to a real and effective power, he could only succeed by taking into account *and* by exploiting the interests of the Shīʿīs who formed about half of Baghdād's population. He had to shape his subjects' political consciousness in such a way that the person of the caliph was forearmed against accusations from the outside (i.e. that he was the ʿAlid anti-caliph against the Khwārazmshāh) and from the inside (i.e. against the criticism of the Ḥanbalī Ibn al-Djawzī, *Dhayl*, ii, 420). During al-Nāṣir's reign the cutting edges of the conflict between Shīʿīs and Sunnīs, which for such a long time had shaken the ʿIrāḳī metropolis, seemed to have been blunted.

9. The caliph as traditionist and reformer. Al-Nāṣir also recognised the importance of religious propaganda of the *ʿulamāʾ*; in particular, he acquired the duties and authority of the traditionists by concerning himself personally with the science of *ḥadīth*. Since all his undertakings were directed towards abolishing the traditional separation of powers—the worldly power in the hands of the caliph or the sultan, the spiritual power in the hands of the *ʿulamāʾ*—and towards uniting them in his person, he claimed that, as successor of the Prophet and as the instructing authority, it was his duty to look after the well-being of the Islamic community in this world and in the hereafter.

Al-Nāṣir reformed education in Baghdād insofar as he succeeded—as the Saldjūḳs had done before him—in bringing the nomination for the chairs at the Great Mosque under his control. Besides influencing intellectual life, this also, or rather above all, had economic consequences because it meant control of the sources of income which were at the origin of different conflicts of interest in the city. Al-Nāṣir, in collaboration with al-Suhrawardī, thus not only showed new directions in educational policy, but he created a *novum* in the history of state control of education in Islam. Since the arrival of the Saldjūḳs, law, together with its propaedeutic disciplines such as Ḳurʾān exegesis, *ḥadīth*, grammar, literary theory and the first principles of mathematics, had been taught exclusively in the *madrasa* [*q.v.*] (exegesis of the Ḳurʾān and law also in the mosque), and medicine mainly in the hospitals (*bīmāristān* [*q.v.*]), while "foreign sciences" (*ʿulūm al-ʿadjam* such as mathematics, physics and philosophy, were taught privately. Al-Nāṣir systematically tried to enlarge or found convents, the so-called *ribāṭs* [*q.v.*] and to regain control of the educational system as a whole, lost since the *madrasas* had come into existence (Chabbi, *Ribat*, 116-20; Hartmann, *an-Nāṣir*, 126-7, 198 ff.). The *ribāṭs*, already under al-Mustaḍīʾ officially recognised as institutions (*Muntaẓam*, x, 233), were solidly integrated by al-Nāṣir into the spiritual life of Baghdād as homiletic institutions, as establishments for teaching law and as meeting-places for Ṣūfīs. In the first half of his reign he founded six new *ribāṭs*, where the doctrines of ʿIrāḳī Ṣūfism, combined with Ṣūfī-inspired traditional homiletics and sciences, were spread. In the *Ribāṭ al-Mustadjadd* (also called *Ribāṭ al-Marzubāniyya*), the most famous of them, all fields of knowledge, i.e. of external and internal *ʿilm*, were to be united in the person of the caliph.

Al-Nāṣir's reforms consisted in creating a new harmony between the sciences and in making an attempt to suppress in the Islamic community *kalām* and the tendencies favourable to philosophy. Only one generation before, in the second half of the 6th/12th century, a fierce fight had been waged concerning the recognition of paraenesis as an official field of science, but in al-Nāṣir's time the audience in the *ribāṭs* very often were students at the *madrasa*, a fact which is very well-documented by ʿUmar al-Suhrawardī's circle of students. In this way, the subject-matter of the convent influenced the lectures at the theological colleges. The caliph visited regularly intellectual occasions and heard sermons and put all items necessary for maintenance and study at the disposal of the students free of charge. If coming from outside, the students for a greater part also lived in the *ribāṭs* (*Djāmiʿ*, ix, 99; *Mirʾāt*, viii, 513; *Ḥawādith*, 74). Al-Nāṣir also earned merit for renovating and enlarging in 589/1193 the Madrasa al-Niẓāmīyya. The newly-built part was called after him al-Nāṣiriyya (*Kāmil*, xii, 104; *Bidāya*, xiii, 6). It was also in the period of the foundation of the *ribāṭs* that the Ṣūfī mystical communities developed into hierarchically-organised orders. The caliph's attention to the *ribāṭs* and the origin of the orders apparently coincided with the reorganisation of the *futuwwa*.

Following the example of the Prophet, al-Nāṣir succeeded in being recognised in the field of *ʿilm*. Having become a *mudjtahid*, he transmitted, in order to underpin this claim, Aḥmad b. Ḥanbal's *Musnad* to Ḥanbalī scholars as part of *samāʿ* collections (*Dhayl*, ii, 218; *Mirʾāt*, viii, 556). He further put together seventy *ḥadīths* which went back to the Prophet. Through *idjāza*, he transmitted them equally to representatives of all four Sunnī *madhāhib* (*Mirʾāt*, viii, 543-4; *Siyar*, xxii, 197-8; Bundārī, *Dhayl*, fol. 28a; Dubaythī, *Dhayl*, fol. 10a). Under the title *Rūḥ* (*Rawḥ*) *al-ʿārifīn*, al-Nāṣir had this collection of *ḥadīths* propagated systematically in ʿIrāḳ, Syria and Egypt, in Rūm Saldjūḳid Asia Minor, in Persia and in the Holy Cities of Mecca and Medina. It was a programmatic work with a moral tendency, fundamental for this caliph's view of his own function (*Mirʾāt*, viii, 564-5; 543; *ibid.*, fol. 319b (missing in the Ḥaydarābād edition); *Siyar* xxii, 198; *Sulūk*, i, 180; *Mufarridj*, iv, between 163 and 170). The *ḥadīths* of the *Rūḥ al-ʿārifīn* touch on the following subjects: moral information and instructions for the believers, warnings against the temptations of the world, appeals to observe the religious duties and guidelines for life after death. In the 9th/15th century, al-Suyūṭī [*q.v.*] was critical of the enthusiasm for the *Rūḥ al-ʿārifīn*, maintaining that the work had originated from political expediency and personal career-making, and not for the sake of

religion. According to him, the work does not stand up against the standards of *ḥadīth* criticism (*Taʾrīkh al-Khulafāʾ*, 448). Among other contemporary historians, Ibn al-Dubaythī (*Dhayl*, fol. 10a) and al-Bundārī (*Dhayl*, fol. 28b) quote from the *Rūḥ al-ʿārifīn*. The theologian al-Taftazānī [*q.v.*] quoted from it in the 8th/14th century, and in the 11th/17th century it was known to Ḥādjdjī Khalīfa (*Kashf al-ẓunūn*, i, 915). ʿAbd al-Laṭīf al-Baghdādī's [*q.v.*] commentary (*Siyar*, xxii, 197; see also his memoirs, ed. Cl. Cahen, 105), together with al-Nāṣir's *ḥadīths* mentioned above, have survived under the title *Futūḥ al-waḳt* (B.L. Cat.Ar. 6332, fols. 30b-76b, which includes a copy of an *idjāza* of the commentator and his autographic *placet*, fols. 76b-82b; cf. Cat. Or. 5780; Hartmann, *an-Nāṣir*, 206-32). Another commentary of the *Rūḥ al-ʿārifīn* by Sibṭ Ibn al-Djawzī (d. 654/1257 [*q.v.*]) is considered to be lost. Numerous *ḥadīths*, mostly from other collections of al-Nāṣir, have found their way into al-Suhrawardī's *Rashf al-naṣāʾiḥ*.

10. Conclusion. The aim and, in the end, also the essence of al-Nāṣir's ideas about his function was that the caliph should get back the position of a *mudjtahid*, act in politics as the guardian and propagator of the traditions of the Prophet on behalf of all dogmatic trends, and retain his own judgement as the recognised expert in the matter of text interpretation. After these tasks and their fulfilment had been curtailed for several centuries, al-Nāṣir's caliphate to a large extent again met the standards set as an ideal for the function of the Prophet's successor.

Bibliography: 1. Sources. The most comprehensive biography published so far is al-Nāṣir's necrology by Dhahabī, *Siyar al-nubalāʾ*, xxii, Beirut 1405/1985, 192-243. Dhahabī quotes several lost or unpublished contemporary chronicles. Ibn al-Sāʿī, *Kitāb Rawḍ al-nāṣir fī akhbār al-Imām al-Nāṣir* (see al-Irbilī, *Khulāṣat al-dhahab*, Baghdād n.d., 282) is lost, as are the works by Ibn al-Djawzī, written in favour of or against al-Nāṣir (see *Mirʾāt*, viii, 484; Ibn Radjab, *Dhayl*, i, 420). Abu 'l-Fidāʾ, *Mukhtaṣar taʾrīkh al-bashar*, i-iv, Istanbul 1286/1896; Abū Shāma, *al-Rawḍatayn*, i-ii, Cairo 1287-8/1870-1; idem, *Tarādjim ridjāl al-ḳarnayn al-sādis wal-sābiʿ* (= *al-Dhayl ʿalā 'l-Rawḍatayn*), Beirut 1974; Bundārī, *Dhayl ʿalā Taʾrīkh Baghdād*, Bibl. (ANGELIKA HARTMANN)

NĀSIR AL-DĪN SHĀH (*r.* 1848-96), fourth ruler of the Ḳādjār dynasty [*q.v.*] of Persia. Born on 6 Ṣafar 1247/17 July 1831 in the village of Kuhnamīr near Tabrīz to the then Prince Muḥammad Mīrzā (later Muḥammad Shāh, r. 1834-48) and Malik-Djahān (later Mahd-i ʿUlyā: Queen Mother, d. 1873), daughter of a powerful Ḳādjār chief, Nāṣir al-Dīn epitomised the eventual union of the contesting Ḳuwānlū and Davalū clans of the Ḳādjār tribe. The young Crown Prince's right of succession to the throne was not fully secured before 1847, when a complex power struggle within the royal family, fuelled by rival officialdom and by European envoys, turned to Nāṣir al-Dīn's momentary advantage. His childhood and early youth turned out to be even less cheerful because of Muḥammad Shāh's contempt for Nāṣir al-Dīn and his mother, haphazard education, irregular allowance and isolation within the palace even though he benefited from his mother's full moral support. His brief but eventful governorship of Ādharbāydjān ended upon the death of his ailing father when he was declared the Shah in 14 Shawwāl 1264/13 September 1848. Crucial to success of the young Shah's swift and unchallenged accession was the capable and ambitious commander of the Ādharbāydjān New Army, Mīrzā Taḳī Khān Amīr Kabīr [*q.v.* in Suppl.], who in collaboration with the British consul in Tabrīz organised the young Shah's triumphant march to the capital in October 1848. Equally instrumental was Mahd-i ʿUlyā's interim government consisting of a fragile coalition of high-ranking officials who orchestrated the removal of the previous prime minister, Ḥādjdjī Mīrzā Āḳāsī.

The first phase of Nāṣir al-Dīn's reign (1848-1858) was characterised by a prolonged struggle to assert the monarchical authority over the office of the Prime Minister (*ṣadr aʿẓam*), to weaken the Ḳādjār nobility, challenge the restraining policies of European powers, and suppress popular and religious dissent. Although at first he willingly delegated full power to Amīr Kabīr as the royal guardian (*atābak*), the Prime Minister, and the commander-in-chief of the army (*amīr-i niẓām*), the Shah found it exceedingly difficult to reconcile the Prime Minister's stern conduct and his draconian reform measures in the areas of finance, military, and the administration with the vested interests of the nobility. Mahd-i ʿUlyā's sustained opposition to Amīr Kabīr was shared by the discontented bureaucrats and Ḳādjār notables. The Shah's own desire for greater political initiative and for a larger allowance eroded Amīr Kabīr's support base leading to his dismissal in November 1851 and shortly afterward his tragic execution in January 1852. The much-bemoaned episode, which was in part exacerbated by the undue intervention of the British and the Russian ministers and their proxies, remained a dark spot in the Shah's political career. Even in his short term of office, Amīr Kabīr consolidated Nāṣir al-Dīn's throne, not only by bringing a semblance of order to the otherwise chaotic government but also by destroying the internecine Dawalū revolt in Khurāsān (1848-51). Even more crucial for the survival of the Ḳādjār throne was Amīr Kabīr's harsh suppression of the Bābī movement [*q.v.*] which culminated in the execution of the Bāb [*q.v.*] and the crushing of the Bābī armed resistance. The Shah's fear of the Bābīs, who in August 1852 tried to assassinate him, persisted throughout his reign and was shared by the high-ranking *ʿulamāʾ*. After the fall of Amīr Kabīr, the Shah acquiesced in their almost unhindered monopoly of the civil judiciary, the charitable endowments, the mosques and education.

During the seven-year term of office (1851-8) of Mīrzā Āḳā Khān Nūrī, Iʿtimād al-Dawla, the Shah's drive for monarchical ascendancy was contained by the manoeuvres and machinations of his pro-British Prime Minister, who nevertheless had an important influence on the Shah's political behaviour. In search of greater security but also to balance the British influence at the close of the Crimean War (1854-6) the Shah entertained an old ambition of the Ḳādjār rulers for the reassertion of Persia's sovereignty over the long-disputed vassalage of Herat. Moved by patriotism and by military glory, he took advantage of the chaotic condition of Herat to break relations with Britain over a scandalous affair involving Charles Murray, the British Minister in Tehran. Soon he launched an expedition under the command of his uncle Sulṭān Murād Mīrzā Ḥusām al-Salṭana, who eventually captured Herat in October 1856. Faced with a British declaration of war, Nāṣir al-Dīn's conditional proposal for withdrawal from Herat was answered by the landing of a sizeable Anglo-Indian force in Būshihr in December 1856. The waning Persian resistance soon encouraged the British to move to the interior, forcing upon the Shah a humiliating withdrawal from Herat and a hasty compliance with the terms of the Paris Peace Treaty of March 1857. Faced with increasing popular criticism at home, but partly as a result of intrigues within the harem and the bureaucracy, in August 1858 the Shah dismissed Āḳā Khān Nūrī and sent him to a lifetime exile. Defeat in war and the disastrous collapse of the subsequent expedition against the Turkomans of Marw in October 1860 convinced Nāṣir al-Dīn as to the expediency of diplomatic accommodation with the neighbouring powers, a hallmark of the remaining years of his rule.

The second phase of Nāṣir al-Dīn's reign (1858-71) was marked by the abolishing of the office of *ṣadr aʿẓam* and the appointment of ministers to the newly-created ministries, with the Shah acting as his own Prime Minister. After a brief period of lukewarm experimentation with western-style reforms (1858-60), the Shah's personal supervision drew him further into a complex political game in which his prime objective was to obstruct the monopoly of power by any one minister or faction. Having been exposed as early as 1855, but more so after 1858, to the reformist views of the celebrated Mīrzā Malkum Khān [*q.v.*], the Shah increasingly adopted an autocratic approach

while ignoring Malkum's rationalisation reform plans. His constant juxtaposition of ministers, and a redefining of their functions and responsibilities, contributed to the confusion in the administration. The Shah's main rationale was to preserve a fragile balance between the powerful conservative camp headed by Mīrzā Yūsuf Mustawfī al-Mamālik, the chief state accountant, and the weaker reformist wing championed by Farrukh Khān Amīn al-Dawla. The selective nature of the reforms initiated by the Shah from mid-1860s is most visible in the construction of the telegraphic network. Direct and speedy contact with the provinces increased the Shah's control while at the same time he remained loyal to the Ḳādjār practice of delegating to the provincial governors enormous power. Up to 1888 the Shah's eldest son Masʿūd Mīrzā Ẓill al-Sulṭān governed from his provincial capital in Isfahan over as many as sixteen provinces and governorates in central and western Persia.

The rise of the celebrated reformer Mīrzā Ḥusayn Khān Mushīr al-Dawla [*q.v.*, and see DUSTŪR, iv, Iran) to the premiership (November 1871) marked the beginning of the third phase of Nāṣir al-Dīn Shāh's reign (1871-86). Royal tours to Ottoman ʿIrāḳ (November 1870-January 1871) and to Europe (May-September 1873, to include Russia, Prussia, England, France, Italy, Austria and Turkey), the first by a Persian royalty, provided the Shah with first-hand experience of the outside world and allowed greater recognition of the Persian state. Nāṣir al-Dīn's diaries of these tours, as well as diaries of his later visits to Europe (March-August 1878 and May-October 1889), register his sincere and occasionally amusing impressions of prosperous and exotic Europe. He remained more impressed with the royal splendour, the natural scenery, and the trivia rather than with the political institutions or industrial achievements. Throughout, the Shah and his retinue were received with great esteem and fascination, often one reminiscent of the old Persian monarchy. During the first tour, the granting of the Reuter concession, notorious for its all-embracing monopoly of Persia's natural resources, its finance and communication, was also finalised under the auspices of Mushīr al-Dawla. On his return, in response to a palace revolt orchestrated by the conservatives the Shah was forced to demote his premier to the rank of Minister of War and repeal the Reuter concession. The administrative, military and judicial reforms that were implemented by Mushīr al-Dawla until his dismissal in 1880 and which were largely on the model of the Ottoman *Tanẓīmāt* [*q.v.*] were meant to strengthen and rationalise the government by restraining the arbitrary power of the monarch. Yet Nāṣir al-Dīn, in spite of his apparent support for reforms, managed to utilise the resistance of the conservative princes and *mustawfīs* in order to deflect Mushīr al-Dawla and eventually to concentrate power in his own hand. In the area of foreign policy the Shah exploited the tense rivalry between his imperial neighbours, especially after 1881, in order to maintain a fragile equilibrium conducive to tranquility, the stabilisation of the frontiers at the expense of dispensing with the periphery (Khīwa, Marw, Sarakhs, Herat, eastern Sīstān, and Baḥrayn) and the restraining of European imperial access to the interior at the cost of refraining from infrastructural reforms such as railways and navigation, which were hardly in any case feasible because of the rivalries of outside powers.

A shift in Nāṣir al-Dīn's political conduct, characterised by personal disillusionment and growing popular discontent, marked the fourth and the final phase of his reign (1886-96), beginning with the death of the conservative patriarch Mīrzā Yūsuf Mustawfī al-Mamālik who served as nominal premier since 1881. After more than a decade of stiff resistance, the Shah's consent to the opening of the Kārūn river navigation (October 1888) and the granting of the British-operated Imperial Bank of Persia (January 1889) announced a new era. The Shah was persuaded to grant concessions by the British envoy Sir Henry Drummond Wolff in an attempt to resuscitate the repealed Reuter concession, but the opening-up to Europe was further facilitated by the rise of a younger generation of statesmen trained in the Shah's inner court and in the foreign service. The rise of the young Mīrzā ʿAlī Aṣghar Khān Amīn al-Sulṭān (d. 1907) to the premiership (officially appointed in 1888) was largely due to his willingness to augment the Shah's personal gains and to negotiate on his behalf with foreign powers. He gratified Nāṣir al-Dīn's narcissistic profligacy and exploited his emotional insecurities in exchange for greater control over the government and foreign policy, while the Shah promoted his own younger son, Kāmrān Mīrzā Nāʾib al-Salṭana, the War Minister, as a counterbalance to the premier. The advice of the reform-minded Mīrzā ʿAlī Khān Amīn al-Dawla (d. 1904), the head of the State Consultative Council, had some moderating influence on the Shah's conduct. The nationwide protest in 1891-2 against the Régie tobacco monopoly granted to a British subject in 1889 nevertheless indicated an imbalance in Nāṣir al-Dīn's domestic policy and a dramatic turning-point in popular discontent against the Shah and his premier. In order to pay for the growing bureaucracy and royal expenditure through the sale of concessions, limited though this was, the Shah disenfranchised the merchants of the bazaar and alienated their *ʿulamāʾ* beneficiaries, who now were lionised by activists such as Sayyid Djamāl al-Dīn Asadābādī "al-Afghānī" [*q.v.*]. The growing domestic dissent continued even after the cancellation of Régie. The Shah's assassination on 18 Dhu 'l-Ḳaʿda 1313/1 May 1896 inside the shrine of Shāh ʿAbd al-ʿAẓīm and on the eve of his fiftieth jubilee (according to the lunar calendar) was not an isolated and unpredictable event. His assassin, Mīrzā Riḍā Kirmānī, a devotee of Sayyid Djamāl al-Dīn, was a typical victim of the petty oppression of the late Nāṣirī police apparatus controlled by Kāmrān Mīrzā. Nāṣir al-Dīn was buried in an adjacent room of the same shrine.

One of the longest-ruling Persian monarchs, Nāṣir al-Dīn left his discreet stamp on the Persian government and society of his time. His chief achievement was his often unappreciated diplomatic skill which helped in preserving Persia's sovereignty and territorial integrity in an age of imperial threat, a credit which nonetheless is tainted by his domestic shortcomings and failures to implement reforms. His capricious vacillations between modernisation and conservatism were determined as much by expediency and fear of social upheavals as by his deep-seated suspicions. Distrustful and self-indulging, the auctioning of government offices, the currency depreciation swindle, unceasing hunting and outdoor excursions, his obsessive infatuation for his favourite page-boy Malīdjak ʿAzīz al-Sulṭān, his whimsical and at times cruel treatment of his subjects, his ceaseless search for personal wealth, and his intolerance for dissent severely battered his image. His complex personality was embellished however by his artistic and literary accomplishments, historical and topo-

graphical interests, patronage of mixed Perso-European art, architecture and urban development as well as secular and religious scholarship, high and popular literature, Persian music, and Shīʿī passion plays (*taʿziya* [*q.v.*]). Many European innovations, from postal services, passports, street cars and gas lighting, to photography, museums, military music, modern outfits and appearance (including shaving of the beard), fireworks, and modern furniture were introduced by Nāṣir al-Dīn himself. His numerous diaries of his domestic and international travels, mostly published in his own time, are unique among the Islamic rulers of his time for portraying him as an avid though not specially perceptive observer with an eye for details and a lucid style. His preoccupation with details is also evident in the affairs of the government and the army, at the cost of his losing sight of the broader picture. His astute handling of the *ʿulamāʾ*, the nobility and foreign representatives was complemented by his royal façade and his promotion of pomp and circumstance. In contrast, Nāṣir al-Dīn's informal court and pleasure-seeking private life has generated a lopsided, often farcical, image of him in modern Persian history.

(A. AMANAT)

NĀṢIR ʿALĪ SIRHINDĪ (d. in Dihlī on 6 Ramaḍān 1108/29 March 1697, one of the best of the Persian poets of India, who were by this time very numerous; their productions however are for the most part of little artistic value. Of his life we know only that he travelled a great deal but finally settled in

Sirhind, where he enjoyed the favour of the governor Sayf Khān Badakhshī and of the *Amīr al-Umarāʾ* Dhu 'l-Fiḳār Khān. His principal work is a version of the love story of Madhumalat and Manūhar in Persian verse, the original having been written in Hindī by Shaykh Djammān. The same subject was taken up after Nāṣir ʿAlī by Mīr ʿAskar ʿĀdil Khān Rāzī (d. 1107/1696), one of the governors of Dihlī under Awrangzīb (1659-1707), who called his poem *Mihr u māh*. Besides the poem, Nāṣir ʿAlī wrote a short *mathnawī*, Ṣūfī in character, and a description of Kashmīr, both of which still survive. His lyrical *Dīwān* was collected by his friends after his death; it consisted of the usual *ghazals*, some *sāḳī-nāmas* and poems in praise of the Ḳalendar dervishes (lith. Lucknow 1244, 1281, and Cawnpore 1892).

Bibliography: H. Ethé, *G I Ph*, ii, 252, 310; V. Ivanow, *Curzon collection cat.*, nos. 278-9, and *Asiatic Society of Bengal Coll.*, nos. 813-17. There are mss. in most European libraries. (E. Berthels)

NĀṢIR-I KHUSRAW, whose full name was Abū Muʿīn Nāṣir b. Khusraw b. Ḥārith al-Ḳubādhiyānī, Persian poet and prose writer, a noted traveller, and an Ismāʿīlī philosopher and *dāʿī* [*q.v.*]. He was born into a family of landowners and officials in 394/1004 in Ḳubādhiyān [*q.v.*] on the right bank of the Oxus River. What little we know about his early life comes to us primarily from references in his own works. Such autobiographical details reflect Nāṣir's own retrospective arrangement of his life to reflect what he regards as phases in his moral and spiritual evolution.

During the period of Ghaznawid control of the area, he probably worked as an official. After the establishment of Saldjūḳ rule in 431/1040, he served in an administrative capacity in Marw, where his brother held a prominent position. There are references to Nāṣir's early interest in philosophy, science, mathematics and poetry, which he seems to have pursued while maintaining an active social life in court circles.

The next, more dramatic phase of his life, is marked by his resignation from his post in 437/1045 and his decision to set out on pilgrimage to Mecca. He departed for what would eventually turn out to be a seven-year journey, accompanied only by his brother and a servant. In the *Safar-nāma*, the classic account of his travels, he explains his reasons for leaving by reference to a dream, a visionary experience that depicts a spiritual transformation, which he subsequently elaborated upon more fully in one of his poems. It portrays a "conversion" climaxed by an oath that commits him to the service of the Fāṭimid [*q.v.*] Ismāʿīlī *Imām* of the time in Cairo, al-Mustanṣir bi 'llāh, and to the cause of the *daʿwa* of the Ismāʿīlīyya [*q.v.*].

Some scholars have understood Nāṣir's conversion as an instant event that caused him to leave a hitherto dissolute lifestyle in Marw in quest for a more meaningful life, which eventually led him to Cairo. Others, including Corbin and Ivanow, have suggested that he was probably already involved with Ismāʿīlism before leaving on his journey and that his description of his conversion should be understood as an allegorical account of an inner quest and transformation that eventually culminated in his official appointment to the *daʿwa* while at the Fāṭimid court in Cairo.

The first phase of his journey took him to Mecca by way of Nīshāpūr, Tabrīz, Aleppo and Jerusalem. After performing the pilgrimage, he set out for Egypt, arriving in Cairo in 439/1047. He lavishes praise on Cairo, its prosperity, administration, order and its social and intellectual life. He stayed in Cairo for about three years, becoming familiar with the tradition of Ismāʿīlī learning and was in all probability attracted to its message by al-Muʾayyad fi 'l-Dīn al-Shīrāzī [*q.v.*], the eminent Ismāʿīlī *dāʿī*. During his stay in Egypt, Nāṣir undertook two more pilgrimages to Mecca.

He left Cairo in 441/1050, proceeded to Mecca, remaining there for six months, performed the pilgrimage and then left to go to Balkh, where he arrived in 444/1052. This marked the end of his period of travels and the beginning of the next phase in his life, where he assumed the task of preaching on behalf of the Ismāʿīlī *daʿwa*. In his own writings, Nāṣir constantly refers to himself as the *ḥudjdja* [*q.v.*] of Khurāsān, indicating his leadership role in charge of the Fāṭimid *daʿwā*'s activities in the region. This phase of his life, which in a sense is the most productive in terms of output as a writer, is also the most obscure. Faced by obvious opposition in the predominately Sunnī, Saldjūḳ-controlled milieu of Balkh, he was forced to seek refuge in the valley of Yumgān in Badakhshān [*q.v.*], which was then under the control of a sympathetic Ismāʿīlī local ruler. It is during this period that some of his key surviving works and poems were composed. His work reflects the ambivalence he felt about his work and "exile" in Yumgān. He laments the lack of intellectual fellowship, the sense of isolation and the climate of opposition within which he had to work. On the other hand, he draws comfort in his writings from his commitment to the work of preaching, his sense of his mission in life, and his literary pursuits. The exact year of his death is not known. It fell sometime between 465/1072 and 471/1078. He is buried in Yumgān, where his modest tomb has become the site of pilgrimage.

The works of Nāṣir-i Khusraw that have survived indicate a wide range of intellectual and poetic discourse. They represent a significant contribution to Muslim literature in Persian during the 5th/11th century, and his Ismāʿīlī writings are the only contributions in Persian that have survived by a major figure of the Fāṭimid *daʿwa*. They are a continuation and elaboration of the pattern of intellectual exposition initiated by early Fāṭimid writers such as Abū Ḥātim al-Rāzī (d. 322/934) and Ḥamīd al-Dīn al-Kirmānī (d. after 411/1020-21) [*q.v.*]. Though it is very probable that some of the distinctively Ismāʿīlī elements in his writings might have undergone change through revisions by non-Ismāʿīlī writers. Nāṣir's ideas and works were preserved and had a substantial impact on the subsequent development of Ismāʿīlism among Persian-speaking Muslims and have exercised a continuing influence on the Ismāʿīlīs of Central Asia, Afghānistān and Iran. The impact of his writings, however, has not been limited to the Ismāʿīlis and his poetry and prose have earned Nāṣir-i-Khusraw a reputation as an important figure in mediaeval Persian literature.

The *Dīwān*, a collection of poetry, is probably his best known work. Some of the poems, in particular the famous "confessional ode", are reflections on his inner conflicts and spiritual development. His commitment to the cause of the Ismāʿīlī *daʿwa* is explicit in the poems but is informed by a much wider range of human and religious concerns. The tone throughout is moral, exhortative and occasionally philosophical.

The *Safar-nāma*, an account of his travels, falls within the genre of mediaeval Muslim travel literature. It is a description of places, persons and

events, as well as an interpretation of contemporary Muslim society and culture, enlivened by Nāṣir's personal observations and insight.

Nāṣir's other surviving works, fall within the tradition of Fāṭimid, Ismāʿīlī literature, and reflect the basic framework of its religious system and interpretation of Islamic thought and practice. Among them are

(i) The *Rawshanāʾī-nāma* ("The book of enlightenment"), a poetic work on standard Ismāʿīlī themes.

(ii) *Wadjh-i dīn* ("The face of religion"), an exposition of the major doctrines and practices of Islam, with an interpretation of their inner significance, illustrating the use of the hermeneutic method, of *taʾwīl* in Ismāʿīlī thought.

(iii) *Gushāyish wa rahāyish* ("Emancipation and respite"), a philosophical work that sets out a framework dealing, through questions and responses, with key Islamic ideas.

(iv) *Khwān al-ikhwān* ("A banquet for the brethren"). A summary of basic principles and practices of the faith.

(v) *Zād al-musāfirīn* ("Sustenance for travellers"), surveys the philosophical positions of some of the ancients, including Plato and Aristotle, and argues against some of the views of early Muslim philosophers like Abū Bakr al-Rāzī (Rhazes, d. 312/926).

(vi) *Djāmiʿ al-ḥikmatayn* ("The sum of two wisdoms") in which Nāṣir seeks to synthesise positive religion with the resources of philosophy. His goal is to create harmony between the language of the Ḳurʾān and the rational and logical tools of the intellectual sciences.

(vii) *Shish faṣl*, a summary in six chapters, of the Ismāʿīlī interpretation of Islamic tenets; it is also called the prose *Rawshanāʾī-nāma*.

In addition there are a number of works attributed to Nāṣir-i-Khusraw, for which there is no evidence of his authorship.

Bibliography: For the older bibl., see E. Berthels, s.v., in *EI*¹; and for a full list of studies on Nāṣir and works written and attributed to him or works referred to by others that have not survived, see I. Poonawala, *Biobibliography of Ismaʿīlī literature*, Malibu 1977. A new English translation by W.M. Thackston, of the *Safar-nāma* is *Nāser-e-Khosraw's Book of Travels*, New York 1985. There is also a more recent edition of *Wadjh-i dīn* ed. G.R. Aavani, Tehran 1977. A commemorative volume of articles, *Yād-nāma yi Nāṣir-i-Khusraw*, Mashhad 1355/1976, sums up recent Persian scholarship on Nāṣir. For a detailed study of a well-known poem of his, see Julie S. Meisami, *Symbolic structures in a poem by Nāṣir-i Khusrau*, in *Iran*, *JBIPS*, xxxi (1993).

(AZIM NANJI)

AL-**NĀṢIR** AL-**SALĀWĪ**, SHIHĀB AL-DĪN ABU 'L-ʿABBĀS AḤMAD B. KHĀLID B. ḤAMMĀD AL-NĀṢIRĪ, a Moroccan historian born at Salé on 22 Dhu 'l-Ḥidjdja 1250/20 April 1835, died in the same town on 16 Djumādā I 1315/13 October 1897. The genealogy of this writer can be traced in a direct line to the founder of the Moroccan brotherhood of the Nāṣiriyya [*q.v.*], Aḥmad b. Nāṣir, who was buried in his *zāwiya* at Tāmgrūt in the valley of the Wādī Darʿa (Drā). He studied in his native town, which had in those days some reputation as a centre of learning, and was a minor rival of Fās, the intellectual capital of the country. His principal teachers were Muḥammad b. ʿAbd al-ʿAzīz Maḥbūba and the *ḳāḍī* Abū Bakr b. Muḥammad ʿAwwād; without neglecting theological and legal studies, he acquired a profound knowledge of profane Arab literature. At the age of about 40, Aḥmad al-Nāṣirī entered the legal branch of the Sharīfī government's service as a notary or superintendent of the state domains. He held more or less important posts from time to time in this service. He was stationed at first at al-Dār al-Bayḍāʾ (Casablanca) 1292-3/1875-6, and made two stays at Marrākush, where he was employed in the financial administration of the imperial household. He then lived some time at al-Djadīda (Mazagan) where he was attached to the customs service. He next spent some time in Tangier and Fās and towards the end of his life returned to his native town where he devoted himself to teaching. On his death he was buried in the cemetery at Salé outside the Bāb Maʿalika Gate. Al-Nāṣirī was a minor civil servant who was also a man of letters and a historian. In addition to his historical work, which gained him a certain reputation even outside of Morocco, he left other works which would alone have probably sufficed to attract attention to him and secure him an honourable position among contemporary Maghrībī men of letters. These are, in addition to the six opuscula detailed in Lévi-Provençal, *Historiens des Chorfa* (353, n. 1): 1. A commentary on the *Shamaḳmaḳiyya*, a poem by Ibn al-Wannān which he called *Zahr al-afnān min ḥadīḳat Ibn al-Wannān* (lith. at Fās in 1314 A.H., 2 vols.); 2. A survey of the heresies and schisms in Islam entitled *Taʿẓīm al-minna bi-nuṣrat al-sunna* (Rabat ms., no. 66; cf. Lévi-Provençal, *Catalogue*, i, 23); 3. A monograph on the family of the Nāṣiriyya to which he himself belonged: *Ṭalʿat al-mushtarī fi 'l-nasab al-djaʿfarī* (lith. at Fās, 2 vols., n.d., new ed. 1320/1902; a French synopsis has been given by M. Bodin, *La Zaouïa de Tamegrout*, in *Archives Berbères*, 1918). This work, which the author finished in 1309/1881, is a good history of the *zāwiya* of Tāmgrūt, with much interesting information, which compensates for all the discursions in which the historian tries to prove the authenticity of his family genealogy with the help of somewhat unconvincing arguments.

Aḥmad al-Nāṣirī's great work is the *Kitāb al-Istiḳṣā li-akhbār duwal al-Maghrib al-aḳṣā*. Its publication was an event unparalleled in Maghribī historiography. The author produced not a limited chronicle but a general history of his country, one, moreover, printed in the Muslim Orient (Cairo 1312/1894, 4 vols.; 2nd ed. Casablanca 1954-6, 9 vols.). Welcomed by European orientalists on its publication, it was not long in attracting the attention of the historians of North Africa, for whose work it became a much consulted document, especially as a French translation in the *Archives Morocaines* soon made the last quarter—the history of the ʿAlawid dynasty—accessible even to non-Arabists.

It was soon recognised that this chronicle was like all the other products of western Arab historiography: it was only a compilation, the most appreciable merit of which was to have collected in a continuous narrative, items of political history scattered about the chronicles or biographical collections written in the country. But it must be confessed that al-Nāṣirī was the first of his compatriots to attempt to exhaust a subject of which his predecessors had only dealt with parts. But this was not his primary object: the author of the present article has shown elsewhere (*Shorfa*, 357-60) that the starting point in the compilation of the *Kitāb al-Istiḳṣāʾ* was a work of some length on the Marīnid dynasty of Morocco, based mainly on the historical works of Ibn Abī Zarʿ and Ibn Khaldūn, to which he had given the title of *Kashf al-ʿarīn fī luyūth Banī Marīn*. His residences in the different capitals of Morocco, having enabled him to get access to sources

for other dynasties also, he had the idea of composing a complete history of Morocco. He finished his work on 15 Djumādā II 1298/15 May 1881, before the end of the reign of the ʿAlawid sultan Mawlāy al-Ḥasan, to whom he dedicated it. But he was poorly recompensed for this act. On the death of this ruler, the author decided to have his chronicle printed in Cairo, after continuing it down to the year of accession of sultan Mawlāy ʿAbd al-ʿAzīz.

The reader may be referred to *Les historiens des Chorfa* for an examination of the Arabic sources of the history of al-Nāṣirī, and for a list of works from which he adopted or quoted textually passages. Here we shall simply point out that the chronicler was the first Moroccan writer to use European as well as Arabic sources; he only learned of them by chance; these were the history of Mazagan (Ar. al-Djadīda) under Portuguese rule entitled *Memorias para historia da praça de Mazagao*, by Luis Maria do Couto da Albuquerque da Cunha, Lisbon 1864, and the *Descripción historica de Marruecos y breve reseña de sus dinastías*, by Manuel P. Castellanos, Santiago 1878, Orihuela 1884, Tangier 1898.

In the arrangement of his chronicle al-Nāṣirī does not differ from the other historians of his country. But he sometimes gives evidence of a critical sense; we have a feeling that he is a historian by accident and a literary man by vocation. He sometimes gives evidence of considerable independence of spirit and of some breadth of view. As to his style, it is clear and chastened and only rarely resorts to metaphors and rhymed prose. The writer seems to be the Moroccan historian of his time who writes with most facility and elegance.

The first three volumes of the Cairo edition have been translated into French by A. Graulle, G.S. Colin and I. Hamet, in *AM*, xxx (1923), 1-302, xxxi (1925), 1-238, xxxii (1927), 1-283, xxxiii (1934), 1-621; the fourth one was done by E. Fumey, *Chronique de la dynastie ʿalaouie au Maroc*, in *ibid.*, ix (1906), 1-399, x (1907), 1-424. An epitome of the work was made by Aḥmad al-Raḥīmī al-Tiṭwānī, under the title *Taḳrīb al-aḳṣā min Kitāb al-Istiḳṣāʾ*, Tetouan 1346/1927, and then epitomised and continued by al-Tuhāmī al-Wazzānī (1359/1940).

Bibliography: A general study of the life and works of al-Nāṣirī was made by E. Lévi-Provençal, *Les historiens des Chorfa*, Paris 1923, 350-68. This contains (355) judgements on the *Istiḳṣāʾ*, to which may be added R. Ricard, *Les ravages de l'«Istiqṣāʾ»*, in *Hésperis*, xlviii (1956), 201-2. Other references are limited; one may merely cite Ibn Ibrāhīm al-Marrākushī, *Iʿlām*, ii, 236-9; Brockelmann, S II, 888-9; Sarkīs, *Muʿdjam*, 1040.

(E. LEVI-PROVENÇAL)

AL-**NĀṢIRA**, Modern Hebrew Nāṣerat, Nazareth, the home of Jesus, a town of northern Palestine, since 1948 in Israel, situated in lat. 32° 42' N. and long. 35° 17' E. at a height of 505 m/1,600 ft.

It lies in a depression sloping to the south surrounded by hills in a fertile district. While the hills to the north and northeast are not very high, in the northwest the Djebel al-Sīkh rises to 1,600 feet above sea-level. The name of the town, which does not occur in the Old Testament, is found in the New and in the Greek fathers of the Church in the varying forms Ναζαρα, Ναζαρετ and Ναζαρεῦ with ζ, but according to Jerome it had in Hebrew a *ṣade*, which is confirmed by the Syriac Nāṣrāt and the Arabic Nāṣira as well as by the Talmudic derivative form N.w.ṣ.r.y, pl. N.w.ṣ.rīm, while the Christian Arabic has ζ. All these forms as well as Ναζαρηνός (Mark i. 24) have in the first syllable an *a* obscured to *o* in Talmudic. In Christian Aramaic there is a subsidiary form N.ṣ.w.r.t, with *o* in the second syllable with which is connected the derivative Ναζωραῖος (Matt. xxvi. 71; John xviii. 5), cf. τῶν Ναζωραίων αἵρεσις (Acts, xxiv. 5). The Mandaean term Naṣoraean (e.g. Dalman, *Aram. Gramm.*[2], 178; Gressmann, in *ZATW*, xliii, 26 ff.) is usually connected with this, but Lidzbarski (*Mandäische Liturgien*, p. xvi; *ZS*, i, 230 ff.) wants to explain it as "observers", while Zimmern (*ZDMG*, lxxiv, 429 ff., 76, 46) seeks its origin in the Babylonian *nāṣira*. That the Arabic *naṣārā*, Christians, sing. *naṣrānī* and abstract *naṣrāniyya*, come from the name of the town was known to the Arab writers.

Nazareth, which in the time of Jesus was a little town of no importance (cf. John i. 47: "what good can come out of Nazareth"?; it is not even mentioned by Josephus), was not in the early Christian period one of the places of the New Testament to which large numbers of pilgrims went. According to Epiphanius, it was inhabited exclusively by Jews till the time of Constantine the Great. The number of Christians however gradually increased and was maintained after the Muslim conquest (636). In the time of Arculf (*ca.* 670) it had two churches, and in 332/943 al-Masʿūdī mentions a church held in great veneration there, no doubt the church of St. Mary. Before Galilee was conquered by Tancred and the Crusaders, Nazareth was destroyed by the Saracens; it revived under Christian rule, especially after the bishopric of Scythopolis was transferred thither. The Russian abbot Daniel (1113-15) has given a very good picture of the Church of the Annunciation and of the Well of Mary there in this period. In 583/1187, the Ayyūbid Ṣalāḥ al-Dīn [*q.v.*] took Nazareth and at the peace between him and Richard I of England (1192) it remained in his hands. In 1251, during the last unsuccessful crusade, Louis IX undertook a pilgrimage from ʿAkkā to Nazareth. Yāḳūt (623/1225), who relies on the Gospel story instead of Muslim legend, mentions al-Nāṣira as a village 13 miles from Ṭabariyya. In 661/1263 the Mamlūk sultan Baybars ordered the *amīr* ʿAlāʾ al-Dīn to destroy Nazareth and particularly the Church of St. Mary. Al-Dimashḳī (*ca.* 1300) calls it a Jewish town belonging to the province of Ṣafad and inhabited by Yamanīs, and Khalīl al-Ẓāhirī (d. 872/1468) numbers it among the townlike villages in Ṣafad. The Christian visitors, however, describe Nazareth as a wretched village inhabited by very few Christians with a ruined church and complain of the hostile attitude of the Muslim population. It was not till 1620 that better days dawned when the Druse chief Fakhr al-Dīn [*q.v.*] opened the town to the Franciscans. The Roman Catholic monastery with the Church of the Annunciation was rebuilt, although not completed till a century later. There were only a few Christians in addition to the monks in the town, until in the middle of the 18th century the Shaykh Ẓāhir al-ʿAmr of ʿAkkā increased its prosperity after which they gradually grew in number. In 1890, according to G. Schumacher, there were 7,419 inhabitants in the town of whom 1,825 were Muslims, 2,870 Greek Catholics and the remainder Christians of other confessions. Jews were not allowed to live there. The great monastery with the Church of the Annunciation in the southeast belongs to the Roman Catholics, the Church of the Annunciation in the northeast to the Greek Church. The Muslims have a mosque of considerable size and five *walīs*. The well of Mary, which has a dome over it and is open on one side, has its water brought from a spring below the Greek Church of the Annunciation.

Nazareth was the headquarters of the Ottoman ar-

mies during World War One, being captured by the British in September 1918. During the Arab-Israeli War of 1948, it was the headquarters of Arab forces under Fawzī Ḳāwūḳdjī until these were defeated, with the resultant surrender of Nazareth without a fight. Modern Israeli Nazareth is an important market centre for the Arab population of northern Galilee, and is the chef-lieu of the Northern District of Israel. It is also the largest, virtually all-Arab town of Israel, with a population in the 1970 estimate of 34,000, the majority Christian.

NĀṢIRĀBĀD [see SĪSTĀN].

AL-**NĀṢIRIYYA**, a town of southern modern ʿIrāḳ and the chef-lieu of the governorate of Dhū Ḳār. It is situated on the left bank of the Euphrates, above the Hawr al-Ḥammār of the marshlands [see AL-BAṬĪḤA], some 177 km/110 miles to the northwest of Baṣra (lat. 31°04′N., long. 46°17′E.).

The town was founded *ca.* 1870 by the paramount chief of the Muntafiḳ [*q.v.*] confederation, Nāṣir Saʿdān Pasha, who aided the administration of Midḥat Pasha [*q.v.*] in extending Ottoman Turkish influence over this largely Shīʿī region against local tribal interests. In July 1915 it was captured by British and Indian forces under General G.E. Gorringe. After 1930 it acquired a station on a spur from the Iraq Railways' Baghdād-Baṣra line. The population of the town according to the 1985 estimate was 138,842.

Bibliography: Admiralty Handbook, *Iraq and the Persian Gulf*, London 1944, 547-8; S.H. Longrigg, *ʿIraq 1900 to 1950, a political, social and economic history*, London 1953, index. (ED.)

AL-**NĀṢIRIYYA**, a branch of the Ṣūfī order of the Shādhiliyya [*q.v.*], which originated in southern Morocco, at the *zāwiya* of Tāmgrūt [*q.v.*], which had been founded in 983/1575 by a member of a family of marabouts. The order owes its name to the Ibn Nāṣir family [*q.v.* in Suppl.], who headed the *zāwiya* from the time of the *shaykh* Maḥammad b. Muḥammad b. Aḥmad b. Muḥammad b. al-Ḥusayn b. Nāṣir b. ʿAmr b. ʿUthmān (1015-85/1603-74), the founder (1070/1660), onwards. It was however his son Aḥmad b. Maḥammad (1057-1129/1647-1717) who was responsible for organising the order.

Coppolani, *Les confréries religieuses musulmanes*, Algiers 1897, 479; W. Marçais, *Textes arabes de Tanger*, Paris 1911, 133; E. Montet, in *RHR*, xlv, 20-1; E. Lévi-Provençal, *Chorfa*, 99; G.S. Colin, *La zāouia de Tamgrout et les Naciriyine*, in *Rens. coloniaux* (1938), 205-23; L. Massignon, *Annuaire du monde musulman*, ⁴1955, 257. On a secondary branch, see E. Michaux-Bellaire, *La zaouia d'Ahançal*, in *Arch. Mar.*, xviii (1927), 87-113. It will be remembered that the author of the *K. al-Istiḳṣā'*, al-Nāṣirī [*q.v.*], has furthermore left behind a history of the family called the *Ṭalʿat al-mushtarī fi 'l-nasab al-djaʿfarī*, lith. Fās n.d.; a résumé of this work has been given by M. Bodin in *Arch. Berb.*, xviii (1927), 87-113. (ED.)

NASKH (A.), or AL-NĀSIKH WA 'L-MANSŪKH, is the generic label for a range of theories advanced in the fields of *Tafsīr*, *Ḥadīth* and *uṣūl al-fiḳh* since a comparison of verse with verse, *ḥadīth* with *ḥadīth*, *ḥadīth* with verse and both Ḳur'an and *Ḥadīth* with the *Fiḳh* suggested frequent, serious conflict.

That the Prophet's mission had extended over a quarter of a century inspired the idea of gradual development in the details of the regulations introduced in both Ḳur'ān and Sunna. *Naskh* applies to each of the two sources and to the relations between them. Most accepted the *naskh* of the Ḳur'ān by the Ḳur'ān and the *naskh* of *ḥadīth* by *ḥadīth*. The *naskh* of Ḳur'ān by *Ḥadīth* and of *Ḥadīth* by Ḳur'ān raised more delicate issues which divided the scholars.

ʿAbd Allāh b. Masʿūd reports that before he emigrated to Abyssinia, he used to greet the Prophet on passing him at prayer and the Prophet would return his greeting. On his return, ʿAbd Allāh did this, but the Prophet ignored him, and ʿAbd Allāh was perplexed. Completing his prayer, the Prophet explained, "God introduces such regulations as He pleases, and He has decreed that when we pray there must be no talking." In this instance of *naskh* in the *Ḥadīth*, a later regulation has replaced an earlier practice.

The ruling in Ḳur'ān, II, 180, that the Muslim make testamentary provision for parents and nearest kin was thought to have been revoked on the revelation of IV, 10-11, whose rulings allot to the relatives specific shares in a deceased's estate. Many verses counsel patience in the face of the mockery of the unbelievers, while other verses incite to warfare against the unbelievers. The former are linked to the Meccan phase of the mission when the Muslims were too few and weak to do other than endure insult; the latter are linked to Medina where the Prophet had acquired the numbers and the strength to hit back at his enemies. The discrepancy between the two sets of verses indicates that different situations call for different regulations. This is an instance of *naskh* in the Ḳur'ān. Chronology is the key to the resolution of the difference, since a divine book cannot contain contradictions, IV, 82.

The principal component of the general concept of *naskh* is "change", "replacement". To this was joined the notion of "withdrawal", "omission", but solely in relation to the operation of *naskh* upon the Ḳur'ān. The idea had originated in the exegesis. According to interpretation, LXXXVII, 6-7, XIII, 39, XVII, 86, XXII, 52 and II, 106, the last two of which actually employ the term *naskh*, appear to suggest the possibility of Muḥammad's forgetting revelations; the impossibility of his doing so, or divinely controlled forgetting by means of which the divine author would determine the final contents of His Book. The disputed exegeses were precipitated in appropriate anecdotes and the resulting references to "events" in the life of the Prophet consolidated the notion of his forgetting and contributed to the even-

tual shaping of the theories of *naskh*. Of special importance were allegations of actual omissions from the revelation such as those recording the "loss" of a verse in praise of the Biʾr Maʿūna [*q.v.*] martyrs, the Ibn Ādam "verse" and reports on the alleged originally longer versions of sūras IX or XXXIII, said to have once been as long as sūra II and to have been the locus of the stoning "verse". Lists were compiled of revelations verifiably received by Muḥammad and publicly recited during his lifetime until subsequently withdrawn (*rafʿ*), with the result that when the divine revelations were finally brought together into book-form, there was collected into the *muṣḥaf* [*q.v.*] only what could still be recovered following the death of the Prophet. The *muṣḥaf* has from the outset been incomplete relative to the revelation, but complete in that we have all that God intended us to have.

Interpretation similarly supplied the impulse behind and the vocabulary deployed in discussions on *naskh*, or the replacement of regulations. Prominent in this regard were the interpretations of Ḳurʾān, XVI, 101, and II, 106. Equation of the term *āya*, used in both verses, with "a Ḳurʾān verse", facilitated the claim that God had declared that "alteration", "substitution", even "omission", would affect the texts. The interpretation could be reinforced by production of what appeared to be numerous instances of actual change. Ḳurʾān, VIII, 66, for example, was held to have been revealed to reduce from ten to two the number of unbelievers against whom the Muslim was required in v. 65 to fight; LVIII, 13, had apparently rescinded the order in the immediately preceding verse to forward a fee in advance of an audience with the Prophet. II, 180 and IV, 10-11, have been mentioned; II, 142-4, in association with II, 150, afforded the clearest indication of the historical change affecting the *ḳibla* [*q.v.*]; XXIV, 2, had replaced the measures introduced in IV, 15-16, to deal with sexual impropriety. Instances of the *naskh* of Ḳurʾān rules adduced in the specialist works are numbered in the hundreds. Sūra IX, 5, for instance, the so-called "sword-verse", alone was thought to have replaced one hundred and twenty-four verses.

The significant fact that II, 106, the chief Ḳurʾānic proof-text, juxtaposed forgetting with *naskh*, interpreted in the light of XVI, 101, to mean *tabdīl* "replacement", led to the formalisation of reported forgetting as a type of *naskh*, the *naskh* of both wording and ruling, where, however, *naskh* retains its XXII, 52, sense of "withdrawal", "suppression". Alleged cases of clash of regulations derived from either Ḳurʾān verses or *ḥadīth*s, could, on the same pattern, be referred to as the *naskh* of the ruling but not of the wording. The formula is hybrid, since *naskh* carries both the sense of "replacement", referring to the ruling and "withdrawal", for the original wording has not been withdrawn.

In addition to the *naskh* of the Ḳurʾān by the Ḳurʾān and the *naskh* of the *Ḥadīth* by the *Ḥadīth*, examples of which we have considered, the majority speak also of the *naskh* of the *Ḥadīth* by the Ḳurʾān and the *naskh* of the Ḳurʾān by the *Ḥadīth*. In the case of the change in the *ḳibla*, the Ḳurʾān states that God had appointed the previous direction of prayer, without, however, identifying it. Some, therefore, saw this as an instance of the *naskh* of Ḳurʾān by Ḳurʾān, whereas, since the Ḳurʾān lacks mention of the earlier direction, others saw it as an instance of the *naskh* of the *Ḥadīth* by the Ḳurʾān. It was argued that there is no real conflict between IV, 10-11, and II, 180. Inheritance differs from testamentary provision and sūra IV regulates both in a single context. But, as a *ḥadīth* attributes to the Prophet the words "There is to be no *waṣiyya* in favour of an heir", many argued that here was an undoubted example of the *naskh* of the Ḳurʾān by the Sunna. The strongest opposition to both principles that the Ḳurʾān could repeal the *Ḥadīth* and that the *Ḥadīth* could repeal the Ḳurʾān is the hall-mark of the source theory developed by al-Shāfiʿī (d. 204/819) which revolutionised *uṣūl al-fiḳh*. He campaigned tirelessly to justify use of the Sunna as the second primary source alongside the Ḳurʾān against those who would accord the *Ḥadīth* no role in the derivation of the *sharīʿa* on the argument that the degree of conflict in the *Ḥadīth*, the inadequacies of the guarantee against corruption, fraud or error afforded by the *isnād*s rendered the *Ḥadīth* unfit for the sacred role of declaring the divine intent underlying the Ḳurʾān's declarations. These opponents being deaf to all but Ḳurʾān evidence, al-Shāfiʿī referred them to IV, 65, XXIII, 73, LIII, 2-3, LIX, 7; to verses linking obedience to the Prophet to obedience to God Himself, III, 132, IV, 80; and to the series of verses which speak of the Prophet's being granted, in addition to the Book, the *Ḥikma*, identified by al-Shāfiʿī as the Sunna. He drives home the point that, in the Ḳurʾān, God imposed upon every Muslim the religious obligation to obey the Prophet as he obeyed God. The only access to knowledge of the Prophet's commands being through the Sunna, al-Shāfiʿī could insist that God, in His Ḳurʾān, had thus imposed on every Muslim unquestioning adherence to the Sunna. Simultaneously, in a parallel confrontation with the Mālikīs and the Ḥanafīs, he sought by emphasising the wording of XVI, 101, "*We* substitute one *āya* for another *āya*", and II, 106, "*We naskh* an *āya*", to impose the view that the *naskh* of a Ḳurʾān verse was an exclusively divine prerogative. As a corollary, he next exploited "We shall bring one better than or similar to it", of the same verse to promote his view that, as nothing could be thought of as superior to or even similar to the Sunna of the Prophet, his opponents' regular procedure of ignoring *ḥadīth*s from the Prophet in favour of reports from Companions and others showed their failure to appreciate the unique status bestowed by God upon the Prophet and hence the special role of the Sunna of the Prophet. Nothing can *naskh* that Sunna save only that Sunna.

He further exploited X, 15, "It is not for me to alter it on my own initiative, I merely follow what is revealed", to argue that Ḳurʾān and Sunna are never in actual conflict. As both come from God, they cannot conflict. The Sunna follows, that is, elucidates the precise intent of the Ḳurʾān, XVI, 44. The Sunna cannot *naskh* the Ḳurʾān. Only the Ḳurʾān can *naskh* the Ḳurʾān and only the Sunna can *naskh* the Sunna.

Theological objections were raised to the theory of *naskh*. Following development of the *iʿdjāz* [*q.v.*] doctrine, it was argued that, being of divine authorship and hence individually perfect, all Ḳurʾān verses could be said to be similar, but no one could be said to be superior to another. *Naskh* could not, therefore be predicated of the Ḳurʾān. Nor, since the wording was of undoubted human origin, could any *ḥadīth* be thought to be similar, let alone superior to any verse. The *naskh* of the Ḳurʾān by the Sunna could not therefore be posited. The scholars easily evaded this difficulty, as is shown by al-Shāfiʿī's and al-Ṭabarī's regular insistence that *naskh* is not a matter of wording but of rulings. As the ruling of any *āya* could be said to be similar or even superior to that of any other *āya*, so also, the ruling of any *sunna* might be said to be similar or even superior to that of any *āya*. Al-Shāfiʿī's theory of *naskh* is thereby shown to have been short-lived.

As lengthy lists of instances of greater or lesser

incongruity between verses of the holy book had resulted from the efforts of the first exegetes, further theological considerations were urged which rendered necessary a clear distinction between the divine application of *naskh* and the evidence of deficient knowledge or of inadequate reflection suggested by a change of regulation. Merely human knowledge may develop and merely human decisions may be altered but that is inconceivable in the case of divine decisions. The Omniscient knew from all eternity all that would ever happen and when precisely it would happen. That knowledge would render *naskh* unnecessary. This objection made essential a distinction between the divine knowledge and the divine will. *Naskh* is a consciously applied process, planned in advance and intended to be applied to the content of revelation until the process of revelation finally ceased on the death of the last prophet. *Naskh* appears to our deficient human knowledge to be change, *tabdīl*. In reality, it is the announcement by a prophet of the termination of the duration of a regulation and the commencement of the duration of another, whether the earlier regulation was announced by the same prophet or by another prophet. A second objection arose from the view that what is good is commanded and what is evil is forbidden. In prohibiting what had been permitted or permitting what had been forbidden, *naskh* would be to declare good evil and evil good. *Naskh* cannot, therefore be posited as a divine activity. Being concerned with regulations, *naskh* theorising is hostile to the concept of inherent good or evil. The function of divine commands is to test human obedience. That explains why regulations may differ from religion to religion or from period to period. Since men will either be rewarded for obedience or punished for disobedience, God may command what He pleases and prohibit what He pleases. Dependent solely upon the divine will, regulation becomes wholly arbitrary and so may change at any moment. Only what God commands is good; only what He forbids is evil and, as regulation is linked to the divine will and not to the divine knowledge, objections based on the inconceivability of change of the divine mind, or development of the divine knowledge, known as *badā*ʾ, inevitably fail. *Naskh* involves only commands which on first institution could have been declared temporary and are such as are indifferently capable of being regulated or of being unregulated. Excluded therefore, are the central tenets of the faith, but also all regulations of the Ḳurʾān expressly stated to be temporary.

To discuss the relations between the two primary sources of the *Fiḳh*, the Ḳurʾān and the Sunna of the Prophet, which, in his discussions on *naskh*, he had rigorously insulated one from the other, al-Shāfiʿī resorted to a technique which he referred to as *takhṣīṣ*, particularisation, actually, alleged exclusion. The sūra IV regulation on sexual impropriety has been mentioned. That had been replaced by the XXIV, 2, flogging penalty. The *Fiḳh* introduced a distinction between adultery and fornication, on which the Ḳurʾān is silent, and assigned the sūra XXIV flogging to the latter sin. For the sin of adultery, the *Fiḳh* decreed death by stoning, thus raising the critical question of its origin. Stoning was rejected by some Muslims, on the grounds that they could not find two penalties in the Book of God. The sūra IV regulations had been flagged as temporary, "or until God appoint a process for these women". Deriving the distinction between fornication and adultery in the difference in tone between the harshness of IV, 15, and the mildness of IV, 16, the majority traced in XXIV, 2, the process promised in sūra IV while they presumed that stoning derived from the Sunna, as documented, for example, in the ʿUbāda *ḥadīth* to the effect that the Prophet had said, "Take it from me! Take it from me! God has now appointed a process for females: the unmarried with the unmarried, one hundred lashes and twelve months' banishment; the married with the married, one hundred lashes and death by stoning". Further reports show the Prophet extending the dual penalties to males, while other reports, in which Muḥammad applied to married persons the stoning penalty alone, were taken to indicate that he had alleviated this element of the penalties by declining to flog in addition to stoning. Confronting the problem, al-Shāfiʿī argued that the ʿUbāda statement was the first revelation to follow sūra IV and was thus its *nāsikh*. The other *ḥadīth*s in which the Prophet did not flog those whom he stoned were simultaneously the *nāsikh* of the ʿUbāda report and the elucidation of XXIV, 2. The Prophet's conduct showed *takhṣīṣ*, particularisation. Flogging is specific to those who are not stoned, those who are stoned being excluded from its provisions. Stoning exemplifies the *naskh* of the Sunna by the Sunna, although al-Shāfiʿī does state that the ʿUbāda *ḥadīth* was an instance of the *naskh* of the Ḳurʾān.

The reply to those who rejected stoning since they could not find two penalties in the Book of God, as indicated by al-Shāfiʿī's teacher, Mālik, was supplied in the statement attributed to ʿUmar that a stoning verse had indeed been revealed to Muḥammad which had been memorised by those in his company and recited as Ḳurʾān in the ritual prayers. The Prophet, Abū Bakr and ʿUmar had applied its provisions and it was merely the fear that he might be accused of adding to the Book of God that inhibited ʿUmar from writing the verse into the *muṣḥaf*. The majority, both before and after al-Shāfiʿī, were satisfied that stoning was one clear instance of the *naskh* of the Ḳurʾān by the Sunna. Al-Shāfiʿī had denied the very possibility yet had failed to resolve the problem of the origin of the *Fiḳh* penalty, justifying Schacht's conclusion that, on this question, al-Shāfiʿī's theory of repeal breaks down.

Later scholars, under the powerful influence of al-Shāfiʿī's theory on the role of the Sunna in relation to the Ḳurʾān and impressed by ʿUmar's claim that a stoning verse had been revealed, formalised stoning as a third type of *naskh*: the withdrawal of the revealed wording but not of the ruling.

It was on quite a separate matter, arising from the exegesis of IV, 23, the precise definition of the number of breast-feedings required to set up a permanent barrier to the marriage of males and females related through having shared a common wet-nurse, that al-Shāfiʿī committed himself to this third type of *naskh*. His normal assiduity to ascertain the Prophet's views on disputed legal matters led him to accept a *ḥadīth* which, however, comes not from the Prophet, but from his widow. ʿĀʾisha declared that God had revealed a Ḳurʾān verse stating that the minimum number was ten; subsequently a second verse was revealed, declaring that the minimum was five and that this second verse was still being publicly recited when the Prophet died. Mālik had drily rejected this report as not being in conformity with the "practice". Al-Shāfiʿī embraced it and made it the basis of his *Fiḳh*. This second instance of *naskh al-tilāwa dūna 'l-ḥukm* can fairly be attributed to al-Shāfiʿī's attitude.

The third and final instance of this type of *naskh* was contributed by the Ḥanafīs who insisted, on the grounds of a reading attributed to ʿAbd Allāh b.

Mas^cūd, that the fast mentioned in V, 89, should be of three consecutive days. This reading was, admittedly, that of a single Companion, but, as the *ḥadīth* from a single Companion was probative, his Ḳur'ān information deserved the same treatment. The ʿAbd Allāh reading was still in circulation in the time of Abū Ḥanīfa, who had adopted it in reaching his conclusion.

Neither *idjmāʿ* nor *ḳiyās* [*q.vv.*] can repeal. As *naskh* concerns the documents of the Tradition, and as *idjmāʿ* and *ḳiyās* must be based on a document, it is the document which is the *nāsikh*. Besides, neither was resorted to until after the death of the Prophet and after the death of the Prophet, *naskh* is inconceivable, since *naskh* may be effected only at the hands of him by whom the revelation is mediated.

Bibliography: The extensive literature includes the relevant sections of the *tafsīrs*, the special chapters in the *ʿulūm al-Ḳur'ān* and *uṣūl al-fiḳh* works and a large number of specialist studies. For lists of the latter, see Ḥātim Ṣāliḥ al-Ḍāmin, in *al-Mawrid*, Baghdād, vi/1 (1977), 195-6; ix/4 (1980), 481-3. (J. BURTON)

NASKHĪ [see KHAṬṬ].

NASNĀS/NISNĀS [see ḲIRD].

NASR (A.) "vulture", one of the five deities said to date from the time of Noah and to have been adored by the people then (Ḳur'ān, LXXI, 23). Ibn al-Kalbī, *Aṣnām*, our sole source regarding this, makes it the idol of the Ḥimyarites, who worshipped it at Balkhaʿ in the land of Saba' (*TA*, iii, 572, at the end, cites al-Djawharī, who says that Nasr was the idol of Dhu 'l-Kilāʿ of the Ḥimyarite country). It was Maʿdī-Karib, of the sub-group of Dhū Ruʿayn, who received it from ʿAmr b. Luḥayy, the first known reformer of the cult in Arabia; he discovered these five idols on the beach at Djudda, where they had become buried since the Flood. At the time of the Pilgrimage, he summoned the tribes to their cults: Ḳuḍāʿa took Wadd, Hudhayl took Suwāʿ, Madhḥidj took Yaghūth, Hamdān took Yaʿūḳ and Ḥimyar took Nasr.

Following A. Jamme, only five South Arabian inscriptions mention the idol's name with certainty: CIS 189, 1; 552, 2; RES 4048, 4; 4048, 2; RY. 196, 2 (*Le panthéon sud-arabe préislamique d'après les sources épigraphiques*, in *Le Muséon*, lx [1947], 130). Moreover, no theophoric name composed with this name has been found amongst the Ḥimyarites and none of their poets mentions it. The only pieces of evidence, apart from those in Ibn al-Kalbī, attesting the existence of a cult of the vulture amongst the Arabs, are found in the *Babylonian Talmud ʿAbda Zara* (tr. Goldschmidt, ix, Berlin 1934, i/3, 468) and in the *Doctrine of Addai* (ed. and tr. Philipps, London 1876, 24).

One should note that the divinity's representation in animal form, lacking in Central Arabia, was fairly current in South Arabia, where Ilumḳuh assumed the form of an ibex, bull, lion and sphinx: ʿAthtar had the antelope and the bull's head as emblems, Saḥar (the dawn) that of the serpent, etc. (cf. G. Ryckmans, *Les religions arabes préislamiques*, 2nd ed. Louvain 1951 [= Bibliothèque du Muséon, 25]; A. Grohmann, *Göttersymbole und Symboltiere auf südarabischen Denkmälern*, in *Denkschriften der kais. Akad. der Wiss. in Wien*, phil.-hist-Kl., lviii/1 [1914], pp. 104).

Bibliography: Ibn al-Kalbī, *K. al-Aṣnām*, ed. and tr. W. Atallah, Paris 1969, 7-9, 43, 48; T. Fahd, *Le Panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 132-4. (T. FAHD)

NASR (A.) masculine noun (pl. *ansur, nusūr, nisār*) denoting the vulture irrespective of species; the term is cognate with Akkadian *nashru* which is also encountered in the Hebrew *nesher* (Turkish *akbaba*, Persian *dāl*, Berber *tamādda*).

From the Atlantic to the Indian Ocean, in the lands of Islam eight species of vulture are known, almost all of them resident and localised in mountainous regions and at the desert fringes. Four of these species are common there, and they are: (a) The Egyptian vulture (*Neophron percnopterus*); this is the *oripelargus* of Pliny which was formerly known as *Catharte alimoch* and Pharaoh's Chicken. Besides its contemporary names of *rakhma* and *anūḳ*, the Egyptian vulture has inherited, according to the locality, numerous nicknames such as *umm ḳays, umm risāla, umm kabīr, umm ʿadjīna, umm ʿadjība, umm djuʿran, umm rakham Allāh, ḥafṣa, ʿuḳāb al-salāwāt*; in Lebanon, it is called *shūḥa*, in Kabylia *isghī* and in Persia *kerkes*. Moreover, the male is called *yarkhūm* and *ʿudmul* and, in Egypt, *firʿawn*; the young in the nest are *naḳānik*. This carrion-eating bird is especially well-known to the Egyptians and is tolerated everywhere on account of its valuable contribution to the cleaning of streets in towns and villages. In the age of the Pharaohs, this vulture, deified and representing the sun, was the object of the greatest veneration; respect for the bird has been retained over the centuries and into the present day. In the 18th century, the English traveller T. Shaw relates (*Voyages*, ii, 91-2) that the Pasha of Egypt at that time donated two oxen every day to feed these vultures, beloved of the city populations.

(b) The Griffon vulture (*Gyps fulvus*), with bright plumage and known as *kishʿām, aklaf, khathak*, in Kabylia *idjidar, gder*; it is confined to mountain ranges.

(c) The Black vulture, Hooded vulture (*Aegyptius monachus*) known as *nasr al-djiwā', satal*. In the Maghrib, it is found only as a winter resident in Morocco.

(d) The Bearded vulture (*Gypaetus barbatus*); this is the *ossifragus* of the Ancient world and, in Arabic, the *kāsir al-ʿiẓām*. It is also lent the names *bulaḥ, bulat, mukallifa, fayna, abū dhaḳan, abū liḥya*, in Kabyle *afalku* (from the Latin *falco*) and in Persian *humā* [*q.v.*].

The four other species are much less common and very localised, especially in the Sudan. These are: (a) The Nubian vulture (*Torgos tracheliotus nubicus*) which is found only in Morocco, in southern Tunisia, in

Sinai and in the Sudan, where it is fairly common; it has the nicknames *abū wudān* and *abū sansala* (for *silsila*). This is the largest of all the vultures and has a bald head and neck, with reddish skin; like the Black or Hooded vulture, it nests in isolated trees in the savannah.

(b) Ruppell's vulture (*Gyps ruppelli*), which is native to the Sudan and an accidental visitor in Egypt and Sinai.

(c) The White-headed vulture (*Trigonoceps occipitalis*), common in the Sudan, with the names *nusnūs* and *nasr ḳunbaranī*.

(d) The White-backed vulture (*Pseudogyps africanus*) which is seen only in the Sudan; the sub-species *bengalensis* is found in Baluchistan and Pakistan.

The root *n-s-r* contains the notion of slashing, ripping to shreds and, in the context of raptors, tearing with stabs of the beak (*minsar*) the flesh of the prey which is to be eaten. In Arabic, vultures of all kinds are known, besides *nasr*, by the names *ʿatīḳ, lammāʿa, ʿabann, hawzab*. The male is called *ḍarīk*, the female *ʿanz*, the chick *hay<u>th</u>am, muḳʿad*, and the eggs *raḳan*. If the vulture has plentiful plumage, it is *<u>gh</u>udāf* or *ahdab*, and the old, reddish-coloured vulture is the *maḍraḥī*; the smaller species are nicknamed *falatān*. To all these terms, there should be added the list compiled by al-Damīrī (*Ḥayāt*, ii, 348) of *kunya*s attributed to the vulture: *abu 'l-abrad, abu 'l-iṣbaʿ, abu 'l-minhāl, abū Mālik, abū Yaḥyā* and, for the female, *umm ḳa<u>sh</u>ʿam*.

The Arab-speaking naturalists, including al-D̲j̲āḥiẓ, al-Ḳazwīnī and al-Damīrī, have with regard to the vulture faithfully repeated the accounts of Aristotle and Pliny, who noted that, for self-preservation, it nests in inaccessible cliffs and for this reason its eggs are very seldom found; hence adages such as *abʿad min bayḍ al-anūḳ*, "more inaccessible than the eggs of the vulture" and *aʿazz min bayḍ al-anūḳ* "more precious than eggs of the vulture". This voracious raptor (*min sibāʿ al-ṭayr*) is dubbed "ignoble" (*lāʾim, laʾīm*) because it does not have talons and feeds on dead flesh as opposed to the "noble" raptors (*d̲j̲awāriḥ, kawāsir*), falcons and hawks, which hunt and catch their prey alive. However, the vulture is endowed with powerful eyesight which enables it to identify the carcases of animals over great distances; al-Damīrī, exaggerating somewhat, gives it a range of 400 parasangs (approx. 2,000 km!). This sharpness of vision has given rise to the erroneous belief that it is accompanied, in the vulture, by a sophisticated sense of smell which can detect smells of decomposition from a great distance; modern science has proved that its olfactory faculties are as limited as those of all other birds. Its sustained and gliding flight enables it to cover enormous expanses, such that it used to be said, among those with unbridled imagination, that in a single day it could join East to West. As Aristotle noted, the insatiable appetite of the vulture drives it to follow armies on the march and caravans, in quest of rubbish thrown out along the way and, ultimately, the carcases of dead animals. Horror is evoked by mention of the sinister "Towers of Silence" or *dak<u>h</u>mas*, necropolises of the fire-worshipping Parsees, where corpses were offered to the greedy vultures. Later, it was the same lugubrious cortège of hungry carrion-eaters which accompanied the funeral caravans of the <u>Sh</u>īʿīs travelling to the burial-grounds of Karbalāʾ. Thus it is hardly surprising that, in the minds of all peoples, the vulture is generally associated with macabre spectacles.

However, this sombre image which is currently associated with the vulture was not the major preoccupation of the Arabs, whose attitude to the bird was conditioned by awe at its legendary longevity. There was, for example, a story according to which King Solomon discovered, on a journey through Egypt, a splendid palace, utterly deserted and guarded by a lone vulture. Questioned by the king who could converse with animals, the raptor told him that he had been there for 700 years without ever seeing a human being. This longevity of the vulture, which is entirely mythical, is also found in the fabulous story of the Sage Luḳmān [*q.v.*] who is mentioned in the Ḳurʾān (XXXI, 11-12/12-13). This Sage had reared and kept until their death seven vultures in succession, each of them having lived eighty years; the first was called Amad and the last, named Lubad, died with his master who, according to some, was then 1,000 years old. This Lubad has become the theme of adages such as *ṭāl al-abad ʿalā Lubad* "Lubad has not done with living" and *ahram min Lubad* "much older than Lubad", applied to anyone who has lived a very long time. In the same context, there is also the saying *aʿmar min al-nasr* "longer-living than the vulture". In short, Luḳmān and his vulture Lubad evoked for the Arabs the same model of longevity as that evoked for Christians by Methuselah.

Through its enormous size, its terrifying appearance and aggressiveness which drives away all other carnivores from the prey, the vulture has acquired the title of "Lord of the birds" (*sayyid al-ṭayr*), a title confirmed by a *ḥadī<u>th</u>* of the Prophet Muḥammad to whom the Angel Gabriel is supposed to have said (al-Ḳazwīnī, *ʿAd̲j̲āʾib*, ii, 290): "Every thing requires a lord; for humanity it is Adam, for his descendants it is you..., for birds it is the vulture..." It is this status conferred on the vulture which is ratified in the practical advice given in the book of *Kalīla wa-Dimna* by Ibn Muḳaffaʿ [*q.v.*] in these terms: "The best lord is he who resembles a vulture surrounded by carrion and not he who resembles carrion surrounded by vultures" (quoted in *Ḥayawān*, vi, 330).

Lord or not, the vulture can be the victim of its own greed for, once gorged, it can hardly fly and can only become airborne by making a laborious series of leaps; a child can then fell it with a blow from a stick. Furthermore, al-D̲j̲āḥiẓ denounces (*Ḥayawān*, vii, 38) the stupidity and awkwardness of the vulture, characteristics which it shares with the bustard (*ḥubārā*).

The habits of vultures were quite well known to the Ancients, but often erroneously interpreted. According to them, the two eggs or the single egg were laid on bare rock, and their incubation left to the heat of the sun; only a few plane-leaves were placed around them with the object, apparently, of protecting them from bats which were believed to be partial to eggs. This is clearly sheer fable, since the eggs are always laid on a thick bed of grass and leaves based on a solid foundation of branches, and they are incubated in turn by the female and the male. Another fiction, related by al-Ḳazwīnī, with regard to laying, was that the male, when this was imminent, would travel as far as the East Indies to search in certain mountains for a stone called *ḥad̲j̲ar al-nasr* "vulture's stone" or *ḥad̲j̲ar al-ʿuḳāb* "eagle's stone" and *ḥad̲j̲ar al-ṭalḳ* "stone of confinement"; al-Ḳazwīnī adds the name *abūṭafyūn* (?) or *abūṭāḳyūn* (?) which is possibly meant to correspond to the Greek ἀποθήκη "pharmacy" or ἀπότεξις "childbirth". On returning to the eyrie, the vulture would place this stone beside his mate, who would then lay with the minimum of discomfort. Among .he Greeks, this stone was given as a talisman to pregnant women, supposedly to prevent them miscarrying. In fact, this was the "aetites", a hollow nodule of

argillaceous oxide of iron surrounding a loose nucleus which is heard to rattle when it is shaken; this geological phenomenon suggested the notion of the foetus in the womb of its mother or the embryo of the chick in its shell, hence this myth of the "stone of confinement" (see *Tuḥfa*, no. 49). However, this still does not explain why the stone needed to be sought so far afield and why its benefits were confined exclusively to the eagle and the vulture.

According to al-Djāḥiẓ (*Ḥayawān*, v, 392, 398), the vulture carries in its plumage a small parasite called *ḳamlat al-nasr* "vulture's louse" and *dadah* in Persian, which it drops in rocky areas and whose bite can be fatal for humans. This could be a reference to blood-sucking mites of the Acaridae family such as the *Dermanyssus gallinae* and the *Argas persicus*, or to lice such as the *Liperus robustus* and the *Goniodes colchici*; all of these parasites are very dangerous, being the bearers of serious and sometimes fatal diseases.

An account of eastern legends concerning the vulture would not be complete without a mention of the improbable ascent into space of the despot Nimrod [see NAMRŪD] who sought proof that God was indeed in Heaven, as stated by Abraham. As the story is told by al-Thaʿlabī (5th/11th century) in the *Ḳiṣaṣ al-anbiyāʾ* and by al-Damīrī, this sovereign ordered the construction of a large gondola fitted with a trap-door above and another in the floor; motive power for the ascent was provided by four requisitioned vultures, each tied by the feet to one side of the gondola. To incite them to greater effort by exploiting their greed, a tall mast fixed to the cabin was crowned with a bait of carrion. Nimrod took his place in the gondola accompanied by a page equipped with a bow and arrows; insatiable appetite impelled the vultures to take to the air and to rise higher and higher, transporting with them these two proto-astronauts. The ascent continued for two days, until the moment when the two travellers no longer saw anything but shadows below them and, above them, the infinite celestial canopy where the dwelling-place of this God of Abraham was still invisible. In his chagrin, Nimrod shot an arrow into space, but this returned immediately covered in blood and a storm arose which sapped the enthusiasm of the rocket vultures. Nimrod had no choice but to reverse the baited mast; seeing their meal below them the four raptors dived towards the ground at a headlong pace and the whistling produced by the giddy descent of the vehicle, followed by its violent impact on the ground, made the mountains shake and created the impression that the Day of Judgment had arrived (a reference to Ḳurʾān, XIV, 46/47). This, with the collapse of the Tower of Babel and the confusion of tongues, was a celestial punishment reserved for this idolatrous despot.

The specific qualities attributed to various parts of the vulture's anatomy were numerous, all of them belonging to superstition. The gall, dissolved in an eyewash and smeared seven times around the eye, cures cataracts and other ocular complaints. The liver, roasted, pulverised and mixed with a drink is a potent aphrodisiac; placed in a lambskin bag, it is beneficial for the leper who carries it. The heart, carried in a wolf-skin bag, is a talisman against ferocious beasts and draws to the bearer the consideration and sympathy of all those whom he approaches. The brain, mashed with a little pure tar and olive-oil and poured into the nose of one whose face is disfigured by dry impetigo (*djudhām*), makes all trace of it disappear; the same treatment is also effective against depression. This potion of the brain is even salutary for the leper who swallows it over a period of seven days. The eye of the vulture worn on the arm is a talisman against evil spirits and enables the wearer to approach his sovereign. The cranium worn in an amulet is beneficial against headaches. The dried and salted entrails are taken as a potion against urinary incontinence. The tendons of the vulture's feet serve as a talisman against gout in the legs, those of the right foot for the right leg and those of the left for the left leg. The left thigh of the vulture cures its bearer of all wounds and old scars. The servant equipped with a large vulture's bone need no longer fear the anger of his master, while the upper mandible worn in a handkerchief around the neck guards against attack from any flying creature. The ash of the humerus of the right wing of a vulture, dissolved in a drink, is an infallible love-philtre. The radius and the ulna, after boiling, are thrown into a vessel full of water and, while one floats on the surface, the other sinks to the bottom; rubbing a person's shoulders with the latter is a sure method of obtaining his consent to any request. The plumage of the vulture also has its properties. Thus a single feather placed on a woman in labour assures her a quick and painless delivery. Fumigating a place with vulture's feathers repels snakes and vermin. In warfare or hunting, archers took care to fit their arrows with the tail-feathers of the vulture, thus ensuring a tight and rectilinear trajectory, a factor of precision. The melted grease of the vulture, poured luke-warm into the ear, guards against deafness; mixed with honey, it is an effective treatment for all ocular complaints. The flesh of the vulture, its consumption forbidden under Islamic law, when boiled and mixed with salt, white cumin, honey, the sap of the Ceylon cornel tree (*wars*) and the rhododendron (*ʿaṣal*), constitutes an excellent ointment against insect-stings and snake bites. The blood of the vulture when drunk as a potion reduces quartan fever. Finally, a vulture's egg, well-beaten, is supposedly an aphrodisiac when smeared on the sexual parts.

In botany, the name of the vulture is associated with four plants, as follows: (a) *djanāḥ al-nasr* "vulture's wing" for the Cardoon (*Cynara cardunculus*); (b) *kaff al-nasr* "vulture's foot" for the Scolopender or Hart's tongue (*Scolopendrium vulgare*); (c) the same name for the Water milfoil (*Myriophyllum verticillatum*); (d) *ẓufr al-nasr* "vulture's claw" for the Greek Catananche (*Hymenonema Tournefortii* or *Catananche graeca*). On the other hand, the dialect term *nasrī* or *nisrī* denoting the Dog rose (*Rosa canina*) is a corruption of the Persian *nisrīn* and has no connection with *nasr*.

Arab astronomers placed the two attitudes of the vulture, flight and repose, in the names of two well-known stars, names which have been retained: (a) Altair (alpha *Aquilae*) derived from *al-Nasr al-ṭāʾir* "the Vulture flying", in the 17th Boreal constellation of the Eagle; (b) Vega (alpha *Lyrae*) derived from *al-Nasr al-wāḳiʿ* "the Vulture perched", in the 19th Boreal constellation of the Lyre.

NAṢR b. AḤMAD [see al-Khubza'aruzzī].

NAṢR b. AḤMAD b. ISMĀʿĪL, Sāmānid *amīr* of Transoxania and Khurāsān (301-31/914-43), given after his death the honorific of *al-Amīr al-Saʿīd* ("the Fortunate").

Naṣr was raised to the throne at the age of eight on the murder of his father by the Turkish *ghulāms* of the army, with a regency of the vizier Abū ʿAbd Allāh Muḥammad b. Aḥmad Djayhānī [see al-Djayhānī in Suppl.]. The early years of his reign were seriously disturbed by rebellions at Samarḳand, at Nīshāpūr and in Farghāna by various discontented members of the Sāmānid family, and the amīrate was not at peace till after 310/922 when Abu 'l-Faḍl Muḥammad b. ʿUbayd Allāh Balʿamī [see Balʿamī] became vizier, although the Sāmānid army had operated, with sporadic success, in the west against the Zaydīs of the Caspian provinces and against various Daylamī adventurers, maintaining some degree of authority in Rayy, granted to the Sāmānids by the ʿAbbāsid caliphs (see G.C. Miles, *The numismatic history of Rayy*, New York 1936, 137 ff.).

In *ca.* 318/930 a revolt broke out in the capital Bukhārā in favour of Naṣr's imprisoned brothers, in which one of these last, Yaḥyā, was temporarily raised to the throne. Then during Naṣr's last years, in the vizierate of Abū ʿAlī Muḥammad b. Muḥammad Djayhānī, an extensive Shīʿī *daʿwa* appeared in Transoxania, building on the existing Shīʿī centres in Khurāsān and helped along by envoys from the Ismāʿīlī Fāṭimids of North Africa, under the directorship of the *dāʿī* Muḥammad b. Aḥmad Nakhshabī or Nasafī [see al-Nasafī]. He made many converts to Ismāʿīlism amongst dignitaries at the court of Bukhārā, culminating in the *Amīr* himself, according to the accounts in the *Siyāsat-nāma* and the *Fihrist*, until a reaction led by the Sunnī *ʿulamā'* and the Turkish military classes forced him to abandon this heresy and violently to massacre its adherents (see S.M. Stern, *The early Ismāʿīlī missionaries in north-west Persia and in Khurāsān and Transoxania*, in *BSOAS*, xxiii [1960], 78-80).

Naṣr died, probably naturally, in Radjab 331/April 943, and was succeeded by his son Nūḥ (I) [*q.v.*]. Naṣr's court was one of the focuses of the New Persian literary and cultural revival, where poets like Rūdakī, Muṣʿabī [*q.vv.*], Murādī, etc., flourished (see J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 144-5).

Bibliography: The main primary sources are Gardīzī and Ibn al-Athīr, both utilising material from the lost *Ta'rīkh Wulāt Khurāsān* of Sallāmī; Masʿūdī, *Murūdj*; Ibn al-Nadīm, *Fihrist*; Niẓām al-Mulk, *Siyāsat-nāma*, ch. xlvi; Narshakhī, *Ta'rīkh-i Bukhārā* (tr. Frye, 95-6). Of studies, see Barthold, *Turkestan*, 240-6; Frye, in *Camb. hist. of Iran*, iv, 141-3. See also Sāmānids. (C.E. Bosworth)

NAṢR b. MUḤAMMAD al-SAMARḲANDĪ [see Abu 'l-Layth].

NAṢR b. MUZĀḤIM, Abu 'l-Faḍl al-Minḳarī al-Tamīmī, early Shīʿī historian (though probably not, as Sezgin rightly observes, the first one) and traditionist; his date of birth is uncertain, but he died in 212/827. He lived originally in Kūfa but later moved to Baghdād; amongst those from whom he heard traditions was Sufyān al-Thawrī [*q.v.*]. His own reputation as an *akhbārī* and *muḥaddith* was, however, weak, and he was regarded by some Sunnī authors as a fervent (*ghālī*) Shīʿī. He is best known for his *Kitāb Waḳʿat Ṣiffīn* (this has been reconstructed, from the passages cited from it in al-Ṭabarī and Ibn Abi 'l-Dunyā's *Sharḥ Nahdj al-balāgha*, by ʿAbd al-Salām Muḥ. Hārūn, 2nd ed. Cairo 1381/1962-3), which apparently enshrines authentic contemporary information and which offers a Shīʿī approach to the subject [see Ṣiffīn]. But he seems also to have written several other books whose titles alone are known to us, on other topics significant for the Shīʿa, such as the Battle of the Camel and the killing of al-Ḥusayn.

Bibliography: A.A. Duri, *The rise of historical writing among the Arabs*, Princeton 1983, 47-8, 144; Brockelmann, S I, 214; Sezgin, *GAS*, i, 313. The *Kitāb Waḳʿat Ṣiffīn* has been used extensively by, *inter alios*, M. Hinds, see his articles in *al-Abḥāth*, xxiv (1971), 3-31; *IJMES*, ii (1971), 346-67; and *ibid.*, iii (1972), 450-69. (C.E. Bosworth)

NAṢR b. NUṢAYR al-Ḥulwānī, Abu 'l-Muḳātil, a blind Shīʿi poet of the 3rd/9th century who owes the fact of his not having fallen into total obscurity to a *maḳṣūra* [*q.v.*] (of which there are two verses given in al-Masʿūdī, *Murūdj*, § 3462) and a *nūniyya*, both composed in praise of the *dāʿī* Muḥammad b. Zayd (d. 287/900 [*q.v.*]). Thirty-six verses of this last *ḳaṣīda* (metre *ramal*, rhyme *-ānī*) have been preserved, solely by al-Masʿūdī, it appears (*Murūdj*, § 3518), whilst the *maṭlaʿ* (*lā taḳul bushrā...al-mihradjānī*):

Do not say "One piece of good news", but "two pieces of good news": the face
of someone whom I love and that of *mihradjān*,

cited in various circumstances, became more or less proverbial. As it happened, the *dāʿī* saw in the first words of the verse a bad augury and, irritated, threw the poet out, after however proposing himself modifying it in the following manner:

If you say one piece of good news, I have two of them ...

(al-ʿAskarī, *Ṣināʿatayn*, 432). It is likewise criticised by Ibn Sharaf (*Questions de critique littéraire*, 88/89), who suggests simply reversing it:

The face of someone whom I love and that of *mihradjān*, there is
a very good piece of news, or what shall I say, two pieces of good news.

In the *Yatīma* (i, 146), al-Thaʿālibī attributes the verse to one Ibn Muḳātil (instead of Abu 'l-Muḳātil), whilst Ṣāliḥ al-Ashtar (the editor of Ghars al-Niʿma's *al-Hafawāt al-nādira*, 28) and M. ʿAwwād (the editor of Hilāl al-Ṣābi''s *Rusūm dār al-khilāfa*, 63) identify with al-Ḥasan b. al-Ḳāsim al-ʿAlawī [*q.v.*] the *dāʿī* whose name is not explicitly given in the text.

Bibliography: Given in the text. (Ch. Pellat)

NAṢR b. SAYYĀR al-Laythī al-Kinānī, the last

governor of Khurāsān under the Umayyads, d. 131/748.

Naṣr's whole career seems to have been spent in Khurāsān and the East. In 86/705 he campaigned in the upper Oxus region under Ṣāliḥ, brother of the governor of Khurāsān Ḳutayba b. Muslim [*q.v.*], and received a village there as reward. Then in 106/724 he was campaigning in Farghāna under Muslim b. Saʿīd al-Kilābī, and served as governor of Balkh for some years. Hence on the death of the governor of the East Asad b. ʿAbd Allāh al-Ḳasrī [*q.v.*], the caliph Hishām was advised to appoint as his successor Naṣr, then 74 years old, and known to be "abstemious, experienced and wise" (*ʿafīf mudjarrab ʿāḳil*), having a Tamīmī wife and therefore able to count on the support of several of the main North Arab or Muḍarī tribal groups in Khurāsān. Naṣr now began what was to prove the last Umayyad period of power in Khurāsān, now separated administratively from ʿIrāḳ.

Naṣr relied on the support of the old-established Arab *muḳātila* settled in Khurāsān, but soon became involved in disputes with the Yemeni supporters of the former governor Asad al-Ḳasrī, with the armed rebellion of these groups at Marw (now the capital for the province in place of Balkh) in 126/744 under Djudayʿ b. ʿAlī al-Kirmānī, chief of the Azd, who was demanding vengeance for the Muhallabids [*q.v.*] whom the Umayyads had hunted down. More dangerous was the long-running defiance of the Umayyads on the part of al-Ḥārith b. Suraydj [*q.v.*], who before Naṣr's arrival had been allied with the Ḳaghan of the Western Turks or Türgesh in Transoxania. Naṣr's expedition against the Turkish region of Shāsh in 122/740, followed by a raid into Farghāna, seems to be connected with attempts to dislodge al-Ḥārith, who nevertheless continued as an opposition force amongst the Arabs of Khurāsān till his death in 128/746 at the hands of Djudayʿ's troops.

Naṣr's attempts at redressing the grievances of the Arabs in Khurāsān and at healing tribal tensions included in 121/739 fiscal reform in the Marw region, where the local Persian landowners, the *dihḳāns*, had been —it was alleged— using their social influence to discriminate against the Muslim settlers: now, all Muslims and non-Muslims alike were to pay *kharādj* or land-tax for their lands and the non-Muslims (probably in large part Zoroastrians) were to pay additionally the *djizya* or poll-tax.

Naṣr's position in later years became increasingly difficult as the Umayyad caliphate was plunged into civil strife on Hishām's death in 125/743. The dead caliph's ephemeral successors endeavoured to place their own nominees in the governorship of Khurāsān, but Naṣr refused to move and was finally confirmed in office by both Yazīd (III) b. al-Walīd b. ʿAbd al-Malik and by the last Umayyad Marwān b. Muḥammad [*q.vv.*]. With ʿIrāḳ by 128/746 inflamed by Khāridjite activity and the revolt of the ʿAlid ʿAbd Allāh b. Muʿāwiya [*q.v.*], Naṣr's communications with the centre of the caliphate were cut, and with them the hopes of receiving troop reinforcements to strengthen the Muḍarī side against the anti-government Azd and then, from 129/747 onwards, against the leader of the ʿAbbāsid *daʿwa* at Marw, Abū Muslim [*q.v.*]. In the face of the strength of ʿAlī b. Djudayʿ and Abū Muslim, Naṣr had in 130/748 to evacuate Marw. His son Tamīm was defeated at Ṭūs, so that Naṣr then had to abandon Nīshāpūr and flee westwards. Fresh troops were belatedly sent from ʿIrāḳ by Yazīd b. ʿUmar b. Hubayra [see IBN HUBAYRA], but these were defeated at Rayy by Abū Muslim's lieutenant Ḳaḥṭaba b. Shabīb [*q.v.*]. Still retreating, Naṣr fell ill and died in Sāwa [*q.v.*] in northwestern Persia, on 12 Rabīʿ I 131/9 December 748, aged 85, "out of chagrin" (*kamad*) according to al-Masʿūdī, thus allowing the ʿAbbāsid advance westwards to gain fresh momentum.

See Barthold, *Turkestan*, 192-4; Wellhausen, *Das arabische Reich und sein Sturz*, 176-7, 298-306, 323-36, Eng. tr. 283, 474-91, 523-40; H.A.R. Gibb, *The Arab conquests in Central Asia*, London 1923, 89 ff.; M.A. Shaban, *The ʿAbbāsid Revolution*, Cambridge 1970, 128-31, 135-7, 159-61; E.L. Daniel, *The political and social history of Khurasan under Abbasid rule 747-820*, Minneapolis and Chicago 1979, 44-5, 55-7, 74-6; M. Sharon, *Black banners from the east. II. Revolt, the social and military aspects of the ʿAbbāsid Revolution*, Jerusalem 1992, 35 ff. (C.E. BOSWORTH)

NAṢR B. SHABATH AL-ʿUḲAYLĪ, the leader of a rebellion of the North Arab or Ḳaysī tribesmen in al-Djazīra against the central authority of the ʿAbbāsids during the caliphates of al-Amīn and al-Maʾmūn.

We find him mentioned in 196/811-12 as the head of *zawāḳīl*, lawless bands of Arabs, mainly Ḳaysīs, who had taken advantage of the breakdown of rule during the civil war (see on the term *zawāḳīl*, D. Ayalon, *The military reforms of caliph al-Muʿtaṣim, their background and consequences*, unpubl. paper presented to the Internat. Congress of Orientalists, New Delhi 1964, xerox Jerusalem 1963, 14-20); Naṣr's main aim seems to have been to uphold the Arab cause against the *Abnāʾ* of Baghdad and against what was regarded as the domination of the *ʿAdjam*, the Persianised supporters of the ʿAbbāsids (al-Ṭabarī, iii, 845). The rebellion went on for some 14 years; in 198/814 Ṭāhir Dhu 'l-Yamīnayn [*q.v.*] was sent against Naṣr, and he in turn in 205/821-2 deputed his son ʿAbd Allāh [*q.v.*] to conduct operations against Naṣr from a base at al-Raḳḳa on the middle Euphrates. It was not till 209/824-5 that Naṣr submitted and his fortress at Kaysūm (modern Tkish. Keysun, to the southwest of Adıyaman) was demolished; in the next year he was brought to Baghdad, and subsequently disappears from mention (al-Ṭabarī, iii, 975, 1044-6, 1069-72, 1073-4, tr. Bosworth, *The reunification of the ʿAbbāsid caliphate*, Albany 1987, 10, 106, 108, 110, 140-4, 145-6).

Bibliography: Given above; see also H. Kennedy, *The Prophet and the age of the caliphates*, Harlow 1986, 155. (C.E. BOSWORTH)

NAṢR ALLĀH B. MUḤAMMAD b. ʿAbd al-Ḥamīd, Niẓām al-Dīn Abu 'l-Maʿālī, also known as Naṣr Allāh Munshī, a Persian author and statesman who was born at Ghazna in a family which came from Shīrāz. He served as a secretary in the *dīwān* of the Ghaznawids. Under Khusraw Malik (555-82/1160-86) he rose to the rank of a vizier but he fell into disgrace with this sultan and was executed while in prison (cf. ʿAwfī, *Lubāb*, i, 92 ff.).

Naṣr Allāh Munshī's fame rests on his version (*Tardjuma*) of the Indian mirror for princes *Kalīla wa Dimna* [*q.v.*] into Persian prose, which was based on the Arabic of ʿAbd Allāh b. Muḳaffaʿ and was completed between 538/1143-4 and 540/1145-6. He added a new preface to the text dedicating it to Sultan Yamīn al-Dawla Bahrāmshāh (511-47/1117-52). Further additions to the original in this rather free rendering are a great number of verses in Arabic and Persian, quotations from the Ḳurʾān and the *Ḥadīth* and proverbs. To be noted is an anecdote cited from the *Ḥadīḳat al-ḥaḳīḳa* of his contemporary Sanāʾī (cf.

Meier, *loc. cit.*). The Arabic verses became the subject of a special commentary (cf. Rieu, *loc. cit.*).

Until the present day, Naṣr Allāh's translation is regarded as a model of elegant Persian style. It served as the basis for the metrical version composed by Ḳāniʿī for the Saldjūḳ sultan of Konya about 658/1260 and for a series of Turkish translations. It was not superseded by the celebrated *Anwār-i Suhaylī*, "The lights of Canopus", written in the late 9th/15th century by Ḥusayn Wāʿiẓ al-Kāshifī [*q.v.*], who claimed to have made a simplified version but really produced the opposite effect (see the comparisons between the two Persian versions by Browne and Arberry).

Already the earliest manuscripts contain the text in varying lengths. It is likely that the author himself brought his work out in different forms. The *Tardjuma* has been printed several times since the middle of the 19th century. By far the best edition available now is the one published by Mudjtabā Mīnuwī (Tehran, 1343 sh/1964).

Mīnuwī, *Dībāča* to his edition, pp. *zāl-kāf* [vii-xx].

(E. Berthels-[J.T.P. de Bruijn])

NAṢR al-DAWLA, Abū Naṣr Aḥmad b. Marwān, third and most important prince of the Marwānid dynasty [*q.v.*] of Diyār Bakr. He succeeded to the provincial sovereignty on the death of his elder brother, Mumahhid al-Dawla Abū Manṣūr Saʿīd, in 401/1010-11, after a struggle with the latter's murderer, and was in the same year formally recognised by the ʿAbbāsid al-Ḳādir [*q.v.*], from whom at the same time he received his *laḳab*, and by the Būyid *amīr*, Sulṭān al-Dawla. Though now established in the capital Mayyāfāriḳīn [*q.v.*], he was unable to obtain effective control of Āmid, the next most considerable city of the province, until 415/1024-5, when his tributary, Ibn Damna, who had hitherto ruled it, was assassinated; and during his reign of over fifty years, he suffered several ineffective attacks on his territory from the ʿUḳaylids of Diyār Rabīʿa, to whom he appears, at one period at all events, to have paid tribute (see Ibn Athīr, ix, 121), and to whom, in order to compose a quarrel arising out of his divorce of a lady of that family, he was obliged, in 421/1030, to cede Niṣībīn [*q.v.*]. In 433/1041-2, Diyār Bakr was invaded from Ādharbāydjān by the bands of the Ghuzz Turkmens which had pushed northwestwards on the advance of the Saldjūḳ leaders into Djibāl and for two years parts of it were subjected to their depredations. Otherwise, the province enjoyed, throughout his reign, a tranquility remarkable in this troubled age.

The ruler of Diyār Bakr was regarded as a principal guardian of the frontier of Islam in eastern Anatolia, and as such was expected to harass the Christians whenever opportunity offered (see the letter addressed to Naṣr al-Dawla by the Saldjūḳ Ṭoghrīl Beg: Ibn al-Athīr, ix, 275). Nevertheless, Ibn Marwān's relations with the Byzantine Empire were for the most part amicable, being based on a pact of mutual non-aggression, to which both parties appealed when it was infringed. The only important breaches of this agreement occurred in 418/1027 when Naṣr al-Dawla seized al-Ruhā (Edessa), which, however, was recovered by the Greeks four years later, and in 426/1034-5, when an attempt was made by the Christian inhabitants of that city, in league with Arabs of the Numayr [*q.v.*] tribe, to invade his territories. Later, their good relations were of use to the Emperor Constantine X, who in 441/1049-50 obtained Ibn Marwān's help in securing from Ṭoghrīl Beg the release of the Georgian general Lipariti, with whom he had been in league against the Georgian king, and who had been captured the year before by Ṭoghrīl's half-brother Ibrāhīm Ināl. Up to 436/1045, Armenia, which also marched in part with Diyār Bakr, was still independent of the Empire; and in 423/1032 a Marwānid commander led a successful raid into this country. In 427/1035-6, on the other hand, a *Ḥadjdj* caravan from northern Persia was attacked and looted near Ānī [*q.v.*] by Armenians of the Sunāsuna tribe, upon which Ibn Marwān forced the aggressors to give up their prisoners and booty.

Early in Naṣr al-Dawla's reign, the north of Syria and parts of the Djazīra contiguous to Diyār Bakr were obliged to acknowledge the suzerainty of the Fāṭimid caliphs, though their hold on these parts remained somewhat precarious. Also, his own territories were menaced by Fāṭimid pretensions when in 430/1038-9 the governor of Damascus, Anūshtikīn al-Dizbirī, who was then reasserting his rule in northern Syria, projected an attack on Diyār Bakr. This, however, came to nothing.

The reign of Naṣr al-Dawla saw the rise of the Saldjūḳs from some obscurity to the empire of Persia and ʿIrāḳ. His first communication with them occurred as early as 435/1043-4 on the Ghuzz invasion of Diyār Bakr, when he addressed a letter of protest to Ṭoghrīl, who, though he was scarcely in a position to do so, undertook to restrain the marauders. (It may be noted, nevertheless, that Ibn al-Azraḳ describes this Ghuzz invasion as having been actually instigated by Ṭoghrīl, who, he says, granted the province as a fief to its two leaders in advance; cf. Amedroz, *The Marwānid dynasty of Mayyāfāriqīn*, 137. Surely this author is mistaken in considering the date 434 as wrong, since it agrees exactly with those given by Ibn al-Athīr.) Eight years later, Naṣr al-Dawla acceded to Ṭoghrīl's demand for recognition as suzerain; and this subservience, which was renewed in 446/1054-5, when Ṭoghrīl made a triumphal tour through Ādharbāydjān and Muslim Armenia, spared Diyār Bakr the experience of a Saldjūḳ visitation. In the following year, however, Ṭoghrīl's attention was drawn to the murder of a Kurdish chieftain by Naṣr al-Dawla's son Sulaymān, his lieutenant in the Djazīra; and in 448/1056-7, when the sultan was obliged to visit al-Mawṣil in order to oppose a combination of Shīʿī leaders headed by al-Basāsīrī [*q.v.*], he forced an indemnity from Ibn Marwān by laying siege to Djazīrat Ibn ʿUmar.

Naṣr al-Dawla was sagacious, or fortunate, in his choice of the two *wazīrs* who served him in turn, namely Abu 'l-Ḳāsim al-Maghribī [*q.v.*] (in office 415-28/1025-37) and Abū Naṣr Ibn Djahīr (afterwards entitled Fakhr al-Dawla) [see djahīr, banū] (in office 430-53/1039-61). It was no doubt owing in part to their abilities that the remarkable tranquility enjoyed by Diyār Bakr during his reign was turned to advantage and resulted in an equally remarkable prosperity. This Naṣr al-Dawla fostered by a reduction of taxation and by renouncing the practice of

mulcting the rich in order to augment the revenues. Nevertheless, his court is said to have surpassed those of all his contemporaries in luxury, and many instances are quoted of his profusion and generosity. Mayyāfāriḳīn became during his reign a centre for men of learning, poets and ascetics, as also a refuge for political fugitives. Among the latter were the Būyid prince al-Malik al-ʿAzīz [*q.v.*], who was ousted from the amīrate in 436/1044-5 by his uncle Abū Kālīdjār [*q.v.*], and the infant heir of the ʿAbbāsid al-Ḳāʾim —afterwards al-Muḳtadī [*q.v.*]— who was removed with his mother from Baghdād on the occasion of its occupation in 450/1058 by al-Basāsīrī.

Naṣr al-Dawla is described as being resolute, just, high-minded and methodical, and though much addicted to sensuality, he was strict in his observance of religious injunctions. He died, aged about eighty, on 24 Shawwāl 453/11 November 1061, leaving Fakhr al-Dawla Ibn Djahīr still in office to secure the succession to his second son, Abu 'l-Ḳāsim Naṣr, Niẓām al-Dīn.

NAṢR AL-DĪN KHODJA (modern Turkish: Nasreddin Hoca) is the label of the most prominent protagonist of humorous prose narratives in the whole sphere of Turkish-Islamic influence, ranging from the Balkan area to the Turkic-speaking peoples of Central Asia. Naṣr al-Dīn is a legendary character whose historical existence none of the various theories regarding his alleged lifetime has succeeded to prove beyond doubt. The character from the 10th/16th century onwards increasingly served as a point of crystallisation for an otherwise amorphous popular tradition of aphorisms, witticisms, jokes, jests, and anecdotes of various origins.

The period of Naṣr al-Dīn's supposed historical existence might be fixed some time in the 7th/13th to the 8th/14th century, the region where he probably was active as a *khodja* (from Persian *khʷādja*, designating a man of distinction, and definitely not a distortion of the name of the related Arabic jester Djuḥā [*q.v.*] as supposed by Basset) somewhere in southern-central Anatolia, maybe even in Aḳ Shehr [*q.v.*], where a mausoleum bearing his name is preserved. In an apparent contradiction, characteristic however for any popular tradition such as the one focusing on Naṣr al-Dīn, facts about the circumstances of his life become known in an increasingly detailed manner the more distance from his alleged lifetime one gets. This is all the more the case since, in late 20th century Turkey, Naṣr al-Dīn, explicitly employed for touristic interests, is being promoted as an international ambassador of Turkish good-natured mentality and hospitality.

The earliest anecdotes about Naṣr al-Dīn in a Turkic language are quoted in Lāmiʿī Čelebi's (d. 939/1531) *Leṭāʾif* (ms. Istanbul, Ayasofya Kütüphanesi 4233, fols. 17b-18a, 31b, 34b, 35b-36a) and Ebu 'l-Khayr-i Rūmī's (d. 885/1480) *Saltuḳ-nāme* (ed. Ş.H. Akalın. Istanbul 1988, 140-2, 181-2). While Lāmiʿī Čelebi mentions Naṣr al-Dīn as a contemporary of Sheyyād Ḥamza (8th/14th century), the decisive impact for subsequent popular tradition, and notably, later European learned discussions, derives from Ewliyā Čelebi, who visited Naṣr al-Dīn's alleged tomb in Aḳ Shehr in the 17th century and quotes an anecdote in which Naṣr al-Dīn is depicted together with the Mongol ruler Tīmūr (died 807/1405 [*q.v.*]). Any such attempts at historicising the character of Naṣr al-Dīn are to be judged as speculative as the often-quoted date 386 in the inscription on Naṣr al-Dīn's tomb (ostensibly a posthumous joke to be read in reversed order as 683/1284) and even the charters of endowment (*waḳfiyya*) of the year 655/1257 and 665/1266 respectively, mentioning the appearance before the *ḳāḍī* of a certain "Naṣr al-Dīn Khodja", which are quoted at the beginning of the 20th century by Köprülüzāde Meḥmed Fuʾād (cf. *Manzûm Nasreddin Hoca fikraları*, ed. A. Çatıkkaş, Istanbul 1980, 14 f.).

The early manuscript tradition of anecdotes on Naṣr al-Dīn presents a comparatively small repertoire, which in subsequent centuries was continuously enlarged. The first printed Turkish collection (Istanbul 1253/1837) comprises 134, later lithograph and printed collections some 125 anecdotes. While in the late 19th century such writers as Čaylaḳ Tewfīḳ [*q.v.* in Suppl.] pioneered the Naṣr al-Dīn literature in modern Turkish, most recent Turkish publications rely on Bahāʾī (i.e. Weled Čelebi [İzbudak]), who in 1323/1907 published his collection of almost 400 anecdotes, *Leṭāʾif-i Naṣreddīn Khodja raḥmetü llāhi ʿaleyh*, drawing on earlier prints as well as manuscripts and oral tradition. The printed collections in Northwest- and Middle-Asiatic Turkic languages mostly derive from the first Tatar imprints (*Lätaifi Xuğa Nasiretdin Äfändi*, Kazan 1261/1845, reprinted more than 30 times), themselves constituting almost identical renderings from the Ottoman Turkish.

Originating in Turkish tradition, Naṣr al-Dīn's fame soon spread all over the regions of Ottoman dominion, the character meanwhile integrating narrative materials originally attached to other protagonists, such as Ḳarāḳūsh [*q.v.*] or Buhlūl [*q.v.*], some of them anonymous or of local importance only, such as Ahmet Akaj (Crimean Tatar), Navoi (Özbek) or Aldarkösö (Kirgiz). Naṣr al-Dīn is known in Central Asia as Ependi or Apandi (from Turkish Efendi, here meant as term of respectful address), a term which by way of Uighur adaptations eventually resulted in the modern Chinese word *A-fan-t'i*, trickster. In the area of Persian influence, the character is designated as Mollā Naṣr al-Dīn (first Persian printed edition 1299/1881). This applies to Persia, Afghānistān, and the Pashtō language regions in the East as well as to Kurdish and most of the Caucasian languages, whereas the tales on Naṣr al-Dīn in Tādjīk tradition rather seem to be influenced by surrounding Turkic languages. In Azeri tradition, Naṣr al-Dīn gained fame as the eponym of a renowned satirical magazine at the beginning of the 20th century. In the Balkan area, Naṣr al-Dīn, besides being richly documented in the Greek (Nastradin), Albanian, Serbian and Croatian languages, still today in Bulgarian and Macedonian popular tradition serves as an antagonist of the national hero Chitūr Petūr (Iter Pejo).

Previous research on the historical development of the stock of Naṣr al-Dīn anecdotes (Basset; Horn; Christensen; Wesselski) has only succeeded in elucidating singular traits, at the same time thoroughly misunderstanding or ignoring others. Recent philological comparisons of the narrative repertoires of Djuḥā and Naṣr al-Dīn have led to the following conclusions. Some, though relatively few, of the earliest versions of anecdotes that in later sources are told in the name of Naṣr al-Dīn are to be traced to the mediaeval stock of tales on Djuḥā, whose con-

tents may be reconstructed from Arabic *adab*-literature (e.g. al-Ābī [died 421/1030], *Nat͟hr ad-durr*, v, ch. 17) contemporary to the mention of a Book of Anecdotes on D̲j̲uḥā (*Kitāb Nawādir D̲j̲uḥā*) in Ibn an-Nadīm's *al-Fihrist*. However, the narrative tradition on D̲j̲uḥā and Naṣr al-Dīn, as it is documented in manuscript collections of their tales, developed separately from each other until the 19th century; at any rate, a Turkish translation of the Arabic booklet never existed. It is not until the printed collections of the 19th century that a direct connection between the narrative repertoires on D̲j̲uḥā and Naṣr al-Dīn becomes manifest. One of the first printed collections in Turkish—probably that of Būlāḳ 1256/1840 containing a repertoire slightly different from the edition Istanbul 1253/1837—was translated into Arabic (Būlāḳ 1280/1864 or earlier) while being considerably enlarged. The anonymous compiler added to the translation of the Turkish original some 100 jests adapted from mediaeval Arabic *adab* literature; these tales as a rule, notably in the original sources, were not told in the name of D̲j̲uḥā, Naṣr al-Dīn's Arab predecessor, but rather belong to the basic stock of jocular tales prevailing throughout entertaining *adab* literature since its beginning (cf. U. Marzolph, *Arabia ridens* Frankfurt 1992, 2 vols.). This Arabic translation, or rather adaptation, was in turn translated into Persian (1299/1881), once more being enlarged by coining tales taken from mediaeval (Arabic and Persian) literature on Naṣr al-Dīn. Here again it is interesting to note that the compiler did not draw on the stock of anecdotes on D̲j̲uḥī (the Persian form of D̲j̲uḥā) as it is documented in the works of Anwarī (died *ca.* 586/1190), D̲j̲alāl al-Dīn Rūmī (died 672/1273), ʿUbayd-i Zākānī (died 772/1371) or in the *Laṭāʾif al-ṭawāʾif* by ʿAli b. Ḥusayn Wāʿiẓ Kās̲h̲ifī, commonly known as Ṣafī (d. 939/1532). The interchange of the additional repertoire thus introduced by the Arabic and Persian versions with subsequent Turkish tradition has not yet been scrutinised; but it is obvious that at the latest by the end of the 19th/beginning of the 20th century Naṣr al-Dīn had gained such an amount of popularity in the whole region under Ottoman dominion that the provenance of the narrative materials attached to him did not play a decisive role; on the contrary, it had become permissible to attach to the character any tale that might fit into the general frame outlined by popular perception. This may serve as an explanation for the fact that some of the more recent collections of tales on Naṣr al-Dīn can present a remarkably large repertoire (e.g. K̲h̲aritonov: 1238 items).

It is necessary to point out that the above conclusions with a necessary degree of certainty are only valid for printed or rather literate tradition, which is subject to distinctive mechanisms of selection and adaptation. On the other hand, oral tradition is subject to other criteria, which in the case of Naṣr al-Dīn can only be a matter of speculation. Current research has so far to a minor extent only focused on orally-narrated tales about Naṣr al-Dīn (cf., e.g. Kúnos), which presumably enjoy an overwhelming popularity in traditional but probably less in modern Near Eastern societies.

As for the scholarly pre-occupation with Naṣr al-Dīn, his charming character seems to have had a tremendous and in fact devastating impact on most attempts at a detached analysis of Near Eastern humorous narratives. National Turkish research still mainly consists of futile attempts to argue beyond doubt for Naṣr al-Din's historical existence or to demonstrate the essential traits of his character by reconstructing the supposed original stock of anecdotes attached to him. On the other hand, most Western researchers have all too readily identified Near Eastern humour on a general level with Naṣr al-Dīn, and—corresponding to contemporary propagated Turkish tradition—have succumbed to the temptation of reducing him to a charming, lovable, intrinsic but morally harmless philosopher. As for the historical evidence of the narrative repertoire linked with Naṣr al-Dīn's name, it is obvious that since the earliest known manuscripts this repertoire contained a considerable proportion of scatological, sexual, sodomite, and otherwise explicitly provoking anecdotes.

From a point of view contemporary to the manuscript tradition, it may safely be assumed that these tales did not constitute a major offence; rather it is to be supposed that they represent humorous attitudes of a direct and outspoken kind, not yet submitting to restrictions by the requirements in content and form that later were established by refined literary developments. While it must remain doubtful whether the early collections represent anything that safely might be termed as "folk" literature, it seems most certain that this kind of crude anecdote still today enjoys a wide popularity and not only in rural areas of the Near East. Even though contemporary Turkish research encourages attempts to "domesticate" Naṣr al-Dīn—such attempts as are practised by recent Turkish collections—by eliminating this part of the historical repertoire or denying its claim to originality, a strictly historical evaluation should bear in mind that moral standards are subject to frequent changes.

Apart from the intentionally offensive portions, the repertoire of anecdotes on Naṣr al-Dīn contains a large amount of tales otherwise documented in international narrative tradition. For these tales the attachment to the character of Naṣr al-Dīn is often but one station on the way they travel through times and regions, more than once securing their survival and wide dissemination throughout the Near East, the Balkan region and the Mediterranean.

NAṢRĀWĪ [see NAṢĀRĀ].

NAṢRIDS, Ar. BANŪ NAṢR, also known as BANU 'L-AḤMAR, so called from the name of Muḥammad b. Yūsuf Ibn Naṣr Ibn al-Aḥmar, founder of what was to be the last major Muslim dynasty in the Iberian Peninsula, ruling a kingdom in the far south of Spain from its capital city, Granada (Gharnāṭa [*q.v.*]) and claiming as its remote ancestor the Khazradjī leader Saʿd b. ʿUbāda, a Companion of the Prophet. Although the dynasty was born on 26 Ramaḍān 629/18 April 1232, its association with Granada dates only from around Ramaḍān 634/May 1237 when that city passed into the hands of the dynasty's founder—now known to us as Muḥammad I—coming into prominence as the seat of his power only from 644/1246. Thereafter Granada remained the Naṣrids' true capital until their rule came formally to an end on 2 January 1492 with a public ceremony following an improvised capitulation on the previous day.

1. History.

For the period running from the latter part of the 8th/14th century until the loss of Granada to the Christians there are many aspects of Naṣrid history on which, despite some notable scholarly progress over the last fifty years, we are still ill informed. For this the relative paucity of Arabic source material is mainly responsible. Where such material is lacking we are compelled to have cautious recourse to evidence—only too often tendentious—contained in the chronicles of the Iberian Christian states, which at times are our only resource for even such basic matters as dates.

The following list of Naṣrid rulers will, as regards later members of the dynasty, be found to differ in certain details from C.E. Bosworth's revised list contained in his *Islamic dynasties* (revised edition Edinburgh 1980, 18-19) and should be regarded as replacing it. From the list below it will be seen that after the death of Yūsuf III there comes a confusing series of changes of monarch. For the period 1417-54, however, L.P. Harvey provides a most helpful schema in his *Islamic Spain* (see *Bibl.* below), 245. It should be noted that where only dates of the Christian era are given in the list, the reason is that the date A.H. is not to be found in any known Arabic source.

1. Abū ʿAbd Allāh Muḥammad I *al-Ghālib bi 'llāh*: 629-71/1232-73 (in Granada 634-71/1237-73).
2. Abū ʿAbd Allāh Muḥammad II *al-Faḳīh*: 671-701/1273-1302.
3. Abū ʿAbd Allāh Muḥammad III *al-Makhlūʿ*: 701-8/1302-9.
4. Abū 'l-Djuyūsh Naṣr: 708-13/1309-14.
5. Abu 'l-Walīd Ismāʿīl I: 713-25/1314-25.
6. Abū ʿAbd Allāh Muḥammad IV: 725-33/1325-33.
7. Abu 'l-Ḥadjdjadj Yūsuf I *al-Muʾayyad bi 'llāh*: 733-55/1333-54.
8. Abū ʿAbd Allāh Muḥammad V *al-Ghanī bi 'llāh*: 755-60/1354-9 (reign interrupted by Ismāʿīl II, then Muḥammad VI) and 763-93/1362-91.
9. Abu 'l-Walīd Ismāʿīl II: 760-1/1359-60.
10. Abū ʿAbd Allāh Muḥammad VI *al-Ghālib bi 'llāh* (to the Castilians *el Bermejo* "The Red", *el rey Bermejo* "The Red King"): 761-3/1360-2.
11. Abu 'l-Ḥadjdjādj Yūsuf II *al-Mustaghnī bi 'llāh*: 793-4/1391-2.
12. Abū ʿAbd Allāh Muḥammad VII: 794-810/1392-1408.
13. Abu 'l-Ḥadjdjādj Yūsuf III *al-Nāṣir li-Dīn Allāh*: 810-20/1408-17.
14. Abū ʿAbd Allāh Muḥammad VIII *al-Mutamassik* (*al-Ṣaghīr*/*el Pequeño* "The Little One"): 1417-9 (reign interrupted by Muḥammad IX) and 1427-9.
15. Abū ʿAbd Allāh Muḥammad IX al-Ghālib bi 'llāh (*al-Aysar*/*el Zurdo* "The Left-handed"): (1) 1419-27 (reign interrupted by Muḥammad VIII); (2) 1430-1 (reign interrupted by Yūsuf IV); (3) 1432-45 (reign interrupted by Muḥammad X); (4) 1447-53.
16. Abu 'l-Ḥadjdjādj Yūsuf IV (*Ibn al-Mawl*/*Abenalmao*): 1431-2.
17. Abū ʿAbd Allāh Muḥammad X (*al-Aḥnaf*/*el Cojo* "The Lame"): Jan.-Jun 1445 (reign interrupted by Yūsuf V) and 1446-7.
18. Yūsuf V Ibn Aḥmad/Ibn Ismāʿīl (*Aben Ismael*): 1445-6 (reign interrupted by Muḥammad X) and Sept.-Dec. 1462.
19. Muḥammad XI (*el Chiquito* "The Little Fellow"): 1451-5 (in association with Muḥammad IX until the latter's death in 1453, then in competition with Saʿd from mid-1454 until mid-1455).
20. Abū Naṣr Saʿd *al-Mustaʿīn bi 'llāh* (*Ciriza* <Sīdī Saʿd/*Muley Zad*/*Çah*): 1454-64 (in competition with Yūsuf V in 1462-3).
21. Abu 'l-Ḥasan ʿAlī (Muley Hacén): 1464-82 (reign interrupted by Muḥammad XII in July 1482) and 887-90/1482-5.
22. Abū ʿAbd Allāh Muḥammad XII (*Boabdil*): 887/1482; 891-7/1486-92.
23 (?). Muḥammad XIII b. Saʿd (*al-Zaghal* "The Brave"), brother of Muḥammad XII's father, ʿAlī (no. 21): 890/1485. (Al-Zaghal had himself proclaimed king not too long after his infirm brother ʿAlī had appointed him regent early in 1485, and in fact in early 891/1486 Muḥammad XII recognised him as king for a while. Until al-Zaghal's departure for North Africa in 1489 the Naṣrids' subjects were deeply divided in their allegiance, and the picture is very confused and confusing.)

A. Birth of the Naṣrid Kingdom. 1. Muḥammad (I) b. Yūsuf. In 620/1224 the Almohad caliph Abū Yaʿḳūb Yūsuf II al-Mustanṣir died, leaving no son and hence a legacy of dynastic quarrels that were soon to rob al-Andalus of all central administration. The ensuing period of confusion and weakness was to be fully exploited not only by the Banū Mardanīsh [*q.v.*] in Valencia and the Banū Hūd [*q.v.*] in Murcia (to whom the future ruler of Granada was politically subordinated for a year or two), but also, and far more importantly, by Ferdinand III of Castile following the union of his crown with that of Léon in 1230; for, from 1231 onwards, his forces drove deep into the Muslim heartlands in a series of campaigns that were eventually to win for him Cordova (632/1236) and Seville (646/1248). For Andalusian Islam the loss of

these once-great cities would leave it no solid base in the Guadalquivir, thus presaging the loss of effective Muslim control of all but a small part of the Iberian Peninsula.

Such was the nature of the times which witnessed the conception, birth and growth of a memorable dynasty that was to rule a kingdom which, in the final analysis, owed its existence mainly to the adroit manoeuvres of Muḥammad (I) b. Yūsuf b. Naṣr in response to the many threats posed by disintegrative forces to the very survival of Islam in 13th-century Spain.

The new dynasty came into being in Arjona (Ardjūna), a small frontier town south of the Guadalquivir, some 30 km to the north-west of the city of Jaén (Djayyān [*q.v.*]). It was there that in 629/1232 Muḥammad b. Yūsuf managed to establish himself as the effective ruler of a relatively small region including Jaén and extending south-eastwards as far as Guadix (Wādī Āsh) to the north-east of Granada and as far east as Baeza (Bayyāsa [*q.v.*]) on the north bank of the Guadalquivir.

Of vital importance to the establishment and consolidation of Naṣrid rule was the unwavering support of another Hispano-Arab family with Arjona connections, viz. the Tudjībid Banū Ashkīlūla (or, in Castilian sources, Escayola). With their military assistance, close political co-operation and a loyalty underpinned by multiple marriage ties with members of the Naṣrid family, Muḥammad b. Yūsuf was able not only to make himself master of Arjona and later to accept the invitation of Granada's notables to assume control of their city (634/1237), but also, after his loss of Arjona (642/1244) and then of Jaén (643/1246) to the Christians, to transform Granada into an enduring political entity.

To a proper understanding of the nature of that entity an appreciation of the religious side to its founder's life is crucial. Early in his career Muḥammad had come into prominence as a charismatic leader of frontiersmen, a man with a religious mission (*daʿwa*), displaying all the outward signs of the typical Muslim mystic and maintaining, immediately upon his accession in Granada, the image of an ascetic by avoiding the direct exercise of governmental power. This, together with command of the army, he assigned to his right-hand man, ʿAlī Ibn Ashkīlūla, the then head of his family. Whatever the exact nature and extent of the religious thinking that initially informed the faith and practice of Muḥammad, it is clear that, once ensconced in Granada, he embraced and indeed strictly enforced the doctrines of its Mālikī religious establishment. Moving gradually towards self-assertion and away from his undertaking to share his kingdom with the Banū Ashkīlūla, he made clear his intention to restrict power to the Naṣrid family by naming, in 655/1257, his sons Muḥammad and Yūsuf as his heirs in direct succession to himself. Whether it was this act or the Naṣrid's decision in 662/1264 to make use of Maghribī forces that opened a rift between him and the Banū Ashkīlūla—until then his sole military mainstay—is a moot point. What is not so is the rift itself, which, as it widened into a gulf, separated the Banū Ashkīlūla, in their main governmental base in Malaga (Mālaḳa [*q.v.*]), from the amīrate in Granada. Finally, in 644/1266 fearing that Granada would take their city from them, Malaga's overlords rebelled. Open conflict, with Castilian involvement on both sides, ensued, but victory fell to neither, and, in the event, the struggle dragged on into the reign of Muḥammad II.

In Muḥammad I's political life the Banū Ashkīlūla's role is commonly eclipsed by the prominence accorded to that of Castile. Castile does, of course, loom large in his career: there was, first, his not disinterested subservience to Castilian policy on the eve of the loss of Cordova to Ferdinand in 1236; secondly, ten years later, in surrendering Jaén, there was his agreement to buy peace from Ferdinand at the price of accepting the latter as his overlord along with the payment of a considerable sum in annual tribute; thirdly, there was his active participation in the Castilian campaign that in 1248 wrested Seville from Islam, to say nothing of his passive contemplation of Castilian victories in southern Spain in 1261-2. That he was no martyr for Islam in the primary, religious sense of the word is clear. Yet, equally clear is his commitment to Islam: without it he could hardly have survived in a kingdom so very consciously Islamic as Granada and so very much under the watchful eye of a powerful Mālikī religious establishment; without it his successful appeals to the Ḥafṣids [*q.v.*] of Tunis, the Marīnids [*q.v.*] of Fez and Castile's Mudéjars [*q.v.*] for support in a spirited, if abortive, campaign against Alfonso X in the period 1264-6 may have carried less conviction than they did.

If at the time of his death (671/1273) Muḥammad I had neither gained spectacular victories nor made territorial gains, he had at least "managed to snatch from disaster...a relatively secure refuge for Islam in the peninsula" (Harvey, *op. cit.*, 40). Add to which his creation of a viable régime along with a seat of government that was to increase in splendour, stature and renown and stand as a lasting memorial to the Naṣrids: the Alhambra (*al-Ḥamrā*ʾ; see GHARNĀṬA).

B. Consolidation of the Kingdom. 2. Muḥammad II. Muḥammad I's successor was his son Muḥammad al-Faḳīh ("the Jurist"), a man in his late thirties with a ready grasp of the pressing need to frustrate Castilian aspirations to total hegemony and, as one means to this end, to bring to heel the rebellious Banū Ashkīlūla, by then well entrenched principally in Malaga and Guadix. In Granadan-Castilian relations Muḥammad I had been able to damp any joy his Ashkīlūla problem might have brought to Alfonso X by gaining the support of a large contingent of disaffected Castilian nobles—*Ricos Hombres*—led primarily by the powerful Nuño González de Lara. Although with their aid Muḥammad II was able to wrest Antequera from the Banū Ashkīlūla (671/1273), he came to fear the nobles' return to Alfonso's fold and therefore sued for peace with Castile—peace for which he finally agreed to buy for an annual tribute of 300,000 *maravedís*. Having abandoned the *Ricos Hombres* as part of the bargain and then finding good reason to suspect that Alfonso would thenceforth deal with the Banū Ashkīlūla on terms best suited to his own interests, the Naṣrid turned for help to the Marīnid sultan Abū Yūsuf Yaʿḳūb, to whom the Banū Ashkīlūla had already been appealing for assistance.

In the event, Abū Yūsuf answered both calls, and, once in control of Tarifa and Algeciras (al-Djazīra al-Khaḍrāʾ [*q.v.*]), both won by an advance expeditionary force, he directed a massive shipment of troops across the Straits. These he himself joined in Ṣafar 674/August 1275 and went on to lead a highly successful *djihād*, in which, *inter alia*, the *Ricos Hombres*, now allies of Alfonso, suffered defeat and humiliation, Nuño González losing his life. To detail here all the moves made in the complex game that developed in the wake of the Marīnid intervention is impracticable: it was a game with many rules made and broken by various players ever ready for a change of partner

should a change of tactics so demand. It must suffice to note only some of the most salient points.

From the Marīnids Muḥammad II initially gained little to his liking. Aggrieved at their treating him as no more than the equal of his subjects, the Banū As͟hḳīlūla, he had left Algeciras in disgust, showing little zest for their joint d̲j̲ihād. He thus allowed so close a relationship to develop between the two allies that in 676/1278 the Banū As͟hḳīlūla handed Malaga to a Marīnid governor. Little did they dream that early in 677/1279 it would revert to the Naṣrids: a justifiable sense of insecurity, created by Muḥammad's intrigues with the ʿAbd al-Wādids [*q.v.*] of Tlemcen and with Alfonso, had prompted a Marīnid withdrawal to the Mag͟hrib, and Muḥammad had then struck a bargain with Malaga's Marīnid governor. With Malaga Granada had both gained access to the Mediterranean and greatly enhanced prospects of political and economic viability.

Anger at the machinations and treachery—suffered notably by Alfonso—whereby Muḥammad II had achieved his ends in 1279 resulted in a tripartite offensive against him launched by Alfonso, Abū Yūsuf and the Banū As͟hḳīlūla, the latter now with their main base in Guadix. The war, waged on northern and southern fronts, lasted from May 1280 to April 1281. Granada's survival owed much to a rift between Alfonso and his heir Sancho, whose military support brought great relief to Muḥammad.

In early April 1285 Granada faced a new major problem: responding to an As͟hḳīlūla call for help against Sancho IV (as he had become on Alfonso's death in 1284), Abū Yūsuf once more crossed the Straits for war. After a few months Sancho sought a truce and agreed to withdraw from the Granadan imbroglio. Then, before long the new Marīnid ruler Abū Yaʿḳūb Yūsuf, facing internal problems in the Mag͟hrib, made peace with the Naṣrid and abandoned all territorial claims apart from those to Algeciras, Tarifa and Guadix. In early 686/1288 came the end of the Banū As͟hḳīlūla: accepting Abū Yaʿḳūb's offer of the governorate, in Morocco, of Ksar el-Kebir (al-Ḳaṣr al-Kabīr [*q.v.*]) and all that went with it, their leader ceded Guadix to Granada and emigrated with his clan and his troops and their families to Ksar, where they established a small dynasty, still remembered in the 20th century.

To gain some control of the Straits of Gibraltar and to weaken that of the Marīnids as well as the strength of their position in Spain became Muḥammad's next main objective. This he thought to achieve by pitting the Castilians against the Marīnids in Tarifa. To this end he embarked on a policy that was to culminate in an anti-Marīnid alliance involving Granada, Castile, Aragon and Tlemcen. When in October 1292 Sancho, with Aragonese naval assistance, took Tarifa, Muḥammad expected Sancho to observe one of the terms of an agreement he had made with him by delivering Tarifa to him. When Sancho did not, Muḥammad sought and gained Marīnid support for a new siege of Tarifa. In August 1294 the venture failed: Granada, with its main forces tied to operations elsewhere in Spain, had been of little help. Convinced of the futility of further involvement in Spain, Abū Yaʿḳūb withdrew all his forces, and in 694/1295 ceded to Muḥammad all Marīnid strongholds in the Peninsula. It was now Muḥammad's aim to occupy all vacant positions. In Ronda and neighbouring western areas, however, his past policy of concentrating African troops there, well away from Granada, rebounded adversely upon him: for a year a rebellious enclave, born of local resentment at suffering under Mag͟hribī soldiery and led by the Banu 'l-Ḥakīm of Ronda, denied him access. Access, when it finally came, came on Ronda's terms (D̲j̲umādā II 695/January 1296): *inter alia*, no kinsman of the Naṣrid would thenceforth reside in the area and no Mag͟hribī troops would be billeted on the local population.

Following Sancho's death in April 1295 and the accession of his son Ferdinand (IV), a mere boy, divisions within Castile and more especially between Castile and Aragon had attracted a Granadan offensive on the northern marches. Among Muḥammad's successes the most notable were the capture of Quesada (Ḳayd̲j̲āṭa) at the end of 1295 and of Alcaudete (al-Ḳabd̲h̲āḳ) in June 1300. At the time of his death on 8 S͟haʿbān 701/8 April 1302 he had negotiated a treaty with Aragon recognising Granada's right to Tarifa and other places and was preparing for a new campaign against Castile.

3. Muḥammad III, by all accounts a sadist suspected of patricide, inherited a situation of military advantage which he failed to develop. His preference was for a peace which, however favourable to Granada in certain important respects, imposed upon him a three-year term of vassalage from 1303 and in 1304 drew him, as the vassal of Castile, into a Castilian-Aragonese accord. As Castile and Aragon grew closer in their new relationship, so the outlook for Granada worsened. By 1308 the two Christian powers felt able to spell out in the treaty of Alcalá de Henares the way in which the Kingdom of Granada should be divided between them.

For the Marīnids Muḥammad III cared nothing. In 1303 he had, to their chagrin, isolated them from his dealings with Castile, and in May 1306 his troops managed to seize Ceuta, not for return to the Marīnids, against whom its masters, the Banu 'l-ʿAzafī [*q.v.* in Suppl.], had rebelled, but for annexation by himself. Deporting the ʿAzafids to Granada, he proclaimed himself lord of Ceuta in 1307. He had achieved his aim to control a commanding position in the Straits, but, in doing so, he had laid the foundations of his downfall. Neither the Marīnids, once disburdened of their war with Tlemcen (May 1307) and set on asserting themselves at home, nor the Castilians and Aragonese, once reconciled and bent on achieving the ends spelt out at Alcalá de Henares, could accept a Naṣrid Ceuta: they would all stand shoulder to shoulder in an anti-Granadan tripartite alliance. The threat was too great for the Granadans to stomach: forced to abdicate, Muḥammad went into retirement in Almuñecar, and his chief minister, Ibn al-Ḥakīm, a member of the erstwhile ruling family of anti-Mag͟hribī Ronda, was assassinated (March, 1309) as much, no doubt, for his influence on policy as for his affluence and extravagant living.

4. Naṣr, at the age of twenty-two, came to rule a kingdom in an unprecedentedly parlous position as it straddled the Straits of Gibraltar at war with the Castilian-Aragonese axis, on the one hand, and the Marīnid-Aragonese alliance, on the other. With no hope of official aid from Tlemcen, now at peace with Fez, Granada faced a lonely fight for survival. Fortunately as it turned out for Granada, the Ceutans themselves soon exchanged Naṣrid for Marīnid rule (10 Ṣafar 709/20 July 1309). Ceuta regained, Fez no longer needed Aragon and was now ready to consider Naṣr's proposals for peace and amity, the need for which became pressing with Castile's conquest of Gibraltar in early September 1309. By mid-month all was settled: Algeciras and Ronda and their dependencies would go to the Marīnids in exchange for

assistance. Thereafter Granada's future began to look brighter, not least because of the late and ill-coordinated start that Castile and Aragon had made in the land and sea offensive against Algeciras and Almeria. In mid-November 1309 an important Castilian contingent left the besiegers of Algeciras, and, in Sha^cbān 709/January 1310, the siege ended as Ferdinand IV, eager to be rid of a now heavy burden, readily accepted Naṣr's offer to become his tributary and at the same time return certain frontier strongholds earlier taken from Castile. As for Almeria, Christian delay had enabled it to stockpile for an expected siege that materialised only in mid-August 1309 with the arrival of Aragonese seaborne forces. Dependent on seaborne supplies, which began to fail as soon as autumnal weather prevented eastward movement of their merchantmen, the Aragonese moved into winter at the mercy of the weather at sea with no prospect of effective Castilian aid on land. By the end of December the siege was over: a truce had been called, and in January 1310 the Aragonese left as best they could, never to return to war in Granadan territory. Naṣr could be said to have served Granada well: his gain in containing the Reconquest far outweighed his losses, for, territorially, the only major Christian gain had been Gibraltar. With Ferdinand's death in September 1312 the Castilian offensive ended, and, not long afterwards, the siege of Alcaudete upon its falling to Castile.

On 21 Shawwāl 713/8 February 1314 Naṣr, who, for reasons not wholly clear, had become unpopular and been dethroned by his kinsman Ismā^cīl, son of the governor of Malaga, left Granada for Guadix, where he was permitted to rule as governor.

5. Ismā^cīl I assumed power as Naṣr was planning to regain it by invoking his rights as the tributary of Castile. In due course a sizeable Castilian force made for Guadix and in Ṣafar 716/April-May 1316 engaged intercepting Muslim troops led by the able Marīnid commander, ^cUthmān b. Abi 'l-^cUlā. The ensuing battle, fiercely fought near Alicún at Wādī Fortūna, was perhaps—there is a conflict of evidence—narrowly won by the Christians, for they were subsequently able to move operations much closer to Granada. But one gain at least accrued to Isma^cīl: Naṣr was never again able to embark on such a venture as that which had so signally failed.

In the Straits Granada began to regain strength thanks to the naval cooperation of the ^cAzafī governor of Ceuta, Yaḥyā b. Abī Ṭālib. Be that as it may, in 1319 Castile launched an all-out attack on Granada. Beating a path right through to the Vega, the army of the Infantes Don Pedro and Don Juan, regents for the young Alfonso XI, finally reached the city walls. A short siege gave way to the so-called Battle of the Vega, in which, largely thanks to the Marīnid ^cUthmān, Castile suffered a crushing defeat and both Infantes perished (26 June 1319). Now leaderless, Castile agreed to an eight-year peace, signed 18 June 1320.

With Naṣr no longer any possible threat (he died in 722/1322) and the Castilian court in disarray and dissension, Ismā^cīl set about consolidating his position on the frontiers. In 724/1324 he recovered Baza, and, in 725/1325, Orce, Huescar, Galera and Martos, but then on 27 Radjab 725/6 July 1325, following a quarrel with his cousin, Muḥammad b. Ismā^cīl, governor of Algeciras, he was assassinated.

6. Muḥammad IV, the eldest of Ismā^cīl's four sons, acceded as a minor under the tutelage of his father's powerful vizier, Ibn al-Maḥrūḳ, who was soon in bitter conflict with ^cUthmān b. Abi 'l-^cUlā. Their divisive rivalry ended only with the vizier's assassination on the king's orders in Ramaḍān 729/June 1329.

In 1327 Alfonso XI, now of age, had begun an offensive so encouraging for Castile that Muḥammad IV had applied, successfully, for Marīnid reinforcements. Now fearful of a growth of Maghribī forces in Spain, Castile and Aragon had together with Navarre, Bohemia, England and France planned a huge crusade against Granada. Blighted by Christian disunity, the crusading force had, in spring 1329, left Castile and Aragon to start their own campaign. With no stomach for the fight, Aragon contributed little to it and indeed had to go on the defensive. Fighting alone, Castile won several northern strongholds as well as Teba, west of Antequera (August 1330). Yet again Marīnid aid was sought and gained. Gibraltar was then recovered from Castile. Thereupon Alfonso XI immediately signed a truce (August 1333), as Aragon had done a month before. On his way home from Gibraltar Muḥammad was assassinated on 25 August 1333 by Abū Thābit and Ibrāhīm, sons of ^cUthmān b. Abi 'l-^cUlā, either because of too friendly a relationship with the Marīnid sultan in Fez or too cordial a trucial meeting with Alfonso.

7. Yūsuf I, the younger of two brothers of Muḥammad IV, was proclaimed king by the loyalist Riḍwān, a future Naṣrid minister of consequence. His first official act was to expel, along with all other Banū Abi 'l-^cUlā, Abū Thābit, who, on ^cUthmān's death, had succeeded him as commander of the Maghribī volunteers (*shaykh al-ghuzāt*), and to replace him with a senior Marīnid, Yaḥyā b. ^cUmar b. Raḥḥū.

Early in Yūsuf's reign truces made with Castile gave way to a tripartite peace treaty between Castile, Granada and Fez (1334), and in 1336 Pedro IV of Aragon agreed to extend the term of Alfonso IV's peace with Granada. Neither Alfonso XI of Castile, anxious eventually to close Andalusia's doors on the Marīnids, nor Abu 'l-Ḥasan of Fez, eager to keep them open for Marīnid expansion, had long-term peaceful intentions. Each was developing his fleet, the one with Catalan aid, the other with help from the Ḥafṣids [*q.v.*]. Finally, in April 1340 the Muslim ships, in a pre-emptive strike, wrecked the Castilian fleet in the bay of Algeciras. Heady with success, Abu 'l-Ḥasan, accompanied by all his entourage, led a massive army into a siege of Tarifa. The subsequent battle of the Salado (7 Djumādā I 741/30 October 1340) was a Muslim disaster: Alfonso, supported by his brother-in-law, Alfonso IV, the king of Portugal, and using the heavily armoured cavalry charge that Muslim light horse would, in more open terrain, have easily outmanœuvred, smashed through to victory. Fearing repercussions at home, Abu 'l-Ḥasan beat a hasty retreat to Morocco via Algeciras, and Yūsuf fled to Granada. Whereas the Salado rout curbed Marīnid enthusiasm for expansion into Spain, it spurred Alfonso into frontier action which gained for him Alcalá de Benzaide (now Alcalá la Real), Priego and Benamejí. Then, in August 1342 his siege of Algeciras, his major goal, began. Forces from all over Europe, even England, rallied behind him in what was one of the very earliest major operations (predating Crécy, 1346) in which effective use was made of cannon—not by the Castilians, as often thought, but by the Muslims. As the siege dragged on Alfonso faced problems, notably from the withdrawal of foreign contingents and the attitudes of the Genoese on whose ships he depended. But sheer determination sustained him until he could win peace on his own

terms. When at last Granadan troops, plunging into action from nearby Gibraltar, failed to raise the siege, Yūsuf exchanged Algeciras for a 10-year truce (12 Dhu 'l-Ḳaʿda 744/27 March 1344), favourable terms for the evacuation of its Marīnid garrison and inhabitants, and tribute to Castile. In 1349 Alfonso broke the truce with an attempt to take Gibraltar, but, like many of his troops, he died of the Black Death (March 1350). His son, Pedro I, gladly reached an accord with Yūsuf, whose subsequent good relations with Castile and a readiness to harbour Marīnid rebel princes gradually soured Granada's friendship with Fez. But Yūsuf's days were numbered: on 1 Shawwāl 755/19 October 1354 a lunatic stabbed him to death in the Great Mosque in Granada. An able ruler and diplomat, trusted by his subjects, Yūsuf had achieved far more than his setbacks would suggest. Through his refusal to put his kingdom's heartlands at risk he had preserved them intact, and under his wing Granada had moved well along the road leading to literary and architectural brilliance.

8. (1). Muḥammad V, Yūsuf's eldest son, began his rule at sixteen under the benign tutelage of his father's wise and able *ḥādjib* [*q.v.*], Riḍwān, in whose service was the gifted young Ibn al-Khaṭīb [*q.v.*]. Granada's main objective was a general peace, and Muḥammad, agreeing to pay tribute to Pedro I, soon established good relations with Castile. With Aragon he met with no such rapid success: Pedro IV's initial preference was for warfare on his frontiers. By 1357, however, Granada's diplomatic persistence had led to better relations and the signing of an accord. With Fez, ruled by the Marīnid Abū ʿInān, Granada was also keen to improve relations, and to this end a mission, led by Ibn al-Khaṭīb, was sent to the sultan (755/1354). Little of substance came of the mission, but in 760/1359 on the accession of the latter's brother, Abū Sālim, who, as Marīnid pretender, had found asylum in Granada, a Naṣrid-Marīnid alliance soon followed. By 1385 the accord with Aragon was at an end: Castile and Aragon were at war, and Muḥammad V's special ties with Castile left him little option but to side with Pedro I, much to the chagrin of Pedro IV, whose enemy he now became. In 1359 the Castilian fleet, earlier augmented by three Granadan galleys, was granted port facilities at Malaga, and Muḥammad was just about to move against Aragon on land when he was ousted in a palace revolution (Ramaḍān 760/August 1359) by his half-brother, Ismāʿīl, son of Yūsuf I's widow Maryam, an ambitious *éminence grise*. Aided by her son-in-law Abū ʿAbd Allāh Muḥammad (to the Christians *el Bermejo*), Ismāʿīl's cousin and brother-in-law, Maryam had the palace stormed by an assault force. Riḍwān was killed, but Muḥammad V, outside the Alhambra at the time, escaped to Guadix and thence to Fez (November 1359) to the safety of Abū Sālim's court.

9. Ismāʿīl II, a weak, unprepossessing man, reigned only a few months. Ibn al-Khaṭīb's dislike of him can have done him no good, but worse came from elsewhere. *El Bermejo* held the reigns of power, and it was he who had Ismāʿīl, along with his brother Ḳays and most of their circle, assassinated (8 Shaʿbān 761/24 June 1360).

10. Muḥammad VI, *el Bermejo*, a man coarse in manners and dress, was no more popular at court than Ismāʿīl had been. Formally aligning himself with Aragon, he discarded tribute to Castile. Accordingly, Pedro I, after defeating the Aragonese at Nájera (1360) and later concluding with them the Treaty of Terrer (May 1361), turned his attention to Muḥammad V, whom he had helped to return from Fez and to set up a government in Marīnid Ronda (763/1361). In alliance the two took the offensive, though with little initial success. A Castilian incursion into the Vega with Muḥammad V in full view failed to gain him Granada. Then, at Guadix in Rabīʿ I 763/January 1362 a Castilian defeat reaped Muḥammad VI a rich harvest of prisoners. But then the tide turned. One fortress after another fell to the alliance, notably Iznájar, and Muḥammad V, after gaining Malaga, soon had Loja, Antequera, Vélez and Alhama in his hands. Muḥammad VI fled Granada in panic and in Djumādā 763/March 1362 foolishly threw himself on the mercy of Pedro I of Castile, who had him done to death at Tablada, not far from Seville, on 2 Radjab 763/25 April 1362.

8. (2). Muḥammad V began his seond reign on 20 Djumādā II 763/16 March 1362. He was to rule uninterruptedly for almost thirty years, during which time deft avoidance of war, wherever possible and expedient, gave Granada the longest stretch of peace in its history. Initial prospects for peace were not bright. In Castile Pedro I was at war with rebels led by his half-brother, Enrique of Trastamara, supported by Pedro IV of Aragon. Loyal to Castile, Muḥammad V sent in cavalry which duly participated in the conquest of Teruel (1363). But success was short-lived, and Pedro had to fall back on his beloved Seville (1364). Then, with mercenary companies recruited in France and led by Bertrand du Guesclin, Enrique penetrated Spain via Catalonia and was proclaimed Enrique II of Castile on 16 March 1366. For Pedro I Granadan support proved no asset: branded a "Moor-lover" and no longer welcome even in Seville, he fled his country. As for Muḥammad, fear of an imminent attack on Almeria and possible invasion of his shores by Christian navies drove him to seek help from North Africa. Despite a positive response from Fez and Tlemcen—the latter with a large input of money, troops and supplies—Christian success on land and sea and Muslim unrest in Almeria made it increasingly clear that peace would be in Granada's best interests. Accordingly Muḥammad switched his allegiance from Pedro I to Enrique II and then went on to conclude a peace treaty with Aragon (Radjab 768/March 1367). Later in 1367 Pedro I returned to Castile, aided by England's Black Prince, and Muḥammad, having reversed his allegiance, joined forces with Castile, sacking Jaén, taking Priego and pillaging Úbeda and Baeza. But, failing to take Cordova in the spring of 1368, he returned to Granada. By the end of March 1369 Pedro I was dead. Enrique II, his conqueror and assassin, was back, but too preoccupied internally to prevent Muḥammad from taking, first, such strategic frontier positions as Cambil, Haver and Rute, and then the prized Algeciras (Dhu 'l-Ḥidjdja 770/July 1369). With no military response from Enrique, Muḥammad, already party, along with Aragon and the Marīnid Maghrib, to a tripartite truce, decided to make peace with him. On 31 May 1370 an eight-year truce was agreed and, in 1375, renewed. From 1370 onwards the diplomatically astute Muḥammad negotiated a series of treaties and agreements of various kinds which gained for Granada a lengthy peace with its Christian neighbours that was only seriously threatened on the death of Enrique II (1379) when hostilities broke out between Granada and Castile. These were short-lived: Enrique's son and successor, Juan I of Castile, at war with England and Portugal, opted for peace with a truce that he renewed in 1390.

F. D. 1992 (after L.P. Harvey, Islamic Spain)

policy for Granada two are specially noteworthy: first, his dismantling of Algeciras's massive defences; second, his introduction, in 1372, of direct Naṣrid command of the Maghribī *ghuzāt*, until then always commanded by a royal Marīnid. Both measures were aimed at assertion of his independence of Fez—over which in fact he was soon to gain something of a political upper hand—but the first may also be seen as a move, in Granada's best interests, to make the Straits a less attractive international battleground (see Harvey, 216-17). It remained only to recover Gibraltar from the Marīnids, and this goal was achieved in 1374. Among those necessarily prominent on the Naṣrid-Marīnid stage was the renowned Ibn al-Khaṭīb [*q.v.*], Muḥammad's chief minister, who, being pro-Marīnid, gradually came to fear for his safety and fled his country in 773/1371-2, eventually finding asylum in Fās. There, through the machinations of his successor and former protégé, Ibn Zamrak [*q.v.*], he was tried for heresy by a Granadan tribunal and later murdered in prison (776/1375).

When Muḥammad V died on 10 Ṣafar 793/16 January 1391, he was at the height of his power. For Granada he had achieved relative stability, which had enabled it to prosper. Under him art and literature flourished, and it is to him that we owe much of what we admire in the Alhambra today.

11. Yūsuf II, Muḥammad V's eldest son, was at first dominated by his father's freedman-minister Khālid, who had the ruler's brothers Saᶜd, Muḥammad and Naṣr imprisoned and executed. Ibn Zamrak was imprisoned in Almeria. On being told that Khālid was to imprison him Yūsuf had him slaughtered in his presence. Externally the Christian kingdoms were no threat, but Yūsuf, who died on 16 Dhu 'l-Ḳaᶜda 794/3 October 1392, had opened the door to internal instability.

12. Muḥammad VII, Yūsuf II's younger son, owed his throne to a palace plot to which he was a party, the elder son, Yūsuf, being consigned to prison in Salobreña. Ibn Zamrak, whom Yūsuf II had restored to office, was soon dismissed and, in the summer of 1393, dispatched. For events in the reign of Muḥammad VII and his successors, Muslim testimony, without the detailed and often controlling witness of Ibn al-Khaṭīb and Ibn Khaldūn [*q.v.*], is relatively sparse, and the best has to be made of the evidence of sources that are largely Christian, shedding little or no light on Muslim motives for Granadan actions.

The need to avoid war, felt by Muḥammad V, was certainly not felt by his grandson. Thinking to profit from strife at the court of Enrique III of Castile (1390-1406), he began his reign with a not wholly successful raid on Caravaca in the region of Lorca (1392), thereby opening an era of frontier warfare. Though mainly aimed at seizing cattle and harvests, raids from both sides, inspiring with their heroics the famous courtly Castilian border ballads (*romances fronterizos*), became the order of the day. In April 1394 a populist crusade against Granada, led by one Martín Yáñez de la Barbuda, ended in disaster with consequences that could have been grave had Enrique not had other problems and Muḥammad not agreed to keep the peace. But Muḥammad's word could not be his bond; many of his frontiersmen acted on impulse, and the raids went on. By 1404 a stronger Enrique was eager to move against Granada in concert with Aragon, which did not, however, share his enthusiasm. In 1405 Muḥammad made the first move, which, though a débâcle on the eastern front, won him, much to Castile's dismay, Ayamonte, near Ronda in the west. Only after long negotiations, which Castile saw as a device to enable Granada to prepare for further action, was a truce agreed. The action, when it came, was aimed at Quesada and Jaén. The Castilian massacre that followed at the battle of Collejares (October 1406) stung Enrique into adopting a policy designed to gain popular support and sound financial backing for a campaign against Granada. That policy did not end, as it might once have done, with his death in December 1406: it was taken up by his brother Fernando and his widow Katherine of Lancaster, regents for the infant Juan II. Voted money by the Cortes, the regents moved swiftly into action late in 1407. There was to be no quick and easy victory for either side, and a truce negotiated in April 1408 afforded both sides a welcome respite. In May Muḥammad died. Already a deterioration in Granada's position vis-à-vis Castile was becoming predictable. As Granada's military capacity, no longer underpinned by an organised Maghribī component, faced decline, that of Castile gained ground with a growth of manpower after recovery from the ravages of the Black Death. Combined with increasing strength and advancing superiority in the use and deployment of artillery, the example of Fernando's pertinacity and disinclination for compromise augured ill for Granada's future.

13. Yūsuf III, long his younger brother's prisoner in Salobreña, sought and won from Castile a truce, which, when extended, ran till 1 April 1410. Only four days later Zahara, a stronghold won by Fernando in 1407, was attacked by Granada and sacked. Bent on revenge, Fernando decided to drive into the Muslim heartland to try to win for himself not a mere fortress but Antequera, a populous town set in a highly fertile agricultural region. The town came under heavy siege, and Muslim efforts to negotiate a peace came to nothing. In arguments over vassalage and tribute, which Granada had not paid since the 1370s, neither side would yield. Thus a bitter struggle between besiegers and besieged went on, ending only when a means of access had been gained in a surprise attack by a Castilian assault force on 16 September 1410. Yūsuf decided to sue for peace, and on 10 November a truce was finally signed. Fernando's victory, which earned him the honorific *el de Antequera* ("he of Antequera"), came as a severe blow to Granada. Others may well have followed in due course had not Fernando, on becoming king of Aragon in 1412, had new preoccupations. For the Naṣrids the truce of 1410 opened a relatively long period of comparative peace between Granada and her neighbours that was to last till 1428. Yūsuf died on 9 November 1417, the year after the death of his old enemy, Fernando, and the year before that of the regent Katherine of Lancaster, to whom Granada had been making gifts in place of tribute.

C. The Naṣrid kingdom from 810/1417 to its fall in 897/1492. The history of this period is such a tangle that only skeletal treatment of it can be attempted here. Fortunately, not too much need be told of the sad story of Granada as a house divided against itself since a fair picture of its internal history, which from 1419 is clearly inseparable from that of the politically powerful and ruthlessly ambitious Banu 'l-Sarrādj (best known to Europe as the "Abencerrajes", "Abencérages", etc.) may be gained from the article IBN AL-SARRĀDJ [*q.v.* in Supplement]. In 1419 Muḥammad VIII, Yūsuf III's eight-year old son and successor, was ousted by the Sarrādj candidate, Muḥammad IX, who in 1427 had to flee the country through Granadan fury at his failure to secure the

extension of a truce with Castile. With the aid of the anti-Sarrādj leader, Riḍwān Bannigash (Banegas/ Venegas), Muḥammad VIII returned, but late in 1429 dissatisfaction with his handling of Castile led to Muḥammad IX's return. The second of the latter's four reigns was short: in 1431, after a show of force at the so-called battle of La Higueruela, Castile imposed on Granada, at Riḍwān's suggestion, Yūsuf IV, a short-lived puppet with no real support. In 1432 Muḥammad IX returned for his third and longest reign, which was interrupted by the confused reigns of Muḥammad X (1445 and 1446-7) and Yūsuf V (1445-6). His fourth and last reign he chose, in an attempt to end internal strife, to share with Muḥammad XI (1451-3), son of Muḥammad VIII, whom he had had executed in 1431. Granada's loss from the Naṣrids' feuds was a source of gain for Castile which it readily exploited if able to do so and if free from internal divisions or clashes with Aragon. Juan II of Castile (d. 1454) was not, nor could have been, a Fernando "of Antequera", but he was a big thorn in Granada's side, bent on trying, by whatever means, to keep the Naṣrids divided; to avoid long truces if possible; to subject Granada to fealty and tribute and so deny it its cherished hope of peace with independence; to use whatever military capacity he had to erode the frontier through piecemeal conquest of Granada's bastions and to demoralise townsmen and villagers within the kingdom through operations aimed at reducing to wasteland the carefully cultivated, but highly vulnerable, countryside that richly sustained them. During the 1430s Granada did win some victories, but the very size and increasing strength of Castile was beginning to tell and might well have prevailed but for an internal crisis in 1439 which gained for Granada a three-year truce. A divided Castile emboldened the Naṣrids, and the 1440s were militarily successful years for them. In 1447 they recovered most of what they had lost to Fernando "of Antequera" in the east. In 1449 they even devastated Cieza, north-west of Murcia, while in the west their raiders almost got as far as Seville. That same year Juan II, finding Navarre allied with Granada, sought a truce, which Muḥammad IX granted so that he could deal with Yūsuf V, then ensconced in Malaga. By 1451 Granada was planning a full-scale invasion of the kingdom of Murcia. In 1450 it had actively aligned itself with the Murcian rebel Alonso Fajardo, who was later, as the danger of invasion loomed, to sink his differences with his many Christian enemies. All closed ranks and in 1452 inflicted a heavy defeat on advancing Granadans at the battle of Alporchones, not far from Lorca.

On the death of Muḥammad IX, Castile was too preoccupied with internal crises to secure the succession of its preferred candidate, Yūsuf V, and Muḥammad XI might have succeeded him without more ado but for the Banu 'l-Sarrādj and Juan II's successor, Enrique IV, who together backed Yūsuf III's middle-aged nephew Saʿd (1453-64). From Archidona Saʿd ruled an area westward towards Ronda, while from the Alhambra Muḥammad XI ruled Granada, Malaga and Almeria until too costly a truce with Castile lost him Granada and his throne to Saʿd in 1455. After capture by Saʿd's son, Abu 'l-Ḥasan ʿAlī, Muḥammad met his death in the Alhambra along with all his heirs. As ruler of Granada Saʿd rejected Castile's demands for subordinate, tributary status. Ensuing hostilities ran a now familiar course: raids, truces, battles lost and won on either side in the ebb and flow of a war largely governed by the state of the parties' internal stability. By the end of 1462 Granada, however, had little cause to rejoice: in July Saʿd, in a sudden break with the Banu 'l-Sarrādj, had had two of the most eminent members of the family murdered in the Alhambra but had not prevented others from fleeing to Malaga, where they declared allegiance to Yūsuf V; in August a weak and betrayed Gibraltar had surrendered to the feuding Castilian leaders of the Medina Sidonia (Guzmán) and the Cadiz (Ponce de León) factions; in September Archidona had fallen; by November Yūsuf V had occupied Malaga and Saʿd's lands to the west and then Granada itself. Saʿd's subsequent recovery of his capital and the death of Yūsuf V late in 1463 availed him little: in August 1464 his son Abu 'l-Ḥasan ʿAlī, in concert with the Banu 'l-Sarrādj, overthrew him and had him imprisoned.

Abu 'l-Ḥasan began his reign by strengthening Granada's economy and military capacity, and in 1470 he was well able to suppress a rising by his brother, Muḥammad, in Malaga and to extirpate its prime movers, the Banu 'l-Sarrādj, some of whom escaped death only by fleeing to Castilian protectors. Yet, nothing that Abu 'l-Ḥasan did or did not do could do more than defer the fall of the Granadan kingdom, which in fact owed its survival for a little over twenty years longer as much to Castile's own problems during the 1470s as to Granada's tenacity and sporadic heroic stands. For Granada's long-term future the events of 1479 boded ill: on Juan II's death the crown of Aragon passed to Fernando (V), husband of Isabel of Castile, whose throne, contested since her accession late in 1474, then came to rest on more secure foundations with the Treaty of Alcáçobas (4 September 1479), which ended civil war in Castile, ratified its peace with Portugal and brought about the pacification of the Extremadura. Fernando and Isabel, "the Catholic Monarchs" could now focus attention on Granada and the Reconquest.

In February 1482 the taking of the supposedly impregnable Alhama, commanding the main route from Granada to Malaga and Ronda, was the first major step on the road to final Christian victory. Abu 'l-Ḥasan's valiant efforts to recover it between February and July failed, but in mid-July his rout of forces before Loja dashed any Castilian hopes of an easy passage. At this point, however, he fell prey to a palace plot, hatched by the leader of the Banu 'l-Sarrādj faction and the powerful Yūsuf Ibn Kumāsha (Abencomixa), to replace him with his son Abū ʿAbd Allāh (Boabdil, i.e. Muḥammad XII). Unable to regain Granada, he left with his brother Muḥammad b. Saʿd (M. al-Zaghal) for Malaga, which he made his capital. The kingdom was now divided around Granada and Almeria in the east and Ronda and Malaga in the west. In March 1483 Castilian invaders were soundly beaten in an area east of Malaga. Prompted perhaps by his father's triumph, Boabdil rashly struck at Lucena deep in Castile. In the ensuing retreat he lost first-class officers, and he himself was captured. He thus enabled Abu 'l-Ḥasan to return to Granada. There, for some, the latter ruled as lawful king, for others not, and, when physically incapacitated by a stroke early in 1485, he was replaced by Muḥammad al-Zaghal and taken to Almuñecar, where he died. Al-Zaghal could be described as Muḥammad XIII, for he had made himself king in succession to his brother (*Nubdha* (see *Bibl.*), 13: *istawlā ʿalā 'l-mulk baʿdahu*), and in October 1483 most of the Granadan *fukahā*ʾ had, by *fatwā*, denied Boabdil's right to the throne. Moreover, in 1486 Boabdil himself did acknowledge him, however insincerely or temporarily, as king. Be that as it may, for their own reasons, Boabdil was the Catholic

After R. Arié, *L'Espagne musulmane au temps des Naṣrides*

Monarchs' king, and he it was who formally surrendered Granada to them on 2 January 1492. By that time the kingdom of Granada had become but a shadow of its former self. One town after another, large and small had fallen, sometimes not so easily, into Christian hands, e.g. Coín, Cártama, Ronda, Marbella (1485): Loja, Salar, Illora, Moclín, Colomera, Montefrío (1486); Vélez-Málaga, Malaga—hard won (1487); Vera (1488); Baza, Purchena, Almería, Almuñecar, Salobreña, Guadix (1489). After surrendering Almeria and Guadix in return for a tiny semi-autonomous principality in the Alpujarras, al-Zaghal had sold all his lands in 1490 and sailed for Oran in the Maghrib. Under the Capitulations of Granada, Boabdil had rights as a Mudéjar [*q.v.*], and, having left his old capital for his country estates, stayed on a while before leaving for the Maghrib. In 949/1533-4 he died and was buried in Fez, where in 1027/1617-18 his descendants were to be found living in penury.

The last decade of Naṣrid rule is so involved and in some respects enigmatic that it is not covered here in any detail. The main causes of its extinction, however, may be adumbrated. To begin with, the Catholic Monarchs' ability to tackle the problem of internal dissension and to find judicious ways of uniting most of their subjects in pursuit of a common cause was not matched by the Naṣrids, who failed abjectly to resolve family quarrels and to shed factional strife. Even outside palace circles, a wholly united front could not be guaranteed since the interests of, for instance, merchants, traders, cultivators and the influential *fuḳahāʾ* did not always coincide. But most damaging of all was the split between Boabdil and al-Zaghal, which in 1486 made Granada itself the scene of bloody, bitter fighting. Of the two, Boabdil was the more valuable to Castile, for, though a vacillator, he was a more ready collaborator. Al-Zaghal was by far the better soldier, the more successful leader and the staunch defender of Islam's interests until—perhaps despairing of Boabdil—he gave up and left the latter to his own devices. Politically and otherwise, Castile exploited all perceptible divisions within the Naṣrid camp. Militarily, it moved gradually into a position of superiority through its ability to keep an army in the field and to deploy its artillery with increasing efficiency. It also ensured, as far as possible, that its forces continued the war of

attrition aimed at undermining the economy and morale of the enemy by systematic devastation of *extra muros* cultivated land. Heroism, of which the last years of Naṣrid rule witnessed some striking examples was no substitute for military reinforcements of the kind that the Maghrib had so effectively supplied in time past, but could no longer supply because of its own decadence and weakness. When, in response to an appeal for aid in 1487, Mamlūk Egypt—no naval match for Christian Spain—had nothing more to offer than diplomatic intervention and goodwill, it was only a matter of time before the Naṣrid kingdom fell.

Bibliography: The indispensable standard work, covering not only political history, but also institutions and social, economic, cultural and other aspects of life under the Naṣrids is R. Arié, *L'Espagne musulmane au temps des Naṣrides (1232-1492). Réimpression suivie d'une postface et d'une mise à jour par l'auteur*, Paris 1990, which adds 49 pp. to the 1973 impression (see my review, *JSS*, xx [1975], 278-81), containing a complementary bibliography, addenda and errata; L.P. Harvey, *Islamic Spain 1250-1500*, Chicago and London, 1990, dealing with Mudéjar [*q.v.*] as well as Naṣrid history, offers some new insights into the latter (though in the matter of dates it should be used with caution). Between them the very full bibliographies of Arié and Harvey offer comprehensive coverage of the essential primary and secondary sources, etc. From the end of the 8th/14th century the only Arabic account we have to control the Castilian chronicles' version of Naṣrid history is *K. Nubdhat al-ʿaṣr*, etc. (anon.) ed. Bustānī, *Fragmento de la época*, etc. (tr. C. Quirós) (see Arié, 14; Harvey, 355), covering the period 882-97/1477-92 (and, laconically, to the end of the century). The entry in *EI²*, Supplement, 398 f., cited as relevant to the Banu'l-Sarrādj, calls for two comments: (1) In *Estudios onomástico-biográficos de al-Andalus*, ii, Madrid 1989, 173-5, A. Labarta cogently argues that the "Zegríes" (399b) derive their name *not* from *thaghrī*, as long thought, but from the name "Zakrī"; (2) it was Muḥammad XI, *not* Muḥammad IX, who was murdered as described (*ibid.*, last para.). (J.D. LATHAM)

2. Art and architecture.

Naṣrid architecture may be considered under four periods, reaching its apogee in the 14th century: (1) a first period, under Muḥammad I-III and Naṣr (1232-1314) inherited and adapted Almohad artistic forms; (2) under Ismāʿīl, Muḥammad IV and Yūsuf (1314-54) classically monumental architecture was created; (3) under Muḥammad V and the intrusive rulers of his reign (1354-91) decoration reached its optimum richness in complex architecture with ingenious ground plans, elevations and perspectives; and (4) under Muḥammad VII and Yūsuf III (1392-1417) there was only a brief flowering of decoration. Thereafter, internal dynastic quarrels caused a decline.

Military architecture. This inherited Almohad features in its enclosures, *ḳaṣabas*, *ḥiṣns* and *ḳalahurras* or towers with luxurious residences. Work began in 1238 when Muḥammad I "went up to the place called al-Ḥamrāʾ, inspected it, marked out the foundations and left someone to direct the work" (for a detailed consideration of the Alhambra, see GHARNĀṬA. Monuments. B). Characteristics of this military architecture are: (1) a progressive accumulation of walls and towers in defended precincts; (2) monumental towers with vaulted chambers on various levels, with the largest tower in an angle of the fortress (Alhambra: Vela Tower; Granada: Ḥiṣn al-Tawwābīn; Gibraltar: *al-ḳalahurra*; Malaga and Antequera *ḳaṣabas*: Homage tower). The gates have straight or bent interior passages, leaving the attacker exposed (cf. Vitruvius, *De architectura*, I, v, 2); the internal bend (*bāshūra*) is single in the first period but simple, double or triple in the second one. Precincts of the second and third periods have external (*barrāniyya*) towers, linked to the walls by an arch (Antequera; Malaga; Gibralfaro), and a lower defensive wall (called in al-Andalus *sulūḳiyya*) encircles some walls (Granada: Bāb Ilbīra; Malaga; Gibralfaro). See also ḤIṢN. I. The Muslim West.

Of *ḳalahurras* (so-called by Ibn Baṭṭūṭa and in the poetry of Ibn al-Djayyāb and Ibn Zamrak), the largest in al-Andalus was built at Gibraltar (between 1333 and 1349) by the Marīnid sultan Abu 'l-Ḥasan, according to Ibn Baṭṭūṭa. This impressed Yūsuf I, who erected his own *al-ḳalahurra al-djadīda* in the Alhambra. *Ḳaṣabas* might have an inner precinct enveloped by an outer one (Malaga) or connected to an outer one by towers (Granada), or a main precinct reached by crossing others that do not envelop it (Almeria; Gibraltar). The Malaga one adapted the 11th century fortress and has a complex entrance between walls, towers and gates, leading into the first outer precinct. Within the *ḳaṣabas* of Malaga and Almeria were military quarters with *ḥammāms*, wells and prisons/silos; important *ḳaṣabas* had palaces for the sovereign (Almeria, Malaga, Guadix). Towers (*ṭāliʿa*) on hills and vantage points reported the movements of enemy troops by land or sea.

Religious architecture. Remains of this are few. First period ones show Almohad features: concrete and brick walls, arcades on brick pillars, and pointed horseshoe arches. Of the Alhambra mosques of Muḥammad III and Ismāʿīl I, only the ground plans remain. The three Alhambra oratories of the second and third periods have rectangular ground plans. Yūsuf I inaugurated the *madrasa* of Granada, whose portico entrance was similar to the *funduḳ al-djadīda* (see below), with a courtyard of Marīnid type and with a highly-restored oratory having a square plan ascending to an octagonal lantern. The only surviving *rābiṭa* (the hermitage of St. Sebastian) by the river Genil, has a square plan, a vault of crossed arches leaving the centre free and a covering roof.

Civic architecture. Muḥammad II built the arsenal of Malaga, which Muḥammad V enlarged. The only remaining Naṣrid *funduḳ*, al-Djadīda, is Yūsuf I's Corral del Carbón, with a square plan, central courtyard and three storeys with galleries on pillars leading to the guest rooms; its projecting *īwān* entrance shows clear oriental Islamic influence. The Granada *māristān* or hospital was built by Muḥammad V in 1365-7 after successful military campaigns and partially survives on its southern and eastern sides; it was structurally similar to the *funduḳ* and had a central pool with two large seated lions as water-spouts (now re-sited in the Alhambra). Naṣrid houses varied with social class. The excavated military and artisan quarters of the Alhambra and the Malaga *ḳaṣaba* show small, irregular houses with bent entrances, neighbouring latrines and stables, and a courtyard giving on to the rooms. More luxurious houses had two storeys, as in the Casa de los Girones (Granada), with its richly painted stucco decoration. The numerous Naṣrid *ḥammāms* have lost their access and *bayt al-maslakh* and it is mainly the steam rooms and furnaces which survive (Granada; Baza; Ronda; Gibraltar; Alhama).

Palace architecture. This mainly survives in the Alhambra and Granada, such as Muḥammad III's Partal palace, Yūsuf I's *ḳalahurra djadīda* (Cautiva) in

the Alhambra and his reconstruction of the Comares palace in 1350, completed by Muḥammad V; the latter ruler's Riyāḍ or Lions palace; etc. On these, see GHARNĀṬA. Monuments. B.

Gardens. The Generalife, the ruler's country pleasure palace, with lands, cattle and orchards, preserves the only Naṣrid gardens, containing inter alia the interior sunny patio of the Acequia and the shaded garden of the Water Stairs, offering shade at differing levels.

Decoration and aesthetics. The *dīwān al-inshā*ʾ or chancery also directed architecture and decoration, and four of its poet-viziers who have left beautiful epigraphed poems and Ḳurʾānic texts on the palace walls are known to us: Ibn al-Djayyāb, Ibn al-Khaṭīb [*q.v.*], Ibn Zamrak [*q.v.*] and Ibn Furkūn (whose epigraphed texts are lost). Naṣrid Kūfic writing evolved its own geometric compositions, often combined with floral-geometric designs. Coloured ceramic tiling was used for large geometric compositions, and colouring was an essential element in Naṣrid decoration and architecture, often employing red, blue and green with a white, silver or gold foreground.

(A. FERNÁNDEZ-PUERTAS)

NAṢṢ (A.), a religio-legal term. The meaning of the root appears to be "to raise", especially "to elevate a thing so that it is visible to all". The word does not occur with this sense in either Ḳurʾān or *Ḥadīth*, but it may be etymologically connected with *naṣaba*. In the technical vocabulary of *uṣūl al-fiḳh*, the term refers to a text whose presence in either Ḳurʾān or Ḥadīth must be demonstrated to justify an alleged ruling. In his *Risāla*, al-Shāfiʿī uses it to refer to rulings textually referred to in either Ḳurʾān or *Sunna*, (81, 83, 88, 138, 149, 158-9, 166, 173), although he appears also on occasion to use the term of an explicit Ḳurʾān statement (91, 106) to contrast it with *djumla*, i.e. a general Ḳurʾān statement made more specific only by a *ḥadīth* which supplies a more precise definition. Similarly, the usage referred to in the *Lisān al-ʿArab*, "the *naṣṣ* of the Ḳurʾān or of the Sunna," means the ruling which the *ẓāhir* [*q.v.*], or the words actually present in the text of the Ḳurʾān or the Sunna actually indicate, i.e. without resort to further interpretation. Possibly connected with the basic meaning is the other usage, the *naṣṣ*, or "raising" (*rafʿ*) of a *ḥadīth*, that is, its attribution to its originator, not necessarily the Prophet. To be noted also is the labelling of the Shīʿī principle that the Prophet had designated ʿAlī to be his successor as *naṣṣ wa-taʿyīn*.

Other meanings of the term are supplied by Lane, Dozy and the Arabic dictionaries.

(A.J. WENSINCK-[J. BURTON])

AL-**NASSĀDJ** (A.) "weaver, textile worker", synonymous with *ḥāʾik*, and including sedentary weavers of the towns and villages and also those of the pastoralists and Bedouins. These were usually freemen, but sometimes slaves. *Nassādj* was a less derogatory term than *ḥāʾik* but on the whole the status of the weaver was low in Islamic society, an attitude crystallised in a saying attributed to ʿAlī b. Abī Ṭālib, "Walking with a weaver (*nassādj*) on the road increases a man's livelihood; talking to him is inauspicious, and visiting his workshop stupefies a person" (al-Rāghib al-Iṣfahānī, *Muḥāḍarāt al-udabā*ʾ, Beirut 1961, ii, 459-60). This low status was associated with a relatively meagre income and was affirmed by *kafāʾa* "equivalence in status" [*q.v.*], denying the weaver the right to marry outside his own social level. Hence social mobility was low within this trade, a fact observable till the mid-20th century in a traditionally-organised centre of production like Fās in Morocco (see H.M. Miner. *Traditional mobility among the weavers of Fez*, in *Trans. of the Amer. Philosophical Soc.*, cxvii/1 [1973], 17-36).

We find *al-Nassādj* often used as a *nisba* [*q.v.*]. Al-Samʿānī (*Ansāb*, facs. fol. 559a-b, ed. Ḥaydarābād, xiii, 81-4) cites several traditionists and Ṣūfīs with this affiliation, including Abū Hamza Mudjammaʿ al-Taymī of Kūfa, Abū Muḥammad of Baṣra, a *mawlā* of Bilāl b. Abī Burda b. Abī Mūsā al-Ashʿarī (d. *ca.* 120/738), Abu 'l-Ḥasan Khayr b. ʿAbd Allāh, known as Khayr al-Nassādj (d. 322/934), famed Ṣūfī with a *ḥalḳa* in Baghdād, etc. It is, indeed, not improbable that there was a connection between their status as craftsmen and Ṣūfism.

The weaver's product was usually exempt from taxation (*ḍarāʾib, mukūs*). When the Būyid *amīrs* of Baghdād imposed taxes on silken cloth (*ḥarīr* [*q.v.*], *ibrism*) and on fine cotton cloth of the *ʿattābī* variety, artisan riots against them led to their abolition in 390/999. In the 6th/12th century the Saldjūḳs imposed some *mukūs* on textiles.

NASSADS, the common European form of the name given to the light wooden warships built in Nassau or Hohenau (Lower Austria), the "Nassauer" or "Hohenauer", Magyar *naszád*, pl. *naszádok*, Slav. *nasad*, which were used on the Danube. They were usually manned by Serbian seamen who were called *martalos* [*q.v.*] (from the Magyar *martolóc, martalóz*, lit. "robber"). According to a Florentine account, this Danube flotilla in 1475 consisted of 330 ships manned by 10,000 "nassadists" armed with lances, shields, crossbow or bow and arrow, more

rarely with muskets. The larger ships had also cannon. About 1522 the commander of the Danube fleet was Radić Božić, who reorganised it at Peterwardein (cf. Jireček, *Geschichte der Serben*, ii/1, 258). Through want of money, the Serbian seamen then deserted to the Turks (*ibid.*, 262), who after the fall of Belgrade seized the Danube fleet and developed it into a powerful arm. About 1530 the Danube fleet consisted of 800 nassads and was commanded by the voivode Ḳāsim (cf. J. von Hammer, *GOR*, iii, 85).

NASSER [see ʿabd al-nāṣir, in Suppl.].

NASTAʿLĪḲ [see khaṭṭ].

NASṬŪRIYYŪN, Nasāṭira (a.), sing. Nasṭūrī, the Nestorian Christians. The term derives from Nestorius, bishop of Constantinople, whose Christological doctrine was condemned by the council of Ephesus in 431. But the reasons for the separation of East Syrian Christianity ("Nestorianism") from the Byzantine Church and the West Syrian patriarchate of Antioch were political (the conflict between the Roman and the Persian empires) rather than doctrinal. The term "Nestorians" is also usually rejected (especially in modern times) by the East Syrians themselves. In this article the traditional designation will be used for the sake of convenience.

Already a council in Seleucia-Ctesiphon [see al-madāʾin] in 410 defined the organisation of the independent East Syrian Church in six metropolitan provinces, under the supremacy of the catholicos residing in the capital of the Sāsānid empire: 1. Babylon = Bēth Armāyē (centre: Seleucia-Ctesiphon, with the bishop of Kashkar as acting catholicos in times of vacancy); 2. Susiana = Bēth Hūzāyē (centre: Bēth Lāphaṭ = Gondēshāpūr [*q.v.*]); 3. Northern Mesopotamia = Bēth ʿArbhāyē (centre: Nisibis); 4. Mesene = Mayshān (centre: Perāth de-Mayshān = Baṣra [*q.v.*]); 5. Adiabene = Ḥedhayyābh (centre: Arbīl); 6. Garmaea = Bēth Garmay (centre: Karkhā de-Bēth Selōkh = Kirkūk [*q.v.*]). The number of metropolitan provinces was subsequently increased: 7. Persis (5th cent.) and 8. Marw (6th cent.).

From Marw, Nestorian missionary monks followed the trade routes to Central Asia and China, where additional ecclesiastical centres were established. Evidence of one of the most remarkable missionary enterprises in history is found on a marble pillar erected in Shianfu in the Chinese province of Shensi in 781. The bilingual Chinese-Syriac inscription relates the arrival of the first Syriac missionary Alopen in 635. Three years later the Chinese emperor—according to the stele—invited his subjects to embrace the new religion and ensured the free propagation of Christianity in his empire. The heyday of Nestorianism in China lasted two centuries. By about 1200 Chinese Nestorianism seems to have vanished. From an early date there were also East Syrian communities in India—especially along the Malabar Coast, which was connected with Western Asia by maritime trade routes.

Along the trade routes to India Nestorian traders and missionaries had also settled among the Arabs in the Persian Gulf (e.g. Ḳaṭar and al-Baḥrayn), and in South Arabia (e.g. Nadjrān, Ṣanʿāʾ and Mārib). Though the early history of South Arabian Christianity—due to political reasons—was primarily influenced by Byzantine missionary activity and competing Monophysitism, the Persian conquest in 597 brought about a Nestorian dominance. North of the Arabian Peninsula, the Arab population in the buffer state of the Lakhmid [*q.v.*] kingdom—with al-Ḥīra [*q.v.*] as its capital—had belonged to the East Syrian (Nestorian) Church for centuries. But it was only their last king, al-Nuʿmān III (580-602 [*q.v.*]), who was officially baptised into the Nestorian Church.

Comparatively tolerated by the Sāsānid emperors, the Christians were from time to time subjected to severe persecutions, e.g. under Shāpūr II (309-79), Yazdagird I (399-420) and Bahrām V (420-38). The vacancy in the office of the catholicos 608-28 was the consequence of a persecution initiated by Khusraw II (591-628). Initially, therefore, the Nestorians in Mesopotamia seem to have welcomed the Arab conquerors as liberators from Sāsānid persecutions. In addition, the new Islamic religion was in principle tolerant towards Christians (including Nestorians) as members of the People of the Book (*ahl al-kitāb* [*q.v.*]). Muḥammad himself is supposed to have signed a treaty with Sayyid, king of Nadjrān, and Abu 'l-Ḥārith, Nestorian bishop of Nadjrān. This treaty guaranteed the Christians a protected status [see ahl al-dhimma] in return for the payment of the *djizya* [*q.v.*], from which priests and monks were to be exempted. It is the first of a series of similar treaties regulating the relations between Christians and their Muslim rulers. The most famous of these covenants is attributed to the second caliph ʿUmar ("the covenant of ʿUmar", *ʿahd ʿUmar*). Often such treaties are unhistoric documents of more recent date, legitimising certain rights or restrictions. It is clear, though, that the Prophet himself had a positive attitude towards Nestorians. In his religious views he was strongly influenced by the Nestorian missionaries he met in Yemen and on the trade route between Yemen and ʿIrāḳ (cf. T. Andrae). One of these Nestorians was Ḳuss b. Sāʿida [*q.v.*] of Nadjrān whom Muḥammad is supposed to have heard preaching in ʿUkāẓ.

Though the relationship between the Arab-Muslim invaders of ʿIrāḳ and the Nestorian inhabitants was mutually positive at first, conversions to Islam (already the catholicos Īshūʿyāb III [649-59] found it difficult to prevent the Arab tribes of the Persian Gulf from adopting Islam) and political pressure on the Nestorians weakened the Nestorian Church and caused internal dissension. While the Umayyads in Syria encouraged the appointment of Christian (usually Melkite) officials and therefore treated the Christians well, provocations caused trouble in Mesopotamia. The ambitious governor al-Ḥadjdjādj b. Yūsuf [*q.v.*] (in ʿIrāḳ 75-95/694-714) interfered in the internal affairs of the Nestorian Church and encouraged rivalry within the hierarchy. Such rivalry continued even later on during the ʿAbbāsid period, and occasionally gave rise to double appointments of bishops by rival catholicoi. No doubt dissension within the Church was a contributory cause of the increasing number of conversions to Islam. Another cause was the persecutions which broke out from time to time. Especially under the ʿAbbāsid caliphs Hārūn al-Rashīd [*q.v.*] (170-93/786-809) and al-Mutawakkil [*q.v.*] (232-47/847-61) were the restrictions imposed on the Christians, according to the covenant of ʿUmar, rigidly applied.

In between periods of persecution, and especially

after the establishment of the ʿAbbāsid caliphate in 132/750, relations between the catholicate and the caliph's court were close. Before the end of the 8th century the catholicoi had moved their centre from Seleucia-Ctesiphon to Baghdād. Many Church leaders, such as the catholicos Timothy I (780-823), were highly thought of in the caliphal court. As a result, the Nestorian catholicos became the official representative of all the Christians within the ʿAbbāsid caliphate. During the 3rd/9th and 4th/10th centuries Nestorian government officials played an important part in the ʿAbbāsid administration. The employment of Christian secretaries [see KĀTIB], especially in Syria, had been widespread during the first Islamic century, the conquerors having initially left the pre-Islamic systems of administration intact. But even after the Arabisation of these earlier administrative systems Christian clerks were widely employed not only in Syria and Egypt but also in ʿIrāḳ—at least after the ʿAbbāsid revolution. In ʿIrāḳ there were Nestorian monasteries [see DAYR] which provided the ʿAbbāsid empire with competent officials. Some of these officials attained high positions and could even be appointed viziers, in which case they normally had to convert to Islam. The most famous of these ʿIrāḳī monasteries was Dayr Ḳunnā [*q.v.*] with the school of Mar Mārī. Here, such successful viziers as ʿAlī b. ʿĪsā (245-334/859-946 [*q.v.*]) of the Banu 'l-Djarrāḥ family began their careers. Here, too, future Nestorian catholicoi like Israel (960-2) and Īshūʿyāb b. Ḥizḳiyāl (1020-5) were teachers. As a member of the teaching staff at Dayr Ḳunnā the famous Nestorian logician Abū Bishr Mattā b. Yūnus (d. 940), one of Yaḥyā b. ʿAdī's (d. 974) teachers, may be mentioned too.

One of the reasons why relations between the Nestorian Church and the Muslim rulers were often so good may be the outstanding rôle which the Nestorians played in the field of medicine, science and philosophy. There were famous Nestorian schools of learning in Edessa, Nisibis and Seleucia-Ctesiphon. Many Greek philosophical and medical works by Aristotle [see ARISṬŪṬĀLĪS], and his commentators, and by Ptolemy [see BAṬLAMIYŪS], Hippocrates [see BUḲRĀṬ], Galen [see DJĀLĪNŪS], etc., were soon translated into Syriac. Further to the east, Gondēshāpūr was famous especially as a medical centre. The Nestorian Bukhtīshūʿ [*q.v.*] family produced prominent physicians for generations. They provided the leadership at the medical school at Gondēshāpūr and served as court physicians to the caliph in Baghdād from 148/765. While the early translations from Greek into Syriac and from Syriac into Arabic were of a literal type, the translations produced by the school of Ḥunayn b. Isḥāḳ (d. 873)—leader of the academy or *Bayt al-ḥikma* [*q.v.*] founded in Baghdād by the caliph al-Maʾmūn—were more polished. Besides, translations into Arabic became more and more common, whether through a Syriac intermediary or directly from Greek. In this academy Ḥunayn's son Isḥāḳ and nephew Ḥubaysh were also active. Often enough the translations were provided with commentaries. In a third phase of the translation movement, revisions of older versions were made, textual criticism was applied, and the interest was more purely philosophical than earlier. In this phase Nestorian scholars of the Aristotelian school in Baghdād such as Abū Bishr Mattā b. Yūnus (d. 940) and ʿAbd Allāh b. al-Ṭayyib (d. 1043) took part.

Besides their prominence as translators, philosophers, scientists and practitioners in the fields of medicine, pharmacy, banking, etc., the Nestorians during the ʿAbbāsid caliphate produced an enormous religious and ecclesiastical literature—in Syriac as well as in Arabic. Though Arabic was adopted fairly early, the Nestorians (and the Jacobites, or West Syrians) never abandoned Syriac as a literary medium. This should be compared to the situation among the Copts in Egypt. Here, Arabic on a wide scale was introduced only in the 4th/10th century, but soon more or less replaced Coptic, which was thereafter restricted to liturgical and philological contexts. Within the enormous corpus of Nestorian literature there are important works relevant to the history of Islamic-Christian dialogue and the situation of the Nestorian Church during the ʿAbbāsid caliphate. The catholicos Timothy I (780-823) was not only a collector of canonical materials and a translator of Aristotle but also engaged in a theological dialogue with the caliph al-Mahdī (158-69/775-85) dealing with most of the classic points of discussion: Christology, the Trinity, moral and ritual differences between Christians, Muslims and Jews, the Prophethood of Muḥammad, the *taḥrīf* [see AL-INDJĪL] of the Scriptures, the veneration of the Cross, etc. Though originally in Syriac, Timothy's apology is better known in its Arabic versions. Another Nestorian writer from the first ʿAbbāsid century, writing in Syriac, is Theodore bar Kōnī. His *Scholion* or compendium of Nestorian theology includes an apologia for Christianity against the Muslims. The importance of this work lies in the fact that it provides the framework of the ecclesiastical philosophy and the basic outline of the Christian approach to Islam which was to become standard in future apologies. In contrast to the two previous authors, ʿAmmār al-Baṣrī wrote his *Kitāb al-Burhān* and his *Kitāb al-Masāʾil wa 'l-adjwiba* in Arabic, presumably during the caliphate of al-Muʿtaṣim (218-27/833-42). Being himself a *mutakallim*, ʿAmmār in his Trinitarian apology refutes an Islamic conception of the attributes of God (*ṣifāt Allāh*) which corresponds to the doctrine held by the Muʿtazilī scholar Abu 'l-Hudhayl al-ʿAllāf [*q.v.*]. According to Ibn al-Nadīm, Abu 'l-Hudhayl also wrote a refutation of ʿAmmār entitled *Kitāb ʿalā ʿAmmār al-naṣrānī fi 'l-radd ʿalā 'l-naṣārā*. Like ʿAmmār, another Nestorian Arabic writer, Isrāʾīl al-Kaskarī (d. 872), defended the doctrine of the Trinity in the genre of questions and answers. Here, too, Muʿtazilī conceptions (al-Nāshiʾ al-Akbar's [*q.v.*]) are refuted. Another important point of reference in Isrāʾīl's doctrine on divine Unity and Trinity is Yaʿḳūb b. Isḥāḳ al-Kindī's [see AL-KINDĪ] philosophy. Isrāʾīl was also engaged in a public debate with al-Kindī's disciple Aḥmad b. al-Ṭayyib al-Sarakhsī [*q.v.*]. One of the most prolific Nestorian writers was Elia of Nisibis, or Iliyyā al-Naṣībī (975-1046). In 417/1026 Elia had seven discussions with the Muslim vizier Abu 'l-Ḳāsim al-Ḥusayn b. ʿAlī al-Maghribī (d. 418/1027 [see AL-MAGHRIBĪ, BANŪ], a refugee from al-Ḥākim's Egypt. The sessions which took place in Nisibis and were collected under the title *Kitāb al-Madjālis*, deal with the standard topics of the Christian-Muslim dialogue, but also with profane matters such as syntax, lexicography and calligraphy. In the field of ecclesiastical history during Islamic times, Mārī b. Sulaymān's *Kitāb al-Madjdal* (*ca.* 1160) and the revisions and additions made by ʿAmr b. Mattā and Ṣalībā b. Yūḥannā in the 14th century provide the most exhaustive information available on the relations between the Nestorian hierarchy and the Muslim government. A fair amount of historical criticism has to be applied in order to interpret the statements and the explanations of events made by Mārī, ʿAmr and Ṣalībā. Often enough there are traces

of a later generation having touched up an original story. The historical section in the *Kitāb al-Madjdal* is only a small part of the entire work, which is a compiled encyclopaedia—a Nestorian counterpart to al-Muʾtaman b. al-ʿAssāl's *Madjmūʿ uṣūl al-dīn* (13th cent.) in the Arabic literature of the Copts. A similar, but far less comprehensive, theological compendium was written by ʿAbdīshūʿ (d. 1318), the last of the great Nestorian writers.

Though the ʿAbbāsid caliphate officially lasted until 656/1258, the effective rulers 334-447/945-1055 were the Shīʿī Būyids [see BUWAYHIDS]. This fact hardly aggravated the situation for the Nestorians. As was the case in Fāṭimid Egypt, the Shīʿī Būyids were rather more tolerant than the Sunnīs towards the Christians. When the Sunnī Saldjūḳs in 447/1055 replaced the Būyids as effective rulers many Nestorian churches and monasteries were damaged. But on the other hand, this was the fate of all religious minorities. And when the Saldjūḳs had finally established themselves the situation for the Nestorians seemed once more to have improved. When the Saldjūḳs extended their power over Syria and Palestine, this in fact facilitated the expansion of the Nestorian Church in the West. Also, in the East the Nestorian Church appears still to have been flourishing during this period. About 25 metropolitan provinces (including those in India and Central Asia) were subordinate to the catholicos.

In Central Asia, Nestorianism, from an early date in hard competition with Manichaeism and Buddhism (cf. the discoveries in the Turfān oasis), had been established through traders and missionaries. Nestorian Christianity was encouraged by the tolerant Mongol rulers, and when the Mongols conquered the Eastern parts of the caliphate and sacked Baghdād in 656/1258, there were numerous Nestorian Christians among the advancing Mongols and Turks. In Baghdād the Christians and the Shīʿīs were tolerated while the Sunnīs were treated as enemies. In 680/1281 a monk of Mongol descent was elected catholicos under the name Yabalāhā III (1281-1317). During his catholicate the Nestorian Church experienced its last period of peace, but also a change of fate when the Mongol rulers adopted Sunnī Islam. The Nestorians suddenly lost their privileged status and were once more subjected to persecutions. Because of the privileges the Christians had enjoyed during the past decades, the Muslims sought revenge. Under these circumstances it is probable that numerous native ʿIrāḳī Nestorians also converted to Islam. Over the following decades the Nestorian Church lost all its eastern provinces. The final blow was delivered by the invasion of Tīmūr Lang, whose reign of terror lasted from 771/1369 to 807/1405, and his hordes, in whose footsteps nothing but destruction, persecution and murder followed.

Those Nestorians who did survive the invasion of Tīmūr fled through northern ʿIrāḳ up into the Hakkārī Mountains to the west of Lake Urmiya. Presumably to prevent disintegration, the catholicate (from now on called "patriarchate") was made hereditary in 1450. The office went from uncle to nephew (who was designated before birth). On the one hand, rivalry between different candidates and their supporters was avoided by this procedure. On the other hand, the opposition against this rule was inevitable. When, in 1551, the patriarchal see became vacant, part of the Church refused to acknowledge the nephew of the deceased, Shimʿūn VIII Denḥā, as the new patriarch.

The Nestorians on the northern plains of ʿIrāḳ preferred a pro-Roman bishop, Yūḥannā Sulāḳā, to Shimʿūn VIII Denḥā. In 1553 Yūḥannā Sulāḳā visited Rome and was consecrated by the Pope. Contacts with Rome had been made earlier in the history of the Nestorian Church. Already in the catholicate of Yabalāhā III in 1287 and 1297 there had been connections between the Nestorian catholicate and the Roman curia, but nothing serious had come out of it. Not even in the 16th century were the endeavours to have lasting results. It was not until the 19th century that an effective Chaldaean Patriarchate of Babylon was finally established. The present *ca.* 500,000 members of this Church—of Nestorian origin, but now in union with Rome—are called Chaldaeans. Since 1989 Raphael I Bidawid has been the patriarch of the Church, and resides in Baghdād.

In the mountain area of Hakkâri province in modern Turkey, the Nestorians held on to the hereditary patriarchate of Shimʿūn VIII Denḥā and had no relations with Rome. In the 19th century, Protestant missionaries and amateur archaeologists regarded the Nestorians of the mountains as descendants of the ancient Assyrians. As a result of this, the Nestorians were increasingly called Assyrians—an epithet they themselves generally accepted. During the 20th century—especially in the diaspora in America and Europe—a national Assyrian movement has grown strong. This movement was greatly inspired by the severe persecutions which the Assyrians suffered during World War I, when the community was suspected of supporting the British, with whom Turkey was at war. About one-third of the Assyrian population died in these massacres. In ʿIrāḳ, where the majority of the survivors had fled, a new massacre further scattered the community in 1933, when the British mandate ended. In the same year the patriarch, Mar Shimʿūn XXIII, lost his ʿIrāḳī citizenship and took up residence in San Francisco, USA. In protest against the office of the patriarch being hereditary and the Patriarch's adoption of the Gregorian calendar in 1964, members of the Church in ʿIrāḳ found support from the Assyrian Metropolitan of India, Mar Thomas Darmo, who was elected patriarch in Baghdād in 1968. In 1970 he was succeeded by Mar Addai of Baghdād. Shortly thereafter the ʿIrāḳī government invited Mar Shimʿūn XXIII to return to ʿIrāḳ, and gave him legal recognition as head of the Assyrian community. However, in 1973 he resigned from his office and married. He was assassinated in San Francisco in November 1975. In October 1976 the bishop of Tehran was elected patriarch and took up residence in Morton Grove, Illinois, USA, as Mar Denḥā IV. At the same time he declared the end of the patriarchal dynasty. Although the main reason for the schism between the two groups—now about equally strong—was then removed, a full reconciliation has not yet been achieved. Substantial progress towards a solution was made in early 1990 when bishops of the two parties negotiated together. In all, the Assyrian Church of the East counts about 500,000 members. Together with the Chaldaean Catholic Church, the number of the spiritual offspring of the East Syrians, or Nestorians, amounts to about a million.

(B. Holmberg)

NAṢŪḤ PASHA (d. 1023/1614), an Ottoman grand vizier, was of Christian descent and was born either in Gümüldjine [*q.v.* in Suppl.] (the modern Komotini, Thrace, Greece) or in Drama. According to some sources (e.g. Baudier and Grimestone, in Knolles), he was the son of a Greek priest; according to others (e.g. Naᶜīmā, *Taʾrīkh*[1], 283, *arnaʾud djinsi*), of Albanian origin.

He came early in life to Istanbul, spent two years in the old Seray as a *teberdār* (halbardier) and left it as a *čawush*. Through the favour of the sultan's confidant Meḥmed Agha, he rapidly attained high office. In quick succession, he became voivode of Zīle (Anatolia), master of the horse and governor of Fülek (Hungary). He married the daughter of the Kurdish Mīr Sheref and thereby obtained riches as great as his power, which every one was now beginning to fear. His ambition and arrogance, his venality and cruelty, knew no bounds and he was even said to be aiming at the throne. In 1015/1606, he was to conduct the campaign against Persia, as the son-in-law of Mīr Sheref and on account of his local knowledge, with the rank of third vizier and *serᶜasker*, but his attention was claimed by the trouble in Anatolia which was affecting the whole of Asia Minor; through Kurdish treachery he lost a battle, and it was only in the autumn of 1017/1608 that his troops joined the army of the grand vizier, who received him very coolly (cf. J. von Hammer, *GOR*, iv, 412-13). In 1011/1602 Nāṣūḥ Pasha had been appointed governor of Siwas, the next year of Aleppo and in 1015/1606, of Diyārbakr. His goal was the grand viziership. He did not hesitate to ask the sultan to give him the imperial seal and the post of commander-in-chief in return for a sum of 40,000 ducats and the maintenance of the army at his own expense. Aḥmed I handed on the offer to the grand vizier, who summoned Naṣūḥ Pasha to him and fined him that sum as a punishment (cf. von Hammer, *GOR*, iv, 446-7). When soon afterwards the grand vizier, the Croat Ḳuyudju Murād Pasha, died at the age of over 90, Naṣūḥ Pasha became his successor (22 August 1611). In the following year he married ᶜĀʾisha, the three-year old daughter of Sultan Aḥmed I (February 1612). His arrogance now knew no bounds; all his opponents were ruthlessly disposed of. His personal qualities dazzled everyone: "Of imposing appearance, brave and eloquent, never weary of talk or action, but at the same time passionate, impetuous, quite incapable of kindly conduct and flattering words and always intent on humbling the other viziers" (von Hammer, *GOR*, iv, 472). As human life was nothing to him but wealth everything, he accumulated vast treasures. Sycophants and astrologers nourished in him the delusion that he was born to rule. The number of his enemies increased from day to day as a result of his intrigues and his ruthlessness. When on Friday, 13 Ramaḍān 1023/17 October 1614, he was to accompany the sultan to the mosque, suspecting no good, he said he was ill. The *bostāndjiˀ bashiˀ* sent to him had him strangled by his own garden guards. His body was buried on the Oḳ Meydān. His estate, which fell to the coffers of the state, was enormous: pearls, jewels, carpets, cloth and bullion without number (cf. von Hammer, *GOR*, iv, 474-5, quoting Mezeray, ii, 195).

Naṣūḥ Pasha left several sons, one of whom, Ḥuseyn Pasha (d. 1053/643; cf. von Hammer, *GOR*, v, 260 and Ḥadjdjī Khalīfa, *Fedhleke*, ii, 226), had a son named Meḥmed. The latter wrote a history of the Ottoman empire (*Dheyl-i Tawārīkh-i Āl-i ᶜOthmān*) from the death of Murād IV in 1048/1639 to 1081/1670, the original ms. of which is in Dresden (cf. F. Babinger, *GOW*, 211).

(with many errors). — On the rumour that Naṣūḥ Pas̲h̲a had made an arrangement with the Persians and that the discovery of this treachery caused his death, cf. the contemporary stories mentioned by von Hammer, *GOR*, iv, 474, n., as well as the Paris pamphlet of 1615. See also *İA* art. *Nasûh Paşa* (M. Tayyib Gökbilgin).

(F. Babinger)

NAʿT (a.) "qualification", a technical term of Arabic grammar used to designate a qualifying adjective and its function as an epithet. It is synonymous with *ṣifa* and *waṣf*, which Sībawayh uses more frequently than *naʿt* itself.

Al-Zamak̲h̲s̲h̲arī defines qualification as being that of the noun which indicates one of the states of the essence (*d̲h̲āt*), used to distinguish two homonyms (*mus̲h̲tarak* [*q.v.*]), to particularise (*tak̲h̲ṣīṣ*) something unknown or to clarify (*tawḍīḥ*) something known; but the quality can also simply be used for praise (*t̲h̲anāʾ*), blame (*d̲h̲amm*) or confirmation (*taʾkīd*).

One can qualify by means of a derived noun (*mus̲h̲taḳḳ*) of the process (*maṣdar*): agent (*fāʿil*), that acted upon (*mafʿūl*), a qualification assimilated (*mus̲h̲abbaha*) to the agent, or by means of the process itself; one can also qualify something unknown by means of a verbal or nominal phrase (*d̲j̲umla*) or by circumstantial expression (*ẓarf*).

The qualification may be applicable to the thing qualified (*manʿūt, mawṣūf*) or to anything which has a connection with it (*min sababihi*). It agrees (*wāfaḳa*) with what is qualified in number (sing., dual or pl.), in determination (definite or indefinite) and gender (m. or f.).

The personal pronoun (*muḍmar*) can neither be qualified nor qualify; a proper noun (*ʿalam*) cannot qualify but can be qualified; the demonstrative pronoun (*mubham*) can only be qualified by a noun determined by the article.

From the aspect of desinential inflexion (*iʿrāb*), the qualifying *naʿt* is one of the five nouns dependent (*tawābiʿ*) on other nouns for their inflexion. It must normally accompany what is qualified, but, in certain cases where it is understood, it can replace what is qualified.

Bibliography: G. Troupeau, *Lexique-index du Kitāb de Sībawayhi*, Paris 1976, 203, 215; Zamak̲h̲s̲h̲arī, *Mufaṣṣal*, ed. Beirut, 114-20; Ibn Yaʿīs̲h̲, *S̲h̲arḥ*, ed. Cairo, iii, 46-63. (G. Troupeau)

NAṬANZ, a small town of western Persia (lat. 33° 29' N., long. 51° 57' E., altitude 1,372 m/4,500 feet) on the lower, southeastern slopes of the Kūh-i Kargas mountains and just off the modern Tehran—Ḳum—Kās̲h̲ān—Yazd road.

The early Islamic geographers do not mention it, but Yāḳūt, *Muʿd̲j̲am*, v, 292, describes it as a small town, administratively dependent on Iṣfahān and in the province of D̲j̲ibāl [*q.v.*], and situated 20 *farsak̲h̲s* to the north of Iṣfahān; and Mustawfī (8th/14th century) describes it as protected by the nearby fortress of Was̲h̲āḳ. This may be the fortress of Naṭanz mentioned by Ibn al-At̲h̲īr, ed. Beirut, ix, 495-6, year 433/1041-2, as the focus of disputes between the Kākūyid ruler of Iṣfahān Abū Manṣūr Farāmarz and his rivals for power after the death of his father ʿAlāʾ al-Dawla Muḥammad b. Dus̲h̲manziyār [see kākūyids]. The town is thus in fact an old one, possessing remains of a Sāsānid fire-temple and important mediaeval Islamic buildings, including a Friday mosque of the Būyid period and the tomb of S̲h̲ayk̲h̲ ʿAbd al-Ṣamad al-Iṣfahānī from 707/1307-8. Al-Samʿānī, *K. al-Ansāb*, ed. Ḥaydarābād, xiii, 136-8, mentions a famous *adīb* in both Arabic and Persian, Abū ʿAbd Allāh Ḥusayn b. Ibrāhīm al-Naṭanzī, *d.* 497/1103. The modern town is situated in the *s̲h̲ahrastān* or district of Kās̲h̲ān, and is the chef-lieu of a *bak̲h̲s̲h̲* or sub-district of the same name; the town and its village dependencies had a population of *ca.* 12,000 in 1960.

(C.E. Bosworth)

NATĪD̲J̲A (a.), the usual name for the conclusion resulting from the combination of the two premisses (*muḳaddimāt*) in the syllogism (*ḳiyās*). It corresponds to the Stoic ἐπιφορά; this word in the works of Galen known to the Arabs is applied to the various discharges from the body but also means, as with the Stoics, the conclusion. Aristotle used the words συμπέρασμα: that which concludes or completes the syllogism.

In place of the usual *natīd̲j̲a* we also find *ridf* or *radf* (= deduction). (Tj. de Boer)

NĀṬIḲ [see sabʿiyya].

al-**NĀṬIḲ** bi 'l-**ḤAḲḲ**, the honorific given by the ʿAbbāsid caliph al-Amīn [*q.v.*] to his son Mūsā in 194/809, when he designated him as heir presumptive in place of al-Maʾmūn [*q.v.*], whereas their father Hārūn al-Ras̲h̲īd had specified that the inheritance of the caliphate should pass to al-Maʾmūn and had taken the precaution of sending a circular letter on this subject to all the provinces and of attaching to the *kisāʾ* of the Kaʿba a copy of this, for the tearing-down of which al-Faḍl b. al-Rabīʿ [*q.v.*] sent a *ḥād̲j̲ib*. It was in effect this vizier of al-Amīn's who led the caliph into taking this measure which was to unleash a fratricidal war between Hārūn's two sons. Mūsā was the son of an *umm walad* [*q.v.*] called Naẓm, who was al-Amīn's favourite, and if he had ascended the throne, he would have been the first caliph not to be of ʿAbbāsid blood on both paternal and maternal sides. At the time of his nomination, his very tender years drew criticisms from hostile poets, like a certain ʿAlī b. Abī Ṭālib (*sic*) who was a partisan of al-Maʾmūn's (see al-Masʿūdī, *Murūd̲j̲*, vi, 438-9 = § 2645, but cf. al-Ṭabarī, iii, 804).

Bibliography: The historians of the ʿAbbāsid period speak of al-Amīn's measure (*sub anno* 194). See especially, Ṭabarī, iii, 795-6; Ibn al-Ṭiḳṭaḳā, *Fak̲h̲rī*, ed. Derenbourg, 292-3, Eng. tr. Whitting, 211-12; D̲j̲ahs̲h̲iyārī, *Wuzarāʾ*, 290, 292; Masʿūdī, *Murūd̲j̲* index; Ibn Ḳutayba, *Maʿārif*, 384; Ibn Tag̲h̲rībirdī, *Nud̲j̲ūm*, ii, 145; Maḳdisī, *Badʾ*, vi, 105. See also the *Bibls.* to the arts. al-amīn and al-maʾmūn. (Ch. Pellat)

NATION [see umma].

NATIONALISATION [see TAʾMĪM].
NATIONALISM [see ḲAWMIYYA].
NATIVITY [see MAWLID, MĪLĀD].
NAṬRŪN, in Arabic mineralogy and pharmacology considered to be one of the at least six kinds of *bawraḳ* [*q.v.*]. It is the νίτρον/*nitrum* of the ancients, but indicates not our saltpetre but a compound of sodium carbonate ($NaCO_3$) and sodium bicarbonate ($NaHCO_3$) with several impurities. In reverse *bawraḳ*, because of the vagueness of the term (see Dietlinde Goltz, *Studien zur Geschichte der Mineralnamen in Pharmazie, Chemie und Medizin von den Anfängen bis Paracelsus*, Wiesbaden 1972, 248-50), is considered as a kind of *naṭrūn* (Maimonides, *Sharḥ asmāʾ al-ʿuḳḳār*, ed. M. Meyerhof, Cairo 1940, no. 51). *Naṭrūn* was obtained partly from natural crystallisations occurring in sodium-containing lakes, and partly artificially, like in Egypt where Nile water was directed to sodium beds (*nitrariae*), cf. Pliny, *Nat. Hist.* xxxi, 109: *Et hoc quidem nascitur, in Aegypto autem conficitur, multo abundantius...fit paene eodem modo quo sal, nisi quod salinis mare infundunt, Nilum autem nitrariis.* The production of sodium is very old: Old Egyptian *nṯry(t)*, Akkadian *nit(i)ru*, Hebrew *neter*, Aramaic *nitrā*, Greek νίτρον. Sodium was used for mummification, for ritual purification, for fumigation, for the production of faience (as a binding agent), and also in medicine (see *Lexikon der Ägyptologie*, iv, 1982, 358 f., and, for Islamic times, BAWRAḲ in Suppl.).

Sodium was of primary importance for Egyptian trade. The richest mineral area was Wādī Naṭrūn. According to Ibn Faḍl Allāh al-ʿUmarī, no other lake as small as Birkat al-Naṭrūn—only 1,000 *faddāns* in extent—produced so much money, sc. 100,000 *dīnārs*. Aḥmad b. al-Mudabbir, the dreaded financial administrator under the Ṭūlūnids, had reintroduced Ptolemaic Roman taxes in the form of state monopolies, which included the exploitation of sodium. This situation lasted till the Mamlūk period, when the *nāẓir al-khāṣṣ* had to survey the sultan's monopolies. In 833/1429 Sultan Barsbāy [*q.v.*] forced the merchants to buy (*ṭarḥ*) great quantities of sodium for increased prices. For the lucrative sodium trade, see S.Y. Labib, *Handelsgeschichte Ägyptens in Spätmittelalter (1171-1517)*, Wiesbaden 1965, 165, 247, 315, 406.

In modern Morocco, the term *naṭrūn* (var. *litrūn*, *liṭrūn*) indicates a mixture of gypsum and rock salt, see Helga Venzlaff, *Der marokkanische Drogenhändler und seine Ware*, Wiesbaden 1977, 108 f.

Bibliography: Given in the text. See also the Bibl. to BAWRAḲ. (A. DIETRICH)

NAṬṬĀḤA [see IBN AL-KHAṢĪB].
NATURE [see DHĀT, ḲAWN, KHALḲ, ṬABĪʿA].
NAUPLION (Class. Gk. Nauplīa, A. Anaboli, vern. Gk. Anāpli[on], Lat. Anapoli Romaniae, Ital. Napoli di Romania, Tk. Anabolu-Inebolu), a coastal town and capital of Argolis *nomos* (= diocese), in northeastern Morea [see MORA] or Peloponnesos, 13 km southeast of Argos (A. Argho, Tk. Arhos). A handy refuge for mariners, it is situated at the head of the Argolic Gulf, sitting on the northern slope of twin crags, the western Akronauplīa (Hellenistic/Roman/Byzantine/Frankish), i.e. Tkish. Ič Ḳalʿe, forming a small peninsula in the bay, and the much higher Venetian Palamēdi(on), dominating the post from the southeast (1981 pop.: 10,611).

1. The Byzantine and Frankish periods (to 1389)

Nauplion emerges in the 6th-7th centuries as one of the few Moreote settlements to sustain the Avar-Slavonic raids, and its history throughout the Byzantine period, as part of the Peloponnesos "theme", is more or less linked with that of Argos until the Latin conquest of 1210-12 and the Ottoman seizure of Argos in 1463 (see below; cf. Lamprynides, 17-38); an important Venetian *quartiere* (11th-12th centuries), it was entrusted by the Byzantine Angelus dynasty (late 12th century) to the local archontic family of Sgurus, and Leo Sgurus held it against the Frankish onslaught following the Fourth Crusade until *ca.* 1208; Sgurus' widow bequeathed it to the Epirot ruler, who was, however, forced to cede it to the Achaia ruler, Villehardouin (1210-12) (refs. in Savvides, in *Byz. and Mod. Greek Studs.*, xii [1988], 289 ff.; M. Kordoses, *Conquest of Southern Greece*, 79 ff., 92 ff., 111 ff., 123 ff.) In the early 10th century, raids off Nauplion by the Cretan amirate [see IḲRĪṬISH] are recorded, while in 1032 the town's Byzantine strategus defeated a fleet of African Muslims [see IFRĪḲIYA] in the Adriatic (cf. *JOAS*, ii, 52 f.); in the mid-12th century al-Idrīsī [*q.v.*] lists "Argho" and "Anaboli" among the 13 chief Moreote cities and praises their countryside (*Nuzhat al-mushtāḳ*, Fr. tr. Jaubert, ii, 125; *JOAS*, ii, 54). After 1212 Villehardouin divided the town into the western *Castello di Greci* and the eastern *C. di Franchi*, and soon ceded it to the de la Roche family, who, together with the Fourcherolles, de Brienne and d'Enghien houses, dominated its history in the Frankish era (1212-1389: Lamprynides, 39-53; Pitcher, map VIII), facing imminent Italian corsair attacks (late 13th century) and warding off Catalan and Turcoman raids (14th century) (cf. Vakalopoulos, i², 127; Setton, *Papacy*, i, 428, 447-8); the Turkish attacks actually continued in the Ottoman period (mid-15th to the 1st half of the 16th centuries: Sathas, *Turkish-dominated Greece*, 39 ff.; Vakalopoulos, iii, 122-3; Krantonelle, *Hist. of piracy*, 54, 56 ff. and *passim*). In 1388-9 the d'Enghien family ceded the town to Venice, but the latter was able to establish its control only in 1394, after a brief capture by the Florentine Acciaiuolis and the despot of Mystras [see MEZISTRE in Suppl.] (cf. Zakythenos, *Despotat*, 132-3; Miller-Lampros, ii, 12-13; Cessi, in *NAV*, xxx, 152; Setton, *Catalan domination*, 190 ff.; idem, in *Hist. Crusades*, iii, 1975, 246-7, 252; Luttrell, in *PBSR*, xxxiv, 42 ff., 47 ff.; Pitcher, 65; Schreiner, *Kleinchroniken*, ii, 337 f.; E. Zachariadou, *Trade and Crusade*, Venice 1983, 98-9; *JOAS*, ii, 60).

2. The Venetian and Turkish periods (1389-1822)

The long first Venetian rule (1389-1540: Lamprynides, 54-92; Pitcher, maps XIII, XIV, XVI; Panagiotopoulos, *Populations*, 21 ff. and maps) is the best known, with extensive commercial activity, profitable treaties with the Menteshe Oghullarī [*q.v.*] (in 1403 and 1407: Zachariadou, 102, 231, 237) and the Ottomans (in 1419 and 1479; cf. Setton, *Papacy*, ii, 8, 514), a population growing, no doubt associated with extensive Albanian settlements since the late 14th century (cf. Zakythenos, i, 343 [add. C. Maltezou]; Vakalopoulos, i², 32; iii, 37, 51, 89; Ploumides, *Venetian-dominated lands*, 41) and also with large numbers of refugees following the fall of Morea (1460-1) and Eghriboz [*q.v.*] (1470) (Vakalopoulos, ii², 75 f.). The 1529-30 census records *ca.* 13,300 inhabitants. Important reconstructions (Akronauplīa) and fortifications (*Castello di Toro* [*ca.* 1400]; coastal walls [1501-5]; "Five Brothers" gunnery in the northwestern section) took place (cf. Bon, *Moree*, 491 ff., 676 f.); in 1471 the architect Gambello built the *Castello* (*Scoglio*) *di Santo Teodoro* or *C. Pasqualino* (after the *proveditore*'s name), renamed Boūrtzi by the Turks after the little island in the Argolic bay. Nauplion

withstood four major Ottoman attacks by Yaᶜḳūb Beg in 1396-7, in 1426-7, by Maḥmūd Pasha in 1463—in the course of which Argos was conquered (cf. Saᶜdeddin, *Tacüt-tevarih*, i, 504; Uzunçarşılı, ii, 1988[5], 26 ff.; Vakalopoulos, iii, 19; Panagiotopoulos, 108 f.)—and between 1500-2, when it was valiantly defended by Greeks, Italians and Albanian *stradioti* (on the Turkish raids, see Schreiner, ii, 360-1, 433-4, 507, 532 ff., 541; *JOAS*, ii, 61, 65; Sathas, 11 ff., 61, 63 f.; Cogo, in *NAV*, xviii, 366, 390 ff.; Miller-Lampros, ii, 235; Pitcher, maps X, XVI; Vakalopoulos, iii, 76, 78; Setton, *Papacy*, ii, 248-9, 516, 521 ff.; Uzunçarşılı, ii[2], 218-19). With the 1503 treaty, it remained in Venetian hands and refortifications were carried out in the harbour of the lower town. In 1537 the Morea *sandjaḳ beg*, Ḳāsîm Pasha, began a three-year siege of the town, which ended with the surrender of the *proveditore* Contarini on 21 November 1540, to be soon followed by the surrender of Monemvasia [see MENEKSHE] (cf. Von Hammer, *Histoire*, v, 283 ff., 316 f.; Miller-Lampros, ii, 252 ff.; Zinkeisen, ii, 803; Sathas, 119 ff., 125 f.; Amantos, *Relations*, 168; Schreiner, ii, 580-1; Vakalopoulos, iii, 30 map, 152-3, 159 ff.; Pitcher, 115; Runciman, *Mistra*, 118 ff.). Several Naupliote scholars fled to the Ionian islands and the West (P. Petres, in *Peloponnesiaka*, iii-iv [1958-9], 371-2; Vakalopoulos, iii, 162, 183; Panagiotopoulos, 110 f.).

The first Ottoman rule (1540-1686: Lamprynides, 93-109) witnessed a comparative tranquillity and the conqueror's tolerance, ecclesiastical privileges and a noteworthy artistic and cultural prosperity (cf. T. Gritsopoulos, in *Pelopon.*, xvii [1987-8], 95 ff., 113 ff.; idem, in *Acts 2nd Argolic Congr.* [1989], 263; Vakalopoulos, ii[2], 264-5). Commercial activity continued and the population grew to *ca.* 40,000, including some Jews (Vakalopoulos, ii[2], 396; iv, 45-6), while a modest programme of Muslim religious building (e.g. Süleymān *khān* or Fetḥiyye *djāmiᶜ* on Akronauplīa) was effected, according to Ewliyā Čelebi [*q.v.*], who visited Argos and Nauplion in mid-1668 and left an important account of the town's fortifications, many inhabitants, mosques and about 200 Muslim households (cf. Th. Kostakes, in *Pelopon.*, xiv [1980-81], 239, 279-83, with mod. Gk. trans.-comm.). Until the 1574 Morea reorganisation into two *sandjaḳs* (Balyabadra/Patras and Mezistre/Mystras), Nauplion was seat of the *sandjaḳ-beg*. In 1686 Morosini, in the course of his Moreote campaign, heavily bombarded the town, forcing its governor, Muṣṭafā Pasha, to capitulate on 20-1 August (Sathas, 347 ff.; Vakalopoulos, iv, 19 ff.; Uzunçarşılı, iii/1, 1983[3], 479 f.; cf. Von Hammer, xii, 224 f.).

The second Venetian rule (1686-1715: Lamprynides, 110-56) commenced with five *proveditori*, soon replaced by Morosini (1692), whose sudden death (December 1694: Sathas, 400-1; Vakalopoulos, iv, 32-3, 37) was followed by new struggles with the sultanate, temporarily patched up by the Carlowitz Treaty (1699) [see ḲARLOFČA], which allowed Venice to refortify the town with extensive fortifications of the imposing Palamēdi (Tk. Planota) rock (1711-14), renovations of Akronauplīa and Bourtzi (Bon, *Moree*, 493, pls. 132-3) and constructions of the *Porta di Sagredo*, massive barracks, churches and fountains to replenish St. Mark's fleets (between 1701-13). "*Napoli di Romania*" (as opposed to "*Napoli di Malvasia*", i.e. Monemvasia) became the capital of *Provincia di Romania* (including Corinth, Argos, Tripolitsa, Tzaconia, Porto Porro and Thermesi) and seat of the *proveditore generale di Regno di Morea* (Sathas, 364-5; Vakalopoulos, iv, 52-3; Panagiotopoulos, 161, 163, 164 ff., 176: records 2,551 families; *ibid.*, 132-3, 148-9, 184, 187-8, 199, 291, 313, with details on the towns and villages of the *territorio di Napoli di Romania* and on the population according to the censuses of 1700 [9,685, i.e. diminished on account of the 1687 and 1690 plague] and 1711 [6,548].). Commerce continued to thrive, and famous visitors like the *proveditore generale* Corner (1690), Coronelli (1687) and B. Randolf (1689) lavishly praise Nauplion as the fairest and the most populous city of the Orient, with its safe port and celebrated fortifications; the Venetian era closes with the 1714-15 land-and-sea siege by massive forces led by the *wezīr* ᶜAlī Pasha, the *serᶜasker* Dāwūd Pasha and a 50-strong fleet under Djānîm Khodja; the *proveditore* Delphino had only 1,747 defenders and the treacherous Palamedi *castellano*, De la Salle, who betrayed the fortress to the Turks, was immediately murdered by the enraged Naupliotes; the capitulation (9 July 1715) was followed by extensive slaughter and looting (Sathas, 443 ff.; Vakalopoulos, iv, 77-8; Runciman, 127-8).

The second Turkish rule (1715-1822: Lamprynides, 157-95), ratified by the Passarowitz Treaty of 1715 (cf. Uzunçarşılı, iv/1, 1982[3], 104 f., 107, and PASAROFČA), was harsher, with no privileges, extensive confiscations by the newly settled aghas, church persecutions (cf. Gritsopoulos, *Pelopon.*, xvii, 118 ff.) and a dwindling commercial activity of the locals (Sakellariou, *Peloponnesos*, 118 f.). The sultan himself [see AḤMAD III] visited the town (Sathas, 446 f.), where more Muslim buildings were erected (e.g. Vouleutērion *djāmiᶜ*, 2 *menteshes* and several baths and fountains: cf. Uzunçarşılı, iii/2, 1983[2], 305). Until 1770, with the transferral of the Morea Pasha's seat to Tripolitsa, Nauplion was capital of the Mora *wilāyet* (Sakellariou, 99-100, 255 ff.); its participation in the 1770 uprising (Gritsopoulos, *Orloffika*, *passim*; Uzunçarşılı, iv/1, 397-8), caused the massive extermination of the local Albanians by the *ḳapudan-pasha* Ḥasan, who in 1779 pushed them from Palamēdi into perdition (Sathas, 527-8; Uzunçarşılı, iv/1, 434-5). Henceforward the locality was called "Arvanitiā". The decreased population, intensified by the 1790 plague (Leake, *Travels*, ii, 359), is recorded by Pouqueville (7,000 in 1799 and 11,780 in 1816), who also gives details on the town's trade and products (cheese, cotton, silk, wool, hides), fortifications, buildings and Christian-Muslim population (*Voyage en Morée*, i, 233, 356, 501; iv, 342 ff.; v, 215, 233; vi, 263 ff.; cf. Sakellariou, 216 ff., 266, 270, 284).

In the early stages of the Greek War for Liberation, the Greeks, assisted by the clergy, repeatedly besieged Nauplion between April 1821 and late 1822 (Lamprynides, 196-243; Vakalopoulos, v, 734 ff.; vi, 207-8, 263 ff., 273 ff.); temporary succour by Maḥmūd Pasha in mid-1822 prolonged the surrender of ᶜAlī Pasha of Nauplion to the Greek Klepht chief Koloktrōnes until 30 November, following the fall of Palamēdi to Staikopoulos. Liberated Nauplion was to become the first capital of the modern Kingdom of Greece from 8 January 1823 until the transferral to Athens by the decree of 18 September 1834.

Bibliography: Mostly given in the article; for older references and titles of modern works, see MORA, NAVARINO and MEZISTRE in Suppl. On the pre-1389 period, see A. Savvides, *Nauplion in the Byzantine and Frankish periods* [forthcoming]; the most detailed monograph is M. Lamprynides, *Nauplia from antiquity to modern times* [in Greek], Nauplia 1975[3] (till the late 19th century). Other contributions: G. Cogo, *La guerra di Venezia contro i Turchi*, in

Nuovo Archivio Veneto [= *NAV*], xviii (1899), 5-76, 348-421; xix (1900), 97-138; R. Cessi, *Venezia e l'acquisto di Nauplia et Argo*, in *NAV*, xxx (1915), 147-73; A. Luttrell, *The Latins of Argos and Nauplia*, in *Papers, British School at Rome* [= *PBSR*], xxxiv (1966), 34-55. On the fortifications, see above and K. Andrews, *Castles of the Morea*, Princeton 1953, 90-105; A. Paradisses, *Fortresses and castles in Greece*, ii, Athens-Thessalonica 1974, 146-52; and [in Greek]: J. Sphekopoulos, *Medieval castles of the Morea*, Athens 1968, 97-100; D. Antonakatou, *Nauplion* (1971), *passim*; S. Karouzou, *Nauplion* (1979), *passim*; see also refs. in Uzunçarşılı, *Osmanlı tarihi*, i-iv, and Vakalopoulos, *Hist. of modern Hellenism*, i-vi. Stud.* [= *JOAS*], ii (1990), 49, 52-3, 54, 60, 61-2, 65; *Medieval Peloponnesian bibliography... 396-1460*, Athens 1990, 14, 17, 21 ff., 24-5, 26, 30 ff., 33, 39-40, 42, 44 ff., 47 ff., 50, 53-4, 56-7; E. Stassinopoulos, *Argolic bibliography*, in *Acts 2nd Argolic Congr.* (Athens 1989), 377 ff. The etymology of Nauplion is summarised by D. Vagiakakos [in Gk.], in *Istoria Eikonographemēne*, fasc. xxcvii (1975), 142-3. (A. Savvides)

NĀʿŪRA (a.), more rarely Naʿūra, pl. *nawāʿīr*, a word designating current-driven, water-raising wheels, Eng. and Fr. noria. The term has no obvious derivation from Arabic, and is probably of Aramaic origin (see Fraenkel, *Die aramäischen Fremdwörter*, 134; also Dozy, *Supplement*, ii, 689-90).

The nomenclature for water-raising machines is very variable, and often the only way of knowing which machine is being referred to is from the context; for example, if a machine is driven by running water it is almost certain to be a noria. To avoid confusion, the Syrian usage will be followed, in which the *nāʿūra* is always the current-driven wheel and the *sāḳiya* [*q.v.*] is the geared machine driven by an animal [see mā'. 3. Hydraulic machines].

The noria can be constructed of timber or metal. In East Asia, bamboo is used, not only for the framework, but also for the containers for raising the water. In the Middle Ages, the construction of most norias in the Islamic world probably followed the pattern of the well-known wheels at Ḥamāt on the Orontes. The only metal member is the axle. The timber framework, wedged to the axle, and the inner rim are first constructed, care being taken to ensure that the wheel turns in a single vertical plane. Finally, the outer rim for the compartments is mounted, or norias may have earthenware pots, similar to those of the *sāḳiya*, lashed to the rim. Paddles are fitted to the rim between the compartments or pots. The noria is erected in bearings fixed in two columns in the stream. The paddles dip into the water and rotate the noria; the containers fill at the bottom of the travel and discharge at the top. The Ḥamāt wheels discharge into an aqueduct that carries the water to the town and the fields, the diameter of the wheels being about 20 metres. A similar system with one huge noria of 90 cubits—say 50 m—in diameter is described by al-Idrīsī, *Maghrib*, 187 (Arabic), 228 (French).

The first known description of a noria occurs in Vitruvius, *De Architectura*, Book 10, Ch. 5. It is brief but unambiguous. In classical and Hellenistic times information about norias is very scanty, but in Islamic writings there are abundant references. The first mention we have is in al-Balādhurī, *Futūḥ*, 363, describing how Bilāl b. Abī Burda al-Ashʿarī erected norias on the banks of a canal in the Baṣra area. As Abū Burda [see al-ashʿarī, abu burda] died in 103/721-2 or 104/722-3 aged over eighty, the event probably took place about 20 years earlier. Al-Muḳaddasī mentions large numbers of norias (which he calls *dawlāb*) at Ahwāz (411) and on the river Kūr in Fārs (444). There is no doubt that they were in widespread use in Islam. T.F. Glick has plotted the locations of norias in the Iberian peninsula, see his *Irrigation and society in medieval Valencia*, Cambridge, Mass. 1970, 178-9. It spread into other parts of Europe and eventually to the New World (G.M. Foster, *Culture and conquest*, Chicago 1960, 63, 69 n. 9). Even today the noria is found to be effective in many parts of the world, given the right hydraulic conditions. The well-known noria at Murcia, for example, was still in use in 1990.

Bibliography (in addition to works cited in the article): E. Wiedemann and F. Hauser, *Über Vorrichtungen zum Heben von Wasser in der islamischen Welt*, in *Jahrbuch des Vereins Deutscher Ingenieure*, viii (1918), 121-54; G.S. Colin, *La noria marocaine et les machines hydrauliques dans le monde arabe*, in *Hespéris*, xiv (1932), 22-60; idem, *L'origine des norias de Fès*, *ibid.*, xvi (1933), 156-7; T. Schiøler, *Roman and Islamic water-lifting wheels*, Odense 1973, deals mainly with the *sāḳiya*, but norias are discussed on 37-9; D.R. Hill, *A history of engineering in Classical and Medieval times*, London 1984, 127-54. (D.R. Hill)

NAVARINO (a. Irūda, t. Anavarin), a seaport of the southwestern Morea [see mora] or Peloponnesos, in Messenia, associated with modern Pylos town, which was built between 1828 and 1832 (population in 1971, 2,258), and situated behind the southern headland of Navarino Bay, a deepwater channel, as capital of Pylia *eparchia* (= province) of Messenia *nomos* (= diocese). Locally called Neokastron ("new fortress") after the 16th century Turkish fortifications, it should not be confused with the 13th century Frankish Palaiokastron ("old fortress"), known to the Franks as Port-de-Jonc, still commanding the northern channel to the harbour and lying deserted to the southwest of Homeric Pylos, on Koryphasion promontory.

Sheltered by Sphakteria island, Navarino harbour was considered amongst the safest of the Morea ports in post-mediaeval Italian portulans, and is closely connected with various important mediaeval and modern events. The etymology of the name is uncertain: it may be a survival of Avar rule in the Morea in the early Dark Ages; it has been identified with the Navarrese, although these did not appear in the Morea till the 14th century, and the name Navarino existed before then; most probably, its origin may be (Bulgaro-) Slavonic. In Byzantine times, there is a single mention of Pylos in connection with raids of the Cretan Arabs [see iḳrīṭish] on the western Morea *ca.* 872-3; this area was included in the late 9th century in the Peloponnesos "theme" (refs. in A. Savvides, *On Pylos-[N]avarino-Zonklon in the Byzantine period*, in *Byzantina*, xvi [1992]).

The earliest mention of the Greek form Avarīnos appears in a 12th century ecclesiastical *Notitia* ("*Pylos, nunc vocatur Abarinus*"), in a Palaiologan imperial chrysobull of 1293 and in the Greek version of the *Morea chronicle* (see below), whilst the earliest mention of the Arabic name is in the *Nuzhat al-mushtāḳ* of al-Idrīsī [*q.v.*], tr. Jaubert, ii, 124, where the town of Irūda is referred to as "a commodious port" (see R.-J. Lilie, *Handel und Politik 1081-1204*, Amsterdam 1984, 203; Savvides, in *JOAS*, ii [1990], 53).

1. The pre-Ottoman period to 1500. Information on Navarino increases after the 1204-5 Frankish

conquest of southern Greece. In the 13th and 14th centuries, the Frankish fortress of Palaiokastro or Port-de-Jonc became the seat of various Latin estates, which were often affected by Latin fratricidal strife, especially in the Veneto-Genoese naval clash of 1354 which ended in the Republic's defeat. Around this time, Albanian settlers established themselves in the area, whilst in 1381-2 a company of Navarrese, Gascons and Italians appeared. In 1417 the Venetians seized the harbour and the Frankish fortress and in 1423 became lawful owners by purchase from a Genoese baron; eventually, in 1479, Navarino was acknowledged by the Ottoman Turks as Venetian, and it then developed into an economic and commercial centre. It had suffered from Turkish raids since 1423, and in summer 1460 Meḥemmed II [*q.v.*] had laid waste the countryside around Navarino, so that by later that year only Navarino and such other Venetian possessions as Modon, Koron, Nauplia [*q.vv.*], Argos, Monemvasia [see MENEKSHE] and Maina had remained in Christian hands.

2. The Ottoman conquest: the Turkish and Venetian periods (1500-1828). The annexation in A.M. 7008-9 (= A.D. 1500-1) by Bāyezīd II [*q.v.*], shortly after the fall of Modon and Koron, has been recorded in, among other places, thirteen Greek short chronicles (here called Avarīnos, Anavarīnos, Novarīno) and in Kātib Čelebi's [see ḤĀDJDJĪ KHALĪFA] *Tuḥfat al-kibār* (tr. J. Mitchell, *History of the maritime wars of the Turks*, London 1831, 21 ff.). In August 1500 the Venetian castellano Contarini surrendered, although his garrison numbered 3,000 and he had provisions for three years, but soon afterwards the Venetians recaptured it and destroyed a Janissary garrison. It fell definitively to the Turkish commander ʿAlī Pasha advancing by land and Kemāl Reʾīs attacking by sea on 20 May 1501 (see V.J. Parry, in *The new Camb. mod. hist.*, i, 403-4; Pitcher, 87 and map XIV; Uzunçarşılı, ii, 219 and refs.; cf. Savvides, in *JOAS*, i [1989], 212). This cession was confirmed by the 1503 treaty, and henceforth Navarino became a base for piratical operations in the Ionian and Adriatic Seas, being often a concentration point for the Turkish fleet. In 1571-2, shortly after the Lepanto disaster [see AYNABAKHTĪ], a rebuilt Turkish armada under Ulūdj ʿAlī Pasha defeated off Navarino a Christian fleet under Don John of Austria. Kātib Čelebi mentions that the town's original name was Anavarin(o) (von Hammer, *Rumeli und Bosna geographisch Beschrieben von ... Hadschi Chalfa*, Vienna 1812, 122-3; Pitcher, map XXVI), whilst Ewliyā Čelebi states that Navarino's revenues were reserved for the sultan (*Seyāḥat-nāme*, viii, Istanbul 1928, 309-10; Th. Kostakes, *Evliyā Čelebi in Peloponnesos* [in Greek], in *Pelopon.*, xiv [1980-1], 262-3; Pitcher, *loc. cit.*). In 1572-3, according to Ulūdj's plans, there was erected the Neokastro (Anavarin ḳalʿesi) to distinguish it from the old Frankish structure or Palaiokastro (S. Gerlach, *Tagebuch*, Frankfurt 1674, 244; Vakalopoulos, iii, 261; Baltas, 46 ff., 128, 140 ff.).

From 1500-1 till 1828, Navarino and its bay remained in Turkish hands except for two Venetian periods of rule (1644-8, 1686-1715) and one of Greek rule (1821-5). In the early stages of the Veneto-Turkish war of 1645, the Ottomans used Navarino as a base against Crete (Kretschmayr, iii, 315), while in late 1685-mid-1686 Francesco Morosini, aided by the Swedish Count Von Königsmark, stormed Koron and captured both Neo- and Palaio-Navarino, defended by Muṣṭafā Pasha and Djaʿfer Pasha, together with Modon, Kalamata, Zarnata, Passava, Celefe and Vitylo (von Hammer-Purgstall, *Histoire*, xii, 222-3; C. Sathas, *Turkish-dominated Greece 1453-1821* [in Greek], repr. Athens 1990, 343-4, 346-7; Kretschmayr, iii, 345-6; Vakalopoulos, iv, 19-20, 33 map; Hasiotes, in *IEE*, xi, 22-3). About that time Coronelli published in Venice (1685; and in French, Paris 1687) his *Memorie istoriografiche* and Randolf his *Present state of the Morea* (London 1689³, repr. Athens 1966), both containing important details on Navarino, which was made seat of St. Mark's, Messenian possessions until 1715 (Kretschmayr, iii, 354; Vakalopoulos, iv, 52, 77, 79; Hasiotes, xi, 43; Topping no. IX, 313, 316, 325). Population estimates of that period give 1,413 (1689 Corner census) and 1,797 inhabitants (*ca.* 1700 Grimani and *ca.* 1711 Querini-Stampalia census) (cf. Sakellariou, *Peloponnesos*, 57,118 ff., 285; Panagiotopoulos, 138-9, 144-5, 225 ff., 231 ff., with charts and index: s.v.). The second *Tourkokratia* commences in 1715 with the creation of the *Anavarin wilāyeti* (= province; sometimes referred to as a *ḳaḍāʾ* = judicial and administrative district), within the Morea *sandjak* (Pouqueville, *Voyages en Morée*, i, 233; iv, 342 ff.; vi, 73; Sakellariou, 95 ff.; 107, 255 ff.). The area's social and economic life is described by Pouqueville and Leake (refs. in Sakellariou, s.v.), while from the late 18th century the French also played an important rôle in the town's development (Pouqueville, vi, 264; Sakellariou, 128; Vakalopoulos, iv, 155, 273; for the post-1828 period, cf. D. Themelē-Katephōre, *French interests in Greece* [in Greek], Athens 1985, 62, 65, 157). During the First Russo-Turkish War (1768-74), Navarino was temporarily taken. After a six-day stubborn defence by the Ottoman garrison and the Muslim civilian population (Pouqueville, vi, 72, lists 600 Turks and 130 Greeks), the Russians on 10 April 1770 forced the fortress (Neokastro), no longer strongly fortified but still amply provided with munitions and artillery, to capitulate (see P. Kontogiannes, *The Greeks during the First Russo-Turkish War of Catherine II* [in Greek], repr. Athens 1989, 136 ff., 183 ff.; Sakellariou, 177 ff.; 182 ff.; Vakalopoulos, iv, 389 map, 391 ff.). By the terms of the treaty, the Turks left for Chania (Crete) leaving behind them a number of Christian women, whom they had imprisoned in their harems. The Russians immediately refortified the fortress, making it their principal base for their Moreote operations, but soon they were forced to evacuate it: on 1 June 1770 Aleksei Orlov sailed away with the Russian ships and on the next day the Turks occupied the well-placed fortress, which was in part burnt and destroyed (Sakellariou, 190 ff.; Simopoulos, *Foreign travellers*, ii, 1985², 368, 593, 679-80; details on the 1770 Greek uprising and its consequences in T. Gritsopoulos, *Ta Orloffika*, Athens 1967).

In the last decades of Ottoman rule, the Turkish family of Bekir Agha of Navarino played a prominent part. Soon after the outbreak of the Liberation War, the Greeks laid siege to Navarino on 29 March 1821, where the Turks of Arkadia (Kyparissia) had also taken refuge. Between 1-7 August the Turks surrendered and the Greeks, despite all agreements, massacred them mercilessly (Striebeck, *Tagebuch*, 35 ff., 92 ff.; Lieber, *Tagebuch*, 20-1; cf. Vakalopoulos, v, 350, 780, 785; vi, 49 ff.; 106 ff.; *The information of the German philhellene Striebeck on certain historical facts in Neokastron in 1821-2* [in Greek], in *Pelopon.*, xvi, 57 ff.; *The Greek troops of 1821* [in Greek], repr. Thessalonica 1991, 22-3, 44, 160; see also J. Philemon, *Essay on the Greek Revolution* [in Greek], Athens 1859-61, esp. i, 112; iii, 61, 114-15). In the spring of 1825, however, Ibrāhīm Pasha [*q.v.*] of

Egypt invested the area; in spite of a heroic Greek defence, Palaiokastro and Neokastro were occupied on 29 April and 11 May respectively (Vakalopoulos, vi, 695, 762, 900; vii, 96, 110; *Greek troops*, 193). What has given Navarino its special place in history is the naval battle fought on 20 October 1827 in its harbour, the "last great battle of the age of sail" (R. Clogg, *A short hist. of modern Greece*, Cambridge 1986², 65), between the combined fleets of England, France and Russia under the British vice-admiral Sir Edward Codrington and of Turkey, Egypt and Tunisia under Ṭāhir Pa<u>sh</u>a. The Muslim forces were destroyed, with three-quarters of their vessels sunk and about 6,000 Turks killed compared with only about 1,000 among the European allies (details in C. Woodhouse, *The battle of Navarino*, London 1965 and updated Greek tr., Athens 1977; *Modern Greece: a short history*, London 1977, 147 ff.; cf. Vakalopoulos, vii, 830 ff.). Ibrāhīm was cut off on the Moreote mainland from his supplies and was soon forced to conclude a truce with Codrington, though Neokastro remained in Turkish hands until the spring of 1828; finally, in the autumn of 1828, Ibrāhīm withdrew to Egypt and the French troops under General Maison relieved the Egyptian-Turkish garrison. In *ca.* 1832 A. Reumont (*Reiseschilderungen und Umrisse*, 83 ff.) gives an important description of Navarino under French occupation, especially on the building activities resulting in the foundation of modern Pylos (Vakalopoulos, viii, 260); new road connections with Methone were constructed in 1830 (Themelē-Katephōre, 168). Following the *Tourkokratia*, Navarino-Pylos was elevated to an important administrative unit within the newly-founded Kingdom of Greece (see beginning of the article and Stadtmüller, 156 map.; S. Loukatos, *Politeiographika of Koron, Modon and Neokastro in 1830* [in Greek], in *Pelopon.*, xv [1984], 209 ff.; E. Frangaki-M. Wagstaff, *Settlement pattern changes in the Morea/Peloponnesos c.A.D. 1700-1830*, in *Byz. and Mod. Greek Stud.*, xi [1987], 177 map, 178 table).

(N. BÉES-[A. SAVVIDES])

NAVARRA (Eng. and Fr.: Navarre), a province of northern Spain, whose capital, Pampeluna, abandoned its allegiance to the Muslims in 182/798 and made itself into a semi-independent kingdom. Its history, at the time of Muslim domination, becomes intermingled with that of Pampeluna [see BANBALŪNA] and with that of the majority of its inhabitants, the Basques or Vascons [see BA<u>SH</u>KUNI<u>SH</u>]. (ED.)

LAS NAVAS DE TOLOSA [see AL-ʿIḲĀB].

NAWʾ [see ANWĀʾ].

NAW BAHĀR, a pre-Islamic sacred site and monastery at Bal<u>kh</u> [*q.v.*] in what is now northern Af<u>gh</u>ānistān, destroyed by the Arab invaders, but famed in early Islamic history as the place of origin of the Barmakī family of officials and viziers in early ʿAbbāsid times, the eponym Barmak having been the head or abbot (*pramu<u>kh</u>a*) of Naw Bahār. See on the shrine, almost certainly a Buddhist one, AL-BARĀMIKA. 1. Origins; to the *Bibl.* there should be added Le Strange, *Lands*, 421-2; Barthold, *An historical geography of Iran*, Princeton 1984, 14-15; R.W. Bulliet, *Naw Bahār and the survival of Iranian Buddhism*, in *Iran, JBIPS*, XIV (1976), 140-5, emphasising the existence of several other Naw Bahārs in the northeastern Iranian region. (ED.)

AL-**NAWĀ<u>DJ</u>Ī**, <u>SH</u>AMS AL-DĪN MUḤAMMAD B. ḤASAN B. ʿALĪ B. ʿU<u>TH</u>MĀN AL-ḲĀHIRĪ, an Arab scholar, poet and man of letters, born in Cairo in 788/1386 and died there in 859/1455, a typical representative of the literature of the post-classical period.

Of his many teachers we may mention the authority on *ḳirāʾāt* al-<u>D</u>jazarī (751-832/1350-1429; cf. Brockelmann, II², 257-8, no. 6) and al-Damīrī [*q.v.*]; he mentions the latter in the preface to his stylistics (Paris ms., de Slane, no. 4453); among his literary friends were Ibn Ḥi<u>djdj</u>a al-Ḥamawī [*q.v.*] against

whom he later directed his polemic *al-Ḥudjdja fī sariḳāt Ibn Ḥidjdja* (Leiden ms., no. 509). His official position was teacher of *ḥadīth* in several of the *madrasas* of Cairo; he was closely connected with Ṣūfī circles. In addition to several journeys in Egypt, he twice made the *ḥadjdj*. As was the custom with scholars of the time, he wrote a number of commentaries and glosses on well-known textbooks and several works on rhetoric and poetics. As a poet he made his way by panegyrics on high officials and many Maecenases richly rewarded him. In obedience to the taste of his patrons, he compiled anthologies of poems on subjects which were particularly popular with the upper classes of his time; as usual, some of these are on the borders of belles-lettres and erotica. The majority of these anthologies still exist only in manuscript (see Brockelmann, *loc. cit.*); the best known and perhaps the most important from the point of view of scholarship is *Ḥalbat al-kumayt*, whose title refers to the poets who vie with one another in descriptions of wine (see his own explanation of the name, ed. Būlāḳ 1276, 7, 17-19). It was finished at the end of Shawwāl 824/end of October 1421 (339 ult.) and first called *al-Ḥubūr wa 'l-surūr fī waṣf al-khumūr*. Cf. *Ḳuṭb al-surūr fī awṣāf al-khumūr* by Ibn al-Raḳīḳ al-Ḳayrawānī (d. 417/1026) (Brockelmann, I², 161, S I, 252), a work often cited by al-Nawādjī, 6, 143, 163). Neither this change of name nor the last section, which is devoted to the regret and shame caused by wine, prevented the author from being vigorously attacked (see al-Sakhāwī, in Ḥādjdjī Khalīfā, iii, 106-7, no. 4607); many regarded his book not only as frivolous but even as sinful. Al-Nawādjī continued the long series of anthologies on wine which from the 3rd/9th century onwards occupy a special place in Arabic literature. Ibn al-Muʿtazz's [*q.v.*] work *Tabāshīr al-surūr* (see *Bull. USSR Acad. of Sciences* [1927], 1163-70) was perhaps the earliest and was also used by al-Nawādjī (*ibid.*, 1169, n. 6). Of his predecessors (in addition to the two mentioned), he quotes not only purely literary but also scientific works: Kushādjim (d. *ca.* 350/951 [*q.v.*]), *Adab al-nadīm*; al-Tanūkhī (d. 384/994 [*q.v.*]), *Nishwār al-muḥāḍara*; ʿAlāʾ al-Dīn b. Ẓāfir al-ʿAsḳalānī (5th-6th/11th-12th centuries), *Badāʾiʿ al-badāʾih*; al-Tīfāshī (d. 651/1253), *Surūr al-nafs bi-madārik al-ḥawāss al-khams*; Ibn Saʿīd al-Andalusī (d. *ca.* 685/1286), *al-Murḳiṣ wa 'l-muṭrib*; Ibn Waṭwāṭ (d. 718/1318), *al-Mabāhidj*; Ibn Nubāta al-Miṣrī (d.768/1306), *Sarḥ al-ʿuyūn*; Ibn Abī Ḥadjala (d. 776/1375 [*q.v.*]), *al-Sukkardān*; al-Ghuzūlī (d. 815/1412), *Maṭāliʿ al-budūr*; Ḥasan b. Zufar al-Irbilī, *Rawḍat al-djalīs wa-nuzhat al-anīs*; Muḥammad al-ʿAnbarī, *al-Nawr al-mudjtanā min riyāḍ al-udabāʾ*; Ibn Bukhtīshūʿ, *al-Khawāṣṣ*; ʿAlī b. Ḥazm al-Ḳurashī (d. 687/1288), *Mūdjiz al-ḳānūn fī 'l-ṭibb*; al-Damīrī [*q.v.*], *Ḥayāt al-ḥayawān*.

He also dealt with contemporary poetry and belles-lettres. His encyclopaedia of wine contains 25 chapters and a concluding one, not always systematically arranged and often only loosely connected (e.g. the chapter devoted to the Nile or long poems of the *zadjal* type). With a critical sifting of his sources, the anthology may produce much not only of purely literary value but also of interest for the history of culture. In spite of vigorous attacks on it, the *Ḥalbat al-kumayt* has always been very popular (cf. V. Chauvin, *Bibliographie des ouvrages arabes*, ix, Liege 1905, 59-60, no. 70) and has exercised considerable influence. Even as late as the 18th century the ʿIrāḳī scholar Amīn b. Khayr Allāh al-ʿUmarī (1737-89; see al-Ziriklī, *al-Aʿlām*, i, Cairo 1927, col. 129) continued his tradition in the anthology *Nawādir al-minaḥ fī aḳsām al-malāḥa wa 'l-mulaḥ* (see Dāwūd al-Čelebī, *Kitāb Makhṭūṭāt al-Mawṣil*, Baghdād 1927, 50-2, no. 65). In Europe also, al-Nawādjī early attracted attention: in the 17th century d'Herbelot (1625-95) devoted an article to him in the *Bibliothèque orientale* (Maastricht 1776, 657). In the 18th century, Sir William Jones (1746-94) wrote of his book "Est hic liber Athenaei Δειπνοσοφισταῖς simillimus, sed mea quidem sententia jucundior, ornatior, copiosior" (*Poeseos asiaticae commentariorum libri sex*, Leipzig 1777, 355). In the first half of the 19th century we often come across extracts and translations from his anthology (see Chauvin, *op. cit.*); in recent literary investigations, it has now been thrust into the background by earlier works in Arabic literature.

Bibliography: The principal sources (including mss.) are given by Brockelmann, II², 69-70, and J.E. Sarkis, *Dictionnaire encyclopédique de bibliographie arabe*, Cairo 1930, col. 1872; of special importance is al-Nawādjī's younger contemporary al-Sakhāwī's (1427-97; see Brockelmann, II², 43-4) *al-Ḍawʾ al-lāmiʿ*; extracts from this work are given in Ḥādjdjī Khalīfa, ed. Flügel, iii, 106-7, no. 4607 and ʿAlī Mubārak, *al-Khiṭaṭ al-Tawfīḳiyya*, xiii, Cairo 1306, 13-14. See also Ibn Iyās, Cairo 1311, ii, 36, 49-50; Ḥādjdjī Khalīfa, ii, 176, iii, 17, 106, 511, iv, 62, 341, 503, v, 487, vii, 1218; Ziriklī, *al-Aʿlām*, iii, Cairo 1928, 885. (I. KRATSCHKOWSKY)

NAWĀR [see ČINGĀNE, LŪLĪ, ZUṬṬ].

AL-**NAWĀWĪ**, MUḤAMMAD B. ʿUMAR B. ʿARABĪ AL-DJĀWĪ, an Arabic writer of Malay origin, born in Tanāra (Banten), the son of a village judge (*pangalu*), after concluding his studies made the pilgrimage to Mecca and settled there permanently in about 1855, after making a short visit to his native land. After he had studied further and completed his education with the teachers of the holy city, he set up as a teacher himself and gained great influence over his fellow countrymen and their kinsmen. From 1870 he devoted half his time to authorship. He was still alive in 1888.

He wrote a large number of commentaries on popular textbooks, which are listed by Brockelmann, II², 651-2, S II, 813-14, in addition to Snouck Hurgronje, *Mekka*, ii, 362 ff. Of these, the following may be mentioned, with some information additional to what is contained in these two works.

He expounded the Ḳurʾān in his *al-Tafsīr al-munīr li-maʿālim al-tanzīl al-musfir ʿan wudjūh maḥāsin al-taʾwīl*, Cairo 1305. In the field of *fiḳh*, he annotated the *Fatḥ al-karīb* of Muḥammad b. al-Ḳāsim al-Ghazzī (d. 918/1512), a commentary on Abū Shudjāʿ al-Iṣfahānī's *al-Taḳrīb*, entitled *al-Tawshīḥ*, Cairo 1305, 1310, and again entitled *Ḳūt al-ḥabīb*, Cairo 1301, 1305, 1310. — He wrote a commentary on al-Ghazālī's *Bidāyat al-hidāya* under the title *Marāḳī 'l-ʿubūdiyya*, Būlāḳ 1293, 1309, Cairo 1298, 1304, 1307, 1308, 1319, 1327. — On the *Manāḳib al-ḥadjdj* of Muḥammad b. Muḥammad al-Shirbīnī al-Khaṭīb (d. 977/1569), he wrote *al-Fatḥ al-mudjīb*, Būlāḳ 1276, 1292, Cairo 1297, 1298, 1306; Mecca 1316. — On the *Safīnat al-ṣalāḥ* of ʿAbd Allāh b. Yaḥyā al-Ḥaḍramī he wrote the *Sullam al-munādjāt*, Būlāḳ 1297, Cairo 1301, 1307. — He wrote a commentary on the 601 questions of Aḥmad b. Muḥammad al-Zāhid (d. 819/1416), put into verse by his fellow-countryman Muṣṭafā b. ʿUthmān al-Djāwī al-Ḳārūṭī as *al-Fatḥ al-mubīn* on *ṣalāt*, alms, fasting and pilgrimage under the title *al-ʿIḳd al-thamīn*, Cairo 1300; the *Safīnat al-nadjāʾ* of Sālim b. Samīr of Shiḥr in Ḥaḍramawt, completed in Batavia, was expounded under the title *Kāshifat al-sadjāʾ*, Cairo 1292, 1301, 1302, 1303, 1305, Būlāḳ

1309. — On the exposition of the *uṣūl al-dīn* by his colleague Muḥammad b. Sulaymān Ḥasab Allāh entitled *al-Riyāḍ al-badīʿa*, he wrote the commentary *al-Thimār al-yāniʿa*, Cairo 1299, 1308, 1329, Būlāḳ 1302.

In the field of dogmatics, he annotated al-Sanūsī's *Umm al-barāhīn* (d. 892/1496), entitled *Dharīʿat al-yaḳīn*, Cairo 1304; the *ʿAḳīdat al-ʿawāmm* of Aḥmad al-Marzūḳī (*ca.* 1281/1864) entitled *Nūr al-ẓalām*, Cairo 1303, 1329; al-Bādjūrī's *Risāla fī ʿilm al-tawḥīd* entitled *Tīdjān al-darārī*, Cairo 1301, 1309, Mecca 1329; the *Masāʾil* of Abu 'l-Layth entitled *Ḳaṭr al-ghayth*, Cairo 1302, 1303, Mecca 1311; the anonymous *Fatḥ al-Raḥmān* entitled *Ḥilyat al-ṣibyān* in a *Madjmūʿa*, Mecca 1304; and the *al-Durr al-farīd* of his teacher Aḥmad al-Naḥrāwī entitled *Fatḥ al-madjīd*, Cairo 1298.

In the field of mysticism, he wrote a commentary on the *Manẓūma hidāyat al-adhkiyāʾ ilā ṭarīḳ al-awliyāʾ* of Zayn al-Dīn al-Malībarī (d. 928/1522) entitled *Salālim al-fuḍalāʾ*, Cairo 1301, Mecca 1315; and on his *Manẓūma fī shuʿab al-īmān*, he wrote the *Ḳāmiʿ al-ṭughyān*, Cairo 1296. On the *al-Manhadj al-atamm fī tabwīb al-ḥukm* of ʿAlī b. Ḥusām al-Dīn al-Hindī (d. 975/1567) he wrote *Miṣbāḥ al-ẓulm*, Mecca 1314. — His commentaries on stories of the life of the Prophet may be classed as edifying popular literature; such he wrote on the *mawlid al-Nabī* under the title *al-ʿArūs*, Cairo 1926, which is ascribed by some to Ibn al-Djawzī, by others to Aḥmad b. al-Ḳāsim al-Ḥarīrī, entitled *Fatḥ al-ṣamad al-ʿālim ʿalā mawlid al-Shaykh Aḥmad b. Ḳāsim wa-yusammā al-Bulūgh al-fawzī li-bayān alfāẓ mawlid Ibn al-Djawzī*, Būlāḳ 1292, entitled *Bughyat al-ʿawāmm fī sharḥ mawlid Sayyid al-Anām li-Ibn al-Djawzī*, Cairo 1927, and *Fatḥ al-ṣamad al-ʿālim ʿalā mawlid al-Shaykh Aḥmad b. Ḳāsim*, Mecca 1306, as well as on the *Mawlid* of Djaʿfar al-Barzandjī (d. 1179/1765) entitled *Targhīb al-mushtāḳīn*, Būlāḳ 1292, and again under the title *Madāridj al-ṣuʿūd*, Būlāḳ 1296, and on his *al-Khaṣāʾiṣ al-nabawiyya* entitled *al-Durar al-bahiyya*, Būlāḳ 1299. He made an excerpt from al-Ḳasṭallānī's (d. 923/1517) *Mawlid* entitled *al-Ibrīz al-dānī fī mawlid Sayyidnā Muḥammad al-Sayyid al-ʿAdnānī*, Cairo 1299.

In the field of grammar, he wrote a commentary on the *Ādjurrūmiyya* entitled *Kashf al-murūṭiyya ʿan sitār al-Ādjurrūmiyya*, Cairo 1308, and on a versification *Fatḥ ghāfir al-khaṭiyya ʿala 'l-kawākib al-djaliyya fī naẓm al-Adjurrūmiyya*, Būlāḳ 1298; and on ʿAbd al-Munʿim ʿIwaḍ al-Djirdjāwī's (*ca.* 1271/1854) *al-Rawḍa al-bahiyya fi 'l-abwāb al-taṣrīfiyya* entitled *al-Fusūṣ al-yāḳūtiyya*, Cairo 1299. In the field of rhetoric, he completed in 1293/1876 a commentary on the *Risālat al-Istiʿārāt* of Ḥusayn al-Nawāwī al-Mālikī entitled *Lubāb al-bayān*, Cairo 1301.

Bibliography: Given in the article.

(C. BROCKELMANN)

AL-**NAWAWĪ** (or AL-NAWĀWĪ), MUḤYĪ AL-DĪN ABŪ ZAKARIYYĀʾ YAḤYĀ B. SHARAF B. MURĪ [following Nawawī's own spelling, Suyūṭī, fol. 53b] B. ḤASAN B. ḤUSAYN B. MUḤAMMAD B. DJUMʿA B. ḤIZĀM AL-ḤIZĀMĪ AL-DIMASHḲĪ, a Shāfiʿī jurist, born in Muḥarram 631/October 1233 in Nawā south of Damascus in Djawlān. The ability of the boy very early attracted attention and his father brought him in 649/1251 to the Madrasa al-Rawāḥiyya in Damascus. There he first of all studied medicine but very soon went over to Islamic learning. In 651/1253 he made the pilgrimage with his father. About 655/1257 he began to write and was called in 665/1267 to the al-Ashrafiyya *dār al-ḥadīth* in Damascus in succession to Abū Shāma who had just died. Although his health had suffered severely during his life as a student, he lived very frugally and even declined a salary. His reputation as a scholar and a man soon became so great that he even dared to approach the Mamlūk sultan Baybars [*q.v.*] to ask him to free the people of Syria from the war taxes imposed upon them and to protect the teachers in the *madrasas* from a reduction in their income. This was in vain, however, and Baybars expelled al-Nawawī from Damascus when he alone refused to sign a *fatwā* approving the legality of these exactions. (This action of al-Nawawī's is commemorated in the popular romance *Sīrat al-Ẓāhir Baybars*, Cairo 1326, xli, 38 ff. in which the sultan, cursed by al-Nawawī, becomes blind for a time.) He died unmarried in his father's house in Nawā on Wednesday, 24 Radjab 676/22 Dec. 1277. His tomb is still held in honour there.

Al-Nawawī has retained his high reputation to the present day. He had an exceptional knowledge of Tradition and adopted even stricter standards than later Islam; for example, he admits only five works on Tradition as canonical, while he expressly puts the *Sunan* of Ibn Mādja on a level with the *Musnad* of Aḥmad b. Ḥanbal (cf. *Sharḥ Muslim*, i, 5; *Adhkār*, 3). In spite of his fondness for Muslim, he gives a higher place to al-Bukhārī (*Tahdhīb*, 550). He wrote the principal commentary on Muslim's *Ṣaḥīḥ* (Cairo 1283); as an introduction to this, he wrote a history of the transmission of this work and a sketch of the science of Tradition. He gives not only observations on the *isnāds* and a grammatical explanation of the traditions, but he also comments on them, mainly from the theological and legal aspect, quoting when necessary not only the founders of the principal schools but also the older jurists like al-Awzāʿī, ʿAṭāʾ, etc. He also inserted headings (*tardjama*) in Muslim's work. We may also mention his frequently annotated *Kitāb al-Arbaʿīn* (Būlāḳ 1294 and often since) and portions of commentaries on al-Bukhārī and Abū Dāwūd (Ibn al-ʿAṭṭār, fol. 10b); and an extract from Ibn al-Ṣalāḥ, *ʿUlūm al-ḥadīth*, with the title *al-Taḳrīb wa 'l-tafsīr*, partly tr. Marçais, in *JA*, ser. 9, xvi-xviii, and printed at Cairo 1307, with a commentary by al-Suyūṭī, *Tadrīb al-rāwī*.

Al-Nawawī's importance as a jurist is perhaps even greater. In Shāfiʿī circles he was regarded, with his *Minhādj al-ṭālibīn* (finished 669/1270-1; Cairo 1297 and frequent later eds.; ed. van den Berg with French tr., Batavia 1882-4; cf. thereon Snouck Hurgronje, *Verspr. Geschr.*, vi, 3-18), as the highest authority along with al-Rāfiʿī, and since the 10th/16th century the two commentaries on this work, Ibn Ḥadjar's *Tuḥfa* and al-Ramlī's *Nihāya*, have been regarded almost as the law books par excellence of the Shāfiʿī school. The book consists of excerpts from the *Muḥarrar* of Rāfiʿī and, as the author himself says, is intended to be a kind of commentary on it. It certainly owes the estimation in which it is held also to the fact that it goes back via al-Rāfiʿī and al-Ghazālī to the Imām al-Ḥaramayn. We should also mention the *Rawḍa fī mukhtaṣar sharḥ al-Rāfiʿī* (on al-Ghazālī's *Wadjīz*) finished in 669/1270-1, on which commentaries have often been written, the commentaries on Shīrāzī's *al-Muhadhdhab* and *al-Tanbīh* (Brockelmann, I^2, 485) and al-Ghazālī's *al-Wasīṭ*, which do not seem to have survived, and a collection of *fatwās* put together by his pupil Ibn al-ʿAṭṭār (Cairo 1352).

His biographical and grammatical studies resulted in the *Tahdhīb al-asmāʾ wa 'l-lughāt* (Part 1 on the names, Wüstenfeld, Göttingen 1842-7; Part 2 only in ms. in Leiden; included by Ibn al-ʿAṭṭār among the unfinished works and there are certainly gaps in it) and *al-Taḥrīr fī alfāẓ al-tanbīh* completed in 671/1272-3. To his mystical tendencies —he had attended lectures

on the *Risāla* of al-Ḳushayrī and transmitted it— we owe works like the *Kitāb al-Adhkār* on the prayers, finished in 667/1268-9 (Cairo 1331 and frequent later eds.), the *Riyāḍ al-ṣāliḥīn* (finished in 670/1271-2; Mecca 1302, 1312, Eng. tr. Muhammad Zafrulla Khan, London 1975) and the incomplete *Bustān al-ʿārifīn fi 'l-zuhd wa 'l-taṣawwuf*. For his complete works, see Brockelmann, I², 496-501, S I, 680-6.

Bibliography: Ibn al-ʿAṭṭār (d. 724/1324), *Tuḥfat al-ṭālibīn fī tardjamat Shaykhinā al-Imām al-Nawawī* (with many *marthiyas*), ms. Tübingen, no. 18; Sakhāwī (d. 902/1496-7), *Tardjamat Ḳuṭb al-Awliyāʾ ... al-Nawawī*, ms. Berlin, Wetzstein, ii, 1742, fols. 140-207 (Ahlwardt, no. 10125); Suyūṭī, *al-Minhādj fī tardjamat al-Nawawī*, ms. Berlin Wetzstein II, 1807, fols. 53a-68a (Ahlwardt, no. 10126); Subkī, *Ṭabaḳāt al-shāfiʿiyya al-kubrā*, Cairo 1324, v, 1658; Dhahabī, *Tadhkirat al-ḥuffāẓ*, Ḥaydarābād n.d., iv, 259-64; Yāfiʿī, *Mirʾāt al-djanān*, Ḥaydarābād 1339, iv, 182-6; the other sources are printed in Wüstenfeld, *Über das Leben und die Schriften des Scheich Abu Zakarija Jahja el-Nawawi*, Göttingen 1849; Snouck Hurgronje, *Verspr. Geschriften*, ii, 387-8. (W. HEFFENING)

NAWBA (A.), in the art-music of the Islamic Middle East and North Africa, a complex form made up of a number of individual pieces arranged in a standard sequence. (For the use of *nawba* in relation to the military and ceremonial ensemble, see NAḲḲĀRA-KHĀNA and MEHTER.)

The term *nawba* appears already in the *Kitāb al-Aghānī* of Abū 'l-Faradj al-Iṣbahānī (284-356/897-967 [*q.v.*]), but in its non-technical meaning of "turn". It refers either to the practice, established at the latest by the beginning of the 2nd/8th century, of having a given musician perform regularly at court on a particular day of the week, or to several musicians taking turns to sing during a single *madjlis*. However, for all their references to features of etiquette, missing from the many accounts in the *Kitāb al-Aghānī* of musical *madjālis* at the ʿAbbāsid court is any indication of the existence of a large-scale conventional sequence of songs, let alone of any complex cyclical form. The choice of which song to sing next was governed by various and sometimes unpredictable factors, and the patron would often demand to have a particularly pleasing item repeated several times (see Sawa, *Music performance practice*, 115-16, 166-70).

The notion of a preferred or most effective order of events is, however, attested by the end of the 4th/10th century. The singer is advised in the *Kamāl Adab al-ghināʾ* of al-Ḥasan al-Kātib (late 4th/10th or early 5th/11th century) and in the *Ḥāwī 'l-funūn* of Ibn al-Ṭaḥḥān (d. after 449/1057) to begin with slow and serious songs and to conclude with faster and more frivolous ones: such a plan, it is urged, will accord with the changing mood (and increasing inebriation) of the audience. Given this broad framework, it might be expected that more specifically musical considerations would lead to the development of particular conventional groupings either of individual songs or of types of song (involving some pattern of unity or contrast relating to modal, rhythmic or formal parameters). But these two works, despite their concern with the practicalities of music making, fail to indicate the existence of any such compound structure, and the term *nawba* does not occur in them. It does, however, appear shortly after, in the phrase *nawbat-i muṭribī*, in the *Ḳābūs-nāma* (475/1082-3) of Kay Kāʾūs [*q.v.*], where we encounter the first tentative association with formal organisation, even if it is clear from the context that we are still dealing with nothing more precise than the general trajectory or changing character of the various pieces that make up a complete performance, moving again from slow to fast, from stylistically complex to simple.

A similar overall design, but rather more explicit in its articulation, is to be found in Spain. Al-Maḳḳarī (986-1041/1578-1632) quotes Ibn Ḥayyān (377-469/987-8-1076 [*q.v.*]) to the effect that the conventional order was to begin with *nashīd* [*q.v.*], followed by *basīṭ*, both of these being slow, and conclude with the faster *muḥarrakāt* and *ahzādj*. The particular pairing of *nashīd* and *basīṭ* is mentioned already (*Aghānī*³, v, 427) in relation to Isḥāḳ al-Mawṣilī (150-235/767-850 [*q.v.*]) and the sequence as a whole is closely related to the format discussed by al-Ḥasan al-Kātib. For him *nashīd* and *basīṭ* constitute successive stages within a single piece, but one occurring at the beginning of a performance, while *hazadj* is specified as one of the lighter, quicker rhythms that are saved till the end.

If this suggests that there were still similar concepts of large-scale (but loosely structured) organisation in both East and West in the 5th/11th century, the testimony of al-Tīfāshī (580-651/1184-1253) shows that two centuries later there were two well-established but distinct complex forms, both called *nawba*. That in the West began again with a *nashīd*, but followed now by *ṣawt*, *muwashshaḥ* and *zadjal*. The first two seem to have been differentiated by a technical feature, the inclusion in the first and omission from the second of an initial section called *istihlāl*; the last two relate to strophic verse/song forms.

The Eastern *nawba*, in contrast, consisted for al-Tīfāshī of five pieces: *ḳawl*, *ghazal*, *tarāna*, *zamāna* and *ḳawl (-i) dīgar*. There is, however, no mention of it in the treatises of Ṣafī al-Dīn al-Urmawī (d. 693/1294), and given that he does refer to other forms it may not yet have become as important as the prominence accorded it by later theorists would suggest. Nor, indeed, is it singled out for emphasis in the next work to cite it, the so-called *Sharḥ Mawlānā Mubārak Shāh bar adwār* (777/1375) (which lists, incidentally, only three movements: *ḳawl*, *ghazal* and *tarāna*), so that it is not until the beginning of the 9th/15th century, in the treatises of ʿAbd al-Ḳādir al-Marāghī (d. 839/1435), that it comes to the fore. (In an interesting autobiographical anecdote, he relates how he won a wager to compose one whole *nawba* each day for a month.) The cyclical implication in al-Tīfāshī's account of the final return to the initial song type suggests that the slow to fast trajectory had either been abandoned or had never been relevant to the Eastern *nawba*, and confirmation of this is given in ʿAbd al-Ḳādir al-Marāghī's description of what seems to have been its normative form during the 8th/14th and early 9th/15th centuries. All of the now canonic four movements (*ḳawl*, *ghazal*, *tarāna* and *firūdāsht*) are unified not only by identity of melodic mode but also by being restricted to a small number of rhythmic cycles. What distinguishes them is not, therefore, a progressive change of character, nor particular features of formal structure, but rather the language and type of the verse: the *ḳawl* set Arabic verse, the *ghazal* Persian, the *tarāna* a *rubāʿī*, the *firūdāsht* again Arabic verse. The Eastern *nawba* (or, in full, *nawba murattaba/nawbat-i murattab*) cannot, therefore, be seen as a crystallisation of an earlier large-scale format, but is rather just one (even if the only compound) form among many, and in a larger performance context it was probably assigned to the initial, slower block of pieces.

Some idea of the later history of the *nawba* can be gleaned from song-text collections of the late 9th/15th and 10th/16th centuries. It is clear, for example, that

the theorists' specification of a *rubāʿī* for the *tarāna* had been abandoned in practice: normally just one line (and usually, indeed, the same line) was set. They also show that ʿAbd al-Ḳādir al-Marāghī's attempt to add a fifth movement (*mustazād*) which would repeat material from the previous four had not proved successful: no other composer tried to emulate him. But of far greater significance is the fact that they reveal how the *nawba* itself, despite the high prestige it had earlier enjoyed, was rapidly falling out of favour. Already by the end of the 9th/15th century few were recorded entire, and by the middle of the 10th/16th it had virtually ceased to exist: we find a bare handful of examples, a few *ḳawl* plus *ghazal* pairs, and a scattering of individual movements.

Its disappearance from the repertoire at this time inevitably calls into question the supposition of continuity and subsequent transformation. There is no evidence to sustain the notion that more recent large-scale cyclical forms such as the Ottoman *faṣīl* or even the Central Asian *shashmaḳom* [*q.v.*] gradually evolved out of the *nawba*. The earliest description of the *faṣīl*, that of Demetrius Cantemir, dates from *ca.* 1110/1700, although it is no doubt the case that it had been in existence for some time. But the crucial argument against a derivation of *faṣīl* from *nawba* is that the two have virtually nothing in common apart from the primary fact of being conventional assemblages of individual pieces considered to form a complex whole. Whereas the *nawba* consisted of four specific and highly uniform vocal compositions by a single composer, the *faṣīl* in its classical form can be defined as a variable selection of pieces, usually by different composers, fitting into a series of prescribed slots organised in such a way as to emphasise, within the overall unity of mode, contrast and variety. It thus alternates between instrumental and vocal, unmeasured and measured, and juxtaposes vocal pieces using contrasting rhythmic cycles.

In the Maghrib, on the other hand, the term *nawba* is still current and there must, therefore, be a reasonable possibility of continuity from the Western form as specified by al-Tīfāshī down to the present. Unfortunately, this must remain supposition: the word may surface in 12th/18th century sources such as *al-Ḥāʾik*, but there is no documentary evidence to chart any of the stages of what must have been a complex evolution leading to the present form, which has many more components than its 7th/13th century antecedent and retains none of its formal terminology. In current Moroccan practice, for example, the *nawba* consists broadly of a number of introductory pieces largely serving the purpose of modal exposition (an instrumental prelude, *mīshāliyya*, followed by the choral *inshād ṭabʿ al-naghma* and a briefer instrumental *bughya*), and then an instrumental prelude, *tūshiya*, leading to five core groups of vocal pieces (*ṣanʿa*) selected from a wide repertoire of more than 1,000 songs in, successively, the rhythmic cycles *basīṭ*, *ḳāʾim wa-niṣf*, *baṭāʾiḥī*, *daradj* and *ḳuddām*. Within each of these groups the tempo gradually accelerates, so that we may detect here an echo or even, possibly, a direct survival of the ancient concept of transition from slow to fast. The essentially choral nature of the performance of these songs may be varied by the insertion of solo display pieces (*baytayn* or *mawwāl*) which allow the individual vocalist's virtuosity to come to the fore. Many of the singers are at the same time instrumentalists: the ensemble consists of the bowed *rabāb* (considered the leader) and a varying number of performers on violin (braced vertically against the thigh), *ʿūd*, and percussion instruments. Considerable regional variations occur across the Maghrib with regard to the nature and size of the ensemble, the repertoire, and its technical terminology (for details on these, see Guettat, *La musique classique du Maghreb*, which also contains a discography).

(O. Wright)

NAWBAKHT, a Persian patronymic (*naw* or *nay* + *bakht* "new fortune"), was borne in Baghdād during the first two ʿAbbāsid centuries by a family remarkable for its influence on the advancement of learning and on the political legitimism of the Imāmī Shīʿa.

It claimed descent (see al-Buḥturī, *Dīwān*, ed. Beirut, 115) from the Persian hero Gīw son of Gūdarz celebrated in the *Shāh-nāma* (cf. Justi, *Iranisches Namenbuch*, 399, and Christensen, *Kayanides*, 59, 117). Its first known representative Nawbakht, an astrologer, owed his fortune to the future caliph al-Manṣūr, to whom in prison he is said to have foretold his accession to the throne and later the victory over the Zaydī rebel Ibrāhīm b. ʿAbd Allāh [*q.v.*]; in the same year (144/762) in which he drew up the horoscope of Baghdād, the new capital, he was granted fiefs in it. His son Abū Sahl Tīmādh (on this curious praenomen, cf. Ibn Abī Uṣaybiʿa, ed. A. Müller, Leipzig 1884, iii, p. xli, and H. Ritter, postlude to his edition of Ḥasan al-Nawbakhtī's *Firaḳ*, 9) (d. 170/786) had seven sons by his wife Zarrīn, the founders of the various branches of the Āl Nawbakht, in which we find theologians like Ibrāhīm b. Isḥāḳ b. Abī Sahl (wrote about 350/961 the *Kitāb al-Yāḳūt*, on which a commentary by al-ʿAllāma al-Ḥillī has been found by A. Iḳbāl; an earlier commentary had been written by Ibn Abi 'l-Ḥadīd, according to his *Sharḥ al-Nahdj*, iv, 575; and the *Kitāb al-Ibtihādj*), Abū Sahl Ismāʿīl [see AL-NAWBAKHTĪ], Ḥusayn b. Rūḥ, third *wakīl* of the Imāmīs [see IBN RŪḤ], and Ḥasan b. Mūsā [see AL-

NAWBAKHTĪ]; astronomers like al-Faḍl b. Abī Sahl (Ibn al-Nadīm, *Fihrist*, 275, who has been confused with al-Maʾmūn's minister) and Mūsā b. Ḥasan Ibn Kibriyā; secretaries of state; and finally, enlightened students of poetry to whom the editors of the *dīwāns* of Abū Nuwās, Ibn al-Rūmī and al-Buḥturī went to establish the texts.

At the beginning of the 4th/10th century, the Nawbakhtīs seem to have been closely linked, like another Shīʿī family of the time, the Banū Bisṭām, with the policies of the caliphal vizier Ibn al-Furāt [*q.v.*] (see Sourdel, *Le vizirat ʿabbāside*, ii, 514 and AL-NAWBAKHTĪ).

Bibliography: ʿAbbās Iḳbāl, *Khāndān-i Nawbakhtī*, Tehran 1933, with a genealogical tree, and useful indices, among others that of the Shīʿī sects, 249-67; H. Ritter, in his edition of the *Firaḳ* of Ḥasan al-Nawbakhtī [*q.v.*]; see also Ibn Khaldūn, *Muḳaddima* and *ʿIbar*, indices.

(L. MASSIGNON)

AL-**NAWBAKHTĪ**, AL-ḤASAN B. MŪSĀ, Abū Muḥammad, scholar and theologian, and proponent of Imāmī Shīʿism, member of the renowned Nawbakht family [*q.v.*] (d. between 300 and 310/912-22). His ancestor, Abū Sahl b. Nawbakht, a famous astronomer, converted to Islam, and participated with al-Manṣūr in the constructing of Baghdad. On the family Nawbakht, see also ʿAbbās Iḳbāl (Eghbal), *Khāndān-i Nawbakhtī*.

Al-Ḥasan b. Mūsā was a nephew of Abū Sahl Ismāʿīl b. ʿAlī al-Nawbakhtī, a prominent Imāmī theologian (d. 311/923; see Brockelmann, S I, 319; Iḳbāl, 96-124). These two members of the Banū Nawbakht were the founders of the first school which fused Muʿtazilī theology with Imāmī teachings. They professed Muʿtazilī tenets on divine attributes and justice, denial of the beatific vision of God (on which both of them wrote works), and rejection of the view that God creates human acts. But they opposed the Muʿtazilī doctrine of the Imāmate, espousing the impeccability and infallibility of the Imāms, although (along with the Muʿtazilīs) denying their miracles (Iḳbāl, 128; Madelung, *Imāmism and Muʿtazilite theology*, 14-16).

Ibn al-Nadīm (*Fihrist*, 177, tr. Dodge, 441), who calls al-Nawbakhtī "a theologian and philosopher", places him in the company of a group of translators of philosophical books—Abū ʿUthman al-Dimashḳī, Isḥāḳ (b. Ḥunayn), Thābit (b. Ḳurra), and others. Ibn Abī Uṣaybiʿa tells (*ʿUyūn al-anbāʾ*, i, 216) of an encounter between al-Nawbakhtī and Thābit b. Ḳurra at the time when the former was a young man.

Al-Nawbakhtī wrote on theology, philosophy and sects, and composed polemical works. Forty-four titles are mentioned in bio-bibliographical sources; see Ritter (ed.), *Firaḳ al-Shīʿa*, Introd., 17-20; Iḳbāl, 129-35. He also copied many works.

His most important book, the *K. al-Ārāʾ wa 'l-diyānāt*, is known mainly from citations by Ibn al-Djawzī in his *Talbīs Iblīs*; and also from al-Masʿūdī, *Murūdj al-dhahab*, and Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*; Ritter, Introd., 22-6; Iḳbāl, 136-40. (Brockelmann, S I, 319, mistakenly says that *K. al-Ārāʾ wa 'l-diyānāt* was edited by Ritter). The extant fragments discuss the Sophists (Sceptics); Dualists; Greek philosophers (Socrates); views of Stoic philosophers; Indian religions (Barāhima); Ṣābians and Madjūs; astronomers and astrologers; views of Djahm b. Ṣafwān, doctrine of Hishām b. al-Ḥakam on anthropomorphism; and views of Muḳātil b. Sulaymān, Naʿīm (Nuʿaym) b. Ḥammād, and Dāwūd al-Djawāribī.

The *K. al-Ārāʾ wa 'l-diyānāt*, as Madelung has shown (*Abū ʿĪsā al-Warrāq*), made use of Abū ʿĪsā al-Warrāḳ's (d. 247/861) *K. Ikhtiṣāṣ madhāhib al-ithnayn* and/or *K. al-Maḳālāt* for knowledge of dualistic religions, the Manichaeans, Marcionites and the Bardesanians. Al-Nawbakhtī's reports on these topics were used in turn by ʿAbd al Djabbār, al-Shahrastānī and Ibn al-Murtaḍā.

Al-Nawbakhtī's polemical works include a refutation of extremist Shīʿīs (*al-Radd ʿalā 'l-ghulāt*); see Ritter, 27; Iḳbāl, 135-6; a refutation of Abū ʿAlī al-Djubbāʾī's refutation of astrologers; and physical proofs from Aristotle refuting those who claim that the sphere is living and rational. His philosophic interests are also expressed in his epitome of Aristotle's *De Generatione et Corruptione* and by a work on atomism.

Al-Nawbakhtī is best known for his book on Shīʿī sects, *Firaḳ al-Shīʿa* (*K. fīhi madhāhib firaḳ ahl al-imāma wa-asmāʾuhā* ...), which was edited by H. Ritter (Istanbul 1931). The work was subsequently edited (but apparently based on Ritter) by Muḥammad Ṣādiḳ al-Baḥr al-ʿUlūm (Nadjaf 1355/1936).

A Persian translation of *Firaḳ al-Shīʿa* was done by M. Dj. Mashkūr, *Tardjamat Firaḳ al-Shīʿa* (Tehran 1325 A.S./1946), see also the French translation by M.J. Mashkour (Mashkūr), *Les sectes shiites: traduction annotée avec introduction*, 2nd ed. (Tehran 1980), which first appeared in *RHR*, cliii (1958), 68-78, 176-214; cliv (1958), 67-95, 146-72; clv (1959), 63-78 (and published separately, Tehran 1958). There is a Russian translation by S.M. Prozorov, *Shiitiskie sekti*, with Eng. summary (Moscow 1973).

The *Firaḳ al-Shīʿa* treats the question of the Imāmate (on which al-Nawbakhtī wrote one or two independent works) as well as Shīʿī sects. A question exists whether the *Firaḳ al-Shīʿa* is the work of al-Nawbakhtī or rather derived from the *K. al-Maḳālāt wa 'l-firaḳ* of his contemporary, Saʿd b. ʿAbd Allāh al-Ashʿarī al-Ḳummī (d. 299/911) (ed. Mashkūr, Tehran 1964), as many parallels exist (see the list of most of them in Iḳbāl, 144-54) between the *Firaḳ* and al-Ḳummī's book. The explanation that commends itself is that al-Ḳummī used al-Nawbakhtī's work and added sources of his own (see Madelung, *Bemerkungen*).

Madelung suggests that al-Nawbakhtī used Hishām b. al-Ḥakam's *K. Ikhtilāf al-nās fī 'l-imāma* for the first part of his book, a source used also by al-Nāshiʾ in his *K. Uṣūl al-niḥal*, which parallels al-Nawbakhtī in several places (J. van Ess, *Frühe muʿtazilitische Häresiographie*, 26, 39, 54; Madelung, *Frühe muʿtazilitische Häresiographie*, 225).

(J.L. KRAEMER)

NAWBANDADJĀN, NŪBANDADJĀN (also Nūbandjān, according to Yāḳūt, *Muʿdjam*, ed. Beirut, v, 307), a town of the province of Fārs in mediaeval Islamic Persia. It lay in the district of Shābūr Khurra roughly midway between Iṣṭakhr and Arradjān [*q.vv.*] on the road linking Shīrāz with Khūzistān. The geographers describe the town as populous and

flourishing, with fine markets and a good running water supply. It flourished under the Būyids, was destroyed by the Shabānkāra Kurds of Abū Saʿd in the 5th/11th century, but was rebuilt by the Saldjūḳ Muḥammad b. Maliḳ-Shāh's governor of Fārs and Kirmān, the Atabeg Čāwulī Saḳāw (d. 510/1116) (Ibn al-Balkhī, tr. Le Strange, *Description of the province of Fars in Persia*, London 1912, 57-8). It then fell into ruins, which were identified by the Russian traveller C.A. Bode (see *JRGS* [1845], 78; A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 172).

Two *farsakhs* from Nawbandadjān was the *shiʿb Bawwān*, the valley accounted by the Muslims one of the four earthly paradises and praised by al-Mutanabbī in one of his most famous *ʿAḍudiyyāt* odes.

Bibliography: *Ḥudūd al-ʿālam*, tr. 128; Le Strange, *Lands*, 264-5; Schwarz, *Iran*, 34-5.

(C.E. Bosworth)

NAWFAL, banū, a clan of the Meccan tribe of Ḳuraysh. The genealogists reckon Nawfal as one of the sons of ʿAbd Manāf, and brother of ʿAbd Shams, Hāshim and al-Muṭṭalib. Nawfal himself is said to have been specially concerned to develop trade with ʿIrāḳ and the Persian empire, and is also reported to have quarrelled with ʿAbd al-Muṭṭalib b. Hāshim (Muḥammad's grandfather).

Some information has been preserved about the mutual relations of the clans of Ḳuraysh. At one period, all the descendants of ʿAbd Manāf together with some other clans formed a group known as the Muṭayyabūn ("the perfumed ones") which challenged another group known as the Aḥlāf ("confederates") led by the clans of ʿAbd al-Dār and Makhzūm. Later, however, the clans of ʿAbd Shams and Nawfal, which often seem to have acted together, left the first group and came closer to the wealthy and powerful clan of Makhzūm, though still maintaining a degree of separation. The clan of Nawfal appears to have been small in number, and there is no member of it in the lists of early Muslims apart from the confederate ʿUtba b. Ghazwān. The clan joined with most of the rest of Ḳuraysh in boycotting the clan of Hāshim when Abū Ṭālib as leader refused either to stop Muḥammad preaching or to withdraw clan protection (*djiwār*) from him; but the leader of Nawfal, al-Muṭʿim b. ʿAdī, was one of five men who brought about the ending of the boycott. Abū Ṭālib died and was succeeded as leader by Abū Lahab, who seems to have refused to continue protecting Muḥammad. As a result, after Muḥammad's abortive visit to al-Ṭāʾif seeking support, before he could re-enter Mecca he had to arrange for the protection of another clan; and it was al-Muṭʿim b. ʿAdī of Nawfal who gave him this, though presumably on condition that he stopped preaching. Al-Muṭʿim is not mentioned after the *Hidjra*, but other members of the clan persisted in opposition to Muḥammad.

(W. Montgomery Watt)

al-**NAWFALĪ**, the *nisba* of a Hāshimite family of *akhbārīs* who transmitted from father to son traditions of a historical character.

On the death of Yazīd (I) b. Muʿāwiya (64/683 [*q.v.*]), ʿUbayd Allāh b. Ziyād [*q.v.*] was confirmed in his office of governor of ʿIrāḳ by the Baṣrans, who nevertheless speedily retracted this when they learnt that the Kūfans had stoned his emissaries. It was at this point that Baṣra designated as its governor ʿAbd Allāh b. al-Ḥārith b. Nawfal b. ʿAbd al-Muṭṭalib b. Hāshim, whose grandfather and father had been Companions of the Prophet. When he was still a baby, this personage had received from his mother, Hind bt. Abī Sufyān, the surname of Babba "the fat one" because he was, it was said, plump. At Baṣra, he showed himself rather placid and inept in exercising his delicately-placed functions, so that he only retained them for a month, after which all trace is lost of him until the revolt of Ibn al-Ashʿath (towards 80/699 [*q.v.*]), in which he participated; subsequently, he had to end his days in ʿUmān (see Ibn Ḳutayba, *Maʿārif*, index; al-Ṭabarī, ii, 437, 446, 463 and index; al-Balādhurī, *Ansāb*, IVB, 100, 104, 109; Muṣʿab al-Zubayrī, *Nasab Ḳuraysh*, 30-1, 86; Ibn al-Kalbī-Caskel, Tab. 7, Register, II, 111; al-Thaʿālibī, *Laṭāʾif*, 27; etc.).

One gets the impression that all the persons bearing the *nisba* of al-Nawfalī are indeed the descendants of Babba, but there are certain homonymities and gaps in continuity which hinder research here. The oldest member of this family of *ruwāt* must have been (I) Sulaymān b. ʿAbd Allāh b. al-Ḥārith, whose name figures in some *isnāds*, but the transmitter thus named, who is cited several times by al-Ṭabarī (ii, 446, 1885, iii, 346, 347, 533), is probably not Babba's son, for, whilst belonging to the same line, he was living at a later time; al-Masʿūdī (*Murūdj*, vii, 218-19 = § 2902) mentions him in fact in the story of an occurrence which is said to have taken place at the court of the ʿAbbāsid caliph al-Muʿtaṣim (218-27/833-42 [*q.v.*]) and in which he is represented as rather necessitous, although related to the ruler (*min ahlihi*). Al-Masʿūdī mentions in total six members of the family, and these have been put together in a genealogical table (index of the ed. of Ch. Pellat, s.v. al-Nawfalī), but it is likely that this table is incomplete. It is certainly right to add a brother of Sulaymān, (II) ʿĪsā b. ʿAbd Allāh, cited in an *isnād* by Abu 'l-Faradj al-Iṣfahānī (*Maḳātil*, 155). The following one is a nephew of ʿĪsā, (III) Muḥammad b. Sulaymān who, in al-Djāḥiẓ's *K. al-Ḥayawān* (iii, 16) retails a dialogue between a Medinan and a Kūfan concerning the love which their respective homelands bear for the Prophet. This *rāwī* is also an authority for al-Masʿūdī (*Murūdj*, vi, 36-9 = § 2267) and, in greater detail, for al-Ṭabarī (iii, 451-5) regarding relations between this personage with Abū Djaʿfar al-Manṣūr (136-58/754-75 [*q.v.*]) whom he accompanied in 158/775 and at whose death he was present. It is his son (the no. VI above) who is the transmitter of this story.

There then come Muḥammad's brother, (IV) ʿAlī b. Sulaymān, then his son, (V) Djaʿfar b. Muḥammad cited in the *Murūdj* (v, 183, 409-10 = §§ 1948, 2161) concerning a tradition about al-Sayyid al-Ḥimyarī and about a *khabar* regarding Sulaymān b. ʿAbd al-Malik (96-9/715-17 [*q.v.*]). The best-known member of the family is nevertheless (VI) Abu 'l-Ḥasan ʿAlī b. Muḥammad, son of no. III above whom al-Masʿūdī (*Murūdj*, i, 11 = § 8) and al-Sakhāwī (F. Rosenthal, *A history of Muslim historiography*², Leiden 1968, 506) count among the number of historians. The first, who cites him several times (v, 4, 41, 177, 183, 185, 187, 189, vi, 36 = §§ 1762, 1795, 1942, 1948, 1950, 1951, 1953, 2267) attributes to him a *K. al-Akhbār*, which must have been utilised by later authors (probably by al-Ṭabarī, who mentions this *rāwī* at least 25 times (until the year 173/789) and borrows from him lengthy accounts; likewise Abu 'l-Faradj, *Maḳātil*, 85, 155, 338, 427). To judge by the nature of the traditions transmitted

by this aristocratic family, it is probable that it showed some sympathy for the ʿAlids.

Now this latter consideration might justify identifying this ʿAlī b. Muḥammad with a Nawfalī of absolutely identical name, with the same *kunya* and *ism*, who is, in regard to the founder in Morocco of the Idrīsid dynasty, Idrīs I (d. 175/792 [*q.v.*]), a source for al-Bakrī (*Description de l'Afrique septentrionale*, ed. and tr. de Slane, text 122, tr. 238-9). Rosenthal (*loc. cit.*) seems to doubt the possibility of this identification, and R. le Tourneau (*Fès*, Casablanca 1950, 34) considers al-Nawfalī as an Andalusian, but it is wise to retain a prudent attitude here. In any case, it was al-Bakrī's citation (without *isnād*, hence, probably, given after a book, the *K. al-Akhbār*?) which allowed E. Lévi-Provençal (see his *Islam d'Occident*, Paris 1948, 15-16) to attribute the foundation of Fās to Idrīs I and not to Idrī II, as was previously done (see also Ibn ʿIdhārī, *Bayān*, i, 218, tr. Fagnan, Algiers 1901, 104; Ibn al-Abbār, *Ḥulla*, ed. Ḥ. Muʾnis, Cairo 1963, i, 53-54). The last member of the family whose name has been brought to light is (VII), ʿAlī b. Djaʿfar, son of no. V.

Bibliography: Given in the article. Sezgin, *GAS*, i, 312, devotes a notice to ʿAlī b. Muḥammad (no. VI) but makes no allusion to al-Bakrī's source.

(CH. PELLAT)

NAWRIYYA (A.), from *nawr* "flower", a term which, like *zahriyya*, designates poetry devoted to the description of flowers; it is practically impossible to separate it, as a genre, from the *rawḍiyya* or *rabīʿiyya* (descriptions of gardens or of the spring, respectively).

Already in the middle of the 5th/11th century, Abu 'l-Walīd al-Ḥimyarī (d. 440/1048) sets forth these genres together; he divides his *al-Badīʿ fī faṣl al-rabīʿ* into (1) poems on the spring, without descriptions of flowers; (2) poems in which are described two or more flowers; and (3) poems on one flower in particular. The appearance of this kind of poetry is closely connected with contacts with ancient Persia and the progressive urbanisation of the Arabs after the conquests. The process is already discernible in the pre-Islamic period (poets at the court of al-Ḥīra [*q.v.*]), but does not attain the status of a separate genre before the ʿAbbāsid period. At the outset, the ʿAbbāsid poets followed, in the *ḳaṣīda*, the pre-Islamic tradition of describing the floral decoration of taverns in Bacchic scenes, but in the specific *khamriyyāt* [*q.v.*], the gardens where feasts are held begin to be described. Abū Nuwās [*q.v.*] generally inserts these descriptions after the theme of the *aṭlāl*, the normal starting-point for his *khamriyyāt*; he describes a restricted number of flowers, which he compares to parts of the body (rose = cheek, narcissus = eyes) or to precious stones, which are in fact the most common images in later poetry. Abū Tammām [*q.v.*] was the first to replace, in a poem, the *nasīb* by a description of spring and its flowers, as an imperfect reflection of the *mamdūḥ*, and this enjoyed an extraordinary success, not only among the Arab panegyrists but also among the Persian, Turkish and Jewish poets. In Ibn al-Rūmī [*q.v.*], the description of gardens and flowers becomes an independent poem. There are two types of *nawriyyāt* in this poet's *dīwān*, either descriptions of spring or of a garden, where nature is depicted as an animate being which praises God by its beauty; or else the description of one or two flowers, generally the narcissus and rose, which, in a famous poem, are the object of a *munāẓara* [*q.v.*] in which Ibn al-Rūmī judges in favour of the narcissus (and which was later, at the opening of the 5th/11th century, to give rise to a series of replicas by authors in al-Andalus, in both prose and verse, collected together by al-Ḥimyarī). Up to al-Ṣanawbarī (d. 334/945 [*q.v.*]), one is not conscious of floral poetry as being a genre ouside that of *waṣf*. This particular poet is considered as the main representative, and indeed the creator of this genre, through the abundance of *nawriyyāt* in his *dīwān*, which take the form of short poems (*ḳiṭaʿ*) as well as lengthy *ḳaṣīdas*, and because his descriptions of nature are present in all the poetic genres.

In al-Andalus, this genre was especially appreciated, to the point that practically all Andalusian poetry may be considered as floral poetry. The reasons which are given for justifying this clear preference (exhuberance of nature, the abundance and variety of flowers in al-Andalus) seem to disregard the fragmentary character of the poetic corpus from al-Andalus. Already in al-Ḥimyarī's work, the greater part of the *ḳiṭaʿ* are fragments of the floral prelude of panegyrics, in the manner of Abū Tammām. The most remarkable poets are Ibn Khafādja [*q.v.*], called al-Djannān, and his nephew Ibn al-Zaḳḳāḳ [*q.v.*].

The describing of flowers lends itself to the use of a recherché language and of conceits, which led to *nawriyyāt* entering at a very early date the books on *maʿānī* and on comparisons (*tashbīhāt*), as well as in anthologies in general.

(TERESA GARULO)

NAWʿĪ, MUḤAMMAD RIḌĀ of Khabūshān, in the vicinity of Mashhad, a Persian poet of the 10th/16th century. The son of a merchant, in his youth he spent some time in Kāshān where he studied under Mawlānā Muḥtasham. Moving to Marw, he became intimate with Ḥākim Nūr Muḥammad Khān there. Like the majority of Persian poets of his time, however, he was attracted by the brilliant court of the Mughals and went to India, where at first he found a patron in the person of Mīrzā Yūsuf Khān Mashhadī, but soon afterwards entered the service of the Khānkhānān [*q.v.*] Mīrzā ʿAbd al-Raḥīm and remained with him and the prince Dāniyāl till his death, which took place in Burhānpūr in 1019/1610. Nawʿī's best work is his poem *Sūz u gudāz* ("Burning and melting"), which has a touching theme, the devotion of a Hindu princess who accompanies her late husband in death on the funeral pyre. It is written in excessively artificial language and distinguished by the originality of its subject, which had not been taken by any Persian poet before Nawʿī. Nawʿī's works were very highly esteemed in India, and he is said to have received 10,000 rupees, an elephant and a horse with valuable trappings for a *Sāḳī-nāma* dedicated to the Khānkhānān. His *Dīwān*, which is entitled *Lubb al-albāb*, has come down to us but has so far attracted little attention.

Bibliography: G. Ouseley, *Biographical notices of Persian poets*, London 1846, 161-6; Ethé, *G I Ph*, ii,

254-5; Badāʾūnī, iii, 361; Abu 'l-Faḍl ʿAllāmī, tr. Blochmann, *Āʾīn-i Akbarī*, 606; Rieu, *Catalogue*, 674a; *Sūz u gudāz*, Lucknow 1284 (at the end of the first part of the *Akbar-nāma*). It has been translated as *Burning and melting: being the Sūz u-Gudāz of Muḥ. Riẓā Nauʿī of Khabūshān*. Translated into English by Mirza J. Dawud of Persia and Ananda K. Coomaraswamy of Ceylon, London 1912.

(E. Berthels)

NAWRŪZ (p.), New (Year's) Day.

1. In the Islamic heartlands. The word is frequently represented in Arabic works in the form *Nayrūz*, which appears in Arabic literature as early as the verse of al-Akhṭal [*q.v.*] (see al-Djawālīḳī, *Muʿarrab*, ed. A.M. Shākir, Tehran 1966; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, ii, 408). It was the first day of the Persian solar year and is not represented in the Muslim lunar year (al-Masʿūdī, *Murūdj*, iii, 416-17 = §§ 1301-2). In Achaemenid times, the official year began with Nawrūz, when the sun entered the Zodiacal Sign of Aries (the vernal equinox). Popular and more ancient usage however would appear to have regarded the midsummer solstice as Nawrūz (al-Bīrūnī, *Chronology*, tr. Sachau, 185, 201). It was the time of harvest and was celebrated by popular rejoicings, but it also marked the date when the *kharādj* [*q.v.*] was collected. The two different dates were retained in Persia proper and also in ʿIrāḳ and Djibāl under Islam, and Ḥamza al-Iṣfahānī states (*Taʾrīkh*, Berlin 1340 [1921], 104) that Nawrūz in the first year of the Hidjra fell on 18 Ḥazīrān (June), which he erroneously equates with 1 Dhu 'l-Ḳaʿda. Confusion arose, however, because the intercalation of one day every four years which allowed the date to correspond with the position of the sun was omitted in Islam (Masʿūdī, *Tanbīh*, 215), and unscrupulous revenue officials found it to their advantage to keep to the false calendar date rather than to the correct traditional one, because it permitted them to collect their dues earlier (al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, iv, 263-4). By the time of the caliph al-Mutawakkil the date of collection of *kharādj* had advanced by almost two months, and in 245/859 he fixed the date of Nawrūz as 17 Ḥazīrān, which approximated to the old time (al-Ṭabarī, iii, 1448; al-Bīrūnī, *Chronology*, 36-7). The reform had no lasting effect and the caliph al-Muʿtaḍid was compelled again to move the date which was fixed as 11 Ḥazīrān (al-Ṭabarī, iii, 2143). Later again, in the Saldjūḳ sultan Malikshāh's reform of the calendar [see djalālī], the Persian astronomers proclaimed the vernal equinox as Nawrūz (Ibn al-Athīr, x, 34; 467 A.H.), and the first day of the new era fell on 10 Ramaḍān 471/15 March 1079.

Nawrūz was celebrated also in Syria, and was adopted in Egypt, as elsewhere, and has been retained by the Copts as the New Year's Day (al-Maḳrīzī, *Khiṭaṭ*, iv, 241-2), but it now falls on 10 or 11 September, see Lane, *Manners and customs of the modern Egyptians*, ch. XXVI "Periodical public festivals, etc."; G.E. von Grunebaum, *Muhammadan festivals*, New York 1951, 54-5.

Popular festivities have marked Nawrūz wherever it has been celebrated. In Sāsānid Persia the kings held a great feast, and it was customary for presents to be made to them while the people who gathered to make merry in the streets sprinkled each other with water and lit fires. Both in ʿIrāḳ and Egypt, these customs persisted in Muslim times (al-Ṭabarī, iii, 2163; al-Masʿūdī, *Murūdj*, vii, 277 = § 2962; al-Maḳrīzī, *loc. cit.*; al-Ḳalḳashandī, ii, 410), and although al-Muʿtaḍid attempted to prevent the customary horseplay in the streets during the midsummer saturnalia, he was unsuccessful (al-Ṭabarī, *loc. cit.*). In the various parts of the Ottoman Empire, the day was celebrated as a public holiday, and in Persia it has throughout its history been marked by great festivities as the chief secular holiday of the year.

Many of the features of these celebrations in Persia are familiar from other cultures where a new year or a new phase of life is being marked, such as the donning of new clothes just before the New Year actually begins, or where the end of the season of winter is marked, in rural society by such practices as the lighting of piles of thorn and brushwood and then the jumping over them by the family, friends and neighbours. But above all characteristic of the New Year celebrations is the preparation on New Year's Day of the *haft sīn* "the seven items beginning with the letter *sīn*" (sc. *sīb* "apple", *sīr* "garlic", *sumāḳ* "sumac", *sindjīd* "jujube", *samanū* "a kind of sweetmeat", *sirka* "vinegar" and *sabzī* "greens"), which are placed on a cloth spread on the floor in front of a mirror and candles in company with dishes of certain foods. See Bess A. Donaldson, *The wild rue. A study of Muhammadan magic and folklore in Iran*, London 1938, 120-3.

(R. Levy-[C.E. Bosworth])

2. In East Africa.

As recently as 1971 Tibbetts reported that the Nawrūz calendar, as modified by Sidi Çelebi, was used by navigators throughout the Indian Ocean. He had corrected the practice followed in the works of Aḥmad b. Mādjid and by Sulaymān al-Mahrī, who did not observe an intercalary day in each fourth year, so that their Nawrūz calendar receded ten days in each forty years. On the eastern African coast, Swahili fishermen and agriculturalists all used the unreformed Nawruz calendar, finding the Islamic calendar suitable only for religious purposes. In Swahili, Nawrūz is vocalised as *Nairuzi*. Its earliest attestation is in an Arabic *History of Kilwa* redacted *ca.* 1550, recording the Portuguese arrival on the coast in 1498 and using both calendars. Doubtless it had been in use long before.

The *Nairuzi* ceremonies in Zanzibar and Pemba display a syncretism between Islam and earlier religious practices. In the 1950s they were studied in Zanzibar by Sir John Gray, then Chief Justice. Study in Pemba by the late Dr P.L. Lienhardt in 1958 has not yet seen the light of day.

The ceremonies are organised by *wavyale*, with a view to propitiating *mizimu*, best described as *genii loci*. These are often hereditary from father to son, but women also may act. The *mizimu* may be malign or benign, and it is wiser not to offend them, on land or at sea. This is especially important in the seven days before *Nairuzi*. A feast is held on the first days, after which fishing and collecting firewood are banned for the week. On the sixth day Ḳurʾān school pupils assemble at the teachers' houses. They recite from the Ḳurʾān, partake of a meal, and sleep in the teacher's house. Next day they proceed to the beach for a further recitation. These recitations are apparently the only Islamic element among the ceremonies. The

pupils and older persons then bathe ceremonially, and put on clean clothes. In Zanzibar, women danced and sang and waved branches in the streets. A ceremonial meal followed, women preparing rice, and men preparing a *kitoweo* (savoury stew). Then, at a given signal, all fires were extinguished, to be relit with firesticks, the most primitive of all human methods. The old ashes were carried to crossroads, where a dance for women only took place. During this the *wavyale* erected a small hut. This the women now pelted with stones and set on fire, to drive away evil spirits for the ensuing year. A men's dance followed, with tridents, swords and daggers. It was concluded by a stick dance, the men using sticks only.

While some elements in these ceremonies can be paralleled elsewhere, their origin, meaning and purpose is not wholly clear in this context.

Tibbetts, *Arab navigation in the Indian Ocean*, London 1971; S.A. Strong, *The History of Kilwa*, (Arabic text), in *JRAS* (1895); information communicated to the author by Dr Lienhardt in 1958.

(G.S.P. FREEMAN-GRENVILLE)

AL-**NAWSHARĪ** [see AL-NŪSHARĪ].

NĀWŪSIYYA, NAWŪSIYYA, the name of an extremist Shīʿī sect (*rawāfiḍ*) attached to a certain Ibn Nāwūs or Ibn Nawus (sometimes changed into Ibn Mānūs), whose personal name varies according to the sources (ʿAdjlān, ʿAbd Allāh, Ḥamlān, etc.), or else attached to a place in the vicinity of Hīt called Nāwūsa (see Ibn Khurradādhbih, 72, 217; al-Balādhurī, *Futūḥ*, 179: Yāḳūt, s.v.; al-Idrīsī, index; Le Strange, *Lands*, 64-5).

The Nāwūsiyya were characterised by the idea (sometimes attributed to the caliph Abū Djaʿfar al-Manṣūr, 138-58/754-75 [*q.v.*]) that the *imām* Djaʿfar al-Ṣādiḳ (d. 148/765 [*q.v.*]) was not dead but would reappear since he was al-Ḳāʾim al-Mahdī [see ḲĀʾIM ĀL MUḤAMMAD].

Bibliography: Ashʿarī, *Maḳālāt*, 25; Nawbakhtī, *Firaḳ al-Shīʿa*, 108; Masʿūdī, *Murūdj*, index s.v. ʿAdjlān; Khwārazmī, *Mafātīḥ*, 31; ʿAbd al-Djabbār, *Mughnī*, xx, 179; Ibn Ḥazm, *Fiṣal*, iv, 180; Maḳdisī, *Badʾ*, v, 129, 135; Mufīd, *Irshād*, 101; Baghdādī, *Farḳ*, 61; Shahrastānī, *Milal*, ed. Badrān, 338, tr. Gimaret-Monod, i, 487 and bibl. given there. (ED.)

NAWWĀB, NAWĀB, a title used in Muslim India. The form must be a hypercorrection from A. *nuwwāb*, pl. of *nāʾib* [*q.v.*], used, as often in Persian usage (cf. *arbāb* "master", *ʿamala* "workman", and see D.C. Phillott, *Higher Persian grammar*, Calcutta 1919, 65) as a singular.

The title was originally granted by the Mughal emperors to denote a viceroy or governor of a province, and was certainly current by the 18th century, often in combination with another title, e.g. the Nawāb-Wazīr of Oudh (Awadh), the Nawāb-Nāẓim of Bengal. A nawāb might be subordinate to another governor, as was the Nawāb of Arcot (Ārkāt) to the Niẓām of Ḥaydarābād, and the title tended to become a designation of rank without necessarily having any office attached to it. Several of the rulers of princely states in British Indian times bore this title, e.g. the Nawābs of Bhopal and Rāmpūr [*q.vv.*].

In the later 18th century, the term was imported into English usage in the form Nabob, applied in a somewhat derogatory manner to Anglo-Indians who had returned from the subcontinent laden with wealth (cf. Sir Percival Spear, *The Nabobs, a study of the social life of the English in eighteenth-century India*[2], London 1963). The word gained currency in England especially after the production in 1768 of Samuel Foote's play, *The Nabob*, and eventually passed into other languages, including French (cf. the title of Daudet's *Le Nabab, mœurs parisiennes*, 1877).

Bibliography: E. Balfour, *The cyclopaedia of India*[3], London 1885, ii, 1070; Yule and Burnell, *Hobson-Jobson, A glossary of Anglo-Indian colloquial words and phrases*[2], 610-12. (C.E. BOSWORTH)

NAWWĀB SAYYID ṢIDDĪḲ ḤASAN KHĀN al-Ḥusaynī al-Bukhārī al-Ḳannawdjī (1248-1307/1832-90), Indian writer, statesman and poet.

He was born at Bareilly in Rohelkhand on 19 Djumādā I 1248/14 October 1832, the son of Sayyid Awlād Ḥasan and a daughter of the *Muftī* Muḥammad ʿIwaḍ, his family claiming descent from al-Ḥusayn b. ʿAlī, hence from Fāṭima and the Prophet. According to the family genealogy, the family moved from Medina to Baghdād and thence to Bukhārā, until Sayyid Djalāl Gulsurkh moved to India in 635/1237-8; his grandson was the famed mystic and traveller, Djalāl al-Dīn Ḥusayn [*q.v.*], known as Makhdūm-i Djahāniyān Djahāngasht, d. 785/1384, who is buried at Uččh near Multān. His great-great-grandson Sayyid Djalāl Thālith moved from Multān to Dihlī where the Sultan Bahlūl Lōdī [see LŌDĪS] gave him a *djāgīr* (fief) at Ḳannawdj [*q.v.*] which became the family seat for many generations. Sayyid ʿAlī Aṣghar of the fifth generation there became a Shīʿī when the area fell under the Nawwābs of Awadh (Oudh). The family remained Shīʿī for the next five generations until Sayyid Awlād ʿAlī Khān "Anwar Djang Bahādur" (d. 1218/1803), keeper of the Golkondā Fort under the Niẓām of Ḥaydarābād, Deccan, whose son, Sayyid Awlād Ḥasan (d. 1253/1837) renounced Shīʿism and severed relations with the Shīʿīs in the family. Awlād Ḥasan was one of the deputies of Sayyid Aḥmad Brēlwī *Shahīd* (d. 1246/1831 [*q.v.*]), and Ṣiddīḳ Ḥasan was the second of his three sons.

Ṣiddīḳ Ḥasan acquired a traditional Islamic education in his home town and the north Indian cities of Farrukhābād, Kānpūr and Dihlī, where he studied under its *Muftī* Ṣadr al-Dīn Āzurdah (d. 1285/1868) for about two years. Memories of his father's association with the *Djihād* movement and education under Āzurdah, influenced Ṣiddīḳ Ḥasan to become one of the major advocates of the new creed of the *Ahl-i Ḥadīth* [*q.v.*], who rejected *taḳlīd* in *fiḳh*. He began his career as a junior clerk in the princely states of Bhopāl (1855-6) and Tonk (1858). A year later he was appointed to write the official history of Bhopāl and married Dhakiyya Begum, daughter of the Prime Minister (*Madār al-Mahāmm*) of Bhopāl, Munshī Djamāl al-Dīn Khān, in 1860. He performed the Pilgrimage in 1285/1869, meeting many *ʿulamāʾ* in the Yemen and Ḥidjāz, and acquiring mss. of important Arabic works. On his return, he was appointed inspector of schools. A year later he became the state's head clerk (*Mīr Munshī*) and was awarded the title of *Khān*.

He found the great opportunity of his life when Nawwāb Shāh Djahān Begum (reigned 1868-1901) married him in May 1871, with formal British consent. Her first husband, Nawwāb Bāḳī Muḥammad Khān, had died in 1284/1867. Two months later he was elevated to the post of *Muʿtamad al-Mahāmm*, second only to that of the Prime Minister. In September 1872 the Begum prevailed upon the British authorities to award Ṣiddīḳ Ḥasan all the official

honours bestowed on her late husband, including a *dj̲āgīr* worth Rs. 75,000 a year. A month later, the British Government conferred upon him the title of *Nawwāb Walād̲j̲āh Amīr al-Mulk*, with entitlement to a 17-gun salute within British India.

Ṣiddīḳ Ḥasan's marriage to the Begum was resented by a group in the royal family, especially by her daughter and heir-apparent, Sulṭān D̲j̲ahān Begum (reigned 1901-26), who feared being bypassed if a male child were to be born of the new marriage. The dissident party found the British Political Agent at Bhopāl, Sir Lepel Griffin, more than sympathetic. On his advice, the first British accusation of publishing "seditious material" was made on 21 March 1881, which curtailed Ṣiddīḳ Ḥasan's powers as the *de facto* ruler of the state (the Begum being in purdah). Being a staunch supporter of the *Ahl-i Ḥadīt̲h̲*, he had alienated Ḥanafī *ʿulamāʾ* as well as the S̲h̲īʿīs. The British were wary of the movement because of its recent military role in the Frontier region. Ṣiddīḳ Ḥasan was also accused of a number of administrative malpractices, causing rifts in the royal family and maintaining contacts with foreign personalities, including the *Mahdī* of the Sudan. Griffin had originally recommended to the Viceroy, Lord Dufferin, the death sentence for the Nawwāb or transportation for life. But the Viceroy, perhaps taking into account the state's traditional loyalty to the British, opted for his deposition, which came into effect on 28 August 1885, with all his honours and authority revoked. Hence forth, his loyal wife became a figurehead, and real power was exercised by her daughter, Sulṭān D̲j̲ahān Begum and the Prime Minister henceforth appointed by the British, whilst Ṣiddīḳ Ḥasan remained under house-arrest in his private residence, Nūr Maḥall. He died on 20 February 1890 at the age of 59 years; the Government of India restored his honours posthumously and the state was allowed to refer to him in official communications as the "Late Nawab and Husband of the Ruler."

Ṣiddīḳ Ḥasan was already writing books when he joined the Bhopāl civil service. He is reported to have sent a copy of his *Tuḥfa-yi faḳīr* (a treatise on coffee and tea) to the Nawwāb of Tonk in 1276/1859. However, his marriage with the Begum placed enormous funds at his disposal. He had free access to eight official printing presses and a team of court *ʿulamāʾ*, which included some Yemenis. He dispatched emissaries to various parts of India and Arab lands to buy rare mss. for him. Many Indian and Arab *ʿulamāʾ* and poets came to live in Bhopāl because of his patronage. He embarked on an unprecedented writing career in Arabic, Persian and Urdu on a wide range of religious, technical and literary subjects. His son lists 222 titles (74 Arabic, 45 Persian and 103 Urdu) to his credit (*Maʾāt̲h̲ir-i Ṣiddīḳī*, iv, appendix). These range from two-paged treatises to multi-volume works. Revenues from his *dj̲āgīr* and the Bhopāl treasury allowed him to print his books in India, Cairo and Istanbul for free distribution worldwide. A latter-day al-Suyūṭī, his writings are rarely original. His rôle hardly goes beyond recompiling, abridgment, enlargement, interpretation or translation from one language to another. Moreover, some works attributed to him were authored by a team that worked for him, and in some of these, like the *Riyāḍ al-murtāḍ* and *al-Dīn al-k̲h̲āliṣ*, he is quoted as a third person. Indeed, one of his books, *Luḳṭat al-ʿad̲j̲lān* (Istanbul 1296/1879, 717-20) says that there is no harm on one's ascribing his book to someone else (cf. Saeedullah, 87 f.).

In his religious writings, Ṣiddīḳ Ḥasan repeats a limited range of topics: e.g. opposition to *fiḳhī taḳlīd* (which he regarded as responsible for the Muslims' intellectual stagnation), *taṣawwuf* and *fiḳhī* rigidness, necessity of *id̲j̲tihād*, admonition on wasteful expenditure in religious and civil ceremonies, and exposition of the conditions preceding the Day of Judgement. Unscrupulous copying from previous works attracted sharp criticism from some contemporary *ʿulamāʾ*, e.g. ʿAbd al-Ḥayy al-Lakhnawī (*Ibrāz al-g̲h̲ayy* and *Tad̲h̲kirat al-rās̲h̲id*, Lucknow 1301/1884). His literary activities were greatly curtailed in the wake of his deposition. His important works nevertheless include: *Fatḥ al-bayān (tafsīr)*, *Abd̲j̲ad al-ʿulūm* (on *ʿilm*), *al-Tād̲j̲ al-mukallal*, *Tiḳṣār d̲j̲uyūd al-aḥrār* and *Itḥāf al-nubalāʾ* (biographies), *Nas̲h̲wat al-sakrān* (on love) and *Gul-i raʿnā* (Persian and Urdu *dīwān*).

(Ẓafarul-Islām K̲h̲ān)

NAYRĪZ, Nīrīz, the name of a mediaeval Islamic region and of a town of Fārs in southern Persia.

The Nayrīz plain is essentially a landlocked region in the southern Zagros mountains, drained by the Kūr and Pulwār rivers which rise in the Zagros and flow southeastwards into the shallow lake known in mediaeval Islamic times as the Lake of Nayrīz and in more recent ones as Lake Bak̲h̲tigān [*q.v.*, and also E. Ehlers, art. *Baḵtagān Lake*, in *EIr*]; although the lake itself is salt, the plain forms an agriculturally prosperous region, and in ancient times was the heartland of Achaemenid Persia, where lay Pasargadae and Persepolis.

In mediaeval Islamic times, the chef-lieu of the region was the town of K̲h̲ayār (thus in al-Iṣṭak̲h̲rī and Ibn Ḥawḳal, the modern K̲h̲īr/K̲h̲ayr in al-Muḳaddasī), whilst Nayrīz lay one stage to the east on the Kirmān road. Ḥamd Allāh Mustawfī, *Nuzha*, 138, 240, tr. 138, 232-3, states that both K̲h̲ayra (*sic*) and Nayrīz had fortified citadels. The geographers place Nayrīz in the *sardsīr* or cold region and mention iron mines, white clay used like chalk for writing and for bleaching, and black clay used for sealing, as being found in the vicinity. The mosque which al-Muḳaddasī mentions at the side of the market is presumably the existing Friday mosque, which has an inscription dating from 362/973. In more recent times, Nayrīz was the centre of Bābī rebellions in 1850 and 1853 led by Sayyid Yaḥyā Dārābī (Waḥīd); see *The Dawn-Breakers, Nabīl's narrative of the early days of the Bahāʾī revelation*, Wilmette, Ill. 1932, 465-99; M. Momen, *The Babi and Baha'i religions 1844-1944*, Oxford 1981, 106-13, 147-52.

At present, the town (lat. 29° 14' N., long. 54° 18'

E., altitude 1,587 m./5,205 feet) is in a district frequented by both Khamsa and Ḳashḳāʾī [q.v.] nomads; it is the chef-lieu of the sub-district of bakhsh of the same name in the shahrastān or district of Fasā, and ca. 1960 had a population of 15,391.

NAYRŪZ [see nawrūz].

al-**NAYRĪZĪ**, Abu 'l-ʿAbbās al-Faḍl b. Ḥātim, Persian geometer and astronomer, about whom almost nothing is known, though his *nisba* refers to the town of Nayrīz [q.v.] in Fārs. Because he mentions the caliph al-Muʿtaḍid in several of his works, it is commonly assumed that al-Nayrīzī flourished around 900 A.D. in Baghdād.

Al-Nayrīzī is well-known in the history of mathematics because he wrote a commentary to the Arabic translation of al-Ḥadjdjādj b. Yūsuf b. Maṭar [q.v.] of the *Elements* of Euclid (300 B.C.). The translation and commentary have been preserved in Arabic (Books I-VI) and in a mediaeval Latin translation by Gerard of Cremona (Books I-X). In his commentary, al-Nayrīzī preserved extracts of the ancient commentaries on the *Elements* by Hero of Alexandria (ca. A.D. 100) and Simplicius (ca. A.D. 500), which are not otherwise extant. In particular, al-Nayrīzī presents a "proof" of Euclid's famous parallel postulate by Simplicius and another such proof by one Aghānis, who was probably a contemporary of Simplicius.

In a separate treatise, al-Nayrīzī gave his own "proof" of the parallel postulate, which is similar to that of Aghānis, and which is based on the assumption that parallel lines are equidistant. Al-Nayrīzī wrote two other mathematical works: a treatise on an exact method for the numerical determination of the ḳibla [q.v.], based on four applications of the spherical theorem of Menelaus, and a hitherto unpublished text on an instrument for measuring the height of mountains, the width of rivers, the depth of wells etc.

Al-Nayrīzī's most important astronomical works, his commentary on the Almagest and two *Zīdjs*, are now lost. His treatises on the spherical astrolabe and on astrological conjunctions are extant.

Matvievskaya, *Matematiki i astronomy musulmanskogo srednevekovya i ikh trudy*, Moscow 1983, ii, 116-118 (useful bibliographies). On al-Nayrīzī and the parallel postulate, see A.I. Sabra, art. *al-Nayrīzī*, in *Dictionary of Scientific Biography*, x, New York 1974, 5-7; Kh. Jaouiche, *La théorie des parallèles en pays d'Islam*, Paris 1986, 127-137. (J.P. Hogendijk)

NAẒAR (a.), lit. "theory, philosophical speculation", probably did not receive until the 9th century A.D. the meaning of research in the sense of scientific investigation as translation of the Greek θεωρία. With Aristotle, e.g. *Metaph.* 1064 b2 (translated by Eustathius/Usṭāth at the beginning of the 9th century), and the Greek *Prolegomena* (Προλεγόμενα τῆς φιλοσοφίας) to the commentaries on Prophyry's *Isagoge*, the philosophies were then divided into theoretical (*naẓariyya*) and practical (*ʿamaliyya*); the latter seek to obtain the useful or the good for man, the former pure truth, in physics, mathematics and metaphysics (see Hein, *Definition* 146 ff.).

Naẓar is primarily an epistemological conception and after the example of Ammonius Hermiae, a pupil of Proclus, is dealt with among the Arabs in the already-mentioned *Prolegomena* prefixed to the *Isagoge* of Porphyry [see *Manṭiḳ* in *EI*²]. *Naẓar* is also discussed as an activity of the human *ʿaḳl* [q.v.] in psychology, but in this case as a rule under synonymns like *fikr, tafakkur*, etc.; cf. e.g. ʿAbd al-Djabbār: see Peters 58 f.; Bernand, *Problème*, 202 ff.

The history of this terminology has still to be written. In the oldest version of Aristotle's logic, a compendium written by ʿAbd Allāh b. al-Muḳaffaʿ (executed 139/756 or later) or his son Muḥammad, *ʿilm* and *ʿamal* are already distinguished as branches of philosophy (*ḥikma*), but *ʿilm* is defined as a *tabaṣṣur* and *tafakkur* of the *ḳalb* (i.e. of the mind); cf. G. Furlani, *Di una presunta versione araba di alcuni scritti di Porfirio e di Aristotele*, in *RRAL*, ser. VI, vol. vi [1926], 207 = *al-Manṭiḳ li-Ibn al-Muḳaffaʿ*, ed. M. Taḳī Dānishpazhūh, Teheran 1977, 2,21 ff.

The oldest speculative theologians of Islam were perhaps more familiar with the distinction *ʿilm ʿaḳlī/sharʿī* than with *naẓarī/ʿamalī*. The *ʿaḳl* is generally recognised as a "root" of the Muʿtazilī system. The Zaydī al-Ḳāsim mentioned it (beginning of the 3rd century A.H.) among his *uṣūl*: *ʿaḳl*, Ḳurʾān and *sunna* (Madelung, 129). *Naẓar* was felt to be an innovation like *raʾy* and *ḳiyās* in *fiḳh*; the Ḥanbalī school objected to the adoption of *naẓar* (see Laoust, 9, n. 1). Contrary to it, the Ẓāhirī theologian Ibn Ḥazm [q.v.] admitted *ʿaḳl* without hesitation—of course the *ʿaḳl* created and equipped by God—as a source of knowledge. Not blind belief (*taḳlīd*) nor deduction from the unknown (*ḳiyās*) were to lead it to the acceptance of the Ḳurʾān, *sunna* and *idjmāʿ*, but quite certain knowledge. There is nothing which Ibn Ḥazm insists upon so often and so emphatically as this; there is no other way to certainty than that of tracing it to sensual perception (*ḥiss*) and intuition of the intelligence (*ʿaḳl*). Indeed, sensual perception is so much preferred by him that comprehension by the reason is called a sixth *idrāk* (*Kitāb al-Fiṣal*, i, Cairo 1899, 4-7). The philosophical position of Ibn Ḥazm recalls Hellenistic eclecticism, according to which all human cognition arises either from sensual perception or intuition or is derived from these sources through the intermediary of proof. Many, however, emphasise the direct evidence of sensual perception (cf. already sūra X, 101 etc.; van Ess, 239), and regard the method of proof as a difficult and uncertain one. Hence we have the emphasis laid on general agreement (A. *idjmāʿ* and *idjtimāʿ*) as a possible, but often doubted (cf. van Ess 308 ff.), criterion of truth. Only where there is no agreement is investigation necessary.

The dualistic epistemology of the eclectics (senses x reason) was very greatly modified in Islam by the penetration of the intellectual monism into Neo-Platonic mysticism and Aristotelian logic. While different stages in human knowledge were distinguished, true knowledge was only to be attained by rational intuition and the intermediary activity of the mind. The main thing for the Neo-Platonist was intuition (*naẓar, baṣar*). It is remarkable how in the Neo-Platonic *Theology of Aristotle*, the latter is made to say (Arabic text ed. Fr. Dieterici, Leipzig 1881, 163): "Plato recognised all things *bi-naẓar al-ʿaḳl* (intuition), *lā bi-manṭiḳ wa-ḳiyās*", i.e. Plato as the divine perceives everything at once like God himself and pure *ʿaḳl*. *Naẓar* in this sense of direct perception is constructed with *ilā*, in other cases, however, with *fī*. For *naẓar fī*, transmitted reflection of the human intelligence, the *Theology* generally uses *fikr* and *rawiyya* and the world of senses, with which our soul is associated, is called *ʿālam al-fikra wa 'l-rawiyya*. Following the *Theology*, the

Muslim mystics generally used *naẓar* for spiritual perception (cf. L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1922, index).

In *Kalām*, however, in the disputes of the theological sects, whose members sometimes are called *ahl al-naẓar* [*q.v.*], *naẓar* receives the dialectical meaning of "reflection", "rational, discursive thinking"; it is an obligation of man, can produce knowledge (*ʿilm*; see Gardet-Anawati, 350 ff.) and may be classified as *naẓar al-ḳalb* (cf. van Ess, 238 ff.; Peters, 57 ff.; Bernand, *Problème*, 201 ff.). In his *Maḳālāt* (ed. H. Ritter, Wiesbaden [2]1963, 51-2), al-As͟hʿarī gives a survey of the different views of the eight parties of the *Rawāfiḍ fi 'l-naẓar wa 'l-ḳiyās*. According to him, groups 1-3 consider all cognition (*maʿārif*) as necessary (*iḍṭirār*) (i.e. given with the mind itself or not given), so that *naẓar* and *ḳiyās* can add nothing to them; these, as well as group 8, which traces all knowledge to the Prophet of God and the Imām, differ from the rest on this point. The other four recognise some kind of acquired knowledge (in both cases the reference is to the apprehension of God) as follows: 4 (the Aṣḥāb Hishām b. al-Ḥakam) by *naẓar wa 'l-istidlāl*; 5 (al-Ḥasan b. Mūsā) possibly by a kind of *kasb* which cannot be more exactly defined (cf. this *kasb* with the *kasb al-afʿāl* of the later As͟hʿarī school); 6 and 7 (anonymous) by *naẓar wa 'l-ḳiyās*, with appeal to the testimony (*ḥud͟jd͟ja*) of the *ʿaḳl*. We are also told (144) of a section of the Murd͟jiʾīs who hold that a belief (*īmān*) without *naẓar* is in their opinion not a perfect belief.

Al-As͟hʿarī himself is probably the best evidence of the fact that the speculation of the human *ʿaḳl* was not regarded as a source (or method) of knowledge of God for the first time in his school but before him by several sects. *Naẓar* (like *raʾy* in *fiḳh*) was most probably applied to the activity of the mind of the reflecting theologian (besides *naẓar* we find terms, often used with differing connotations, like *baḥt͟h, ḥads, raʾy, faḥṣ, fikr, fikra, ḥadīt͟h al-nafs* (see van Ess, 240 f.), *tafakkur, taʾammul, ṭalab;* perhaps also others). The logical methods here used are called (perhaps here still synonymous) *ḳiyās* (deduction by analogy) and *istidlāl* (proof by circumstantial evidence). From what we know of *ḳiyās* in *fiḳh* [see ḲIYĀS] (and of *ḳiyās* in medicine (see Masʿūdī, *Murūd͟j*, iv, 40, vii, 172 ff. = §§ 1368, 2857 ff.), we have probably to think of a process which is a mixture of induction and deduction, often used very arbitrarily. Analogous cases, often superficially regarded as similar (cf. Abū ʿAbd Allāh al-K͟hwārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, Leiden 1895, repr. 1968, 8-9), were sought for, the *ʿilla*, i.e. not the actual cause (*causa*) but the reason (*ratio*) in a higher conception of method or species, under which the further cases could be grouped. For Aristotle and his followers in Islam (al-Fārābī, etc.), deduction had one meaning; they believed in causality or even in the creative activity of abstract thought. The great majority of Muslim theologians, jurists and physicians did not rise so far. It was not till the school of al-As͟hʿarī that the method of *naẓar* superficially grasped penetrated into *kalām*, and *kalām* was defined as *ʿilm al-naẓar wa 'l-istidlāl*. Rejected at first by the majority, gradually tolerated and used as an instrument against heretics and sophists, *naẓar* in the orthodox school was finally recognised as a religious obligation.

Let us now turn back to the general conception of the *ʿulūm naẓariyya*. Al-Fārābī (d. 339/950) distributed them from the philosophical point of view in a special treatise (*Iḥṣāʾ al-ʿulūm*, ed. ʿUt͟hmān Amīn, Cairo [2]1968) in a way which became the model for later times. It was he who first worked on the logic of Aristotle, whence his school was often called that of the *Manṭiḳiyyūn*. He assumed, with Aristotle, that the *ʿaḳl* contained in itself the fundamental principles of all knowledge, the evidence of which had simply to be acknowledged. But the way of reflection and proof leads to the non-evident, the culmination of which, apodeictic proof (*burhān*), is described in the *Posterior Analytics*. From this eminence, the branches of knowledge can be surveyed. After some observations on philology (ch. i; cf. the Stoics) there follows the chapter on logic—whether as instrument of philosophy or as a part of it is a matter of indifference. Logic itself is, of course, a *naẓar* with an object of its own. Next come the sciences of physics, mathematics and metaphysics with main and subsidiary branches. Each is a *naẓar*. But it is noted that, for example, among the physical sciences, medicine is a mixture of theoretical and practical, and similarly music and mathematical subjects. Metaphysics is, however, like logic purely theoretical. Finally, the three practical sciences of Aristotle, sc. ethics, economics and politics, are united under the head of political science, with the addition of *fiḳh* and *kalām*; al-Fārābī remarks that the science of *fiḳh* and the art (*ṣināʿa*) of *kalām* have to do partly with opinions (*ārāʾ*), partly with actions (*afʿāl*).

In conclusion, let us compare with this philosophical division that of the As͟hʿarī theologian ʿAbd al-Ḳāhir b. Ṭāhir al-Bag͟hdādī (d. 429/1037-8) in his *Uṣūl al-dīn*, Istanbul 1928, 8-14 (cf. Wensinck, 250-63). After the distinction between divine knowledge and the knowledge possessed by other living creatures is laid down, the latter is classified as follows:

I. *ḍarūrī*
(necessary, directly evident)
1. *badīhī* 2. *ḥissī*
(internal and external perception)
II. *muktasab* (= *ʿulūm naẓariyya*)
(acquired)
1. *ʿaḳliyya* *s͟harʿiyya*
(knowledge acquired by reason and by law)

The *ʿulūm naẓariyya* are further divided into four, according to the way in which they are acquired:

1. *Istidlāl bi 'l-ʿaḳl min d͟jihat al-ḳiyās wa 'l-naẓar* (speculative theology);
2. *Maʿlūm min d͟jihat al-tad͟jārib wa 'l-ʿādāt* (e.g. medicine);
3. *Maʿlūm min d͟jihat al-s͟harʿ* (legal science);
4. *Maʿlūm min d͟jihat al-ilhām* (aesthetic judgment).

Compared with the *ʿaḳl* monism of al-Fārābī, this division still looks rather eclectic. But from the 11th to the 13th centuries A.D. philosophy and theology, without becoming one, were approaching one another more closely, Ibn Sīnā, who builds upon al-Fārābī, was the intermediary. Al-G͟hazālī sought to combine the *naẓar ilā* of the Neo-Platonic mysticism with the *naẓar fī* of the rationalist thinkers, and Fak͟hr al-Dīn al-Rāzī appropriated the methods of proof of Aristotelian logic to a much greater extent than his theological predecessors.

Bibliography (in addition to the works mentioned in the text): 1. Texts. Ibn Sīnā, *Aḳsām al-ʿulūm al-ʿaḳliyya*, in *Mad͟jmūʿat al-rasāʾil*, Cairo 1328, 229-30 (also in *Tisʿ rasāʾil*, Istanbul 1298, 71-2); G͟hazālī, *Iḥyāʾ*, iii, Cairo 1322, 13 ff.; idem, *Miʿyār al-ʿilm fi 'l-manṭik = Manṭiḳ tahāfut al-falāsifa*, ed. Sulaymān Dunyā, Cairo 1961; idem *Maʿārid͟j al-ḳuds fī madārid͟j maʿrifat al-nafs*, Beirut [2]1975, 49 ff. (based on Ibn Sīnā, cf. *al-S͟hifāʾ, De anima*, ed. F. Rahman, London 1959, 47 ff. and index s.n. *ʿaḳl*)

NAZARETH [see AL-NĀṢIRA].

NĀZILA (A.), active participle of the verb *nazala* "to go down", made into a noun with the specialised use (mainly among the Mālikīs of the Maghrib, but, occasionally, elsewhere and among other law schools) as a legal term meaning "specific case, case in question". The plural *nawāzil* figures in the title of a fairly considerable number of collections, the greater part of them still in manuscript, put together by jurists practising law in a *maḥkama* [*q.v.*] or by independent specialists, using material from their own experience and from the works of their predecessors in order to offer the public, but above all, the *ḳāḍis* [*q.v.*], a choice of questions bearing on specific cases and accompanied by the solutions in practice adopted.

The principle of the *nawāzil* is inscribed in the Mālikī school's tradition, whose founder Mālik b. Anas [*q.v.*] already preferred to deal with real cases rather than construct a doctrine based upon theoretical solutions for hypothetical problems. In one sense, the *nāzila* would appear to be identical with the *fatwā* [*q.v.*]; it is nevertheless to be distinguished from it by the fact that it is not, properly speaking, a juridical consultation but a case which is set forth as a real case and the way in which it was resolved by such-and-such jurist designated by name in the case when the detailing of the matter and the decision are taken from an earlier work. One should however add that a certain imprecision in the use of the technical terms introduces a kind of confusion and prevents one from being too categorical over the proposed definitions. Thus one finds, at the side of the term *nawāzil*, *fatāwī/fatāwā*, *aḥkām* and *adjwiba*, not to mention *ʿamal* [*q.v.*], all without detectable nuances of meaning.

Hence a collection of *nawāzil* furnishes a body of jurisprudential doctrine close to practical and daily life and adopted to the human, social and economic realities of a local character, in such a way that, by means of this expedient, *fiḳh* [*q.v.*] is able to evolve, not however without provoking amongst jurists fertile controversies on particular points. The question naturally arises, how to ascertain in what measure custom (*ʿāda* or *ʿurf* [*q.vv.*]) has inspired such-and-such solution, but the frequent use of the term *mashhūr* "what is current" leads one to think that, in many situations, it must have intervened in some form or other.

The *nawāzil* collections are numerous, whether the actual term figures in the title or not. Thus Mohamed El Mokhtar Ould Bah has registered close to two dozen stemming from the jurists of Mauretania (*La littérature juridique et l'évolution du Malikisme en Mauretanie*, Tunis 1981, 118-19), which witnesses to the Moors' adaptation of *fiḳh* to the special conditions of their land. The author of this work isolates for study from the body of these collections two particular ones which he considers interesting, those of Ibn/Wuld al-Aʿmash (d. 1107/1695-6) and of al-Gasrī (13th/19th century), from which he reproduces some decisions mainly based on the *Mudawwana* of Saḥnūn (d. 6 or 7 Radjab 240/1 or 2 December 854 [*q.v.*]), a work which forms the basic core of the fundamental doctrine of Maghribī Mālikism, and on the *Mukhtaṣar* of al-Khalīl b. Isḥāḳ (d. 13 Rabīʿ I 776/22 August 1374 [*q.v.*]), which is the manual generally used, despite its obscurity.

Amongst the best-known authors of *Nawāzil*, one can mention Saḥnūn's son Muḥammad (d. 256/870 [*q.v.*]), who has left behind some *Nawāzil al-ṣalāt min Dīwān* (sic) *Muḥammad b. Saḥnūn* (see Sezgin, *GAS*, i, 473), and Abu 'l-Layth al-Samarḳandī (d. 373/983 [*q.v.*]), who is credited with a collection of Ḥanafī jurisprudence, the *K. al-Nawāzil fi 'l-furūʿ* (see the list of his sources in *GAS*, i, 447), followed by a *Mukhtaṣar* in which *fatāwī* and *nawāzil* are mingled together (see Brockelmann, S I, 347). It does not seem that, over the succeeding centuries, the authors of *nawāzil*—who certainly existed—were particularly distinguished since, without exception, one must make a great leap to find a known work, that of al-Burzulī (d. 841/1438 [*q.v.*]), the *Djāmiʿ al-masāʾil mimmā* nazala *min al-ḳaḍāyā bi 'l-muftīn wa 'l-ḥukamāʾ*, which is one of the main sources of the famous *K. al-Miʿyār al-mughrib wa 'l-djāmiʿ, al-muʿrib ʿammā taḍammanahu* fatāwī *ʿulamāʾ Ifrīḳiya wa 'l-Andalus wa 'l-Maghrib* of al-Wansharīsī (d. 914/1508 [*q.v.*]), lith. Fās 1315, 12 vols., repr. Beirut, partial tr. E. Amar, in *AM*, xii, 1908. In the second half of the 19th century, a Moroccan jurist, al-Mahdī al-Wazzānī, obviously wished to remodel and update, whilst mainly utilising, al-Wansharīsī's master work, by taking up again its title, *al-Miʿyār al-djadīd*, lith. Fās 1328/1909, 11 vols. Out of this enormous mass of documents, J. Berque has extracted the *Nawazil al-muzāʿara* which he has extensively commented upon and translated (Rabat 1940). The list of sources upon which al-Wansharīsī seems directly to have drawn (60-1) comprises nearly two dozen texts, amongst which only six bear the title of *nawāzil* and three that of *fatāwī/fatāwā*, that is to say, as often happens in Arabic, several terms are used side-by-side to express a single concept without one being able to discern nuances of meaning amongst them, since their terminology is so shifting. The result is that semantic evolution distorts classifications which seem to have become established, so that *nāzila* and *fatwā* end up being employed interchangeably, just as e.g. *risāla* ends up being used for *maḳāma* and vice-versa.

Bibliography: Given in the article. (ED.)

NĀẒIM FARRUKH ḤUSAYN (*ca.* 1016-81/1607-70), a Persian poet. Mullā Nāẓim, son of Shāh Riḍā Sabzawārī, was born in Harāt about 1016/1607 and spent the greater part of his life there. Little is known of his career, except that he made a journey to India and, after spending several years in Djahāngīrnagar, returned to his native town where he died in 1081/1670-71. He was court poet of the Beglerbegis of Harāt and his greatest work, the *Yūsuf*

u Zulaykhā, begun in 1058/1648 and finished in 1072/1661-2, was dedicated to one of these governors, ʿAbbās Ḳūlī Khān Shāmlū. This, a poem of considerable length, is an imitation of Firdawsī's work of the same name and follows the original quite closely but endeavours to surpass it by using the most elegant language. Ethé calls the language of Nāẓim's images distorted and thinks that some of the details put in by him can only have a humorous effect on the reader. But it must be agreed that Nāẓim judged the taste of his period very well, for his work became extremely popular, especially in Central Asia. While Firdawsī's poem is now known to only a few enthusiasts, manuscripts of Nāẓim's *Yūsuf u Zulaykhā* are still quite common in the bazaars of the larger cities of Central Asia, as are those of the even more celebrated version of the same subject by Djāmī [*q.v.*]. His lyrical *Dīwān* is less well known, but it contains many excellent poems (especially *ghazals*), some of which are even at the present day sung by the classically-trained singers of Bukhārā and Samarḳand.

Bibliography: H. Ethé, *GIPh*, ii, 231-2; Rieu, *Catalogue*, 692b and 370a; *Yūsuf u Zulaykhā*, lith. Lucknow 1870; J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 300. (E. BERTHELS)

NĀẒĪM ḤIKMET (NÂZIM HIKMET (RAN), Nazım Hikmet Borzecki), Turkish poet, born at Salonica on 15 January 1902, died in Moscow on 3 June 1963. He was the grandson of Meḥmed Nāẓīm Pasha, the last Turkish Mayor of Salonica on one side and of Muṣṭafā Djelāl el-Dīn Pasha (Polish in origin, formerly Constantin Borzecki) on the other, and the son of Ḥikmet Nāẓīm and Djelīle. He started his secondary education at Ghalaṭasarāy Lycée, moved to Nishāntashī Lycée (1917) and then to the Naval Academy (Heybeli Ada Baḥriyye Mektebi). His first poems were published in *Yeñi Medjmūʿa* in 1918. These poems were written with the traditional syllabic metre and had death, love and longing as their themes. After his graduation, he retired from the Navy on health grounds (1921).

He went to Bolu and worked as a teacher for a while. During this period Nāẓīm met Ṣādīḳ Akhī, a Spartacist, who influenced him with his views on socialism. Curious to learn about Russia and the revolution, Nāẓīm went to Batum and then to Moscow with his friend Wālā Nūr el-Dīn, and there studied economics and political science. During these years, he was deeply influenced by the Russian poet Vladimir Mayakovski, and from this point on wrote very much in Mayakovski's style, popularising free verse in Turkish, becoming a devoted proponent of Marxism and the Marxist interpretation of the arts [see MĀRK(I)SIYYA]. He made his first marriage (to Nüzhet) around this time.

Nāẓīm came back to Turkey in 1924. He published his poems and articles in the newspaper *Aydînlïḳ*. He was sentenced to 15 years imprisonment in 1925 because of his political activities, but hid in İzmir for a while and then fled to Moscow. His first book of poems was published in Baku. In 1928 he married for the second time. The same year, wishing to take advantage of the general amnesty in Turkey, he came back but was arrested. Later acquitted of the charges, he started to work as technical secretary at the journal *Resimli Ay* (1929), and between the years 1929-33, he published his ideological works *Sesini kaybeden şehir, Gece gelen telegraf, Benerci kendini niçin öldürdü?*. He married for the third time (to Piraye). His two plays *Kafatası* and *Bir ölü evi* were staged. In 1933 he was sentenced to 4 years' imprisonment but benefited from the general amnesty declared for the 10th anniversary of the Republic in 1934. He began to write for the newspapers *Akşam* and *Tan* using the pen name "Orhan Selim". Later he began working in the film studios. Two of his most famous works were written during this period. *Şeyh Bedreddin destanı* ("The epic of Sheikh Bedreddin") is epic in style and a synthesis of Dīwān and Folk Literatures. It takes place in the early 15th century, the story of a heretical sect that preached communism. *Memleketimden insan manzaraları* ("Human landscapes from my country"), an episodic verse saga, gives a general view of Turkish history between 1908 to the end of World War II; in it, people of different backgrounds are portrayed using styles of drama, short story, poetry and novel in 20,000 lines. In 1938, he was charged with conspiracy and spreading communism among military cadets and was sentenced to 28 years and 4 months of imprisonment. He spent some 12 years in the prisons of Istanbul, Çankırı and Bursa but was able to write. Imprisonment, longing for freedom, love and hope were the central themes of his works during this period, and the optimistic tone of his works is striking. In 1949 there were widespread protests urging the government to release him, and he was released under the amnesty declared in 1950. He married Münevver Andaç, by whom his son Mehmet was born. Alarmed by threats to his life he fled once more, first to Romania, then to Bulgaria and Poland and Moscow, becoming a Polish citizen and taking the name "Borzecki". His Turkish citizenship was taken away from him in 1951. In 1959 he married Vera Tulkova. His poems of this last phase reflect his longing for Turkey and his bitterness. He died on 3 June 1963 in Moscow of a heart attack.

Much of Nâzım's work complains of social injustice and oppression of the masses, and yearns for revolutionary change. His love poems are, however, tender and optimistic. He is lyrical and full of rhythmic effects and onomatopoeia. The meaning of his poems is embodied in their structures. He used short but picturesque descriptions of nature, powerful similes, striking metaphors and amost theatrical and cinematic techniques to give his message.

Bibliography: 1. First editions of his works. (a) Poetry: *Güneşi içenlerin türküsü*, Baku 1928, *835 Satır*, 1929; *Jakond ile Si-Ya-U*. 1929; *Varan 3*, 1930; *1 + 1 = bir*, 1930; *Sesini kaybeden şehir*, 1931; *Gece gelen telegraf*, 1931; *Benerci kendini niçin öldürdü?*, 1931 (in French: *Pourquoi Benerji s'est-il suicidé?*, Paris, Minuit 1980); *Portreler*, 1935; *Taranta babu'ya mektuplar*, 1935; *Simnavna Kadısı oğlu Şeyh Bedrettin destanı*, 1936; *Kurtuluş savaşı destanı*, 1965; *Saat 21-22 şiirleri*, 1965; *Dört hapishaneden*, 1966; *Rubailer*, 1966; *Memleketimden insan manzaraları*, 1966-7; *Yeni şiirler*, 1966; *Selected poems* (translated by Taner Baypars), London, Jonathan Cape 1967; *İlk şiirleri*, 1969; *Son şiirleri*, 1970; *The Moscow symphony and other poems*, Chicago, Swallow Press 1971; *The day before tomorrow*, South Hinksey, England, Carcanet Press 1972; *That wall*, London, Socialist Artists 1973; *Your hands*, London, Socialist Artists 1973; *Things I didn't know I loved*, New York, Persea Books 1973; *Un étrange voyage*, Paris, Maspero 1980; *Anthologie poétique*, Paris, Temps Actuels 1982; *Human landscapes*, New York, Persea Series of Poetry in Translation 1982; *Les romantiques*, Paris, Temps Actuels 1982. (b) Plays: *Bir ölü evi yahut merhumun hanesi*, 1932; *Kafatası*, 1932; *Unutulan adam*, 1934; *Ferhat ile Şirin*, 1965; *Enayi*, 1965; *İnek*, 1965; *Sabahat*, 1966; *Ocak başında-yolcu*, 1966; *Yusuf ile Menofis*, 1967; *Demokles'in kılıcı*, 1974; *İvan İvanoviç var mıydı yok muydu?*, 1985. (c) Novels: *Kan konuş-*

maz, 1965; *Yeşil elmalar*, 1965; *Yaşamak güzel şey be kardeşim*, 1967. (d) Collections of letters: *Kemal Tahir'e mahpushaneden mektuplar*, 1968 (in French: *De l'espoir à vous faire pleurer de rage; lettres de prison à Kemal Tahir*, Paris, F. Maspero 1973); *Cezaevinden Memet Fuat'a mektuplar*, 1968; *Bursa cezaevinden Vâ-Nû'lara mektuplar*, 1970; *Nâzım ile Piraye (karısına mektuplar)*, 1977. (e) Tales: *La Fontaine'den masallar*, 1949; *Sevdalı bulut*, 1968 (in French: *Le nuage amoureux*, Paris, Maspero 1979). (f) Articles: *It ürür kervan yürür*, 1936; *Milli gurur*, 1936; *Sovyet demokrasisi*, 1935; *Alman faşizmi ve ırkçılığı*, 1966.

2. Selected writings on his life and works: Ahmed Cevad, *Nâzım Hikmet, hayatı, seçme şiir ve yazıları*, 1937; Orhan Seyfi, *Nâzım Hikmet, hayatı ve eserleri*, 1937; Orhan Kemal, *Nâzım Hikmet'le üç buçuk yıl*, 1965; Kemal Sülker, *Nâzım Hikmet'in gerçek yaşamı* (6 vols.), 1987-1989; *In commemoration of Nazım Hikmet (1902-1963)*, London, Union of Socialist Artists 1975; *75 doğum yılında Nâzım Hikmet'e armağan*, Türkiye Yazarlar Sendikası, 1975; Vâlâ Nureddin, *Bu dünyadan Nâzım geçti*, 1986 (1st ed. 1965); Şükran Kurdakul, Kıymet Coşkun and Öner Yağcı, *Nâzım'dan armağan*, 1990.

(Çiğdem Balim)

NĀẒIM, Muṣṭafā, an Ottoman poet of the 11th/17th century whose poetry is so far known only from the samples found in the *tedhkires* and *medjmūʿas* (although Belīgh reports the existence of a complete *dīwān*; cf. also *Sidjill-i ʿOthmānī*). Born in Istanbul as the son of Yeñi Baghčeli Ördek Ismāʿīl Efendi, a *yeñičeri efendisi*, i.e. head of the government registry office for the names and salaries of the Janissaries, he himself first rose to the position of *bash-khalīfe* (head clerk) in the same office and later was appointed to the same position his father had held. He died in 1108/1696 returning from Muṣṭafā II's second campaign against Austria.

The samples of Nāẓīm's poetry that we have seen point to moderate poetic qualities without striking individuality. It is reported that he also had musical talent and composed. His brother ʿOthmān Ḥamdī (died 1132/1719-20 [*q.v.*]) was also a poet besides being a well-known calligrapher.

Bibliography: Ṣafāyī, *Tedhkire*; Sālim, *Tedhkire*; Belīgh, *Nukhbet el-āthār li-dheyl Zübdet el-Eshʿār*; *sheykh el-islām* Meḥmed Esʿad Efendi, *Aṭrāb el-āthār*; Müstaḳīm-zāde Süleymān Saʿdeddīn Efendi, *Tuḥfe-yi khaṭṭāṭīn*, 298; *Sidjill-i ʿOthmānī*, iv, 534; Hammer-Purgstall, *Geschichte der osmanischen Dichtkunst*, iii, 572-6; Flügel, *Die arabischen, persischen und türkischen Handschriften der kaiserlich-königlichen Hofbibliothek zu Wien*, i, 664-5; K.J. Basmadjian, *Essai sur l'histoire de la littérature ottomane*, Istanbul 1910, 127; Th. Menzel, in *EI*[1], s.v. Nāẓım; M.C. Baysun, in *İA*, s.v. *Nâzım Mustafa Efendi*. Hammer-Purgstall, Flügel and Basmadjian confused Nāẓīm with the more important poet Yaḥyā Naẓīm [*q.v.*] either with respect to biography or to oeuvre. These three sources apparently led Menzel to attribute to Nāẓīm part of the large *dīwān* of Naẓīm, who is erroneously named Nāẓım in *EI*[1] (see *Nāẓım, Yaḥyā*).

(E.G. Ambros)

NAẒĪM, Yaḥyā, the most important Ottoman religious poet of his period, as is apparent from his epithet *Naʿt-gū*, the singer of hymns. Born in 1059/1649 in Ḳāsīm Pasha at Istanbul, he entered the Serai as a boy, where he received the education of the *Enderūn* and had the opportunity to acquire special proficiency in Arabic and Persian. He showed a talent for poetry and considerable musical ability. His beautiful voice and his work as a poet and composer gained him the favour of Sultan Murād IV. He was given important offices at the court as a result: the office of a *ḳoghush aghasī* to the *kilār-i khāṣṣe*; he next became *newbetdji bashī* and *ḳuru yemishdji bashī* and attained considerable influence. He then retired of his own accord and became *bazar bashī*. Later, he made the pilgrimage to Mecca. He remained in Medina as a *mudjāwir*, where he died at the age of 80 in 1139/1726. According to another statement (Bursalī Meḥmed Ṭāhir), he died in Edirne.

He flourished under Meḥemmed IV and down to the reign of Aḥmed III. He was a member of the Mewlewī order. Sheykh Neshātī-yi Mewlewī was his teacher in poetry and probably also in music. Naẓīm is the most religious poet of his period. He devoted the whole of his poetical talent to the *naʿt* or hymn. His *Dīwān* therefore resembles a warrant of pardon (*berāt-i ghufrān*). He also gave special attention to the devotional forms of the *tewḥīd*, *taḥmīd* and *munādjāt*.

His *Dīwān*, first printed in Constantinople in 1257/1841, forms a thick volume of 500 pages, of which one-third is devoted to the *naʿt* in the form of 60 *ḳaṣīdas*, hundreds of *ghazels*, *ḳiṭʿas*, *terdjīʿ* and *terkīb*, *müseddes* and *mukhammes*, *rubāʿī* and a *methnewī* for the Prophet. The *Dīwān* is divided into five parts, each of which is in turn a kind of *Dīwān* in itself. He also wrote *medḥiyyes* for Meḥemmed IV and Muṣṭafā II, Aḥmed III, Selīm Giray Khān, Muṣāḥib Muṣṭafā Pasha and the vizier Aḥmed Pasha; also *taʾrīkhs* in imitation of Nefʿī and Nābī and *sharḳīs* in imitation of Nedīm. The recent critical edition of the *Dīwān* (Istanbul 1957) is based on 5 Istanbul mss. plus a ms. *dīwānče*.

Naẓīm was a clever technician who gave expression to his effort for variety and change, not in the matter but in the form. In all his works, however, a deep religious belief, even fanaticism, is marked. His poems are a true reflection of the inclination of the period for religion and Ṣūfism.

Bibliography: Feṭīn, *Tezkere*, Istanbul 1271, 415-16; Ṭayyār-zāde Aḥmed ʿAṭāʾ, *Taʾrīkh*, Istanbul 1293, iv, 151-96; *Khazīne-i funūn*, Istanbul 1312, ii, 245-7 (*Eslāf*, no. 72); Bursalī Meḥmed Ṭāhir, *ʿOthmānlī müʾellifleri*, ii, 452; Köprülü-zāde Meḥmed Fuʾād and Shihāb al-Dīn Suleymān, *Yeñi ʿothmānlī taʾrīkh-i edebiyyātī*, Istanbul 1332, 371-4; I. Nedjmī, *Taʾrīkh-i edebiyyāt dersleri*, Istanbul 1338, i, 170-1; Abū Isḥāḳ Ismāʿīl Efendi-zāde Esʿad Meḥmed Efendi, *Aṭrab al-āthār fī tadkirat ʿurafāʾ adwār* (*tezkere* of the singers); *İA* art. *Nazîm, Yahya* (Halûk İpekten).

(Th. Menzel)

NAẒĪR, Naẓīr al-samt (a.), Eng. and Fr. nadir, the bottom, the pole of the horizon (invisible) under the observer in the direction of the vertical, also the deepest (lowest) point in the sphere of heaven. The nadir is the opposite pole to the zenith [see samt al-raʾs].

The word *naẓīr* (from *naẓara* "to see", "to observe") originally (and generally) means the point diametrically opposite a point on the circumference of a circle or the surface of a sphere; we find *muḳābal* as a synonym of *naẓīr* in this general meaning [see also muḳābala].

(W. Hartner)

NĀẒIR AL-MAẒĀLIM [see maẓālim].

NAẒĪRĪ, the pen-name of the Indo-Muslim Persian poet, Muḥammad Ḥusayn, who flourished during the 10th/16th and early 11th/17th centuries, d. 1021/1612-13. He belonged originally to Nīshāpūr, from where he went to Kāshān during his youth. There he participated in poetical contests with the leading local poets of the day. He was among the first Persian poets who migrated from their native land

during the Ṣafawid period to seek their fortune at the Mug̲h̲al court. On his arrival in India (*ca.* 993/1585-6), he attached himself to ʿAbd al-Raḥīm K̲h̲ān-i K̲h̲ānān [see KHĀN KHĀNĀN], and although he subsequently gained access to the imperial court under both Akbar and D̲j̲ahāngīr, his continued association with K̲h̲ān-i K̲h̲ānān's establishment remained unbroken till the end. Around 1002/1593-4 he decided to go on a pilgrimage to Mecca, for which his expenses were paid by his patron. Attacked by the Bedouins during the journey, he lost his possessions, but was able to fulfil his mission thanks to the help he received from Akbar's foster brother, K̲h̲ān-i Aʿẓam (Mīrzā ʿAzīz Kokā [*q.v.*]), who also happened to be on his way to Mecca at the same time. On returning from the pilgrimage he settled down at Aḥmadābād in Gud̲j̲arāt. It is reported that he spent the last twelve years of his life in retirement devoting himself to the learning of Arabic and the study of the *ḥadīth* and exegesis. When D̲j̲ahāngīr became ruler, he invited Naẓīrī to the court. In 1019/1610-11 the poet presented himself with a *ḳaṣīda*, for which he was handsomely rewarded and admitted to the royal service. The emperor also gave him a substantial land grant in appreciation of a *g̲h̲azal* which Naẓīrī composed as an inscription for a building. The poet died in Aḥmadābād in 1021/1612-13, and was buried there.

Naẓīrī was a man of considerable means. He depended not only on poetry for his source of income; he was also engaged in commercial pursuits, and, according to the *Maʾāt̲h̲ir-i Raḥīmī*, had a successful business as a goldsmith. He is praised by various writers for his hospitable nature and for his openhandedness and generosity towards friends and visitors. He belonged to the S̲h̲īʿī sect, and his devotion to that faith is reflected in his *ḳaṣīda*s honouring the eighth S̲h̲īʿī imām, ʿAlī al-Riḍā. It would seem that he held fixed religious views, for in a *ḳaṣīda* addressed to Akbar's second son, Murād (d. 1008/1599), he denounces as heretics the authors of the eclectic religion that Akbar tried to promote [see DĪN-I ILĀHĪ], and praises the prince for his efforts to counter the new creed.

Naẓīrī holds a place of distinction among the leading poets of the Mug̲h̲al period, and his achievements have been rightly acknowledged by contemporary and later sources. He has left a sizable *dīwān* comprising *ḳaṣīda*s, *g̲h̲azal*s, *tarkīb-band*s, *tard̲j̲īʿ-band*s, *ḳiṭʿa*s and *rubāʿī*s. His poetic skill is evident in all the genres, but it is the *g̲h̲azal* in which his true talents are revealed. Naẓīrī's *g̲h̲azal*s contain mystical and philosophical ideas, and are conspicuous for their modes of thought and expression as well as for their music. He is also the author of several elegiac compositions which are noted for their poignant and sincere feelings. His poems are often patterned after those of early masters, such as Anwarī and K̲h̲āḳānī [*q.vv.*], who provide the models for his *ḳaṣīda*s, and Ḥāfiẓ [*q.v.*], who sets the tone for his *g̲h̲azal*s.

(MUNIBUR RAHMAN)

NAẒMĪ, MEḤMED (according to the *Sid̲j̲ill-i ʿot̲h̲mānī*: Naẓmī Niẓāmī), **EDIRNELI**, Ottoman poet of Edirne (Adrianople) in the period of Süleymān al-Ḳānūnī. He was the son of a Janissary, later himself became a Janissary, then *silihdār* and *sipāhī*. He died in 962/1555, or thereafter, at Edirne, where he is buried in the *türbe* of S̲h̲eyk̲h̲ S̲h̲ud̲j̲āʿ.

Naẓmī possessed great poetic gifts and ability, which he displayed particularly in the clever and accurate imitation of other poets, in so-called *naẓīre*s (pl. *naẓāʾir*). He also himself wrote *g̲h̲azel*s. He rendered a great service to Ottoman literary history by collecting an enormous anthology of the best Ottoman poems, arranged under the eight principal metres. This anthology, the *Mad̲j̲maʿ al-neẓāʾir*, contains 4,000 *g̲h̲azel*s by 125 Turkish poets and *naẓīre*s by himself, in addition. He presented this work, which he brought down to the year 930/1524, to the Sultan. Von Hammer deals fully with it, as it deserves.

He also wrote a *g̲h̲azel* with the rhyme *elif* on each *baḥr* of the *Risāle-i ʿarūḍiyye* of Waḥīd-i Tabrīzī.

Perhaps Naẓmī's main claim to a place in the history of Turkish literature is, however, as an exponent of the more simple style of Turkish poetry, *türki-yi basīṭ*, which harked back to the earlier stages of Turkish literature [see ʿOTHMĀNLĪ. III. Literature. A] before the *dīwān* style, heavily influenced by Persian and Arabic, had developed. See on this poetry of his, M.F. Köprülü, *Millî edebiyat cereyânın ilk mübeşşirlerinden Edirneli Nazmî*, in *Hayat Meʿmuası*, nos. 107-8 (1928); idem, *Millî edebiyat cereyânın ilk mubeşşirleri ve Türki-i basît*, Istanbul 1928, including the text of the poems.

Bibliography : Sehī, *Hes̲h̲t bihis̲h̲t*, Istanbul 1325, 133; T̲h̲üreyyā, *Sid̲j̲ill-i ʿot̲h̲mānī*, iv, 560; Sāmī, *Ḳāmūs al-aʿlām*, vi, 4589-90; Bursalî Meḥmed Ṭāhir, *ʿOt̲h̲mānlî müʾellifleri*, ii, 436; Hammer, *GOD*, iii, 61-73; Fahir İz, *Eski türk edebiyatında nazım*, Istanbul 1966-7, i, 244-7, 508-9; *İA*, art. *Nazmi Mehmed* (Fevziye Abdullah Tansel).

(T. MENZEL*)

NAẒMĪ, S̲H̲EYK̲H̲ MEḤMED B. RAMAḌĀN, Ottoman poet and K̲h̲alwetī *s̲h̲eyk̲h̲*. The son of a merchant named Ramaḍān b. Rüstem, he was born in Istanbul in the Ḳod̲j̲a Muṣṭafā Pas̲h̲a quarter in 1032/1622-3. He became a disciple of ʿAbd al-Aḥad

al-Nūrī. In 1065/1654-5 he became *sheykh* (*pūst-nishīn* [*q.v.*]) in the Khalwetī monastery of Yawashdje Meḥmed Agha near Shehr Emīni, later (1105/1693) also preacher (*wāʿiẓ*) at the Sulṭān Wālide mosque. He died on 24 Shawwāl 1112/3 April 1701 and was buried in a special *türbe*. His son was ʿAbd al-Raḥmān Rafīʿā. Naẓmī was considered a high authority on *ḥadīth*. He wrote a number of works, none of which have been printed, including the *Hadiyyat al-ikhwān* ("Present of the Brethren"), comprising biographies of the seven greatest Khalwetī personalities (Yūsuf Makhdūm; Muḥammad Raḳiyye; Shāh-Ḳubād-ī Shīrwānī; ʿAbd al-Medjīd-i Shīrwānī; Shams al-Dīn-i Sīwāsī; ʿAbd al-Medjīd-i Sīwāsī; ʿAbd al-Aḥad al-Nūrī) and some accounts of their successors.

His poetical works consist of the rhymed Turkish translation of the first book of the *Methnewī* of Djalāl al-Dīn Rūmī; a *dīwān* of the usual type (with many hymns and sacred songs); and the *Miʿyār al-ṭarīḳat* ("Touchstone of the order").

Bibliography: Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, iv, 560; Hilmī, *Ziyāret-i ewliyā*ʾ, Istanbul 1325, 120-1; Sāmī, *Ḳāmūs al-aʿlām*, vi, 4589-90; Bursalî Meḥmed Ṭāhir, *ʿOthmānlî müʾellifleri*, i, 175; Hammer, *GOD*, iii, 596-7; Basmadjian, *Essai sur l'histoire de la littérature ottomane*, Istanbul 1910, 127; *İA*, art. s.v. (Abdülbâki Gölpinarlı).

(T. Menzel)

AL-NĀẒŪR (A.), a term used in Muslim Spain and certain parts of the Maghrib (*nāḍūr*) in mediaeval times to denote a look-out or watch-tower of one kind or another, and, in parts of the 19th-century Maghrib at least, a lighthouse. Based on one of the so-called intensive forms of the participial pattern *fāʿil*, used to convey the idea of habitual or occupational activity, the word can be said originally to have denoted the man whose business it was to keep watch, for it is clearly in this sense (*pace* Dozy's "une tour" (*Suppl.*, s.v.)) that Ibn Baṭṭūṭa [*q.v.*] uses it (iv, 364-5) in an account of a Christian descent on the Andalusian coast from ships lying off Suhayl, now Fuengirola. He does, it is true, speak of his coming upon the *burdj al-nāẓūr* in the vicinity of the port, but he then goes on to say how he learned that at the time of the attack *lam yakun al-nāẓūr bi 'l-burdj*—which can only mean "the watchman was not in the tower".

Corroboration and clarification of the primary sense of *nāẓūr* are to be found in the Valencian *Vocabulista in arabico* (ed. C. Schiaparelli, Florence 1871) attributed to Raimon Martí and dating from the second half of the 13th century. There the term is translated by the Latin *speculator* and glossed as *qui custodit portum* (p. 586). Mis-translated by Dozy (*loc. cit.*), the gloss means *not* "the man who keeps watch on a gate" ("l'homme qui fait le guet sur une porte"), but "the man who watches over a port". As a synonym, the *Vocabulista* (*loc. cit.*) offers *ṭāliʿ*, pl. *ṭawāliʿ*, *ṭullāʿ*, lit. "man who goes up" (sc. into a high place, tower or the like).

Two composite place-names in which *al-nāẓūr* is the second element are to be found in a source earlier than those so far cited, viz. Idrīsī, *Maghrib* (6th/12th century). Of these, one is Ṭaraf al-Nāẓūr (*op. cit.*, 193/235), identifiable as Santa Pola on the coast of southeastern Spain, some 16 km/10 miles as the crow flies, south of the seaport of Alicante. The other is Ḥiṣn al-Nāẓūr (*ibid.*, 93/108; cf. Ibn Khaldūn-de Slane, ii, 55: "Le Nador"), now unidentifiable, but situated in the Central Maghrib, well inland, on the road from Bidjāya [*q.v.*] to al-Ḳalʿa [see ḲALʿAT BANĪ ḤAMMĀD] in a region notorious for the depredations of Arab tribes. In neither of these two cases is the sense of *nāẓūr* unequivocal, for there is nothing to indicate whether the referent is the agent or the place of his work. Like the English "look-out" and the Spanish *mirador* and *vigía*, each of which is both a *nomen agentis* and a *n. loci*, the sense of *nāẓūr* in a neutral context defies determination. What is required is information such as that offered by one al-Anṣārī, the author of an early 15th-century monograph on Ceuta (Sabta).

Speaking of Ceuta's formidable defence system as he knew it prior to the Portuguese occupation (1415), al-Anṣārī describes the unrivalled—his term—principal look-out (*al-ṭāliʿ al-kabīr*) as "*the* look-out of Ceuta [situated] at the top of its harbour's mountain [= Djabal al-Mīnāʾ, now Monte Hacho] and known locally as Al-Nāẓūr". Here there can be no doubt that *al-nāẓūr* denotes *not* "the watchman" or "the observer", but "The Watch-Tower" or "The Observatory". What also emerges from the passage is, first, that *ṭāliʿ*—whence the Spanish *atalaya* "watch-tower", *pace* Dozy and Engelmann, who misinterpret Pedro de Alcala's transliteration and offer *al-ṭāliʿa* as the etymology (*Gl. Esp.*, 209; for abbrev., see Dozy, *Suppl.*, p. xxii)—is, as in the *Vocabulista*, synonymous with *nāẓūr*, though in the sense of the place rather than that of the person, and, secondly, that, on the face of it, *ṭāliʿ* is thought by the author to be a more literary term than *nāẓūr*.

The nature of Ceuta's al-Nāẓūr as known to al-Anṣārī is worth detailing if only because it may well be thought to shed some light on the nature of Ḥiṣn al-Nāẓūr in the Central Maghrib (see above). The watch-tower from which it took its name was not an isolated edifice; it formed just one, albeit the main, part of a true fortress (*ḥiṣn*) with its own *enceinte*, gates and a large *ḳalahurra* (calahorra) accommodating a mosque within. The sum of its parts, then, constituted a true stronghold, and, since it could function as an independent unit, it was considered a refuge and safeguard against the dangers to which siege or internal upheaval might expose the town of Ceuta on the isthmus. Its main value to the Ceutans, however, lay in the intelligence it could gather of potential danger from the sea. In the best weather conditions nothing could pass unobserved through or across the Straits of Gibraltar, for al-Nāẓūr afforded a clear prospect of the coasts of both Spain and northern Morocco. From it an observer could survey the coast of the Rīf as far as Bādis [*q.v.*], and the view of the Andalusian littoral could extend as far as Málaga in the east and beyond Tarifa in the west. It was, so al-Anṣārī tells us, built by the Almoravids as a fortress (*ḥiṣn*) "for the benefit of the observer garrisoned in the watch-tower" (*li 'l-nāẓir al-rātib bi-hi* [sc. *al-ṭāliʿ*]) and constructed with the help of the Ḳāḍī ʿIyāḍ [see ʿIYĀḌ B. MŪSĀ].

E. Terés has drawn attention to the existence of a number of place-names both in Spain and Morocco, which, either in whole or in part, derive or can reasonably be supposed to derive from *al-nāẓūr* (with the phonetic shift *ẓ*>*ḍ*, common in the Muslim West). Thus, in Morocco, only a few kilometres down the coast from the Spanish enclave of Melilla (Malīla [*q.v.*]), lie the town and district of what the Spaniards know as Nador, above which rise heights commanding a wide view of land and sea and bearing the Spanish name "Tetas de Nador". On the Atlantic seabord of Morocco an urban quarter of Larache (al-ʿArāʾish [*q.v.*]) in the coastal sector of the town which pushes out towards the lighthouse also takes its name—in Spanish "el barrio de Nador"—from the Arabic *al-nāẓūr*. From the latter, it may be added, derives also the name of an inland mountain pass, crossed at 1,514 m/4,970 ft. near an old military post

on the post-1956 Route de l'Unité running from Ketama (Kutāma) in the north to the city of Fez (Fās).

In Spanish place-names, *al-nāẓūr* has survived, both singly and in compounds, either in barely disguised garb (e.g. Anador, Castillo Añador, Anaor) or in less obvious attire resulting from contamination of one sort or another (e.g. Dañador, Torre del Andador, Cala (<*ḳalʿa*) del Nadador).

(J.D. LATHAM)

NAZWA [see NIZWA].

AL-**NAẒẒĀM**, ABŪ ISḤĀḲ IBRĀHĪM b. Sayyār b. Hāniʾ, Muʿtazilī theologian, who died between 220/835 and 230/845 while still, as it seems, at the height of his powers. He had been trained in Baṣra, mainly in the circle of his maternal uncle Abu 'l-Hudhayl al-ʿAllāf [*q.v.*], but he succeeded in getting access to the court at Baghdād after 204/819 when the caliph al-Maʾmūn [*q.v.*] had returned from Marw. He may have owed his career to his poetical and rhetorical talent as well. His poetry, though not copious, was highly appreciated for its modernity. Like Abū Nuwās, whom he admired, he excelled in celebrating wine and the ethereal beauty of youths. His poetical style combined an imaginative use of metaphors with a certain intellectual touch which was due to the introduction of abstract terms taken from theology and metaphysics. While still in Baṣra, he had already taken part in debates which were arranged in bourgeois circles and which went far beyond a mere theological purpose; this is why he appears in al-Djāḥiẓ's *K. al-Ḥayawān* as one of the two speakers who, in the first part of the book, vie in defending the precedence of the dog and the cock respectively.

Al-Djāḥiẓ was his pupil also in theological matters. But in this field, al-Naẓẓām's reputation waned rather quickly. He fell victim to his own wit and imagination; some of his ideas were regarded as wild, and even al-Djāḥiẓ rejected them. He had built his theology on a broad speculative basis of natural philosophy which was more elaborate than and differed from that of Abu 'l-Hudhayl. Abu 'l-Hudhayl had been an atomist; he had regarded bodies as aggregates of juxtaposed, isolated particles which are held together merely by God's omnipotence. Al-Naẓẓām, on the contrary, thought that the elements which make up the body permeate each other and may be either visible at its surface or hidden in its interior [see KUMŪN]. God created them all at once; when bodies undergo a change they do normally not add on a new accident but rather bring a hitherto hidden component to the surface. Change is therefore not abrupt, but slow and imperceptible. The only accident which al-Naẓẓām acknowledged was movement; here the transition from rest is abrupt. Even rest, though, results from an inherent force (*iʿtimād*) which may be interpreted as movement without locomotion and which sets the body in motion once all obstacles are removed. Movement has a wider range than locomotion, anyway; it comprises "all actions depending on man's will: Praying and fasting, acts of willing, knowing and ignorance, speech and silence (!), etc.". Al-Naẓẓām thus makes a sharp difference between the realm of man, which is dominated by free will, and the realm of nature where everything acts and reacts *bi-īdjāb al-khilḳa*, i.e. according to an inherent mechanical impetus which was added to it by creation. His idea of locomotion, however, was affected by his rejection of atomism. If a finite distance cannot be subdivided into a finite number of fractions but is subject to infinite divisibility, locomotion has to include a leap (*ṭafra*) since not every imaginable point on the surface on which it proceeds can be touched. This concept which, as many of his other ideas, was suggested to al-Naẓẓām by speculations prepared in Asiatic Hellenism did not catch on in Islam; it was rejected by the theologians (*mutakallimūn*) as well as by philosophers like Ibn Sīnā.

For al-Naẓẓām, this outline of physical theory was, in spite of very elaborate discussion, not a purpose in itself but part of his theology. He shared a good number of the aforementioned axioms with Iranian dualism, especially with Manichaean opponents whom he used to attack, but he differed from them in assuming that the ingredients contained in the physical bodies do not mix by themselves but through an independent force which brings them together, in spite of their diversity and opposition, namely God. Therefore he called the element which guarantees the identity of acting bodies *khilḳa* and not only *ṭabīʿa* "nature". In the same way, it is God who is responsible for good and bad effects in the things He has created. His omnipotence only stops in front of man's free will. But even man's ability of choosing between good and evil is only a result of an enforced mixture between his body and his "soul" or "spirit" (*rūḥ*) which is a "body", i.e. a material entity, too. For if the spirit were left alone it would only perform the good; it is merely through the integration into the body which acts as a harm (*āfa*) to it that it discovers the possibility of evil and is able to do it. Permeation implies that not only is the body penetrated by the soul, but the soul, for its part, invaded by "bodies" perceived by the senses, e.g. sounds contained in the air. The soul therefore serves as a *sensus communis*. It is not located at a specific place, e.g. in the heart; it has rather to be equated with life which is "interlaced" with all limbs. Life guarantees capability of acting (*istiṭāʿa*), but during the actual performance man has to take into account the *khilḳa* of the object which is affected by it, for instance by profiting from the weight or the "movability" of a stone when throwing it.

The act of knowing is a "movement", too; as an accident it has no permanence. But it may lead to rest; this is why al-Naẓẓām defined truth as "tranquillity of the heart" (*sukūn al-ḳalb*). His criterion of truth was therefore a subjective one, namely, inner certitude. But the truth itself is completely independent of the person pronouncing it. Therefore an isolated saying of the Prophet (*khabar al-wāḥid*) may well be true, whereas a tradition of multiple attestation (*mutawātir* [*q.v.*]) may be false if external criteria prove it to be so. Man should argue on the basis of free *idjtihād*; even the *fatwās* reported from the Companions are not binding. Al-Naẓẓām showed that they contradict each other; the material he collected was later on especially appreciated by Shīʿī writers.

In his concept of God, al-Naẓẓām advocated a rigorous *via negativa*. He did not therefore develop a

doctrine of attributes as elaborate as that of his uncle Abu 'l-Hudhayl; he devoted closer examination only to God's will and power, in connection with the problem of theodicy. He limited God's omnipotence by saying that He not only avoids doing evil but is not even capable of it. In spite of that, God is just and good not out of necessity but by free choice; His power still extends to unlimited possibilities, the only restriction being that all of them would be equally good for man, a benefit (*luṭf*) of the same magnitude as the one realised in creation. God always does what is most fitting (*aṣlaḥ*), but there is an infinite number of alternatives. His power is on line with His always being most perfect. The miracles He produces serve to prove the veracity of His prophets. In the case of Muḥammad, this was not achieved through the rhetorical insuperability of the Ḳurʾān but through the predictions contained in it. Muḥammad's pagan adversaries were not permanently incapable of producing anything linguistically comparable to his revelations, but temporarily "averted" from using their rhetorical and poetical skill (*ṣarfa*).

Al-Naẓẓām's works are lost except for a few fragments. Most of them come from his *K. al-Nakth* (see J. van Ess, *Das Kitāb an-Nakṯ des Naẓẓām und seine Rezeption im Kitāb al-Futyā des Ǧāḥiẓ*, Göttingen 1972; another *ca.* 35 fragments are now found in Fakhr al-Dīn al-Rāzī's *Maḥṣūl fī ʿilm uṣūl al-fiḳh*, ed. Ṭāhā Djābir Fayyāḍ al-ʿAlwānī, Riyāḍ 1399-1400/1979-80, ii/1, 438 ff.). Others belong to his *K. al-Ṭafra, his K. al-Djuzʾ*, possibly his *K. al-Radd ʿalā aṣḥāb al-ithnayn*, and to a treatise in which he criticised the *aṣḥāb al-ḥadīth* (see J. van Ess, *Ein unbekanntes Fragment des Naẓẓām*, in *Der Orient in der Forschung, Festschrift O. Spies*, 170 ff.).
